No wonder, therefore, that the Post Office Department is the only one asking for this fund plan; and no wonder, either, that no group of postal employees are asking for it, satisfied, as they are, with their present premium rates from the bond companies, and only fearing that the present 25 per cent reduction in such rates as proposed by this bill will prove later only a delusion and a snare if such contract losses be made also payable out of their fund, with the result that Congress may within the next year or two have to repeat the 75 per cent limitation so that assessments against them may be increased. If the organizations of postal employees are not actively opposing this fund plan in present form, may it not be due to fear of retaliation by the department in other ways?

IV. Despite the fact that the fund is now to be relieved from payin; losses to users of the malls, for which the Government is not liable, the fund will still have hard enough sledding to pay also, as claimed it will, all losses occurring (1) by robbery, fire, or other casualty; (2) by unbonded employees; (3) excess losses over amounts usually covered by bond; and (4) all the losses which Congress has heretofore relieved postmasters from; and this irrespective of the losses on contractors.

V. What would be the practical working and result of the fund plan as under this bill no one can yet foreteil. It is all general in its terms and leaves everything to the discretion of the Postmaster General to work out any plans he may please.

The draft of this bill as submitted, with no limitations on his discretion and hazy in important respects, does not encourage the hope that a fair, efficient, and equitable plan would result. The Postmaster General would have to legislate for himself on all the material features of a working plan.

It is due at least to the 200,000 or so of postal employees whose interests are not now suffering, but whose interests may be by this bill unwittingly and seriously jeopardized, that this bill be rejected in its present form.

United States Granantee Company,

UNITED STATES GUARANTEE COMPANY, By D. J. TOMPKINS, President.

NEW YORK, February 5, 1916.

Postal Facilities of New York City.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET.

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 24, 1916.

Mr. BENNET. Mr. Speaker, supplementing my remarks of yesterday on the postal facilities of New York City, i insert the exact figures:

UNITED STATES POST OFFICE, New York, N. Y., February 15, 1916.

Hon. William S. Bennet, M. C., House of Representatives, Washington, D. C.

Dear Mr. Bennet: The inclosed statement is submitted in reply to your letter of 11th instant and shows the answers to your queries. I also inclose for your information a statement dated January 24, 1916, giving statistical data concerning the postal service of The Bronx Borough covering my term in office as postmaster, which began in 1907.

Very truly, yours,

E. M. Morgan, Postmaster.

E. M. MORGAN, Postmaster.

STATEMENT OF STATISTICAL DATA CONCERNING POST OFFICE AT NEW YORK, N. Y.

1. The increases in postal revenues each year for the past 10 years in New York City:

Postal receipts of the New York (N.Y.) post office (including The Bronx stations).

Calendar year.	Gross receipts.	Increase over previous year.	Per cent.
1905 1906 1907 1908 1909 1910 1911 1912 1913 1914 1915	\$16, 251, 187, 20 17, 820, 884, 98 18, 850, 290, 99 148, 808, 782, 20 21, 173, 756, 65 24, 190, 109, 65 25, 747, 233, 00 30, 002, 303, 09 2 29, 488, 518, 02 30, 127, 062, 01	\$1,569,697.78 1,029,400.01 41,508.79 2,364,974.45 1,942,698.87 1,073,654.13 1,557,123.35 4,255,070.09 513,785.0 638,543.99	11. 00 5. 77 \$6 of 1 12. 51 9. 17 4. 64 6. 44 16. 52 1. 70 2. 11

¹ Decrease due to financial panic.

The gross receipts for 1915 compared to that of 1905 shows an increase of 80.60 per cent, amounting to \$13,875,874.81.

2. The increases in revenues from the stations located in The Bronx for the same period:

Postal receipts of The Bronx stations only.

Calendar year.	Gross receipts.	Increase over previous year.	Per cent.
1905	\$269, 717, 97 327, 893, 85 376, 681, 22 404, 229, 00 457, 976, 93 483, 921, 76 531, 830, 88 590, 681, 88 666, 179, 11 674, 170, 1 704, 668, 75	\$58, 175, 88 48, 787, 37 27, 547, 78 53, 747, 93 25, 944, 83 47, 909, 12 58, 751, 00 75, 597, 23 8, 991, 23 30, 398, 62	21. 57 14. 08 7. 31 13. 04 5. 44 9. 89 11. 04 12. 80 1. 35 4. 50

The gross receipts of The Bronx stations for 1915, compared to that of 1905, shows an increase of 160 per cent, amounting to \$435,850.78.

3. Statement of what the Government pays per mile for the maintenance of pneumatic tubes per year:

Contract price, \$17,000 per mile annually.

² Decrease due to European war.

4. If possible, what extension of the pneumatic tubes has been suggested, if any, for The Bronx from any source?

Copy of a resolution adopted October 27, 1915, by The Bronx Board of Trade (inc.), in the city of New York, advocating the extension of pneumatic-tube service to include The Bronx Borough, is attached THE BRONX BOARD OF TRADE (INC.),

Borough of The Bronx, October 27, 1915.

This is to certify that at a meeting of The Bronx Board of Trade (Inc.), in the city of New York, held this day the following resolution was adopted: "Whereas it has been brought to the attention of this board that the Postmaster General has under consideration a plan to discontinue the present pneumatic mail tube service and substitute automobile service in Manhattan; and "Whereas we believe that such a step would seriously affect the efficiency of the Postal Service and be a decided change for the worse, recent tests having shown conclusively that automobile service in the crowded streets of Manhattan can not possibly be as speedy as the pneumatic tube, particularly in bad weather: "Resolved That The Process." Therefore be it

"Resolved, That The Bronx Board of Trade strongly protests against the discontinuance of the pneumatic mail tube system as a backward step and not to be justified by any plea of economy; and further, be it "Resolvea, That we urge the extension of the pneumatic mail tube service to include The Bronx, so that the 625,000 people of this borough may enjoy the same efficient mail service now given to Manhattan."

Military Training Schools.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY.

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 25, 1916.

Mr. BAILEY. Mr. Speaker, so much is being said in the newspapers and by the advocates of warlike preparation in favor of military training in the public schools and so many honest people are being carried away by the arguments in favor of this strange departure from settled American standards and customs that I feel justified in calling as a witness on this subject so notable an authority on education as Dr. Nathan C. Schaeffer, at the head of the public school system of the great State of Pennsylvania.

In previous remarks on this floor I have quoted Superintendent Schaeffer in condemnation of the idea that military training is a desirable part of the curriculum of our common schools. He embodied this condemnation in his annual report to the governor of Pennsylvania. And now I beg to present another expression of his views on this very vital question as set forth in a letter addressed to the superintendents, principals, and teachers of the schools of the Keystone State. I deem these views so important and so clearly defined that they are given here in the belief that they will be of help to Congress and the country in reaching conclusions on certain great questions which are being pressed, as I believe, by sinister forces, bent on committing our Republic to policies at war with all its traditions, violative of its principles, and destructve of the liberties it was designed to secure. The address of Dr. Schaeffer follows:

MILITARY TRAINING IN SCHOOLS.

[By Nathan C. Schaeffer, superintendent of public instruction, Pennsylvania.]

To superintendents, principals, and teachers:

To superintendents, principals, and teachers:

In view of the fact that legislation is pending in the United States Senate more drastic than the militarism of the countries now at war, I take the therty of sending you some literature on the introduction of military drill into our schools and colleges. Senate bill 1695, introduced by Senator Chamberlain, of Oregon, provides that all persons between 12 and 23 years, inclusive, must submit to military drill under penalties ranging from \$25 to \$500 and 20 days imprisonment. It makes an exception in favor of members of well-recognized religious organizations whose creed forbids participation in war; but no protection is afforded to the thousands of others or their parents who are conscientiously opposed to military drill and training for killing.

In Australia military drill becomes obligatory at the age of 14 and in New Zealand at the age of 16 In these countries thousands of boys have been thrown into military prisons, where they came in contact with undestrable characters and without any of the safeguards which the home throws around its children. After her defeat in the war of 1870-71, France introduced military drill into the schools. More than two decades ago this was dropped from the curriculum, and

the uniforms and other expensive accounterments were sold at auction. That this was not a mistake is evident from the account of which the French soldiers are giving of themselves in the trenches.

Germany has relied upon gymnastics in the schools to develop the strength and endurance which the soldier needs. Dr. Angerstein, a high authority in army circles, pronounces it a physiological crime to introduce military drill into the schools.

Since gymnastic drills and other exercises are employed to counteract the one-sided physical development which drill with guns produces, the inference is sometimes drawn that gymnastics and military drill are synonymous terms. Did anyone ever claim that dancing is military drill because it is used as part of the setting-up exercises in some military schools? It is possible to introduce and maintain a rational system of physical education without the drill with guns.

A company of 100 soldiers requires 13 commissioned and noncommissioned officers; a regiment requires 130 officers, and 1,000,000 soldiers require 130,000 officers.

Since there are more than 12,000,000 male persons in the United States between the ages of 12 and 23, the proposed legislation would give us more than one and one-half million military officers in a country devoted to the arts of peace. Who can forctell the ultimate effects of such a policy or system after it has been fastened upon the youth of our land?

Very sincerely,

NATHAN C. SCHAEFFER.

HARRISBURG, February 10.

Uniformity in Government Service.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 26, 1916.

Mr. BORLAND. Mr. Speaker, under leave to extend my remarks, I wish to submit the following letter:

Mr. BORLAND. Mr. Speaker, under leave to extend my remarks, I wish to submit the following letter:

Hon. Samur. Gompers.

President American Federation of Labor, Washington, D. C.

Dean Mr. Gompers: I have your letter of the 25th instant in regard to the amendment to the legislative, executive, and judicial appropriation bill of 1917 equalizing the hours formally effort on was taken by your executive committee. As I see it, the provision does not affect the rights of labor generally, except so far as the rights of labor are identical with the rights of all other taxpayers of the Nation. The statements in your letter are so general that I and all other friends of labor can heartily concur in most, if not all, of them without being led to a conclusion that a discrimination should be made between Federal employees in respect to their hours of labor. The facts of the situation are these:

Clerks in certain Government departments in the city of Washington are required to work but seven hours a day, while the employees of other departments in Washington are required to work on a schedule of cight in the Government service in the great post offices throughout the country, and in other Government institutions, were working 9, 10, and 11 hours a day in many instances. After much agitation and a spirited fight we secared an eight-hour day for employees in the Postal Service throughout the country. This was considered a notable victory and an acknowledgment of the principle of organized labor that eight hours was a normal day's work. At this time men in the classified service in certain departments in Washington were working on the seven-hour schedule, which was the lingering remnant of the old days before the civil service came into existence, when the camployees in the service and the lingering remnant of the old days hefore the civil service came into existence, when the camployees have a grade of employment. The fight for an eight-hour day was a glorous fight and greatly to the credit of organized labor. It was made u

thing privance, have a local influence at the seat of the Government which is witelespread, perveyful, and insidious. It has not been so very long ago since these same mercantile interests and department store proprietors were protesting vigorously to Congress against the enactment of an eight-hour day for working women in private employ in the District of Columbia, and they are even now protesting that this law is an unreasonable burden upon them financially. Every newspaper the interests of the mercantile class. Their interests anturally lie in the direction of having the largest number of people employed by the Government at less than a full day's time, but regulate their private employment along lines of the smallest number of people for the longest working hours. While I can understand clearly the attitude influence as against the interest of the can understand clearly the attitude influence as against the interest of the dovernment. The interests of the local merchants are in many respects antagonistic to the interests of the local merchants are in many respects antagonistic to the interests of the local merchants are in many respects antagonistic to the interests of the lax payers of the country and have proved in most instances. Neither is the question of adequate compensation involved in this proposition. If Government salaries are not adequate, that does not justify less than a Tull day's work. In fact, the readjustment of salaries, if it be needed, will not be advanced but materially retarded by the employment of a large number of people working less than a Treasury are involved in this matter. It takes more floor space, more desk room, and consequently a larger rent roll in the District of Columbia to house, in large number of people working a full day. The rent which the Government pays to private landowners in the District of Columbia to house, in large number of people working a full day. The rent which the Government pays to private landowners in the District of Columbia to house, in the many pr

Civilization at the Crossroads.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY. OF PENNSILVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 26, 1916.

Mr. BAILEY. Mr. Speaker, is it not true that civilization has come to the crossroads? Under leave granted me to extend my remarks on the general subject of the national defense as it is to-day being pressed upon the country for consideration by those who would head our civilization, not along the straight course it has hitherto pursued in peace and prosperity, but into that troubled way which Europe has followed into the depths of the monstrous tragedy of the ages which is now enacting, it is my purpose to present here some thoughts which, it seems to me, should appeal to the Christian men and women of America. These thoughts were embodied in a remarkable address to the

Union Ministers' Association, of Chicago, by the Rev. Martin D. Hardin, D. D., pastor of the Third Presbyterian Church of that city, and I feel that every man who shall follow them will be the better. In eloquence, in comprehensiveness, in true patriotism, in Christian sentiment, in practical sense, in every aspect of enlightened devotion to the high cause of humanity, this address stands out as a real contribution to the literature of a momentous issue upon the same solution of which the perpetuity of our free institutions depends. It is incorporated here in my remarks as something that is worth while and that is an inspiration in itself.

The address is as follows:

CIVILIZATION AT THE CROSSROADS.

| Address delivered by the Rev. Martin D. Hardin, D. D., pastor of Third Presbyterian Church, Chicago, Ill., to the Union Ministers' Association, of Chicago.

Across the last page of European civilization is written in letters of blood the tragic word "Failure!" Religion, philosophy, science, art, education, commerce, and statesmanship-all the constructive forces of civilization, as they have been-are weighed in the balance and found wanting. The religion of the wise and merciful Christ, except in name only, is largely abandoned for the worship of the Moloch of might. Into the redhot, outstretched, iron hands of this hideous heathen deity Europe's children are being offered up-offered with a blind devotion and unquestioning stupidity equal to that of the most benighted Canaanitish woman of 30 centuries ago. Ideals and ideas, morals and money, homes and churches, vast and beautiful cities, priceless treasures of art, manhood, womanhood, youth, and maidenhood, and, most unthinkable of all, poor, innocent, helpless childhood-all that the heart has loved and the Christian conscience been taught to revere—is being fed to this blind, insatiate monster which with flaming appetite devours and stands calling week after week and month after month for more, more, more!

BACK TO TOOTH AND CLAW.

The cultured and, in many respects, increasingly fraternal Europe of yesterday has slipped back into the jungle to imitate the actions of the tiger, and knowing no law higher than that of tooth and claw.

Men who have thought in their boasted modern wisdom that there is no hell awaiting the sin of man against God awake to find that the fair Europe of yesterday is actually now in a veritable weltering hell of blood and tears, wallings and moanings, insanity and hatreds, demoniacal, loveless brutality as awful as any vision ever haunting the weird imagination of Dante.

The beautiful, art-crowned, garden-cultivated, happy-homed, marvelously citied, increasingly restful Europe of yesterday is gone from the face of the earth, and, for all the men, women, and children of this generation, gone forever. With it have vanished millions of long-cherlshed hopes and golden dreams—the lover's jeweled anticipations, the old man's staff, the father's pride, the toiling, patient mother's comfort and recompense. To every fireside there is appointed not beauty for ashes, but ashes for beauty; not the oil of gladness for mourning, but mourning for the oil of gladness; not the garment of praise for heaviness, but heaviness for the garment of praise. Yes, the heaviness of the destruction of millions of the strongest, bravest, and likeliest makers of to-morrow's happiness and greatness; and, added to all this, the heaviness of such a war debt that Europe's peasantry, already bowed and bent, shall, like the Christ, stagger and fall fainting to the earth under the weight of the very cross upon which they and their children's children for a century to come are to be crucified.

IN THE PACE OF AN INFINITE TRAGEDY.

The mind not moved by this infinite tragedy to seek something radically different in the way of national and international policy from that which has ended thus is to many of us incomprehensible. And yet, at this very hour, with Europe torn and bleeding, burning and dying before our very eyes, we have here in the United States men who dare to draw from this situation this lesson only: That America, now on a scale such as she has never before practiced, must arm and give herself to the gospel of preparedness for the mysterious enemy, just as Europe has done for the last 40 years. Lord Rosebery said recently, and he expressed the sentiment of the best minds in Europe:

I know nothing more disheartening than the announcement recently made that the United States—the one great country left in the world free from the hideous, bloody burden of war—is about to embark upon the building of a huge armada destined to be equal or second to our own.

We are being asked not to see that the very thing which has landed Europe in hell is this same gospel of preparedness. More than anything else, that which has brought Europe to her pres-

ent plight has been a brutai belief in the efficacy of force—a stupid superstition that national stability, commerce, art, civilization, and in the last analysis even Christianity itself rests not upon conformity to the moral order of the world but upon force, and that nation which could mobilize the greatest number of highly trained soldiers or build the greatest number of battle-ships would be the strong and safe nation. According to its size and resources, about every nation now engaged in this bloody struggle has lived fairly well up to this military dogma, with the net result that they all together finally fall, through fear and suspicion and mutually engendered hatreds—hatreds which were intensified a thousandfold by their heavy armaments—into this wicked, wasteful, and stupid slaughter.

ARE FRIENDS OF PEACE FOOLS?

Now, the very men who are most insistent that America shall join more vigorously in this armamental rivalry are those who also insist that all pacifists, and all workers for a world court which may serve ultimately to do away with war, are a set of dreaming, impractical fools, bent upon ignoring "the most fundamental and unchanging facts of human nature." They tell us that this is a practical world, and that any program which does not conform to "human nature as it is now, always has been, and always will be is doomed to failure."

Our first answer to them is that so reasoned "the wise and practical" men of Europe, and yet how Europe could be any more of a failure than it is at this moment is inconceivable. It has been suggested that if every cabinet and council over there had been made up of members taken from their lunatic asylums it is doubtful if they could have wrought such havoc and universal misery as that into which these "wise and practical statesmen" have led, who are supposed to hold a monopoly

of all knowledge concerning human nature.

Europe's wise and practical statesmen, who know all about human nature, have just been wise enough to take all the surplus earnings of her toiling millions, and then mortgage the bodies, brains, and bread of the unborn generations for a hundred years to come, with which to buy instruments of death and destruction, so that when war has come, it has come on such a scale and with such havoc as bleeds Europe to death, and staggers and largely paralyzes all the rest of the world. Marvelous wisdom! Two more generations of such wisdom and practical guidance, and civilization will lose all that it has gained in the last thousand years Oh! they know all about human nature; but they do not know this; That it is of the very essence of human nature to grow suspicious and fearful and finally mad to the point of fighting if a mailed fist is always shoved up under a man's nose, saying "You dare not." No big preparedness man in Europe has known enough about human nature to believe that men of other nations would resent and fear and finally fight over what they themselves would not stand. If a man can look back through the long, fighting history of this earth, and not see that it is in human nature to resent with the last drop of blood the bullying fist and the brute's might, he is but a tyro in his knowledge of what is in the human heart. He who does not know that men of every race under heaven can be led further through intelligent kindness and trust and justice than they can be driven with a club, morally still lives in the stone age.

IS THE SWORD MIGHTIER THAN THE CROSS?

The hands that were pierced on Calvary have wielded a power incomparably greater over human destiny than all the mailed fists of the centuries. And the sword has never been substituted for the cross, Cæsar for Christ, without a moral loss ultimately culminating in a tragedy like that which at present engulfs Europe. Tolstoi, in his open letter to the world at the time of the Russian-Japanese War, said:

No enlightened man can help knowing that the universal competition in the armament of States must inevitably lead them to endless wars, or to a general bankruptcy, or else to both the one and the other.

If every prophecy in Scripture had been fulfilled as literally as Europe is now fulfilling this one, there would not be found an infidel on earth.

But to this side of the preparedness program American advocates of the doctrine seem to-day as blindly ignorant as were their kindred minds across the sea. The horrible war, its suffering, its waste, its insanity, its diabolical wickedness seems to have taught them nothing. Preparedness was fostered on Europe by military minds which insisted that this program would insure peace; that it was "a cheap form of national insurance." Yes; the cheapest swindle that was ever worked off on a poor, gullible humanity. But with the whole philosophy of preparedness as a rational way of insuring peace between nations as completely exploded as any shell which has burst over the bloody trenches, America, at a time when she never was in

so little danger from Europe, is being frightened into its ad-At a time when every rational mind in Europe is praying that the war may have at least one beneficial effect-the end forever of the nightmare of dread under which Europe has constantly lived for a generation or more-America is being asked to set an example which will be used by every military mind in Europe as a cogent reason why when this war is over Europe should proceed to rearm. When America ought to be ringing from one end to the other with a cry of horror over the madness of an armed world and the moral imbedility of a race that can not to-day find some less expensive and dangerous way of keeping the peace than by adopting an adage that was coined in the bloodiest days of heathen Rome, she is, under the adroit hands of absolute unbelievers in the power of Christian truth, being swept into a course which has landed Europe in torment and which will fearfully handlcap the peace minds of the world in persuading their own nations when this war is over to find a new and better basis for international relations.

WHEN THE WAR IS OVER.

The United States at the close of this stupid struggle in Europe will stand forth incomparably the great nation of the world. In men, in resources, in undisturbed industry, in all that ministers to human happiness we will be largely where we were before this bloody slaughter began across the sen—with this difference only, that we will be in the possession of much of the wealth Europe has by her madness lost. Already even England, the creditor nation of the world, is letting go by the billions the accumulated interest-bearing bonds of the last century.

The Europe, on the contrary, that emerges from this conflict will have had its economic and industrial order shattered from top to bottom; will have been well-nigh bled to death in men and resources; will be under a debt so vast that the interest on it alone can not be paid, to say nothing of the principal. It will be a Europe no more resembling that of 18 months ago than the battered, bloody body with half its bones broken from the fall over a hundred-foot precipice resembles the strong, well man at the top before he went over. It will be a Europe saddened, disillusioned, infinitely broken, lying amid its ebbing life's blood, facing an indefinite period of long, hopeless invalidism. Those who prophesy danger from any nation now engaged in this life-and-death struggle surely know little of the modern problems of war. They are reasoning about this war from the past wars of the world, when every man who has really studied the problem knows that history presents nothing from which a parallel can be drawn.

The greatest book which has been written on this war and its probable outcome came out of Russia a dozen years ago. Maurice de Bloch, the great Russian financier, spent twenty-odd years of his life in the most scientific investigation which has ever been made of modern warfare. And he arrived at the conclusion that if ever the great nations of Europe, after their enormous preparations, engaged in war, it would be of such a length, and on such a scale, and so enormously costly, that neither side could win a decisive victory. All which engaged in it would end in financial bankruptcy and economic ruin. I earnestly recommend to all men in America who are to-day tormented with fears of what some country in Europe may do to us when they get through fighting over there, to read De Bloch's "Future of War"—the book which led to the calling of the first Hague conference—the book which is, day by day, being verified by everything that is happening in Europe. Though written 12 years ago, so scientific were De Bloch's conclusions that there is scarcely a detail which would need restatement in the light of the actual struggle which is now going The military minds of Europe which were under the illusion, so strikingly portrayed by the unanswerable argument of Norman Angell, that war could be made to pay its own way, already see the helplessness of recouping their losses through indemnities. They will all spend all they have fighting, leaving nothing but inconceivable poverty to be divided and endured among them. In the light of what has already happened, of what has already been spent, and what now must, with the inevitableness of the law of gravitation, still be spent, no mind in Europe can any longer figure on the hope of reimbursement. In a deadlock of physical force they lie, each side waiting for the other's financial exhaustion to put an end to the struggle. Meanwhile all together are tumbling headlong toward financial and industrial anarchy.

SHALL OUR LEADERSHIP BE EXTENDED?

Yes; the close of this war in Europe will see America the one great, rich Nation of the world, leading all the nations in wealth, commerce, and industry. The question above every other for us to answer is this: Will the United States extend its leadership

also to the realms of morals and ideals? Are American ideals of international good will and justice to prevail? Is real Christianity to spread until it embraces the nations in their intercourse, or are we to confess that during the past 50 years, when we were largely relying on the justness of our actions and our moral ideals to save us from conflicts with other nations, we were wrong and the European nations alone were right when they spent a vast part of their energies and resources in planning for war? Is America now to be dominated by its suspicious military minds, or is America to lead the world in the effort to conquer the deadly militarism which, because of its hellish rule, has swept Europe into her present horrors? Because of our leadership, our wealth, our resources, and relative strength, our conservation of that which Europe has thrown away, Europe's only hope of rehabilitation lies through us; and, whether we want it or not, we are to have an enormous world influence, and it has come to us at an hour when very literally civilization is at the crossroads. The world is at that point in its life where either Christian ideals are going to take hold of the nations and make them see the utter insanity of civilized men fighting like wild beasts, and spending the hard-accumulated earnings of the people for that which is not bread, until poverty and misery are universal, or we are in but the first chapter of a retrograde movement wherein the light of civilization fades into another period The present deluge of blood and misery produced by the power of the military mind in Europe is going to be the last thing of its kind among highly civilized nations and lead to the complete overthrow of the doctrine of military preparedness, or it is going to lead to such hatreds, tyrannies, and fears, to such unbelief in human nature, to such universal suspicion, to such a bold, open profession of supreme faith in force, to such a mania of armamental rivalry, that what Europe has been for the last 40 years-an armed camp-the whole world is going to be. An armed world, a world given over in every country to the leadership of its military winds, is a world headed for a chaos as much beyond that in which Europe is at present engulfed as the present European state surpasses in misery all the preceding wars of the ages.

No generation of men, therefore, were ever called upon to decide a more momentous moral question, a question so fraught with good or evil, so influencing the whole destiny of humanity for ages to come, as that which confronts the people of America over the problem of increased armament. No one of us could sit on a jury, having the life or death of a single man in our hands, without a profound sense of responsibility; but in the decision of the United States over the question of vastly increasing our military strength at this time and in giving our assent to the doctrine that in time of peace it is right to prepare for war, we are deciding the fate of a world; and we are deciding it just the way the men who scoff the loudest at all efforts to create a Christian conscience among the nations, and who openly say that men are going to fight, and that fighting, after all, is not a bad thing but a good thing for the nationsthe way these men of supreme unbelief in moral ideals and spiritual forces want us to decide. Further than that, when America votes to vastly increase her military preparedness at this time she proposes to do under excitement, under fear, under a deliberately planned, Nation-wide campaign of narrowminded specialists and of financial interests, which will make millions out of this new program, what her whole moral judgment during all our preceding history has condemned. She will do what virtually every newspaper in America. under the first shock of the news that at last Europe was at war, denounced in the European nations as the very thing which, above everything else, had led to this universal conflagration. In such a time as this many of us conceive it to be the supreme patriotic duty of all who believe in a righteous God and an eternal moral order, to which nations as well as individuals are responsible-and against which, in the long run, a billion men can not prevailto refuse to let ourselves be swept out of our right senses, but to keep calm and to look thoroughly into the need, the value, and the moral significance of these proposed new and vastly costly policies. To spend billions of dollars over a mere rumor and the fears created by false alarmists is nothing less than criminal. Before entering into the discussion which is to follow let me say that I do not consider all soldiers to be militarists, and, therefore, subject to wholesale censure. All soldiers are not military in mind any more than all preachers are pacifists. For the self-respecting soldier, who does his work conscientiously and so lives and thinks, in touch with the best light of his age, that he has some hope that possibly the world may be educated and made wise enough, if not to get rid of its soldiers, at least to relegate them to such a place of regulated subordination that they do not eat up all the fruits of our common toilwith such a soldier I have no quarrel. And I hope there may be

many such. But for that man, whether in the soldier's uniform, the editor's shirt sleeves, or the garb of a priest of religion, whose ultimate faith for the welfare of society rests upon force and not spirit, upon fear rather than justice and love, I have little respect and no admiration.

A BRAIN WITHOUT A HEART.

Now, the first thing I want to say about the program of vast preparedness is that its chief advocates, the ones who have fathered it from the beginning, the ones who have done the most to create the fear that we are in danger of attack, if not from one direction, then certainly from somewhere else; the men who have produced that state of fear out of which this supposed necessity springs, in their philosophy agree perilously near with the European Bernhardis and the whole blood and iron tribe who are most responsible for Europe's present state. up Bernhardi's book and read it. It fills us with abhorrence. Here is a brain divorced absolutely from heart. Here is a man openly preaching the doctrine that might makes right. Here is a man appearing in the modern world with a spirit as frankly pagan as if he had been lifted bodily out of Rome under Julius Cæsar—a world that never heard of Jesus Christ. We lay the book down with disgust, and we say: "A nation under such leadership is headed for the pit." It is horrible to think that modern civilization anywhere could have so degenerated as to make such a human possible; and we can not help feeling that a kind of moral taint rests upon the whole of Germany that a man so divorced from all the finer feelings of humanity should have flourished there. But hold on a minute before you visit your wholesale condemnation upon the German people. Have you read our own American Bernhardi-Gen. Homer Lea, in his Valor of Ignorance, the book which has received the unqualified indorsement of the military people who are now preaching to us that we are gone unless we straightway arm to the teeth?-the book which has been more responsible for our well-nursed fear of Japan than all causes put together. any man to find anything in Bernhardi which is more frankly pagan, which more brutally denies every postulate of the Christian religion than does Gen. Homer Lea. Gen. Lea's god is blind force. Force, and nothing but force, rules the nations in their intercourse. According to this preacher of valor, men live by conforming only to the laws of force. Hear this sentence: "To exist thus, individually or as a nation, man must cease-lessly endeavor not to thwart but to comprehend and live according to these laws that know not of him and his vain

Some of us, on what we consider even better authority than the dictum of Gen. Lea have for a long time believed that man lives by conforming to the will of a righteous, personal God, who not only knows of us and our vain progeny, but of the very falling But with one fell sweep Gen. Lea wipes God and the whole Christian morality out of existence, and then he proceeds to make for us a new religion founded not on a personal God of love and righteousness but on the worship of force, "that knows not of us and of our vain progeny." People who are religious according to that old mistaken notion which was embodied in the teachings of Jesus Christ can do nothing to alter human life for the better. They are so wildly visionary and so completely misread the laws of life, as Gen. Lea knows "that," I quote again, "as far as the world is concerned they might as well be a louse on the back of a wild duck as it wings it way through the stormy night." Gen. Lea holds that religious people who hate war are powerless to stop it, but that military "experts" like the general, who believe in it, by writing books which constantly play upon the fears of the people, can do a great deal toward making men more belligerent. He is as right in his last proposition as he is wrong in the first. Again I quote from our supreme alarmist: "It is in relation to these forces that govern the formation, duration, and dissolution of political entities, that international arbitration and disarmament are to be considered; not that they themselves are worth even a passing word, but for the fact of the mischief that their illusive ideas are capable of bringing about." amusing to see the intense anxiety with which each one of the modern war writers from every country, including even Bernhardi, of Germany, views the decline of militant patriotism among his own people, and looks upon the growing tendency to find some way to curb war as a sign of national decadence peculiar to his own land; instead of seeing in this growing hatred of war among all free and intelligent classes a worldwide movement big with hope for a new and happier humanity, certain in time to bring about just that change which the militarist says can never come. But to quote again from the

author of "The Valor of Ignorance" (better named "The Ignorance of Valor"):

Usually these delusions are harmful only to the individual, and as such are not worthy of concern; but when the haliucination is apt to become so widespread as to affect the welfare of the Nation, then it is time to point out the mockery of their hopes and the quicksand into which they have led them. * * In this class of visionaries we place International arbitrationists and disarmamentalists, who are so persistently striving, through subservient politicians, through feminism, clericalism, sophism, and other such toilers, drug this already much-deluded Republic into the Brobdingnaglan swamp from whose deadly gases there is no escape.

And, we may answer, exactly so reasoned Bernhardi about the same toilers in Germany. Yet, there is not a free mind in all the world outside of Germany which does not feel that it would have been far better for Germany and for all humanity if Germany had had more of these visionary toilers and less Bernhardis.

THE GOSPEL, ACCORDING TO GEN. HOMER LEA.

War, according to Gen. Lea, who breaks off again and again into peans of praise over the hardened soldier who has been militarily trained until he has shed all the moral sentiments and feelings which belong to ordinary humanity-war is not only a necessary and good thing, it is such a good thing that the very effort to avert and curb it, though that effort appear among intelligent men of all modern nations, is the supreme imbecility and impiety of which the human spirit can be guilty. patient and persistent effort of those who were at the time called "dangerous visionaries" by the Homer Lea type of mind, but whom we look back on now as the real builders of civilization, our race has conquered cannibalism and tribal war, slavery and bloody empires that rested solely on murder and rapine, gladiatorial combats and avowedly wars of conquest; over most of the earth the power of irresponsible kings ruling in wickedness by divine right; wrung from tyranny, ignorance, and superstition a thousand concessions, and put an end forever among really civilized men of the cowardly practice of dueling and the degrading code of honor-all habits of mind as old as war and once thought to be as impregnably fixed "in changeless human nature" as war itself. But they are all gone now and are superseded by new and better habits of life.

But the one supreme curse of them all, the one diabolical thing which is nothing less than hell incarnate, man's deadliest enemy and father of more miseries than all else, we are asked not to attack, not to question its right to be, but to bow down before it as a great god of fate. Before war alone we must be helpless fatalists. For, according to our wise prophet of the way of life for America "War is a biological necessity," and nobody but "Theorists and feminists who are but the feverish phan-tasms and sickly disorders of national life," will ever be fools enough to think that it can be curbed, restricted, or outgrown. According to this man, who in every page of his book shows his absolute contempt of the Christian God, and the Christian hope of the world, what is now going on in Europe must be a part of the world's life until human nature changes; and as all who try to change it "are helpless as lice on the backs of wild ducks, and as the general finds no evidence whatever in all recorded time that human nature has changed one iota, man is condemned forever to be but a fighting animal. The moment he tries to quit fighting and concentrate his energy in things which minister to peaceful cooperation and human happiness, he loses the fighting spirit, and there is no other school of virtue which can possibly furnish a moral equivalent to a periodic wallow in the mire made oozy with human blood shed at the hands of his fellow men. this is the man upon whose observations and authority, more than from any other source, we are told that America must prepare to fight Japan, and that if we are not in a burry about it Japan will permanently take and hold the whole Pacific slope! If his military calculations are so far awry-and they are-as his moral vision and his spiritual reading of the destiny of humanity. those who listen to him need guardians. God pity America and the world if this creature who has not morally emerged from the Tertiary age is to become our supreme prophet! pity the American people if they are blind and gullible enough to be deceived into thinking that when they follow Gen. Homer Lea and the kind who put their approval upon what he has taught, that they are really preparing for peace and not for war.

Has not Europe had 40 years of that kind of preparation for peace? Has not every nation over there been worked into the vast preparedness program by its army and navy leagues, and by its national-defense crowd, the prime movers of which were all the heaviest owners in the concerns which were to furnish the "defense" at the best paying rate of any money invested

WHAT PREPARATION HAS DONE FOR EUROPE.

in Europe? Has not every nation in Europe been led by its military experts into feeling that somebody was sure to attack them, and that their only possible hope and safety lay in ever new and ever vaster expenditures for soldiers and more soldiers. guns and more guns, and ever bigger guns, battleships, and more battleships? Of course, all this was done solely for "defensive purposes." Not in the whole of Europe was there anybody who contemplated "offense." If it were not so tragic, some of the funniest reading in the world is that which has come out of every country of Europe, even by its leading philosophical minds, the men in each country all morally certain that there was nothing wrong with their own "preparedness." I quote from the lengthy statement signed by the leading thinkers of Germany and sent out to America as the nation's justification:

Since the German Army when it is summoned to war represents the whole German people, and since the German people is peaceably disposed, it follows that the army can only be a defensive organization. Again, then, let us repeat that the German Army is a weapon which can be and is used only for defense against foreign aggression.

Well, now, that looks perfectly reasonable from a German standpoint. But our dear German friends do not reason at all that way about the arms of Russia and France or the navy of England. Here is what they say about the Russian arms:

The Czar as an individual is most certainly not the instigator of the unspeakable horrors that are now inundating Europe. But he bears before God and posterity the responsibility of having allowed himself to be terrorized by an unscrupulous military clique.

OUR OWN GRAND DUKES.

Curious, isn't it, how much more innocent look the military cliques on our own side of the line than those on the other? Again, say our peaceably disposed Germans, "The party of the grand dukes in St. Petersburg and the party of the Russian officers, always ready for war, and the Pan-Slavists, the brutal and unscrupulous representatives of the ideal that Russian czarism was destined to rule Europe-these made the war." Now, it so happens that we have but to substitute Prussians for grand dukes and Pan-Germanism for Pan-Slavism, and every one of the allies is using this identical language about the menace of the German cliques. The crime was always with the other fellow. All were sure that they were perfectly innocent and pure of motive. The only difficulty lay in the rather troublesome and aggravating fact, that never seems to have dawned upon military minds and which seems to be inherent in all preparedness programs, that that which looks entirely defensive to the men at the butt ends of these ever-growing and multiplying guns persisted in looking horribly offensive to everybody who was forced to gaze down the front end of the barrels. Of course all this late unpleasantness in which Europe is at present involved would have been entirely avoided if they had all only had a few more millions of guns! If the wicked and foolish pacifists had not interfered with the military experts, these guns would have surely been on hand and peace assured-so reason our wise military minds. And, of course, the whole character of millions of guns and frowning battleships, when we get enough of them to be "adequately prepared solely for defensive purposes" on this side of the ocean will be so changed that they will look to all the world not like "offensive things" but beautiful tubes of peace through which we propose to toss only love messages around the earth. And yet our "wise and practical" friends profess to hold a monopoly of knowledge concerning human nature! Instead of this preparedness program leading to peace in Europe, it led, as in the very nature of things it could not help leading, to fear and suspicion, to crimination and recrimination, to a feverish rivalry, to spying, to constant reports of alarm, until first one side and then the other was in a perfect nightmare of dementia; to the awakening of all the worst elements of the human heart; and the more desperately each nation tried to get "adequately prepared" the more certain was everybody that war was inevitable, until the Bernhardis and Blatchfords in each country were openly publishing that their own nation should strike the other even without warning.

WHAT WILL OUR POSTERITY THINK OF US?

Finally, the nervous tension broke into this present mania of killing, which is the most horrible thing of its kind that has ever disgraced the human spirit. Our more reasonable descendants of 300 years hence will look back upon man's domination by the military minds and philosophy of our day as the most weird, unreasonable, and inexcusable superstition to which the race has ever been subject-trial by fire and battle, the exhaustion of Europe in the vain effort to possess the Savior's tomb, children's crusades, and the burning of witches, will all appear manifestations of right reason in the human spirit compared to an age that puts itself blandly into the hands of military coteries

which thought, or pretended to think, that they really were working for peace by training millions of men day and night to think and plan for war, and by pauperizing the people by

laying in ever more dangerous weapons of destruction.

It is said of the priests of ancient Rome, who worked the superstitions of the simple common people through the supposedly divine oracles, that whenever they met in the streets they winked and laughed a derisive laugh over the general gullibility of human nature. I suspect that a lot of the modern priests of militarism are laughing up their sleeves at the easy way in which, by playing upon fear and with an adroit use of a few catch phrases, Christian people can be led into voting for the military program of men who feel no moral revulsion over war and who are themselves frankly pledged to the idea that there is no greatness nor glory for any nation save through what they call valor. They tell you that they are proposing an enormous increase in our armaments for peace.

Question the men who first fathered this idea of vast armaments in Europe, and they will answer with Von Moltke. "Perpetual peace is a dream, and not even a beautiful dream." Question the men who are loudest in the demand for the same program in America, and, like Homer Lea, they will be found absolute unbelievers in the religious idea that there is a moral order in the universe which demands the cessation of the shedding of human blood.

The military mind and the mind of Jesus Christ and those who really do believe in Him as the God appointed Savior of the world are in absolute and irreconcilable conflict. And I care not whether the military mind appears in England, Germany, Russia, or in America, if it can not be checked in its power of playing upon short-sighted, self-interest, and narrowminded patriotism by preaching the gospel of force, fear, and great armaments, it will destroy modern civilization. Europe right now is its first victim. And that mind is now in America, in a perfect hysteria, screaming to us that we are at the mercy of a mad world unless we, too, go mad and surrender our Christian principles and practice for the worship of that Molech to which Europe's children are being fed. Dr. Jefferson, one of the sanest and most prophetic men in America, is absolutely right when he declares:

There is no question before the world in which the future of Christianity is so vitally involved as this question of international peace. The church can not survive if militarism is to rule. Christianity must languish if Cæsar is to sit on the throne. A house divided against itself can not stand. A nation can not permanently have the ideals of Christ in its homes if it enthrones the ideals of Cæsar in its capital. We can not successively teach the boys the Golden Rule if diplomats are lauded for ignoring it. We can not sing hymns to the God of Love if the money of the people is progressively squandered in the manufacture of instruments of destruction. We can not get men to look adoringly upon Jesus dying on the cross when the magazines and papers are filled with pictures of battleships and battalions of soldiers drilling for the work of human slaughter. Christianity and militarism are implacable and deadly enemies. You can not serve them both. You will come at last to late the one and love the other or you will cling to the one and despise the other.

PREPAREDNESS A CONFESSION.

If there is such a thing as moral certainty, it is that an enormous increased expenditure of money for military purposes on the part of America at the present time is a confession on our part that our faith in the Christian way of life for the nations is weakening before the philosophy which has as its most consistent advocates Homer Lea and Bernhardi.

It is a confession that the military mind in America is already more powerful than the Christian mind. Have we not ever since this war began in Europe hung our heads in shame and humiliation over a European Christianity which had so signally failed in its God-appointed task to curb the murderous spirit of Europe? Now is our first great opportunity to show that our Christianity is of a different fiber. Now is our supreme opportunity to save America from coming to whatever world conference follows this war, with our own faith in the Christ way for nations unshaken and comparatively unpolluted. But let us go to that conference with the record immediately behind us that we have just ordered such an increase in our own program of preparedness as has never been made by any other nation in time of peace, and it will stultify and weaken everything that as a nation we have to say of the moral insanity of a world peace that rests upon nothing but dreadnaughts and bayonets,

If America is to enter that conference free to speak flaming words that shall have the value and power of example back of them, for a new and more rational peace footing among the nations, let her not now vote to spend new billions in the next 5 or 10 years on a program which she professes to abhor. How much more weight our words will carry if we go there as a friend to all, a menace to none, and under no circumstances as a culprit called upon for repentance with all the rest.

AMERICA NEVER MORE SAFE.

There has never been an hour in our national existence for 50 years when we were in so little danger from other nations as we are right now, for the following cogent reasons: To begin with, the European nations have got about all the fighting on their hands that they can take care of for some time to come; and if they should stop fighting to-morrow and patch up some kind of peace between them, their hearts are so full of bitterness that any time within the next 15 years either side engages in another fight; and it looks as if the new antagonist will keep the European power engaged in the front, that European power, whatever it be, can count on its present enemies being immediately upon its back. It is one of the supreme curses of war that it ever breeds more war. Servia and Bulgaria two years ago were at war; and what Bulgaria is now doing to Servia, that either side in the present conflict which should at any time in the near future be foolish enough to attack America, can most certainly count on from its present enemies. That is the first very important fact which is entirely overlooked by our military people, who profess to be so afraid of America's invasion. But they tell us that if it is not the Germans from Europe who are going to invade us, it is certain to be the Japanese.

The Japanese are one of the heaviest taxed peoples in the world. They are still under the burden of the debt left by their war with Russia. More than 35 per cent of Japan's foreign trade, by which alone she is able to keep alive, is with America. The moment she declares war on America that large proportion of her income immediately ceases. With what Japan has recently done to Germany's oriental possessions still rankling in German hearts, and with the Kaiser's remark that "Germany never forgets" cherished by his people as a profound piece of statesmanship, in less than 48 hours after Japan strikes at us it will occur to the Germans that such will be a good time to settle old

scores with the island empire.

If Germany emerges from this war victorious and able to fight anybody, and determined to fight somebody, all tremendous "ifs," she will, in all probability, first try smaller and more accessible nations close at home. The moment she started for the United States she would not only have on her hands the most powerful Nation in the world in potential resources, but

all of her present enemies besides.

America to-day has not only the protection of her Navy, upon which she has spent billions of dollars; of her virtually unlimited power as a fighting nation were she attacked by a transoceanic enemy; has not only the protection of vast seas about her, across which no nation could bring an invading army without enormous risks, but in addition to all these, because she has kept out of the present world insanity, she has half the world arrayed against the other half, each side ready to attack the other that first takes us on as an enemy. Our guns, our power, our distance from the base of the attacker's supplies, our vast potential resources, already enormously increased into actual resources by our engagement in the manufacture of ammunition for the present European war, plus all the resources of either side in Europe which does not attack us, is not after all such a deplorable defense as our military men, who, for public consumption, dream nightmares day and night and profess to see the land swarming with victorious conquerors, would have us

WHERE MILITANT LOGIC FAILS.

There is something else radically wrong with the reasoning powers of those who are howling for more guns. look the fact that while Germany has spent 40 years in preparing for this war, that every day she engages in war she is not only shattering her enemy's guns and supplies, she is using up her own supply of all that constitutes her fighting efficiency. have been single battles around a single city in which during one hour 200,000 high explosives have been discharged from German guns alone. And the fronts where the fighting is always going on with more or less intensity stretch over a distance of many hundreds of miles.

The life of all vast guns which it takes months to manufacture is limited. A certain number of discharges and the hellish things rack themselves to pieces so that they are no longer accurate. Our own Hudson Maxim has recently shown that modern warfare is so exhausting on ordinary rifles that each soldier must be supplied with four in order to be certain that one shall always be ready for action. Let this war go on for months and months, as in all human probability it will go onpossibly for years-and German preparedness, which our people are being so sedulously taught to fear, will be a thing greatly decimated and attenuated compared to what it was when the war began, not only in men and money, as I shall presently show, but also in all the ordnances of war itself. Every day

that this war lasts, in all that constitutes ultimate force efficiency, Europe is growing rapidly weaker and we relatively stronger. The proud Europe that began this war will in nowise resemble the Europe that emerges from it, any more than a cripple who has been bled within an inch of his life resembles an athlete in perfect health. It will be a Europe covered with from five to ten millions of new-made graves in which will lie the very pick and flower of its military manhood. Do you know what that means? Allowing for each body 2 feet by 6, so that literally corpse would be touching corpse, to bury 5,000,000 men would take a trench 42 feet wide that would stretch from Chicago to St. Louis-275 miles-42 feet wide of solid dead bodies of the picked physical manhood of Europe, each one of them a year and a half ago a living man with all the loves and hopes and joys of life that belong to you and me. Would that these dead bodies could be gathered together in one vast open grave where they might lie in all their hideous mutilation, ghastliness, and stench, while around it were gathered all the Kaisers and war lords, Bernhardis and Homer Leas, and the whole military tribe who try to hide the horrors of war under the high-sounding names of glory and valor-would that all such could be forced to march around that grave and look and look; while their ears were pierced by the wails of millions of women and children robbed of their loved ones, until these defenders of war were cured of their mental and moral insanity that war is a necessary part of every nation's life, that would make and keep "a place in the sun."

THE AWFUL RECKONING.

Do not tell me that Europe can bury five or ten millions of her best trained soldiers and still be prepared for conquest. But that is not all. Besides these five or ten millions of dead men, taken out of the world at just that period when they are best fitted to pay back some equivalent for the infinite pains of their rearing, Europe will have to provide for the care and support of an equal number of millions of living cripples-poor, handless, armless, legless, maimed, blind, and mentally derangedno war in history has produced anything like the insanity as this one-creatures who have been rendered absolutely unfit for military services and economically inefficient for life by the fires of hell through which they have been passed. These helpless men Europe must provide for. Allowing \$1 per day as the average earning power of these 5,000,000 men who were slain, and 50 cents a day as the earning power of the cripples, in the next 30 years Europe will be just \$90,000,000,000 poorer for having slaughtered and maimed these victims.

But that is not all. Besides these hosts of dead and cripples, there will be the millions of widows left to be the sole support of from 5,000,000 to 10,000,000 helpless little half-orphan children who are to struggle for a bare existence in an economic order swamped in debt and more frightfully disarranged than any that complex modern civilization has ever witnessed. The war itself is inconceivably horrible; but the reconstruction period is to witness for years to come, a silent human misery which will rival in its torments the fiercest of the battle fields.

To one with Christian sympathies and imagination, the condition of Europe's poor, even before this bolocaust, was little less than tragic. What will this be for the survivors of this deluge of blood? The soldiers died amid the excitement of battle and their agonies were soon over. But what human mind can conceive the bitterness of life to these millions of widows and children pinched by slow but certain starvation, as they cry for bread, and finally lie down to die in festering heaps amid the universal ruin wrought by war? Men who measure the aftereffects of this war by other wars of the past, forget that the last half-century has witnessed the enormous growth of city life, and complex industrial Interdependence.

After other wars most of the people were on soil where they could dig at least a subsistence out of the ground. But to-day a vast part of Europe's population is in great industrial centers where literally the daily bread depends upon the uninterrupted play of industrial and economic forces. Only those of us who have witnessed at close hand the misery of large elements in the industrial workers of a great city during the time of a panic can begin to conceive of the unutterable horrors which are before the laboring people of a continent which has destroyed its bread winners, wiped out billions of its productive property, and spent all its free capital for the work of murder. But what we have seen of human misery for the laboring people in our great American cities in time of nonemployment was but a gentle zephyr to a cyclone, compared to the inevitable miseries and agonies which are going to fall like mountains upon the city population of Europe's industrial centers during the first years of reconstruction following this continual swicide. Here is a part of that infinite madness which beggars all calculation. As certain as to-morrow's sun shines, out of this struggle of the common people who are left in Europe there are going to grow revolutions on such a scale and so irresistible that the minds still haunted, after this war is over with insane dreams of military ambition, will be kept busy at home for a long time to come.

THOUGHTS WHICH APPEAL.

The world will have never seen such suffering and want to be ministered unto in the name of the merciful God as will be found in Europe during the first decade following the close of the present war. If that is true, and the words of Jesus Christ concerning human brotherhood mean anything whatever to us, we are forced to the conclusion that if there ever was a time when it was not only unnecessary and unwise, but positively criminal for a great nation to be thinking supremely of arms, and talking preparedness, such is the time with America to-day.

What an indictment of the feebleness and littleness of our own Christian spirit lies in this awful fact that at a time when all the people from whose loins we sprung and from whom we have received our religion, our art, and all the great constructive ideas of our civilization, all that has made us what we are—when these to whom we are close akin in blood and ideals and religion are dying by the millions and being plunged irresistibly forward into vast hells of universal misery and death, that the mind of America should be excited over nothing but getting

ready to fight those who are left.

Surely if there is a Father in heaven who in any degree resembles the God of our Lord Jesus Christ, He sorrows not more over Europe's tragedy than He does over America's threatened apostasy, when, in such an hour as this in the world, markets and stocks and trade, and battleships and guns, and soldiers and "preparedness" interest us a thousand times more than anything that Jesus Christ ever said. Call me a lunatic if you will, a fool, a freak, a mollycoddle, a coward, a knave, I can not but hold that Jesus Christ's ideal of the kingdom of a God on earth among men where men bear to one another brotherly relations, is something as much more worth dying for than a nation as the British Empire is vaster than an African tribe. And if it is good and heroic and right for men to spend all, even life itself, for patriotism, it is infinitely more good and righteous for Christians to risk something, yes, all, in the effort to establish some sort of a world order in which men of different nations may not be set to blowing off each other's heads every time some intriguing fool upon a throne can get his hand on a hair trigger.

Would that America to-day were not under the domination of minds who see nothing in human nature but that which is responsive to fear. Would that we really were a Christian people. Would that once again we could believe in the common people as our forefathers believed when they founded a Republic which was "of the people, for the people, and by the people." Would that at this hour in the light of the world's history our Nation could be led as one people, not by the priests of Baal but by the mind of Christ and the God in whom we profess to trust, to do for once in the world a great Christian thing. If America has \$2,000,000,000 to take from productive industry in the next decade let her not put it into things which will inevitably be used by the military minds of all other nations as an excuse and as a self-evident reason why they, too, should proceed to get more heavily prepared; let her not put it into things which must, in the very nature of things, be used to help blow the fires of hate and fear and suspicion around the whole earth; into things which thereby may bring on other wars, or, if no wars come, can do no human being any earthly good. If we were a Christian people at this very hour Congress, instead of being beseeched by a great daily press and by thousands of excited citizens over the question of billions for preparedness, would be pressed by millions of Americans demanding that as a Nation we be prepared to minister generously to all the distress of the European world. The money spent to help the Belgians in their hour of supreme need has more completely disarmed Belgian animosity toward us than all the power of German arms could ever do.

While this generation lasts the man in Belgium who would propose evil for America would be looked upon by his countrymen as nothing less than a moral monster. What has done this wonderful thing? Christian kindness, charity, and a living sense of human brotherhood. By the time this war has ended all Europe will be in a state of ruin and misery, want, and exhaustion rivaling that of Belgium. If we could take that hour to do for Europe what American philanthropy has done for Belgium, we would put an end among the common people of every nation over there to the power of any mad set of fools who would be insane enough to want to fight us.

MUST WE GO MAD, TOO?

But to all such ideas it is replied that the German people have gone mad; that they are in the hands of men who, when

they find that they can not get indemnities from the devastated Europe about them, will cross the sea, because we are rich, and take it from us unless we are immediately armed. There are thousands of our people, one regrets to acknowledge, who have been so badly frightened that they honestly believe this. Fear hath torments. And frighten a man bad enough, and his imagination will turn every sound in the house into an invading thief. When I was a child and "saw things in the dark" I spent a night of absolute terror looking at the bull's eye of a burglar's lantern, which, when daylight came on and sanity returned, turned into the kindly coals in the fireplace before which I dressed in warmth and comfort,

Are these terrors justified by the facts? We turn our eyes to Europe and what do we find? Nations whose combined wealth, when they went into this war, roughly speaking, was in the neighborhood of \$270,000,000,000. What it is to-day, since the falling of their stocks, no one can tell. The fright over the Morocco incident sent Germany's stocks tumbling down at the rate of millions. But these nations before going into this war owed for wars already fought \$27,000,000,000, a debt so vast

that it could not be paid and never will be paid.

It is difficult for the human mind to grasp an idea of a billion. When we get into military expenditures we ascend up into astronomical distances and measurements. It is the only "heavenly" thing about the whole military program. But, if you will figure up, you will discover that there have been comparatively only a little over a billion minutes since Christ was born into the world. Well, when this war began Europe owed for wars she had already fought \$27 for every minute of the Christian era. That war debt was a veritable millstone around the necks of Europe's peasantry. But now, in this year and a half of fighting, Europe has already run up a war debt larger than for all the wars of the preceding Christian centuries, and she now owes more than a dollar for war for every second, every tick of the clock, since the Son of Man was here on earth.

CALCULATING THE MONEY COST.

These nations are engaged in a mad struggle which is eating into their common possessions during the first year at the rate of \$20,000,000 in actual borrowed money. If we add the cost of what they have destroyed, it runs up, from the best estimates I can find, into forty or forty-five billions a year. Now, this year, according to the statement of Dr. Karl Helffelrech, secretary of the Germany treasury, in a recent speech before the Reichstag, it is costing all the belligerents eighty-two and one-half million dollars a day; more than thirty billions a year in money, and a corresponding destruction of property goes on. How long are they going to fight? Of course no human being can tell with certainty, but they all declare, even after this year and a half of mutual slaughter, that it is a finish fight, and that they will conquer or spend the last man and farthing in the effort to do so. Would that they could be stopped at this very hour; but, unfortunately, nations mad enough to begin fighting are like men pushed over a precipice, they can not be reached, and they do not come to themselves until they have all struck bottom. The time to stop war is not after they are over the precipice. The neutral world can do little to stop this war; but God pity humanity if after 40 years more of scientific invention the earth ever knows another war. It is that war of 40 years hence that all friends of humanity and of peace ought to be preventing right now.

How long are the nations going to fight? Lord Kitchener, said to be one of the greatest soldiers in Europe, warned the English nation at the outbreak of the present hostilities that they were in it for at least three years. Here is a nice mathematical problem to work on. If it took England three years and cost her \$1,500,000,000 to conquer a hundred thousand Boers in South Africa, how long will it take her and her allies, and what will it cost them, to whip more than a hundred millions of people who have been preparing for 40 years for this particular conflict? And, if it has cost Germany the best soldiers of her marvelously prepared military machine millions and millions of men who were in the prime of their fighting efficiency, so that to-day she is employing mere youths and men over 40 years of age, and billions and billions of dollars to conquer but a relatively small and insignificant part of her enemies' territory, how long will it take her and what will it cost her to conquer 200,000,000 of people who have, and will keep for years, the possession of the seas, and can draw on the ends of the earth for their supplies?

TO THINK OF BELGIUM IS TO WEEP.

The war has swept over little Belgium, and men with hearts can not think of Belgium's condition without tears leaping to their eyes. It swept over a goodly part of France and left the land in ashes. It has swept back and forth over Poland and that is in ashes. It has gone into the edge of Russia and that

is a wilderness. It has passed over Servia, and Servia is no more. It has swept over a goodly part of Urumiah, and more than a million of inoffensive men, women, and children are decimated and wiped out of existence by the hand of those whom German chancellors call "our noble allies." It has turned the Austrian Alps, which reached into heaven, into veritable pits of hell. Once let those splendid German battle lines give way and Germany, too, will go up in smoke, and become in every part where war flames have spread a charred chaos in which the unhappy survivors will be kept alive only through soup kitchens. Meanwhile, what of the navies whose deadly powers we are taught so much to dread? Week by week and month by month German, French, English, and Russian cruisers and battleships go down from shot and shell, torpedoes and mines, by ones and twos and fours.

Months ago it was announced that Germany, in her terrible game of hunting down English commercial ships, had lost over 60 of her submarines. It is true that thus far the main body of the English and German fleets are untouched; but the war is not yet ended, and those last desperate efforts that dying nations will make before surrendering are not over. If the time ever does come—and it may, nay, in all probability, it will come—when the English and German fleets clash, and before that day's battle is over it is within the realm of possibility that America may find herself in the unenviable position of being not the second or third, but the first rate sea power of the world, and all this without building another battleship.

Let this war go on for another 18 months—as it will go on unless it ends in an absolute draw, in which case Europe will herself seriously propose some less dangerous method of keeping the peace than that of preparedness—but let it drag on for months more, possibly years, costing every day it lasts \$50,000,000 a day—eighty-two and a half millions a day, according to the most recent statement of the German secretary of the imperial treasury—a sum sufficient to build one or one and a half Panama Canals once a week, and there will not be left free money anywhere in all Europe sufficient to fit out a formidable expedition against the United States.

HOW THE MONEY CENTER HAS SHIFTED.

Already the money centers of the world have moved from London and Paris and taken up their permanent headquarters, for the next half century at least, in New York City and Chi-The only formidable wars which are going to be fought, or, by any human possibility, can be fought, by any of the great nodern nations after this war closes will be on borrowed capital. Borrowed from where? From the Asiatic Nations? They have not got it. From Africa? Africa has not got it. From Europe? Does any man who has not lost his faculties imagine that by the time European statesmen get through settling with the people of Europe over more than a hundred-billion-dollar debtcan not be paid and much of it must ultimately be repudiated that these people can be immediately hoodwinked into giving up what little they have left to embark on a new venture of blood and death, which, if the conquest of America were its object, would be longer and in the end costlier than the insane struggle that has just closed? No; the money for the conquest of America can not be found in Asia, Europe, or Africa. The only spot on the face of the earth where there will be any free money for a long time to come is in the United States. America, because she has thus far kept comparatively free from the domination of military minds and the philosophy of preparedness, finds herself great, free, and prosperous, while all the rest of the earth has destroyed its fittest manhood and hopelessly engulfed itself in debt, which can be dealt with only by repudiation. Once let nations begin to repudiate their debts and the bankers of the world will for a long time to come have far less interest in the loan game for preparedness and war than they have ever before

Let the United States say to Europe: "We will help you to rebuild your cities and factories; we will furnish capital for every legitimate venture which looks to the rehabilitation of your industrial, economic and social order, but not one dollar will we supply to any nation in Europe which proposes to rebuild its military equipment so that it is a menace to civilization; not one dollar will we loan to any nation that holds back from a world organization which will to a large extent limit the possibility, dread, and costliness of war"—let America say this, and there is not a nation in Europe, no matter what its military minds think, that can force back on the world the horrors of preparedness. The trade and good will of the United States, because we alone possess free capital and purchasing power, will be absolutely essential to the rehabilitation of every European State. When they quit fighting among themselves, unless they do it immediately, their free capital will be gone—

nay, they will have eaten into their own very marrow. Where all are poverty stricken, no matter what the needs, trade is dull indeed. We literally are the hope of the world. Would that we had at the head of our affairs business and political men who are not so easily frightened into blindness to the supreme opportunity to free a world.

WHO IS RESPONSIBLE?

At the close of this stupid siaughter, a slaughter which never would have happened if first submitted to the people, the common people of Europe are going to ask as they have never asked "Who is it and what is it that led us down into this inferno? Was it the aspirations of our own democracy? was it those from above who loaded us down with arms, against our repeated and impassioned protests, and taught us to love that which our honest hearts hate, and to hate that which by all the dictates of our better manhood we love?" And before the people of Europe get through answering that question much that was high and mighty a year and a half ago and that, even yet, looks menacing to all men who love a free humanity will be pulled down from its pedestal of irresponsible power to go the way of all the other tyrannies of the past. America's supreme opportunity to do something glorious for herself, and for this European democracy, and for the free and untrammeled life of to-morrow's larger, juster day among the nations, is to give these downtrodden, deceived common people of Europe a great leverage and a great hope and a great courage to down their war lords and bloodletters of every kind, by pointing across the seas to the great, free, unmilitarized Republic which has set the example to the world of one nation enlightened enough to arrest for once the mad gospel of evermore preparedness

With such military equipment as we now have on hand, and with Europe's utter exhaustion in men, money, industry, and, before the war closes, in the very implements of war itself, we are absolutely safe from European aggression, certainly for the next score or more of years. Let America during those years, with the full weight of her vast moral, industrial, and money power, put herself on the side of those peace forces in Europe that will see the crime of repeating the conditions out of which their present sorrow came, and she will usher in the rule of the people in all Europe. And with real democracy enthroned there is a possibility of a federated world in which all men may be comparatively free and safe.

The hour this war closes rings the death knell of old, tyrannical, war-cursed Europe if America is true to the ideals which have made her great. Between militarism and democracy the feud is eternal. The cause of democracy is the cause of the only kind of Christianity in which the modern mind can be-If America in this hour had any of the vision, faith, and forward-looking spirit of the pioneer souls who gave their lives to found her, and of those who died to save her, she would not now in timorous fear be repeating those damnable shibboleths coined in kings' houses and fostered in dying Europe by those who hate democracy. She would be ringing from coast to coast with the cry that European democracy shall be helped out of its bondage of debt and imprisoning walls of standing armies, forts, and arsenals into a life free to express its own natural good will and fellowship with all brother men. But higher yet along these lines unthinkable to military minds lies America's supreme opportunity to free the whole mind of mankind from that infinite crime and delusion whereby modern science, God's last and, in many respects, greatest gift to the children of men, should have been clutched by wicked hands which wield its wellnigh divine power only for evil. Does the wisdom or sanity of the civilization which has been need any more terrible indict-ment than this; that after a century of the most marvelous scientific discovery and advance that the earth has ever known it is only in the realms of destruction and death that science has been given the money, with a free and unlimited hand, to show what it could do?

THE PROSTITUTION OF SCIENCE.

Every modern nation has overtaxed its people in the creation of scientific ways of killing other people, and has doled out grudgingly little inadequate pittances of money when science has asked that she might show what she could do in the way of bettering and conserving human life. Even in our so-called unmilitary America we, have our Secretary of War and Secretary of Navy who stand unblushingly by the side of our National Treasury and say, "We want \$800,000 a day and every day in the year to spend in getting ready to kill somebody." Now it is proposed they help themselves to nearly two million a day. And then the money is freely voted. And then they say, "We want, besides, \$400,000 every day in the year to pay for having killed somebody in the past." And the money is freely voted. It cost England nearly twenty-seven hundred dol-

lars for every man she killed in the Boer War. It took less than \$2.50 per man to save a life in turning Panama, the deadliest climate on earth, into a region having the lowest death rate in the world. Such is the difference between the cost of science

as an agency of death or as an agency of life.

If but a fractional part of the money and scientific ingenuity and forethought which have been spent in battleships and forts, torpedoes and target practice, and in creating these twenty-odd millions of scientifically trained and equipped soldiers who are finally set to mutually slaughtering one another, and incidentally piling up a seventy-five or a hundred billion dollar debt—if but a fractional part of what the world has spent in killing and getting ready to kill had been devoted to the creation of knowledge, mutual understanding, and good will among the nations; to sanitation, running down the causes and sources and breeding places of disease and preventable death; to wiping out the causes of poverty and crime and misery and human ig-norance, there is not a nation in all the world which would not be, in all that ministers to human happiness and well-being, inconceivably above its present status, and the unrestrained military mind has done this infinite evil. It has robbed us of the incalculable wealth and happiness that might have been ours; it has slaughtered our brothers; it has hardened our hearts; it has clouded our faith; it has made us deny every postulate of the religion which we profess to believe and has left us in a world of blood and tears, sorrows and desolation more tragic than any the earth has ever known since God saw all that He had made and called it good.

Militarism and Christianity can not live together. If Christianity and democracy do not conquer militarism now, militarism will for a long time to come cripple both. In that struggle where ought the sympathies and example of the people of

America to be found?

Our Foreign Policy.

EXTENSION OF REMARKS

HON. KENNETH D. McKELLAR.

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 26, 1916.

Mr. McKELLAR. Mr. Speaker, I wish to extend my remarks by reading the following telegram and letter bearing upon our foreign policy:

KNOXVILLE, TENN., February 25, 1916.

KNOXVILLE, TENN., February 25, 1916.

Hon. K. D. McKellar,
House of Representatives, Washington, D. C.:

We earnestly petition you to use your best efforts and exert your influence to preserve to this country their unalterable rights and interest which are now jeopardized, and to uphold the position taken by our President, which is to prevent the abandonment of the honor and prestige of the United States and to sacrifice forever the rights for which our President is now so ably and strongly contending.

W. S. Shields.

W. S. Shields.

Cary F. Spence.
M. D. Arnold.
J. Allen Smith.
A. A. Blow.

J. E. Briscoe.

Dean Mc.: It seems to me that while we want to keep out of war with Germany and all other nations, that for Congress, by resolution, or the administration to take the proposed step that this country will assent to any nation sinking without warning so-called "defensively armed" merchantmen will be disastrous, and a complete backing down by the United States from the position it has heretofore taken, and will lead us into inevitable trouble. It is a change from heretofore accepted international law and will for that reason be an unneutral act on our part. It will alienate all the allied nations with whom we are now dealing, and almost destroy our commerce with them. But the worst feature is that if we do that, the bars will be completely down, and the Germans will sink all ships without regard to the facts, and then claim they were armed or that they had good reason to think so, and then we will be left to negotiate for the next 20 years about the facts. It will practically destroy our commerce. If we had the ships of our own to do business, it might be another matter from a business standpoint though not from a standpoint of justice and humanity; but we have not the ships, and you will see, in my opinion, that if this step is taken it will mean a slump in business that will cost this country millions, and the Democratic Party loss of control.

I know you are in a better position to judge of the proper thing to do than I am, but I am writing this as the opinion of one of your constituents, and I believe that opinion is pretty general here.

Yours, truly,

R. M. BARTON.

While not indorsing each particular argument advanced by these constituents of mine, I do most earnestly indorse the position taken in both communications, namely, that in this crisis it is the duty of every patriotic citizen to uphold our President

in his efforts to maintain generally the rights of humanity and especially the rights of Americans on the high seas.

For more than a year and a half President Wilson has, under most difficult circumstances, kept us out of war and at the same time has in the highest and truest sense defended and upheld American rights and American honor. No President could have done more than this, and few could or would have done as well. For these two things alone he is entitled to the highest respect and deepest gratitude of the American people. Our foreign policy is peculiarly in the hands of the Executive. The most of us agree that in the past 19 months he has done marvelously well in keeping us out of trouble. He has peculiar knowledge of the situation that we as a body do not have. We have trusted him up to this date and he has not failed us. While almost all the other great nations are up to their eyes in trouble, ours, under his leadership, is at peace with all the world. Whether one is for him or against him, one must admit these facts. Let us continue to uphold and sustain him.

I believe these constituents of mine, who, as I personally know, are men of the highest standing in Tennessee, are simply giving voice to a sentiment that prevails in our entire country, and for these reasons I ask that their views may be placed in the Appeals of Tennessee. I put these communications in the Record to show that the old Volunteer State stands always in the front ranks of those who wish to uphold American rights

and honor.

Four Million Dollars' Worth of Favoritism.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND,

OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 28, 1916.

Mr. BORLAND. Mr. Speaker, a Member of Congress is foolhardy who ventures to attack any of the hoary-headed abuses of the Government service in Washington.

When the bill making appropriations for the expenses of the legislative, executive, and judicial departments of the Government was under consideration by the Committee on Appropriations I introduced an amendment providing that clerks and employees in all branches of the public service in Washington be required to perform eight hours' service in each working day. The amendment was adopted by the committee almost unanimously and reported as part of the bill. Immediately a storm of protest broke out on the part of the merchants and the press of Washington. The newspapers of the Capital were filled with little else for days I was caricatured as trying to induce good old Uncle Sam to become a slave driver! Abusive and anonymous letters poured in upon me. I was threatened with misrepresentation and vilification at home that would defeat me for reelection. The merchants held meetings to denounce me and to bluff and bully all who could be brought within the sphere of their influence to vote against the change. I was held up to scorn as an enemy of labor and as an ignorant demagogue. It was even pointed out that I had been instrumental in curbing the evils of tax dodging in the District of Columbia; that I was the author of a law requiring property owners in Washington to pay part of the cost of street im-provements in front of their own property and relieve Uncle Sam of that expense, and therefore I was a dangerous man. The attitude of the Washington press is epitomized in an editorial squib in the Herald:

It will be recalled that Representative Borland, who by an amendment to an appropriation bill seeks to compel the Government clerks to work an extra hour each day, is the author of another amendment, which now compels property owners in Washington to pay for paving the streets. His popularity in Washington is thus easily explained.

Why all this tempest in a teapot? Is there anything in-human or oppressive in requiring Government clerks to work a standard day of eight hours?

The facts are simply these: In some of the departments in Washington the clerks work only seven hours a day. In other departments—for example, in the Government Printing Office and in the Ordnance ractory at the navy yard—the employees work eight hours. When I first came to Congress, in 1909, the employees of the Kansas City post office and other great post offices throughout the Nation were working 9, 10, and 11 hours in some cases.

I am a believer in the eight-hour law, and after a spirited fight we secured an eight-hour day for postal employees throughout the Union. This was considered a notable victory. Since then Congress has passed laws giving an eight-hour day to employees on Government work, to employees on public work in the District of Columbia, and to women wageworkers in private employ in the District of Columbia. During all of this time clerks in certain of the executive offices in Washington were working only seven hours a day. This is a lingering remnant of the old political system before civil service came into existence, when clerks were appointed by political influence and governed by favoritism. At one time in the dim past clerks in Washington worked only six hours a day. As the business of the Government grew this time was extended, partly by law and partly by Executive order, to six and a half, seven, seven and a half, and eight hours; so that while the hours of labor of Government employees throughout the country have been cut down to the standard day of eight hours the tendency in Washington has been to eliminate favoritism and discrimination by increasing the working day to the same standard schedule. Thus it happens that there still remains a discrimination in favor of the clerks in certain departments who work on a seven-hour schedule and are thus constituted a privileged class. Such a discrimination is unjust and indefensible. The proposed amendment will not affect the hours of those who are already working eight hours, but will equalize the hours of labor among all Government employees. While the Government ought not to require unusual hours of service, except in emergencies, the most fervid imagination can not see anything inhuman or oppressive in this proposal.

Economists, philanthropists, and labor leaders have all agreed that eight hours is a normal day's work. They have taught that the day should be divided into three periods; that the worker should have eight hours for rest, eight hours for meals and social improvement, and, having these, he is in fit condition for eight hours of productive labor. Even in the case of women and children, no different rule was made, but in some cases even a limitation to nine hours was considered a reform. This is the first time, to my knowledge, that anyone has had the audacity to contend that an eight-hour schedule was in-

human and oppressive.

Uncle Sam's pay roll in the District of Columbia is about \$50,000,000 a year. Not all of this would be affected by the change, but it is estimated that a saving of about \$4,000,000 annually would result from requiring a full day's work from Government employees. As the pay roll increases annually with the growth of the Nation's business, the saving in future years will be greater. The longer the abuse continues the more it is costing the American people. The money in the Federal Treasury belongs to the taxpayers. It all comes out of the pockets of the people. It represents the blood and toil those who support their Government. It is a trust fund to be paid out only for an adequate and legal return. Taxation in some form must be borne by the people to pay the expenses of government, but under the Democratic principle taxation must be limited to the actual needs of the Government, honestly and economically administered.

Can Congress defend the placing of taxes upon the farmers and business men of the land to furnish gratuities for privileged classes? Since the tariff has failed us as a source of revenue, it is necessary to look around for other means of taxation. If we propose a tax to-day the people will ask and will have a right to demand an answer to the question, "What do you intend to do with this money?" Can we reply, "We are taxing you at least \$4,000,000 extra in order to pay salaries to an extra number of Government clerks"?

"We dislike to put them to the inconvenience of working a full day, and therefore we will put the burden on you taxpayers?" The American taxpayers would rejoin: "In that case we shall take matters in our own hands. It is no disgrace to feed at the public crib, but it is bad manners to keep both feet

in the trough."

Besides the extra force that must be employed there are other inconveniences in the short day. The public offices should be open the full business hours of the day in order to properly transact public business. Business men come at great expense from all over the United States to transact business at the departments. Their time is always limited, and they are under expense during their stay in Washington. If they can not finish their business by the middle of the afternoon they must return to their hotels and stay over another day to await the convenience of the Government clerks. If they think to take time by the forelock by going to the departments at the hour in the morning at which they would begin business in their home town,

they are told to wait, hat in hand, on the convenience of a lordly chief clerk who is afraid that some one will offend his dignity, hurt his feelings, and treat his refined nature with inhumanity and oppression by expecting him to observe the same business hours that are observed in all commercial cities throughout the land. Frequently the business man must enlist the aid of his Congressman or Senator to obtain information or to straighten out difficulties, as the great mass of constituents can not hope to be familiar with the division of powers and duties of the different departments and bureaus and the methods of procedure in each. Even a first-term Congressman has difficulty in getting on to the ropes on account of the greatly increased number of bureaus and the multitude of laws governing them. A Congressman or Senator who is called upon by busy constituents anxious to adjust some matter and return home finds he must leave Congress in the very midst of the session and hurry down to the department where the business is pending in order to reach there before the clerks have slammed their desks and gone home.

And then consider the multitude of letters that come to the Congressman or Senator, especially from busy commercial cities, asking for information which can only be obtained by a personal

call at the departments.

Every Member on this floor will bear me out when I say that while Congressmen are glad to put themselves at the service of their constituents in all proper and necessary ways, yet they have to spend twice as much time for that purpose as is necessary or as their constituents give them credit for. This is time wasted, and which they should have spent on the floor of Congress or in attendance upon the committees to which they belong. I know many Congressmen whose days are crowded with their committee work, their departmental calls, and their at-tendance on the sessions of the House, and who, therefore, must keep up their correspondence by working nights and Sundays. And this includes all of the really successful Members of Congress. To talk, therefore, of inhumanity and oppression in requiring Government clerks to work during the usual business hours of the day is folly and nonsense.

There are many enterprising and skillful men among the Government employees, and some of them are scientists and experts, whose services are worth more than the Government pays them, but these are all working under the eight-hour schedule now and will not be affected by the change in the laws. On the slackers we need waste no sympathy. There are a number of negroes in the civil service, and, almost without exception, they are in the purely clerical departments where the seven-hour day prevails and not in the mechanical and technical branches where the eighthour day is enforced. I am told that among the young negro couples it is customary for both the husband and wife to take the civil-service examination and secure appointment, if possible, in the same office. As they get to work late in the morning and go home early in the afternoon, it is possible for them to keep house and raise an interesting brood of pickaninnies while drawing two comfortable salaries from the Federal Government. Sometimes the wife only works in the department, and the husband rests at home or devotes his talents to preaching the gospel.

The most bitter opponents of any reform in the law, the men who have denounced it as inhuman and oppressive, who have reviled Congress in public and private, who have stirred up all this hysteria at the mere suggestion of efficiency and economy, are the mercantile interests of the city of Washington.

These merchants, with the real estate and banking interests with which they are allied and the newspapers which subsist upon their patronage, control the public opinion of the District of Columbia. They have an influence which is powerful, persistent, and insidious. Through the various national organizations that are centered in Washington they frequently attempt to extend this influence out into the country, and by "back-fire" seek to coerce Members of Congress to yield to their demands.

These merchants would like to have the shopping districts

crowded with Government employees in the early afternoon. Their interests lie in the direction of having the greatest possible number of people employed in the departments at the highest possible pay and working the shortest possible time. More people and a short work day means more trade, more amusements, more house rent, and the merchants and landlords get substantially all of the clerk's salary. It is easy to understand their position in opposing reform. It is simple and candid. Their fixed idea is that the Federal Government exists for their benefit, and not for the people who maintain it. look upon it as their cow; they do not care who feeds it the hay, but they must have the milk. Under the Constitution the District of Columbia exists solely for the convenience and safety of the Nation as the seat of Government, and not for the

profit or convenience of those who choose to own property or do business here.

While we can understand the attitude of these local merchants, their interests can not be given weight against the interests of the taxpayers of the Nation. While these department-store proprietors denounce as inhuman an eight-hour day for Government clerks I have not noticed that they are willing to concede a shorter day to their own employees. They like to regulate their private business upon the basis of the fewest number of employees and the longest possible hours.

It has only been a few months since these same men were protesting vigorously to Congress against a law limiting to eight hours the time of wage-working women in private employ in the District of Columbia. They said it was "inhuman and oppressive" to forbid them for working their shop girls as long as they pleased. They are still protesting that it will ruin the retail business of Washington and drive trade to Baltimore. What a delightfully elastic conscience these patriots have! How warmly they are interested in the cause of labor!

In the very set of resolutions passed by the Retail Merchants' Association of Washington condemning the Borland amendment as inhuman and oppressive, they also condemn the eighthour law for women passed by Congress which prevents them working their shopgir 10 and 12 hours a day! Could sordid

stupidity go further than this?

Another powerful class who are very bitter against the amendment are the real-estate speculators of Washington. Building houses and selling them on the installment plan to Government clerks is a very profitable business. The clerk is a good risk. His pay and position is sure. He works for an employer who never misses a pay roll; who never goes out of business; who never has a strike, lockout, or boycott; and who sees that his employees pay their debts. On with the dance! More clerks, more houses. Let the taxpayer of the Nation bear the burden. Here the interest of the landowning class is directly opposed to the interests of the Nation and its taxpayers.

Let those Congressmen who believe that clerks in Washingtion should be a privileged class vote against this provision. Let those who believe in discriminating between Government employees in the same grade of service vote against it. Let those who believe in soaking the American taxpayer vote against it. Let those who believe in truckling to the sordid selfishness of private interest in Washington vote against it. And let those who believe that the public is not entitled to have the Government offices open during the usual business

hours of the day vote against it!

Bending Post-Office Employees.

EXTENSION OF REMARKS

HON. J. M. C. SMITH, OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 28, 1916.

Mr. SMITH of Michigan. Mr. Speaker, under leave of the House granted me to extend my remarks in the RECORD on the bonding feature of the Post Office appropriation bill, I desire to insert that provision of the bill.

Section 2 of the bill provides:

Section 2 of the bill provides:

Sec. 2. That hereafter the Postmaster General shall have authority and he is hereby empowered to assess and collect a sum of money, or fee, not in excess of 75 per cent of the present rates of bonds now in force, from each officer and employee of the Postal Service with the United States of America through the Post Office Department who are now, or hereafter may be, required by law to give bond, and to create and establish with the money or moneys derived from such assessments and collections a guaranty fund to indemnify the United States of America for losses incurred because of, or by reason of, the failure of any of the said officers or employees to faithfully perform and discharge, or for improperly performing and discharging, the duties and obligations imposed on the said officers or employees by reason of their acceptance of such office or employment, and a sum of money or fee not in excess of the rates of bonds now in force from each contractor with the United States of America through the Post Office Department who are now, or hereafter may be, required by law to give bond by reason of their acceptance or execution of such contract.

And the Postmaster General is further authorized and empowered to prescribe such regulations as may be necessary to create and maintain a guaranty fund and to pay in full from such guaranty fund any person or persons who have incurred or suffered loss or losses for which the United States is liable: Provided, That any officer or employee may give bond, with surety or suretles approved by the Postmaster General, in lieu of and in the place of an assessment for or contribution to the said guaranty fund: Provided further, That the Postmaster General may, in his discretion, require and secure a bond for the faithful and proper performance and discharge of the duties and obligations of any

office or employment in addition to the assessment for and contribution to the said guaranty fund: And provided further, That the premium of such bond shall be charged against and paid from the said guaranty fund: And provided further, That the establishment and operation of said system shall be without additional cost to the Government.

This is not appropriating money for the conduct of the Post Office Service. It is new legislation and an innovation in the regulation of conducting the post-office business. In recommending this provision of the bill the chairman of the committee said:

Mr. Chairman, there has been much discussion and feeling about this question, but it can be very clear that there can be and is no opposition to it except from selfish motives. Briefly stated, the position of the department in offering this legislation is that such action will result in material saving of money which is now paid in premiums to surety

maierial saving of money which is now paid in premiums to surety companies.

Second. It will stimulate bidding and competition and restore confidence in the minds of the public.

Third. It will prevent collusion among bidders and unwarranted and unfair action by surety companies and their agents.

Fourth It will enable the department to handle and keep within its control confidential information which is now furnished to surety companies by bidders long before it reaches the department, as well as to decide for itself whether or not a competitor is competent or qualified to perform service on proposals submitted by him.

Fifth. It will prevent the restriction and dictation of the amount of bids, such as has been referred to in this report.

They therefore recommend that the present system of bonding of star-route, screen-wagon and other contracts be abolished, and in lieu thereof that a law be enacted containing such provisions as may be deemed necessary in order to have such contracts in the future bonded by the Government.

A specific case is mentioned by the honorable chairman of the committee showing that the Government lost \$20,000 on a single contract because the bonding company refused to bond a contractor unless the contractor would raise his bid from \$44.000 to \$64,000. It looks very strange to the ordinary business man that the Government would award a \$44,000 contract to a contractor at \$64,000, lay the blame on the bonding company, and seek to charge up the loss to the Government of \$20,000 to any bonding company. Has it come to pass that the Government of the United States could find only one man to whom it could let a single contract? And if the contract was only a \$44,000 contract and worth that price, why did it let the contract for \$64,000? This certainly looks like extravagance with a venge-ance. Then, again, why does the Government charge up the loss to the bonding company? Is there not in this broad land any other person who could give ample security to the Government for a \$44,000 contract? Or must the contract be limited to a single person with security from a bonding company? What I insist is that the Government is to blame, whether through the Post Office Department or any other department, for paying \$64,000 for work or material worth only \$44,000, and not the bonding company.

If it is generally known that this method will be tolerated by the Government, we have have no doubt but what there will be plenty of bidders in cases of such contracts where the Government pays a third more for services or articles than they are worth. The agreement is presented by the chairman on the theory that the contract was a \$44,000 contract and not a \$64,000, and it would have been interesting to know whether or not the contractor made money or lost money on this particular

contract, and how much.

We are told that bonding companies do not solicit the bonding screen-wagon or rural-route contracts. Neither do they solicit the bonds for contractors of public buildings. And we are also told of an illustration where a surety company paid an indemnity of \$200,000 in a single case, and the question is then asked. How long could a guaranty fund stand such a strain? This bonding business is a business of itself. It is more or less precarious, and it should not be entered upon without the fullest investigation that it is the proper thing to do. It is of frequent occurrence to notice in the newspapers of the day startling accounts of large defalcations of the surety bonds of public officials and private persons clothed with fiduciary positions.

It might be good business for the Government to accept on such contracts personal surety bonds signed by individuals of undoubted financial standing. This section of the bill for bonding is now eliminated from the bill, but we are given to understand that it wil' be incorporated in the next bill. This keeps the bonding proposition alive, and the intention is to raise a guaranty fund out of which the losses can be paid. This guaranty fund is to be procured from employees by an assessment and collection from each of the officers and employees of the Posta' Service who are required by law to give bonds. No such officers or employees have petitioned or expressed their willingness to furnish money for this fund, although the rate is to be but 75 per cent of what they pay the surety companies for such bonds. But one of the objections lies in the fact that this fund will be from time to time depleted, and if the employees are to be the contributors they stand to contribute from time to time, which

might make the rate greatly in excess of what the bonding companies now charge. The employees are the servants of the Government, and what do you think of the proposition of an employer charging his servants and employees a certain per cent to guarantee him against loss from each of the other employees? If you hire a number of men, you do not compel each one to contribute to protect you against the loss of each of your other workmen. It ought to be sufficient for one to furnish his own guaranty without furnishing surety for his colaborers.

If the employees of the Government are to furnish money to do Government bonding, they should have a voice in placing the bonds. It does not seem right to ask a person to contribute money to conduct a business in which he has no voice. The bonds to be taken are to be passed upon by the Government presumably, but actually by the Postmaster General. Neither furnishes the money and are not particularly interested in the losses, because all losses are to be made good not by the Government but by the employees. It is in principle the same as taxation without representation. It subjects the employees to losses without having any voice in the conduct of the business. At any rate, there is no necessity for forming this bureau; for establishing a large number of new offices; for going into a precarious business; for charging the employees with the losses without any provision for sharing in the gains.

But it is stated that the Government will save money by establishing this activity and bonding its employees. That is not admitted. That remains to be seen. But if the Government is to enter upon the policy of going into the business, then it should furnish its own funds for the conduct of that business and take its own chances. The Government contracts for a large supply of boots and shoes, clothing, blankets, and provisions of all kinds, and uses nearly every product of manufacture. Would anybody advise the Government because it could get its products a little cheaper to go into every industry in which it could accomplish that result? We read of the great profits of the iron and steel industry. Why does the Government not purchase mines, produce its own ore, and engage upon these enterprises? Why does not the Government go into the ship-building business? Why does it not go into the automobile business and pay its employees the wages that some of the automobile companies do? It does not look right that they should pick out this highly scientific business, where the chances of profit and loss are a feature, and not adopt that policy in other

Undoubtedly when the question of bonding is looked into and the facts are fully understood and the testimony weighed that it will not extend its paternal care to this guaranty business.

Pilotage at Southern Ports.

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. HUDDLESTON. Mr. Speaker, as a part of my remarks upon House bill 9678—the Small bill—entitled "A bill to exempt from compulsory pilotage barges while in tow of steam vessels navigated by Government pilots," I wish to quote a letter which I have received from Mr. C. W. Shackelford, of Birmingham, Ala., president of Eclipse Coal Co., as follows:

LETTER OF MR. SHACKELFORD.

BIRMINGHAM, ALA., February 25, 1916.

Hon. George Huddleston,

Washington, D. C.

My Dean Sir: I notice in the newspapers in the last few days, that the river pilots now busy in Washington, fighting a bill introduced by Congressman Small, of North Carolina, for doing away with the services of pilots, provided the master of the vessel holds a Government license etc.

services of pilots, provided the master of the vessel holds a Government license, etc.

I take the liberty of writing you on this subject, and inclosing some information, which I have obtained, in my endeavor to do some coal business in Cuba in 1914. This statement shows the comparative port cost and expense in handling a schooner of 1,200 tons capacity of coal from Philadelphia and Mobile.

The difference you will note amounts to \$341, and is made up practically in towage and pilot's charges, excess at Mobile. In further explanation of this transaction, I beg to say that in 1914 I was interested in a coal contract for delivery in Cuba, amounting to something like 50,000 tons in sight.

I arranged for a small schooner of 900 tons and had delivery made from Mobile to the port mentioned in April, 1914, and my coal proved satisfactory. In the following July I got another contract arranged for of 1,200 tons of coal to go forward during August, and in my endeavor

to get a vessel with freight rate, to enable me to again get in this market, I run up on the information which I inclose you, showing these port charges at Mobile, as compared with Philadelphia port charges. Pending my negotiations, unfortunately, the war in Europe came on, and, in consequence, I could not get a vessel for love or money, and I lost out on that account.

As I see it, and with the information I have in hand, Mobile as a seaport, with existing towage and pilotage charges, together with some other port difficulties, which will make it simply an impossible proposition for any one in Alabama to compete with any other southern port on the gulf or Atlantic coast in shipping any product.

From the information I get, Mobile has something like 30 feet of water, and it is something like 30 miles to deep water on the Gulf, and the towage from other Gulf and Atlantic Ocean seaport cities range from 10 to 76 miles, and all with less cost.

Now, understand, I am not inclined to raise the question as to the merits of the pilot or towboat charges, but as we Birmingham people, and the entire State of Alabama, are vitally interested in Mobile as a port, we take it that our Congressman will join us and see that Mobile is made a port equal to the best in the country, and with all the facilities, and with reasonable cost in handling export business, without limit, except as to our capacity and ability to handle, and give us the full benefit of the Warrior River.

If you will interest yourself in this matter, I would be glad, if wanted, to furnish you further information on the subject, as I am also sure many of your friends around Birmingham can perhaps give you more of it than I can. I am,

EXHIBIT TO MR. SHACKELFORD'S LETTER.

EXHIBIT TO MR. SHACKELFORD'S LETTER. Philadelphia and Mobile port charges compared.

(Philadelphia to Cay Frances, Cuba, 1,200 tons coal, Sept., 1914.) Commission on charter
Docking at coal dock, tow
Towage down the Delaware River
Loading and trimming cargo coal, 7 cents
Discharging coal at Cuba, 20 cents
Clearing and Cuban consul fee, Philadelphia
All Cuban customhouse, pilot, and consignee charges, Cuba

There are other charges, but this will do. There is no pilotage on coal to foreign ports or any ports out of Philadelphia.

Mobile—Same port.

Commission charter, should be more as freight should be higher. \$114

1,069 728 Philadelphia charges_____ Mobile excess charges

Mobile excess charges 341

This is the difference between shipping coal from Philadelphia to Cuba and Mobile to Cuba, about 25 cents per ton.

Mobile port, excess charges made up as follows:

Towage up and down bay \$170

Pilotage—compulsory 130

Harbor master 5

Loading and trimming yessel 36 341

The President's Address at the Gridiron Club Dinner.

EXTENSION OF REMARKS OF

HON. J. THOMAS HEFLIN, OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. HEFLIN. Mr. Speaker, under the leave granted me to extend my remarks in the Record, I include an address de-livered by the President of the United States at the Gridiron dinner Saturday night, February 26, 1916.

The address is as follows:

THE PRESIDENT'S ADDRESS.

Mr. Toastmaster and gentlemen, I have very little to say to-night except to express my warm appreciation of the invariable courtesy of this club and of the reception you have so generously accorded me. I find that I am seldom tempted to say anything nowadays unless somebody starts something, and

Your talk, Mr. Toastmaster, has been a great deal about candidacy for the Presidency. It is not a new feeling on my part, but one which I entertain with a greater intensity than formerly, that a man who seeks the Presidency of the United States for anything that it will bring to him is an audacious fool. The responsibilities of the office ought to sober a man even before he approaches it. One of the difficulties of the office seldom ap-preciated, I dare say, is that it is very difficult to think while so many people are talking, and particularly while so many people are talking in a way that obscures counsel and is entirely off the point.

The point in national affairs, gentlemen, never lies along the lines of expediency. It always rests in the field of principle. The United States was not founded upon any principle of expediency; it was founded upon a profound principle of human liberty and of humanity, and whenever it bases its policy upon any other foundations than those it builds on the sand and not upon solid rock. It seems to me that the most enlightening thing a man can do is suggested by something which the Vice President said to-night. He complained that he found men who, when their attention was called to the signs of spring, did not see the blue heaven, did not see the movement of the free clouds, did not think of the great spaces of the quiet continent, but thought only of some immediate and pressing piece of business. It seems to me that if you do not think of the things that lie beyond and away from and disconnected from this scene in which we attempt to think and conclude you will inevitably be led astray. I would a great deal rather know what they are talking about around quiet firesides all over this country than what they are talking about in the cloakrooms of Congress. would a great deal rather know what the men on the trains and by the wayside and in the shops and on the farms are thinking about and vearning for than hear any of the vociferous proclamations of policy which it is so easy to hear and so easy to read by picking up any scrap of printed paper. There is only one way to hear these things, and that is constantly to go back to the fountains of American action. Those fountains are not to be found in any recently discovered sources,

Senator Harding was saying just now that we ought to try when we are a hundred million strong to act in the same simplicity of principle that our forefathers acted in when we were 3,000,000 strong. I heard somebody say-I do not know the exact statistics—that the present population of the United States is 103,000,000. If there are 3,000,000 thinking the same things that that original 3,000,000 thought, the hundred million will be saved for an illustrious future. They were ready to will be saved for an illustrious future. stake everything for an idea, and that idea was not expediency but justice. And the infinite difficulty of public affairs, gentlemen, is not to discover the signs of the heavens and the directions of the wind, but to square the things you do by the not simple but complicated standards of justice. Justice has nothing to do with expediency; justice has nothing to do with any temporary standard whatever; it is rooted and grounded in the fundamental instincts of humanity.

America ought to keep out of this war. She ought to keep out of this war at the sacrifice of everything except this single thing upon which her character and history are founded-her sense of humanity and justice. If she sacrifices that, she has ceased to be America; she has ceased to entertain and to love the traditions which have made us proud to be Americans; and when we go about seeking safety at the expense of humanity, then I for one will believe that I have always been mistaken in what I have conceived to be the spirit of American history.

You never can tell your directions except by long measure-You can not establish a line by two posts; you have got to have three, at least, to know whether they are straight with anything, and the longer your line the more certain your measurement. There is only one way in which to determine how the future of the United States is going to be projected, and that is by looking back and seeing which way the lines ran which led up to the present moment of power and of oppor-tunity. There is no doubt about that. There is no question what the roll of honor in America is. The roll of honor consists of the names of men who have squared their conduct by ideals of duty. There is no one else upon the roster; there is no one else whose name we care to remember when we measure things upon a national scale. And I wish that whenever an impulse of impatience comes upon us, whenever an impulse to settle a thing some short way tempts us, we might close the door and take down some old stories of what American idealists and statesmen did in the past, and not let any counsel in that does not sound in the authentic voice of American tradition. Then we shall be certain what the lines of the future are, because we shall know we are steering by the lines of the past. We shall know that no temporary convenience, no temporary expediency, will lead us either to be rash or to be cowardly. I would be just as much ashamed to be rash as I would to be a coward. Valor is self-respecting; valor is circumspect; valor strikes only when it is right to strike; valor withholds itself from all small implications and entanglements and waits for the great oppor-tunity when the sword will flash as if it carried the light of heaven upon its blade.

Coming Restoration of the Mississippi as an Important Artery of Commerce.

EXTENSION OF REMARKS

HON. H. GARLAND DUPRE,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, February 29, 1916.

Mr. DUPRÉ. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article from the Scientific American of February 26, 1916, in relation to the coming restoration of the Mississippi as an important artery of commerce

The article is as follows:

COMING RESTORATION OF THE MISSISSIPPI AS AN IMPORTANT ARTERY OF COMMERCE

[By O. R. Geyer.]

Can the Mississippi River once more become an important highway of commerce?

Experienced rivermen who have been watching signs of the coming restoration of inland navigation on the river believe that it can and that the day is not far distant when the Father of Waters will be restored to the proud position it once held as the Nation's greatest artery of commerce. After 80 years of inaction and failure to graspy tion on a large and dependable scale, and in the spring the first of the 36 fast steel barges now being built will begin plying between New Orienss and Minneapolis.

Some of the more progressive terminal points along the river have set modern, cheap terminals to compete with the railroads. New Orienss is the leader in this movement and is spending nearly \$100,000,000 in preparing the port for the expected revival of navigation. To-day the snagged, shoal-marked river exists only in the pages of Mark Twain's the turbulent days on the river, and now it is go easy for the modern coordinated terminals bave done move than anything else to postpone with better and cheaper terminal facilities many years ago, there has been no really determined effort to take advantage of the vast opportunities awalting those making proper use of the river way. Minneapolis, Davenport, St. Louis, Quincy, New Orleans, and a few of the distribution of the long ferminals are completed they will find that the Government has more than kept pace with their enditation of the long feramed of 6-foot channel.

Nearly \$60,000,000 has been spent or will be expended in building rolwal is spending about the realization of the long feramed of 6-foot channel.

Nearly \$60,000,000 has been spent or will be expended in building rolwal is spending about the realization of the long feramed of 6-foot channel.

Nearly \$60,000,000 has been spent or will be expended in building a not the first unit of a concrete terminal.

Once of the marvesis of the long fight for the retoration of river traffic has been the propagations and by the city of New Orleans i

of rat proofing the city will cost \$7,500,000, so thorough are the preparations being made for the revival of initiand navigation.

The work that New Orleans is doing supplements that of the State of Illinois in digging an 8-foot barge canal from Chleago to Davenport. The Government has cooperated even further by building the world's greatest inland dry dock at Koekuk, which can care for three of the largest river boats at one time. Even more important work is being done in blasting a 6-foot channel through the dangerous Le Claire Rapids below the town of Le Claire, lowe, on which more boats have come to grief than through any one other agency on the river. The Le Claire Canal will be 250 feet wide and about 3 miles long. The lowa shore will be used for one bank of the canal and a cofferdam is being built on the outer or river side. When the work of blasting and excavating the rock is completed, which will take another year, a dam and locks will be erected at the lower end of the canal.

The Le Claire Rapids are the last great obstacle in the way of a 6-foot channel. Under oresent Federal rules ships are forbidden from trying to pass the rapids in the nightifune, because of the great danger. Five years time probably will be required before the large river boats. The port of New Orleans will be one of the wonders of the world when fully completed. At the present time it consists of 41.4 miles of river frontage, all under the control of the city dock board. This harbor has a developed area of more than 7 square miles, while the deep-water area within the port limits totals it square miles. The harbor varies in depth from 40 to 188 feet. In time, should conditions warrant it, steel sheds and wharfage facilities could be extended from Point a la Hache to Baton Rouge, about 178 miles, which would provide a deep waterway harbor of 85 square miles. The public wharves have a platform area of 3.777.186 square feet, and steel sheds three-quariers of a mile long protect a wharf area of 2.585,906 smuare feet.

The methods

willed the towboat, so that it no longer is used on an extensive scale on the river.

"When there used to be 4,000 steamboats and 10,000 acres of coal barges and rafts and trading scows," Uncle Memford, one of Twain's river friends, said, "there wasn't a lantern from St. Paul to New Orleans, and the snags were thicker than bristles on a hog's back; and now, when there's three dozen steamboats and nary barges and rafts, the Government has snatched out all of the snags and lit up the shores like Broadway, and a boat's as safe as she would be in heaven."

This is why river men believe the time is ripe for the restoration of inland navigation on the Mississippi, for, they say, the Government has done its share of the preliminary work.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

HON. PETER F. TAGUE, OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES, Tuesday, February 29, 1916,

On the bill (H. R. 10484) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1917, and for other purpo

Mr. TAGUE. Mr. Speaker, in compliance with the request of Mr. BENNET, of New York, who during the debate on the Post Office appropriation bill requested that I should furnish the names of the directors of the New York, New Haven & Hartford Railroad who were members of the Merchants' Association of New York, I desire to file the following:

find in looking over the membership of the association that the New York, New Haven & Hartford Railroad Co. is a member and that Benjamin Campbell, vice president; Robert T. Haskins, freight traffic manager; John T. Pratt, and T. P.

Maxwell are also members of record.

It can not be successfully denied that this road in the past has been controlled by the Morgan and Standard Oil interests

of New York. I find that the J. P. Morgan Co. and the Standard Oil Co. are members of this association.

The following is a list of the directors of the New York, New Haven & Hartford Railroad, against whom the Government is now in action for violation of the interstate-commerce law:

Howard Elliott, A. R. Whaley, H. M. Kocherberger, E. G. Buckland, B. Campbell, J. H. Heustis, L. S. Starrs, William Rockefeller, John T. Pratt, George F. Baker, C. F. Brooker, William Shriver, D. Newton Barnes, Robert W. Taft, J. S. Eaton, J. S. Hemingway, E. Eton Roberts, A. T. Hooley, S. Rea, T. De Witt Cuyler, H. K. McHarg, J. S. Billard, M. F. Plant, and T. P. Maxwell.

In all proceedings thus far it has been acknowledged that the Standard Oil and Morgan interests of New York have dictated the directorship of this road. This not having been denied, it is therefore a fact that the representatives of this road are the representatives of these two interests, inasmuch as the Standard Oil and the J. P. Morgan interests are direct members of this association. The above-named directors, as their representatives, are therefore indirectly allied with the merchants' association.

I also find in looking over the list of this association that there are more than 40 railroad companies having membership in this association, in which many of them the Standard Oil and Morgan interests are allied. I also find there are more than 75 banks and trust companies in which these interests are also associated; that there are more than 125 bankers and brokers who are daily dealing in the stocks of the railroads of the New York, New Haven & Hartford and other railroads who are members of this association and who are now petitioning Congress for protection.

Among the membership of this association are many other interests, including railroad supply houses and brokers of different kinds, who have daily dealings in a business way with

I believe that this verifies my statement that among the membership of the Merchants' Association of New York can be found a large part of its membership who are directly allied with the financial interests who dominate the directorship of the New York, New Haven & Hartford Railroad, and that this portion of the membership of this association is also allied, either directly or indirectly, with the railroads now in question.

Rural Free Delivery Service.

EXTENSION OF REMARKS

HON. NELSON E. MATTHEWS, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. MATTHEWS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter from the Fourth Assistant Postmaster General and my reply to same. The letters are as follows:

POST OFFICE DEPARTMENT,
FOURTH ASSISTANT POSTMASTER GENERAL,
Washington, February 25, 1916.

Washington, February 25, 1916.

Hon. Nelson E. Matthews,

House of Representatives.

My Dear Mr. Matthews: I note in your remarks in the Congressional Record of February 24, 1916 (p. 3502), that you state that in answer to protests from patrons of various offices in your district, "The stereotyped reply comes back that it is in the interest of economy. Economy that cripples a service and makes it, in many instances, worse than no service is surely a faise economy."

As I believe that you will be willing to correct any misstatements of fact, I feel that you will be pleased to do so in this instance. You have received no stereotyped statements from this department in which it is declared that the revision of the Rural Delivery Service was in the interest of economy. While, naturally, there is economy self-evident, yet you were assured that any funds available through such revision or readjustment would be immediately used to establish or extend service to possible prospective patrons wherever found, etc.

This is submitted for such action as you may deem proper.

Very sincerely, yours,

Jas. I. Blaksler,

JAS. I. BLAKSLEE, Fourth Assistant Postmaster General.

FEBRUARY 29, 1916.

Hon. James I. Blakslee, Fourth Assistant Postmaster General, Washington, D. C.

My DEAR MR. BLAKSLEE: I have your favor of the 25th and note that you take exception to some remarks I made in the House on February 24, 1916. Possibly you are correct in saying that this is a misstatement of facts. However, there are so many sentences in the letters from you of a similar character, and the views expressed in your

letters in reply to all the petitions I sent you are so much alike, that at the moment the only word that occurred to me as fitting the subject properly was the word "stereotyped."

The variations in the replies received from you were not sufficient to get the idea of their being stereotyped out of my head.

In looking over your letters I find that, while you did not use the word "economy," you, however, state in your letter of February 14, concerning Paulding County, Ohio, "that this can be accomplished at an actual saving in the cost of operation of \$6,912 per annum, seem unquestionably in favor of the readjustment." I think this statement at least warranted me in thinking you had economy in mind.

You also stated, under date of January 15, in your reply to petitions concerning Putnam County: "The saving effected, \$16,212, is to be used in the establishment of new or extension of existing service in communities where the postal facilities are inadequate for the needs of the residents."

What the people are seriously objecting to is the disrupting of their old, established mail routes. It hardly looks fair to injure or disorganize old, established routes, even if there is a saving, especially for the purpose of establishing new routes. My understanding is that Congress is perfectly willing to furnish your department all the money they require to develop and improve the Rural Free Delivery Service.

Frankly, I want to say that I have lived in northwestern Ohio for the past 60 years, most of the time in Putnam County, and I feel that I am familiar with conditions there, especially so far as the roads are concerned, together with the weather conditions, and I feel that I know the people, who will average up in intelligence with the people of any other community in the United States. I am quite sure that the numerous petitions, together with the scores of letters received by me protesting against the action of your department, would not have come from these people if they had not felt that their service was being

Mobiles.

I am still of the opinion that the patrons living along the automobile routes in Putnam and Paulding Counties, where you propose to establish these routes, are fairly good judges of what constitutes good Rural Free Delivery Service, what is for their best interests, as well as what would or would not be an improvement in their service, in spite of the fact that certain postmasters in the larger towns who would be benefited by the discontinuance of rural free delivery routes out of the smaller towns have advised you to the contrary.

Assuring you of my high regards and regretting that we can not agree, I am,

agree, I am, Yours, very truly,

N. E. MATTHEWS.

Military Instructions of Students Under the Morrill Act of 1862.

EXTENSION OF REMARKS

HON. WILLIAM R. WOOD. OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. WOOD of Indiana. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from Dr. Stone, president of Purdue University, pertaining to military instruction of students under the Morrill Act of 1862.

The letter is as follows:

PURDUE UNIVERSITY, Lafayette, Ind., February 26, 1916.

Hon. WILL R. Wood, House of Representatives, Washington, D. C.

Hon. WILL R. Wood,

House of Representatives, Washington, D. C.

My Dear Sir. At this time of universal discussion of the national question of preparation for defense I deem it important that Congress should not lose sight of one of the most important potential resources which the country possesses as a basis of military organization.

I offer no argument for preparedness, assuming that every intelligent citizen must recognize its importance. Whatever is done in this direction should be in the line of a thorough mustering of resources, a permanent policy utilizing existing forces and organizations and avoiding, if possible, excessive expenditures of money.

Having these principles in mind, I desire to call to your attention the provisions already made under the act of Congress of 1862, known as the Morrill Act, for the administration of military instruction in the land-grant colleges, so called, of the United States. This law was enacted at a time when the state of public mind was similar to that existing to-day, when the people strongly realized the necessity of military resources and the advantage of preliminary training. Under this law there exist to-day 67 colleges, in which over 25,000 students receive military instruction, in which the War Department cooperates by furnishing a regular officer of the Army as instructor and the necessary military equipment

These young men are being trained in engineering, in science, and in all of those technical branches which now have become so necessary as a part of the equipment of the military officer. Indeed, the curricula of these institutions are not dissimilar to that administered in the United States Naval and Military Academies. These young men are being educated at public expense, all of these institutions being maintained by appropriations from Federal and various State treasuries. No other class of young men stands, therefore, in the same relation to their country as do these. Technically trained at public expense, already instructed in the elements of milita

In no other possible way can there be created so efficient a force or one so closely identified with national affairs as by utilizing this existing organization.

I understand that bills have already been introduced covering the lines above suggested, and I can not believe otherwise than that if the subject is understood it would receive the hearty indorsement of Congress; and I make free to ask that, if the matter meets with your approval, you will use such efforts as seem to you wise to bring it to the attention of your colleagues. I am,

Very respectfully, yours,

W. E. Stone, President.

Military Training of the Youth of the Country.

EXTENSION OF REMARKS

HON. H. GARLAND DUPRE, OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. DUPRÉ. Mr. Speaker, under the leave granted to me to extend my remarks in the Record, I include a telegram received by me from the Young Men's Department of the New Orleans Association of Commerce regarding the proper military training of the youth of the country.

The telegram is as follows:

NEW ORLEANS, LA., February 28, 1916.

Hon. Garland Dupré, House of Representatives, Washington, D. C.:

Kindly have the following resolutions, adopted by the Young Men's Department of the New Orleans Association of Commerce, and representing 500 young business men of New Orleans, inserted in the CONGRESSIONAL RECORD, to wit:

Whereas Henry Ford is causing to be published throughout this country certain statements with the object of influencing the public to discourage and disapprove of the adequate military preparedness of the United States, so wisely and strongly urged by the President: Therefore be it

the President: Therefore be it

"Resolved by the executive committee of the Young Men's Department of the New Orleans Association of Commerce, representing the general business interests of approximately 500 men of this city, between the ages of 18 and 30 years:

"First. That said statements would encourage and bring about the willful murder of young Americans, by supporting a doctrine which would unquestionably precipitate them into conflict untrained and unprepared, should they be called upon to resist an invasion of this country by the trained armies of any foreign power;

"Second. That the arguments therein contained are dangerous in a high degree to the peace, well-being, and security of our homes and institutions;

"Third. That the language used is impertinent and offensice by charging our most patriotic men with the basest of ulterior motives in the public press with weakness, the citizenry with lack of comprehension, and our elected representatives with dogmatism; and be it further

hension, and our elected representatives with dogmatism; and be it further

"Resolved. That copies of this resolution be sent to the Hon. Woodrow Wilson, President of the United States, the members of his Cabinet, and to all Members of the United States Senate and House of Representatives, urging upon them the necessity of condemning this sort of propaganda and asking that they impress upon the young men of military age of the nation the necessity of proper military training."

Chairman Executive Committee,

Young Men's Department, New Orleans Association of Commerce.

Preparedness.

EXTENSION OF REMARKS

HON. CHARLES POPE CALDWELL, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 12, 1916.

Mr. CALDWELL. Mr. Speaker, those who are not for preparedness are against preparedness. There can be no middle ground, for a compromise is a failure to prepare. I would like to have it understood at the outset that I am for preparedness a preparedness that will at once provide a sane and scientific organization within the spirit as well as the letter of the Constitution, capable of expansion at a moment's call, and sufficient to maintain the Nation's honor and rights in every quarter of the globe and to protect us from invasion or encroachment from any source. We are as a people the richest Nation of the earth. We bear ill will toward no one, and because of the wisdom and moral courage of our President we are at peace with the world. However much he may be criticized and however much he may be misquoted and misunderstood, all good men will agree that he

has kept us out of the war, and in the light of the conduct of our past Presidents we could hardly expect the same result had

either of them been reelected.

Thanks to a Democratic Congress, guided by that great economist, we have a financial and banking system that has enabled us to withstand the demands of foreign creditors and develop a prosperity which will, in my opinion, extend beyond the life of every Member of this House. We have absorbed nearly all of the foreign-held American securities, which, at the outbreak of the European war, July 31, 1915, amounted to approximately \$10,000,000,000, and we have taken them back at a price far less than that for which they were sold in ex-change for products at a much greater price than the cost of production. The dividends and interest charges upon these enormous values formerly held in foreign countries are now being paid to the American people. At each dividend day we have a new pulsation of finance, increasing prosperity. The gold of the world has found its way into our coffers, and we have ceased being a debtor nation. The balance is now on the other side of the ledger. We are a new people made up of the blood of all nations. An examination of the census reports of 1910 show that there are within the United States those born in the warring nations, or the children of at least one person so born, approximately 27,000,000, or more than one-quarter of our present population, and of the remainder by far the larger portion are of the third and fourth generations of such people. It may be interesting to examine the table as shown by that census report:

(Vol. 1, p. 875, Census Report	1910.)	
England.	2, 322, 442	
Scotland	659, 663	
Wares	248, 947	
Ireland	4, 504, 360	
France	292, 389	
Italy	2, 098, 360	
Russia	2, 541, 649	
Canada	2, 763, 250	
Belgium	89, 264	
Total		15, 520, 324
Germany	8, 282, 618	
Austria	2, 001, 559	
Hungary	700, 227	
Turkey	35, 314	
Turkey in Asia	78, 631	
Total		11, 098, 349
	September 1	State Control Section
Grand total		26, 618, 673

They have been attracted here because their hearts were full of hope, their minds full of ambition, and their bodies strong with energy. Under the American form of Government the individuality of these people has been strengthened, so that to-day America has the power of the organization of the Teuton, the determination of the Englishman, the shrewdness of the Scot, the commercialism of the Jew, the adroitness of the Irishman, and the patriotism of the Italian. A war by any nation against us would be in effect a war upon its own peoples, and certainly a war against its creditor.

I do not expect a situation which will call for the force of arms to decide any matter pending or likely to occur between this Nation and any other nation on the face of the earth. A man does not fight his kin nor his creditor except when deliberately provoked or to support a high moral principle. It seems that the United States need fear nothing unless we take too seriously the cry of the alarmists, or unless we are too greatly impressed by the advocates of peace at any price.

greatly impressed by the advocates of peace at any price.

A man in a high place may "see danger from afar off." The President sits in the highest place in the land, and has information not open to us. He has sounded a warning. In duty we must heed his call. I know not from what quarter to expect trouble. From my 'imited information, it seems that we have not yet reached the crisis. It may be that the President sees trouble with the allies over England's conduct upon the high seas. It may be that he sees a Teuton victory and a demand of England's possessions in America as indennity. It may be that he guards a powder trail leading from Mexico. It may be that our policy toward China is threatened. I can see no cause for alarm from any of these quarters, but my vision is limited and my information more so, and I am prepared to take his word that there is occasion for grave concern and to vote for preparedness with a big "P."

The Nation is able to pay the bill and willing. With a comparatively few exceptions, the business interests of America, backed by its greatest historians and psychologists, demand of this Congress the enactment of a law that will insure the country against terror whenever a crisis may develop. The income from organized business in the United States, exclusive of farm products and rents, amounts to more than \$350,000,000,000

per year. If a demand were made upon the United States by any foreign power capable of enforcing it, to grant which would violate any established principle of international law or result in national dishonor or the surrender of any American right, the machinery of organized business would be affected by the contemplation of our situation to the extent that within a week we would lose, by the pause of the business man at his work, at least one business day. To insure against such a disturbance the business interests could well afford to set aside one-half of a day's income in these very prosperous Democratic years. A vote for preparedness is a vote for business, and my experience has been that an administration that takes care of business generally, generally is taken care of by business at the polls. The protection to be afforded should be commensurate with the risk and hazard apparent; the risk and hazard depend upon the value of the thing protected, and the temper, power, and character of those who covet our property or hate us.

those who covet our property or hate us.

I shall say nothing about the development of the Navy save to express the hope that the Committee on Naval Affairs will present to this House a bill under which, within a reasonably short time, our country will be second to none as a sea power, and that the Committee on Merchant Marine and Fisheries will present a bill designed for the purpose of establishing a merchant marine to the end that the freight charges may be kept at home and not spent abroad. For what profit us that we have the balance of trade and we keep at home the dividends and interest upon our enterprise if upon everything that we sell and everything that we buy the freight charges are carried abroad

for expenditure?

It is with the development of the land force that I have most to do, being a member of the Committee on Military Affairs. seek not to speak for anyone save myself, but I feel that it is our duty to frame a law providing a way within the letter and spirit of the Constitution to establish an armed force of trained men officered by especially educated and patriotic soldiers capable of expansion at a moment's call to meet any emergency and to coordinate business to the end that the Nation's resources would be available for the Nation's defense. The material and reserve supplies should in a large measure be manufactured in Government plants, but not to that extent that private enterprises would be driven from the undertaking, for in case of stress we must have, in addition to the Government plants, a sufficient number of private organizations capable of manufacturing munitions of war, so that all of our needs in the time of war may be quickly supplied.

I herewith submit some correspondence between myself and the War and Navy Departments showing justification for the manufacture of this material in Government plants, and I also at this time wish to say, in response to the attack made upon certain of our liberal and patriotic men who have devoted their time, their energy, their money, and their influence to the upbuilding of patriotic societies advocating the preparation of the United States, that if all the gentlemen mentioned whose motives have been attacked upon the ground of selfish interest are of the same standing and caliber as two whom I have the honor to count as my friends, namely, Col. Robert M. Thompson and Admiral Willard Bronson, the charges must fall with the mere mention of their names. These men are the products of America's greatest institution. They have graduated from the United States Naval Academy; they have served their country. The education received at the hands of the Government has made of them men who stand out among their fellows as being examples of that high character, that strong patriotism, that noble energy toward which all Americans should be striving. I happen to know that Col. Thompson has been one of the best friends the South has ever had. I know that in the social and business world in New York his standing is among the highest, and I know that his greatest delight in life is in service to his country. His purse strings are always open to the worthy cause, and he always has time to discuss or promote any patriotic undertaking. He is known in almost every land as being of the highest type of American citizenship. I am sorry that some of my friends on this side of the House have seen fit to question his and Admiral Bronson's motives. I do not know the others sufficiently to speak of their motives, but I can conceive a patriotism that is above the desire for money.

But, to resume. There are some who are wedded to the pet phrase, "continental army," and many who insist that the absolute centralization of control in time of peace is necessary if we are to have a force available for war; but there is serious contention that in practice there is wisdom in decentralizing in time of peace, and that in time of war the central power becomes absolute. No matter which of these may be right, the Members of this House are sworn to support the Constitution of the United States, and that oath binds us both to the letter of the

document and spirit of its meaning. The Constitution pro-

ARTICLE I, Sec. 8. The Congress chall have power * * * to raise and support armies, but no appropriation of money to that use shall be for a longer term than two years.

To provide and maintain a Navy.

To make rules for the government and regulation of the land and naval forces.

To provide for calling forth the militia to execute the laws of the Union, suppress insurrection, and repel invasions.

To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States, respectively, the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress.

ART II, SEC. 2. The President shall be Commander in Chief of the Army and Navy of the United States and of the militia of the several States when called into actual service of the United States.

And then again we are told that an examination of the military laws of foreign lands shows that the organization of the civilian force in Germany is most nearly like our National Guard, differing only in universal service, and in that the Kaiser has less control than has our President, and the governors of our States have less control in peace and in war than any of the rulers of the twenty-odd principalities of the German Empire. I think that it will be conceded that the land force of the German Empire is the most nearly perfect of any army that has ever been tested on the field of battle.

Our Government was designed to meet just such a situation as now confronts us. It is the highest developed of that human association we call Government, and is the first social organism that takes into account the demonstrated truth "that there may be a man in the community that is wiser than anybody else, but there can be no man who can think better than everybody else."
"The voice of the people is the voice of God," because God is truth, and the whole body politic does not cry out for anything that is not right.

The Committee on Military Affairs, of which I stated I have the honor to be a member, has been in session almost every day since Congress opened. It is composed of 22 members, many of whom have seen active service in the defense of their country. All have studied military science and many of them have had experience fitting them to find the truth. With a patience possible only by reason of the gravity of the situa-tion, with an earnestness born of a patriotic desire to best serve the Nation, and with a courage stimulated by the country's demands this committee has labored unceasingly in an endeavor to arrive at a scientific solution of the Nation's problem and to provide a sane and adequate plan for its de-They have weighed well the testimony given by the advocates of every plan and have counterbalanced the arguments presented in opposition. When the sessions began the bill under consideration contained provisions for a nental army," but after the advocates of that plan had passed through cross-examination it became apparent to my mind that some other plan less selfish and more in accord with the spirit of the Constitution, and less destructive of established institutions, must be presented. The committee hearings are closed. The senior members are now working on a skeleton form of the bill. The full committee will then hold executive sessions. at which, as I understand it, each provision of the proposed bill will be discussed and modified wherever found necessary, and I devoutly hope that all partisan and sectional feeling may be laid aside and that there may be formed a plan giving the Nation an adequate and Regular Army and a citizen soldiery

equal to the Nation's needs. I believe that every means should be first tried without unnecessary delay before compelling universal service or resorting to conscription, without which the "continental army" plan apparently is doomed to failure. While it may be that the people in the East are educated to the requirements of the Nation to that extent that universal service would be acceptable. from an examination of the speeches on the floor of this House and the reading of the newspapers from that portion of our country west of the Allegheny Mountains, it is quite apparent to my mind that the great body of the American public has not come to an acceptance of this doctrine. With a little more pa-tience our efforts will come to fruition, and I hope a law may be framed that will meet the approval of this House and this Nation.

I do not favor a skeleton army. To my mind, the answer to this proposition is one of mathematics. There is no question such a plan would please the vanity and pride of our major officers and provide soft berths for many of them, but we are confronted with something more than politics at this time. With an army filled to war strength, trained to control, the best that we can expect is a 90 per cent efficiency. If a skeleton army is provided, to this 90 per cent efficiency in time

of war must be added raw recruits which we could not expect to be more than 20 per cent efficient, so that with this addition of raw recruits the effect upon the efficiency of our first line would be as 110 divided by 2, or equal to 55 per cent efficiency, and the men we sent prepared to do battle in our time of greatest record would be sent to develop the sent product to the sent pr est need would be sent to slaughter. I would therefore advocate the spending of a few dollars more for the first line.

I would educate and train a large number of officers, and as they go into reserve I would assign them to the citizens' troops. I would have a National Guard under the tutelage of the Regular Army, and I would have summer camps in sufficient number to give men whose patriotism prompts them to surrender a portion of their time to fit themselves to serve the country in her hour of need an opportunity to learn how.

Then in time, if the people come to accept the proposition of the individual's duty of service to the Nation, I would extend the citizen soldiery to universal service if found desirable or necessary, and if the extension of this training did not tend to interfere with the individuality of our people, destroy true Americanism, nor foster in the people a militaristic spirit.

DECEMBER 20, 1915.

Hon. LINDLEY M. GARRISON. Secretary of War, Washington, D. C.

MY DEAR MR. SECRETARY: I have been turning over in my mind the possibility of saying something on the floor of the House of Representatives in relation to munitions and other supplies manufactured by

tives in relation to munitions and other supplies manufactured by Government plants.

Will you please be good enough to send me at your earliest convenience such printed data as you may have on the subject with reference to the various arsenals and other plants under the jurisdiction of the War Department, and particularly will you please furnish me with the following information:

First. In preparing cost data do the various plants carry as an overhead charge the interest upon the money invested in them; and if so, at what rate of interest?

Second. Is depreciation in value of buildings, machinery, and tools taken into consideration; and if so, what percentage in the various articles?

Third. Do the various plants carry as an overhead charge any amount for supervision from the office of the Secretary of War or the bureau under whose immediate jurisdiction they are working?

Fourth. Are any of the salaries of the officers who have supervision or direction or any kind of control of the work in the plants omitted from the cost data; and if so, to what extent?

Fifth. In purchasing materials do the plants pay more or less than is paid by private concerns; and if so, why?

Sixth. Do the employees engaged in work in the various plants receive the highest, the average, or a lower rate of pay than that given by private concerns in the same line of business? What comparison would you make as to hours of labor of the men and pay of supervisory force?

Seventh. Is the product produced by the plants superior, equal to, or inferior to the product obtained from private enterprise?

Eighth. What comparison with private enterprise can you make as to the time required to produce a unit?

Ninth. Do the plants carry in their cost data interest on expenditures from the time of the first outlay until the job is completed?

Tenth. Does the cost data include the expenses of repairs and replacement of tools and machinery and repairs to buildings?

Eleventh. What has been the increased value of plant, real estate, etc.. per annum since its original purchase?

If there are no figures available to answer these questions specifically, will you please furnish me, if you can, a general statement which will approximate as accurately as possible?

Assuring you of my belief in the efficiency of Government work in Government shops and my sincere appreciation of any courtesies extended to me, I am,

Yours, sincerely,

WAR DEPARTMENT,
OFFICE OF CHIEF OF ORDNANCE,
Washington, December 23, 1915.

Hon. Charles Pope Caldwell, House of Representatives, Washington, D. C.

Dear Sir: 1. Your communication of the 20th instant, addressed to the Secretary of War (0.0.000.71/96), has been referred to this office for reply. No printed matter relative to the method of arriving at costs used by this department is available, but a typewritten memorandum on this subject, prepared sometime ago, is inclosed. Replies to part of your question are covered by this memorandum. The answers to your questions will be numbered to correspond to the questions:

answers to your question are covered by this memorandum. The answers to your questions will be numbered to correspond to the questions:

First. Yes; 3 per cent on money invested.

Second. Yes; buildings from 2 to 8 per cent, depending upon whether frame, brick, concrete, or stone; machinery, 4 to 10 per cent, depending upon size and use; allowance for depreciation.

Third. Yes: reference to page 2 of the memorandum herewith will show the items which are considered in determining the War Department overhead and the percentage of the total cost of these items that is considered in arriving at this charge. It will be noted that it amounts to 3.59 per cent.

Fourth. No: 80 per cent of the total pay of the officers so employed is included in arriving at total cost.

Fifth. It is difficult to say, but it is believed that the Government, as a rule, gets slightly lower prices.

Sixth. Instructions as to wages to be paid require that the same wages shall be paid as is paid for the same or similar work in the vicinity. The same rule also applies to the civilian supervisory force. The hours of labor in private plants are, as a rule, 9 or 10, as compared with 8 hours in the Government shops. Many private plants, however, give a half holiday throughout the year on Saturday, but it is without pay, whereas a half holiday, with pay, is given in the Government service from June 15 to September 15. Leaves, holidays, and half holidays now granted amount to 28å days per year, without pay.

Seventh. The inspection of material produced in private plants, as a rule, insures the product being equal to that produced in Government plants, although in some cases the product has been slightly inferior to that produced by the Government.

Eighth. No advantage can be claimed as to the time required in producing material in the Government plants, as compared with private plants.

producing material in the Government plants, as compared with private plants.

Ninth. In only one case has the Government taken into consideration interest on the material involved from the first outlay until the job is completed. This is in connection with the manufacture of smokeless powder at Picatinny Arsenal.

Tenth. Yes; cost includes repair and replacement.

Eleventh. This is difficult to answer. The land occupied by the various arsenals was purchased many years ago, some as early as 1795, and has had the same appreciation that land has had generally in the vicinity.

Referring to the memorandum herewith, it should be noted that the appropriation cost is that usually referred to and given in price lists and is the price used in connection with all transactions with the Army and in certain other special cases. To this price is added the general arsenal burden and War Department burden in making certain other sales; also when comparing arsenal cost with that of private manufacturers. In paragraph 2 on the first page of the memorandum will be found a number of arsenal burden factors. The average for all arsenals is approximately 14.4, which added to the War Department burden given in the second page, makes the average overhead 18, which is the percentage charged in addition to the appropriation cost, as stated in certain cases.

Respectfully,

WILLIAM CROZIER,

Brig. Gen., Chief of Ordnance.

WILLIAM CROZIER, Brig. Gen., Chief of Ordnance.

Memorandum on costs of property manufactured by the Ordnance Department.

Memorandum on costs of property manufactured by the Ordnance Department.

These costs include:

1. Appropriation or allotment cost.

2. General arsenal burden.

3. Wat Department burden.

In greater detail these are as follows:

1. Appropriation cost: The amount chargeable to and defrayed from the appropriation to procure the article.

2. General arsenal burden includes:

(a) Capital cost, or interest on capital invested at 3 per cent. Manufacturing buildings, machinery, wagons, etc., per cent in actual use. Administrative buildings, barracks, quarters, hospitals, etc., at 80 per cent actual value for six principal arsenals.

(b) Depreciation: From 2 to 10 per cent a year. Buildings, 2 to 8 per cent, depending on whether frame or concrete, brick or stone, and use. Machinery, 4 to 10 per cent, depending on size and use of tools. Average annual repairs.

(c) Insurance (fire and accident) at 0.3 per cent.

(d) Administrative cost: Eighty per cent of total, pay of officers and enlisted men, subsistence, clothing, care of grounds, medical service, and pay of clerks, etc., paid out of other than manufacturing appropriations.

Arsenal burdens recently determined, as per above: Frankford, 0.0973: Picatinny, 0.1844; Rock Island, 0.1018; Springfied, 0.1256; Watertown, 0.1507; Watervliet, 0.1792.

Average value of six arsenals, 0.1185.

Arsenal burden=(a) + (b) + (c) + (d) and annual appropriation cost of manufacture, repair, and alteration of ordnance and ordnance stores.

3. War Department burden:

	War	Department burden:	Per cent.
۰	1.	The Adjutant General's office

Hon. Josephus Daniels, Secretary of the Navy, Washington, D. C.

Secretary of the Navy, Washington, D. C.

MY DEAR MR. SECRETARY: I have been turning over in my mind the possibility of saving something on the floor of the House of Representatives in relation to the construction of ships and munitions in Government plants.

Will you please be good enough to send me at your earliest convenience such printed data as you may have on the subject, with reference to the various navy yards and other plants under the jurisdiction of the Navy Department, and, particularly, will you please have the following questions answered:

First. In preparing cost data, do the various plants carry as an overhead charge the interest upon the money invested in them; and if so, at what rate of interest?

Second. Is depreciation in value of buildings, machinery, and tools taken into consideration; and if so, what percentage in the various articles?

Third. Do the various plants carry as an overhead charge any amount for supervision from the office of the Secretary of the Navy or the bureau under whose immediate jurisdiction they are working? Fourth. Are any of the salaries of the officers who have supervision or direction or any kind of control of the work in the plants omitted from the cost data; and if so, to what extent?

Fifth. In purchasing materials, do the plants pay more or less than is paid by private concerns; and if so, why?

Sixth. Do the employees engaged in work in the various plants receive the highest, the average, or a lower rate of pay than that given by private concerns in the same line of business? What comparison woull you make as to hours and labor of the men and pay of supervisory force?

Seventh. Is the product produced by the plants superior, equal to, or inferior to the product obtained from private enterprise?

Eighth. What comparison with private enterprise can you make, as to the time required to produce a unit?

Ninth. Do the plants carry in their cost data interest on expenditures from the time of the first outlay until the job is completed?

Tenth. Does the cost data include the expenses of repairs and replacement of tools and machinery and repairs to buildings?

Eleventh. What has been the increased value of plant, real estate, etc., per annum since its original purchase?

If there are no figures available to answer these questions specifically, will you please furnish me, if you can, a general statement which you will approximate as accurately as possible?

Assuring you of my belief in the efficiency of Government work in Government shops and my sincere appreciation of any courtesies extended to me, I am

Yours, sincerely,

NAVY DEPARTMENT, Washington, January 24, 1916.

Hon. Charles P. Caldwell, M. C., House of Representatives, Washington, D. C.

MY DEAR MR. CALDWELL: Replying in detail to the questions as to navy-yard costs appearing in your letter of December 20, 1915: First. Interest on capital invested is not taken into account, it being

My Dram Mr. Caldwell: Replying in detail to the questions as to navy-yard costs appearing in your letter of December 20, 1915:

First. Interest on capital invested is not taken into account, it being purely hypothetical in Government work.

Second. Until recently no satisfactory method has been worked out for showing depreciation in costs, owing to the legal impossibility of setting up an actual fund for replacements; consequently up to the present time such a charge has not been included in the cost of work.

Third. The salaries of departmental officials are not included in the cost of work the establishment charge stops at the yard limits, as to recognize any other principle would extend the question into a purely academic field, including the whole cost of government—executive, legislative, and judicial.

Fourth. The salaries of navy-yard officials have not up to the present time been included in costs, as it has only been within the last few months that a satisfactory method has been developed whereby the cost system is divorced from the system required by law, whereby the pay of officers is charged to an appropriation other than the shipbuilding appropriation.

Fifth. Owing to lack of information as to prices paid for material by private corporations, it is impracticable to make a satisfactory comparison with prices paid by the Government.

Sixth. The rates of wages of navy-yard employees conform to the standard of the private establishments in the immediate vicinity of the respective navy yards. The hours of labor in navy yards are eight per diem. Contracts for new ships built by private establishments contain the following provision: "Subject to the conditions enumerated in section 2 of the eight-hour law of June 19, 1912, no laborer or mechanic doing any part of the work contemplated by this contract in the employ of the contractor or any subcontractor contracting for any part of said work contemplated shall be required or permitted to work more than eight hours in any one calendar day upon such work."

seventh. The products of the havy yards and of private plants are manufactured under the same specifications and are subject to the same inspection.

Eighth. The records show that the average time for building the Connecticut, Florida, and New York, all Government-built ships, was 3 years 2 months and 26 days, and that the average time required for the contract-built vessels Louisiana, Utah, and Texas was 3 years 2 months and 16 days.

Ninth, Interest on expenditures from the time of outlay until the work is completed is not taken into account in navy-yard costs, not only because interest is in itself purely bypothetical in Government work, but also because when money is expended at a navy yard for labor and material there is no period of idleness for which interest could be computed, all such expenditures being immediately converted into Government assets in another form.

Tenth. Up to the present time only a part of the expense of repairs and replacements of tools and machinery and repairs to buildings are included in navy-yard costs

Eleventh. The additions to the industrial navy-yard plants in the United States from the year 1906 are indicated by the following figures, showing value of total investment year by year:

1906	_ \$97, 118, 756, 2
1907	_ 102, 395, 093, 4
1908	
1909

1913	
1914	
	+ 10 000 0F0 W
1915	_ 170, 200, 000. 1

will be very glad to furnish you with any further information desired. Sincerely, yours,

Josephus Daniels, Secretary of the Navy.

Rural Service.

EXTENSION OF REMARKS

OF

HON. JOHN A. MOON. OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 1, 1916.

Mr. MOON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address recently made by the Fourth Assistant Postmaster General on the subject of the rural service.

The address is as follows:

SPEECH DELIVERED BY HON. JAMES I. BLAKSLEE AT THE TRISTATE MEET-ING OF THE RURAL LETTER CARRIERS OF ARKANSAS, TENNESSEE, AND MISSISSIPPI, AT MEMPHIS, TENN., ON FEBRUARY 22, 1916.

Should approximately \$300,000,000 be insufficient during the fiscal year beginning July 1, 1916, to pay all salaries, including those of rural letter carriers, meet contractual obligations, and liquidate all legitimate indebtedness of the Postal Service, a sum needed to supply such deficiency may be advanced to the Postmaster General out of any money in the Treasury not otherwise appropriated. An individual, a firm, or corporation engaged in any commercial enterprise is compelled to provide for a loss or deficit out of capital or assets, neither of which are located directly in the Treasury of the United States nor indirectly in the taxes paid by the people. The Post Office Department, therefore, has at least this one distinct advantage over any other business concern, otherwise it is in large degree subject to exactly similar limitations.

Thus enormous resources, apparently unlimited capital, vast credit, and tremendous administrative authority are lawfully vested in the Postmaster General as the executive or director of this great business proposition, and, coincident therewith, responsibility, not only for the things that are done and the things that are left undone by every laborer, clerk, carrier, postmaster, or Assistant Postmaster General, but he is also largely responsible for the comfort and convenience of the people of our

country.

It is an absolute certainty that any man clothed with such authority and assuming such responsibility will labor earnestly, honestly, and sincerely to perform his whole duty, to the end that his name and fame will remain stainless and secure in the

history of his time.

Acting for him and with him, every postal employee, imbued with a similar ambition to serve, labors diligently at the task assigned to him-surely none more than the four assistants, who, while directly under the immediate supervision of their chief, have ample daily cause to be thankful that they are subordinate to an experienced public official, familiar with all the details and intricacies of the postal system, and who is wise enough, generous enough, and firm enough to guide them, forgive them, and protect them through every experience, for every failure,

and in every emergency.

During the fiscal year beginning July 1, 1913, and after all estimates had been submitted, all proposed expeditures had been appropriated for, and preparation completed for the conduct of our postal affairs, the department was confronted by an utterly unexpected crisis. Anticipated postal prosperity was suddenly converted into deplorable depression. Instead of profitable returns a deficit was self-evident. The postal receipts, as the barometer of the trade and traffic of the Nation, were falling rapidly, until it was essential to resort to retrenchment to preserve our postal reputation and to minimize the necessity for drafs on the Treasury, which meant additional taxation upon our people already burdened by an emergency war tax. All within a period when a declaration of the facts would have precipitated calamity or a possible panic. Do you wonder that any and every expedient was attempted in order to reduce our We had within our citizenry many who could not understand how this shock to general business affected postal activity, others who adversely criticized any postal economies or who believed that the elimination of useless expense should begin elsewhere than with themselves, and who seemingly failed to realize that the existence of negligence somewhere did not relieve the postal official of solemn duty to eradicate the particular failure within reach. The Postmaster General may properly be proud of the exhibition of courage and efficiency displayed in a time of disaster rarely paralleled in the history of the Postal Service, and the rural carriers and all other postal employees may take unto themselves the credit to which they

are entitled for participating cheerfully and willingly in lightening a burden on the people in the hour of their necessity.

This may be considered only an ordinary duty that could, should, or would be performed by every public servant. True, and in addition, it is similar to daily postal duty, and the only possible recognition merited or desired is the appreciation of our fellow countrymen and their cooperation in our efforts, knowing from such illustrations that whether fully understood or not,

we labor earnestly for their welfare.

Three and one-half lines of House bill 10484, familiarly known as the Post Office appropriation bill, authorize the expenditure of \$53,000,000. More than one-sixth of the entire postal receipts is expended "For pay of rural carriers, substitutes, for rural carriers on annual leave, clerks in charge of rural stations, and tolls and ferriage. Rural Delivery Service, and for incidental expenses thereof." Other statutory legislation provides for the establishment of this particular postal function, and directs that certain specific amounts shall be paid the personnel employed therein for a given number of miles of travel; also for the operation of what are known as motor routes of not less than 50 miles in length at compensation to the carriers of not more than \$1,800 per annum, and so forth,

Fifty-three million dollars is an enormous sum of money to be disbursed within 12 months, at a rate of \$4,416,667 per month. It amounts to \$176,667 per day, or \$245.37 every minute, all paid

to 42,920 rural letter carriers and their substitutes.

Every American citizen is convinced of the substantial benefits derived from the expenditure of this or even a greater sum for the collection and delivery of mail on rural routes, regardless of the revenue received therefrom. We all realize the advantages to our people of the avenues of communication and for the distribution of knowledge, and we are determined that these avenues of communication and dissemination of knowledge shall be improved and increased to where they will be of maximum value to our fellow citizens.

We all have one common desire, one mutual interest, and that is: That every dollar current in this river of money shall produce the greatest amount of good service; furthermore, that under any and every condition absolute equity and fairness in

the distribution of compensation shall appear.

After three years of direct, personal supervision of the methods pursued in the establishment and extension of rural mail service, I am convinced that there has been unfairness in the distribution of mail facilities to rural patrons, that in some localities more than adequate mail service has been provided, while in many other places all mail service has been denied.

I am prepared to prove that there is discrimination and injustice in the compensation paid the personnel employed in the Rural Delivery Service. There are thousands of rural carriers who necessarily work hard for long hours over poor roads, who receive exactly the same compensation as is paid to thousands of other carriers who have a very small amount of work to per-

form in a few hours over a boulevard.

The Postmaster General has directed that every vestige of special privilege, every unnecessary duplication of service, and every unfair retrace for the convenience of one patron at a loss to another be eliminated, and I declare to you that during whatever period it may please the American people to continue this, their administration, and subject to the pleasure of the President, I shall carry out the orders of the Postmaster Gen-eral to the utmost limit of my administrative capacity, regardless of abuse, misrepresentation, or malicious falsehoods. shall endeavor to introduce a square deal in the distribution of rural mails, and not that alone, I shall continue to demand for the rural carriers a fair day's pay for a fair day's work and for the taxpayer a fair day's work for a fair day's pay.

I propose to use any modern device and adopt any improved methods of distribution that will increase the efficiency or productiveness or convenience of the Rural Delivery Service. hope to protect the rural patron against evercharges for collection boxes, and to facilitate the extension of service to him without unnecessary delays, all red tape to the contrary not-

withstanding.

It will be essential that carriers sincerely cooperate in this endeavor, to the end that they maintain the profession or calling of rural letter carrier where it will be recognized as even more necessary, certainly as reputable, as that of any other Federal

employee.

To do so, be prepared to sacrifice pay or place, if through such sacrifice you increase the contentment and happiness of your fellow countrymen. I solemnly assure you that only through patriotic self-sacrifice, only through unselfish desire to serve, only through quick and severe condemnation of trickery and dishonesty can you hope to command the respect and commendation of your fellow countrymen. Thrust out from your ranks all

deceit and hypocrisv and dedicate yourselves cheerfully, willingly, and unselfishly to the service of the people. Do not imagine the people can be fooled; they know. They appear wise, but again let me repeat, they know. cover your route in two, three, or four hours and collect twelve hundred dollars a year, but you can not make your friends and neighbors-and they are a part of the people-believe you earned it.

You may use inadequate equipment and take eight hours to travel a route that should be covered in four with a proper outfit. The postal patron—the people—knows this. It is possible to take a picture of a heavy load of mail transported on some unusual trip, send the picture to a Representative in Congress, and shortly thereafter read an oration printed in the Congres-SIGNAL RECORD having your photograph as an incentive to rounded periods and an inspiration for impressive oratory. Nevertheless, the daily trip report and popular opinion can not be altered in this manner. The people know.

The farmer patron is confronted with a difficult problem when you drive your team leisurely past his domicile or go rushing by at express-train speed on a motor cycle, for his boys whom he fondly expects will grow up to help him work the farm quickly learn that you receive \$4 a day for such work, and they immediately plan to leave the farm and locate at the end of the rainbow, where such easy money is found. Of course, this is not the only cause of the farmer's troubles in this direction. It is, however, one of a number, and we owe such an overwhelming debt to the farmer that we should immediately remove the glitter from the gold that surrounds our particular brick. Now, understand me, this does not apply to all carriers, for thousands of carriers do have to work and work hard for long hours over a difficult road, and the farmer boy who takes your place will surely own a brick, and no gold one, at that. But I speak principally to those who should readjust their point of view and who should forthwith make every effort to improve and elevate the profession or calling of a rural carrier. Those who know that four hours or less is not a day's workand when I speak of cooperation and a readjustment of a point of view I mean that such an employee should join hands with all of us and propose or suggest a plan whereby he may serve more patrons, cover more territory, increase the comfort and convenience of his friends and neighbors, and thereby not only earn every dollar received but be entitled to the gratitude and good will of the people. In fact, as well as in name, he will then become a full-fledged member of the high and honorable craft of rural carrier in the United States Postal Service.

Everybody is familiar with the material evidences of progress within the 20 years since the establishment of the first rural free-delivery route. At a famous dinner in Washington, Hon. Bob Taylor, of the State of Tennessee, aptly described the ad-

vancement poetically, as follows:

There are ships that sail in the sea; There are ships that sail in the sky; The West is irrigating. And the South is going dry.

And it is likewise true that during these 20 years some of the roads have been improved; the automobile as a means of conveyance has been perfected; the telephone is in use everywhere; the electric car is convenient, and parcel post established; and coincident therewith, uninvited, but none the less evident. is the high cost of living. It is peculiar that with all these modern labor-saving devices and the improved efficiency resultant therefrom we must pay more for the necessities of life. Could it be possible that we fail to use the labor-saving devices to the best advantage? This is true in the postal operation known as collection and delivery of mail on rural routes. Only in sporadic cases, only here and there, do we find a single step forward in the method of collecting and delivering mail on rural

In 1896 a standard passenger locomotive weighed 137,000 pounds and could pull a five-car passenger train. In 1915 the standard passenger locomotive weighed 386,600 pounds and could pull a 13-car train of modern steel coaches, each one nearly

four times as heavy as the 1895 coach.

In 1895 a standard freight locomotive weighing 143,000 pounds pulled 50 freight cars having a capacity of 20 tons each. In 1915 a standard freight locomotive weighing 393,200 pounds pulled 100 modern freight cars having a capacity of 50 tons each. All the railroad systems boast of the care in design, excellence in construction, liberality in maintenance, and so forth.

In 1896 the first rural route was established, and since that time numerous others elsewhere, so that to-day 43,800 carriers travel approximately 1,200,000 miles a day. I doubt whether the horse used in the first route established weighs any more, pulls any more, or the size of the vehicle is materially altered.

Why not? Because we have confined our attention, our energies, and our resources to the increase in number and length of And why did these factors predominate? meant jobs and the second pay for the same. Everybody was interested in getting the first, and the lucky selection was actually interested in the second. There you are, and no fault do I find with either, for if there was service that should be rendered, it follows that some one should perform it, and if an employee performed efficient service to the satisfaction of the patron, he was certainly entitled to compensation commensurate to the duty involved. Nevertheless, we must now depart from the limitations heretofore prevailing. We must include in our future activities not only the necessary increasing of the number or rural routes and the desirable enlargement of the emoluments from the same, but also the adjustment, revision, or alteration of existing service so that the greatest amount of good service shall be rendered the people. And to that end, how shall we do it?

At the hearings before the Post Office Committee in Washington a Congressman questioned me rather closely. He said: notice you state in your report that you have increased the number of routes by 6,000 since you came to Washington." I told him yes, I had done that, but I said I think there were a few extensions included in that number. He said: "But I notice that you have a thousand less rural carriers." "That also is true," I declared. "I would like to know how you did it."

Well, there is only one way in which to get my animosity aroused, and that is for anyone to "start something," but I said: "If you will give me time, I will show you how and where we did it," and I made up a partial list. I did not have sufficient time to complete it, but I made up a list of where every new rural route was established during this administration-2,118 new ones-and I made up a list of the extensions to routes, no less than 10 miles-6,845-or making a total of about 9,000, and there were over four of the largest States not included, because I did not have time to complete the list, but the name of the place where it was done, the date, and the length of such extensions is set forth on those sheets, and over 2,000,000 new patrons have been added to the rural delivery service in the past three years, at a reduction in the ordinary expense of operation.

Now, I do not claim very much credit for the reduction or economy involved. It is not an absolute, essential factor in the operation of the Postal Service to economize, but I do say that I, together with the rural carriers, who are certainly entitled to the gratitude of the American people for the additional efforts they have made in covering more territory and serving more people at the same rate of compensation, have gathered in these

2,000,000 people. That has been done.

It is essential that we go further and talk about efficiency in the use of motor devices in the operation of the rural service. As the motor is being perfected it ought to be used. It will in-As the motor is being perfected it ought to be used. It will increase and improve the efficiency of the service. It should reach out from Memphis a distance of 50 miles, as I just heard Mr. Powell state, to the outermost confines of this country. Such service from Chattanooga, New York, Philadelphia, Richmond, Atlanta will communicate directly with the resident on the farm. It will give an opportunity to the farmer to send products of It will give an opportunity to the farmer to send products of his farm in to the city residents and there dispose of same.

Roswell, out from Atlanta, secures its mail by way of Chamblee, over a small short-line railroad, which is not a very highly developed one. Alpharetta is supplied by star route 12 or 16 times a week. Gainesville is right on the line of the railroad. Cummings is supplied by star route, starting from the railroad connection. Three of these four towns lie between the railroads, possibly 6 miles to either. We could operate a motor vehicle through Roswell, Alpharetta, and Cummings to Gainesville and return to Atlanta, a distance of over 100 miles, daily. And thus we would have provided for the people a new avenue for distribution of merchandise and products of the farm and for the dissemination of knowledge, and I do not think there is an American citizen who would endeavor to prevent that. I think they will all endeavor to help us put that system into operation.

The question of rural motor route can be brought very closely The operation of motor routes is handicapped to a certain extent in two directions. One is, you can not establish a motor route less than 50 miles in length; you can not pay the carrier more than \$1,800 a year. These two limitations are serious, because there are some routes over 50 miles in length that cost more than \$1,800 a year to operate and some roads less than 50 miles long that are extremely important and would be of advantage to the people if used.

Second, the applicants who could operate a motor route must be certified by the Civil Service Commission, and new examinations are necessary every time a motor route is established,

and men who have been operating a portion of the motor route are compelled to enter the examination or be dropped from the rolls. That is one of the handicaps of the establishment of motor service I hope to overcome.

The main object we should strive for is to increase the importance of the Rural Delivery Service, and to make it the pride of the Nation. Therefore, do everything you can to make

this branch the most efficient.

I am glad to call your attention to one feature, and that is the appearance of the rural carrier. You do not have to do it, it is not compulsory, it is not mandatory in the service, but I have been furnished some photographs of carriers in uniform. I remember one office in particular where, because of my interest in the use of motor vehicles, the postmaster sent me a picture of all of the carriers who had motors and uniforms, and they certainly presented a neat appearance. Undoubtedly the patrons of these routes were proud of their carriers. This is not an order from the department, but I would be glad if all the rural carriers would appreciate how much it means to be uniformed and well equipped. We are sure you wish to present as attractive appearance and be as well equipped as the city carrier, the railway mail clerk, or any other employee of the service.

Let me assure you, my friends, I have enjoyed coming here, and I sincerely hope some time to have another opportunity to see you and to extend to you the right hand of good fellowship any time you are in my neighborhood.

Eight-Hour Day.

EXTENSION OF REMARKS

HON, WILLIAM P. BORLAND, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 1, 1916.

Mr. BORLAND. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter from Samuel Gompers, on the subject of the eight-hour day, which I have agreed with him to insert, and my reply thereto.

The letter is as follows:

AMERICAN FEDERATION OF LABOR, Washington, D. C., February 29, 1916.

Hon. WILLIAM P. BORLAND,
House of Representatives, Washington, D. C.

Sin: My attention was called to your letter of February 26 to me, through the columns of the daily press, some time before I received it. You express surprise that any formal action should be taken by the executive council of the American Federation of Labor upon your amendment to the legislative, executive, and judicial appropriation bill for 1917.

You express surprise that any formal action should be taken by the executive council of the American Federation of Labor upon your amendment to the legislative, executive, and judicial appropriation bill for 1917.

Since you were surprised, it is evident you did not appreciate the fundamental significance of your amendment. This is further proved by your additional statement that the provision does not affect the rights of labor generally, except so far as the rights of labor are identical with the rights of all other taxpayers of the Nation.

Principles of humanity and human welfare are the same whether applied to one group of citizens called wage earners or to another group of citizens called Government employees. Any action of the Government that is contrary to these fundamental principles is of grave cencern to all citizens, because their welfare is ultimately concerned in the establishment and maintenance of these principles.

You say further that the amendment you offered "does not affect the rights of labor generally, except so far as the rights of labor are identical with the rights of all other taxpayers of the Nation." I was under the impression that you were aware that the organized-labor movement of America as represented and expressed by the American Federation of Labor as in addition to the general interests of all citizens the particular function to speak in the name of and defend and promote the rights and interests of the wage carners in their movement and protest against injustice and wrong.

The fundamental step in securing the industrial welfare of workers is to limit hours of work so that physical and mental strength shall not be unduly taxed and there shall be ample opportunity for recuperation, continued development, and the satisfaction of all of the wants and desires that belong to the normal human being.

You make a very serious error in assuming that the American Federation of Labor in attempting to limit hours of work to not more than eight, what we have advocated is the shorter work

out the whole country has been toward a limitation of the hours of work to conform to the facts of health and life that have been established by science.

Can you not see, sir, that if the Government of the United States shall by law lengthen the hours of any of its employees, that it will be regarded as the course for all business and industry to pursue the same policy?

work to conform to the facts of health and life that have been established by science.

Can you not see, sir, that if the Government of the United States
shall by law lengthen the hours of any of its employees, that it will be
recarded as the course for all business and industry to pursue the same
A division of the whole day into three equal periods—one for labor,
another for rest, and another for social improvement—is a purely arnitrary standard and represented the demands of trade movements to
secure to wage earners improved conditions represented in that standard.
But the ideals of each age differ as our understanding and our experience
give us wider and higher concepts of the possibilities of human development and better conditions in industry.

Your suggestion of equalizing reminds me very much of a cartoon by
the timous Thomas Nast, which appeared in Harper's Weekly during
day with a musket in his hands and a babe in the cradle, I year old,
sith a toy gun in his, and inasuch as the Confederate Army averaged
35 years, Thomas Nast so pointedly created his cartoon, declaring that
this was the type of the average. The cartoon is on a par with your
position on equalizing hours of labor.

The demand for the eight-hour worklay does not represent a fixed
ideal, but if represents one stage in efforts to secure a shorter work day
and the standard of the eight-hour worklay does not represent the formal
deal, but if represents one stage in efforts to secure a shorter work day
and the standard of the end of the standard of the end of the end of the end of the end
deal, that is your purpose it can be accomplished equally well by reducing
the hours of labor of all other employees to the hours worked in Washington; thus equalization can be accomplished without any backward
step and without acting in violation of principles of human welfare.

You say that if opposition to your amendment is sustained it will
necessitate a general campaling for the establishment of a uniform
will be necessary to repudinte most of th

actuated by selfish motives, but if even selfish and mercenary motives can be made to serve the welfare of humanity, ought not those motives be utilized?

You make mention of the fact that the merchants of Washington opposed the enactment of the elght-bour law for many of the employees in private establishments. While that is true, yet you must know that that law established a maximum of eight hours, not a minimum; and I venture to suggest the thought that because of the enactment of that eight-hour law no merchant increased the hours of labor of his employees to eight per day when previous to the enactment they worked a lesser number of hours.

You state that there was a tendency to increase the hours of labor of Government employees, and you know that on many occasions Government employees are required to work 10, 12, and more hours a day. This is a "purely administrative" act, Xour amendment is not a "purely administrative" act, as you state, but proposes a legislative enactment, and the law is to be solemnly invoked to increase the hours of labor of the Government workers.

Some one has quoted you as saying (I do not know that you have so declared) that "if the Government clerks do not like these conditions they can resign." I opine that this is not a careful, practical, or patriotic position to assume, for even granting that the Government employees could and would avail themselves of that right, the exercise of the right would be very hard upon them and might prove a very embarrassing situation for the Government also. In connection with this phase it may not be amiss to call to your attention the following: When 26 letter carriers in the Postal Service of the United States—men located in West Virginia—recently undertook to exercise the right of resigning from the Government's service they were indicted, haled before the court, and severe punishments inflicted upon them.

You, sir, are the author of the amendment to increase the hours of labor of the Government employees. It is not known to the proble tha

Nor has there been any opportunity for hearing before any committee of Congress upon so vital a question of fundamental human welfare. Would you or any committee of Congress undertake to enact into law any proposition affecting industry, commerce, finance, transportation, without giving a hearing to the interests primarily affected by such proposed legislation? The mere statement of the question carries with it its own answer.

I hope that when you and the other Members reconsider this matter you will reach a different conclusion.

Samuel Gompers,

President American Federation of Labor.

Samuel Gompers,
President American Federation of Labor.

P. S.—Inasmuch as you say that you contemplate making my letter and your reply part of the RECORD, I trust you will also include this letter in the RECORD.

MARCH 1, 1916.

Hon. Samuel Gompers,

President American Federation of Labor,
Washington, D. C.

Dear Mr. Gompers: In response to your letter of the 29th ultimo will say that I shall certainly perform my promise and insert your reply in the Cengerssional Record, as you suggest.

I reiterate my belief that eight hours is the normal and standard day's work, and that the people who pay the Federal taxes are as much entitled to a standard day's work from their employees as any other set of employers. This is especially true in view of the fact that the great mass of taxpayers throughout the Nation are working at least eight hours a day or longer.

The present condition of favoritism and discrimination as applied to the employees of the Federal Government in Washington is not the result of any scientific or humane principle based upon the character of the work they perform. If it were, many of the arguments in your letter would apply. The historic fact is that the hours of service of Government employees in Washington have been lengthened from time to time as the needs of the public business required, and there is no reason now why it should not approximate the normal standard, especially in view of the fact the postal employees throughout the country, who are also civil-service men, are upon an eight-hour basis. I recognize that there are some occupations requiring, where the work is so exhausting and the strain so great, less than a normal day of eight hours.

Even before I came to Washington as a public official I had studied

who are also civil-service men, are upon an eight-hour basis. I recognize that there are some occupations requiring, where the work is so exhausting and the strain so great, less than a normal day of eight hours.

Even before I came to Washington as a public official I had studied and devoted a good deal of my time, practically as well as theoretically, to the advancement of the cause of social justice. I know that there are some trades and occupations where the industrial life of the worker is pliftuily short. For example, the great rolling mills, where some of the workers have an industrial life at their maximum working capacity of less than 10 years. The structural steel worker must get high wages because his work is uncertain, and he needs perfect physical, mental, and nervous poise. Both his muscles and his nerves must work like new steel springs. His industrial life is also pltifully short. In many of the other mechanical trades a first-class man finds himself on the junk heap soon after passing his fortieth year. Science, which has long been the servant of greed, is at last being brought to the aid of the worker and humane people are beginning to study the question of prelonging the industrial life and independence and self-reliance of the worker. It seems to me, however, if you will pardon me, that it is entirely out of place to discuss these great principles in connection with the simple proposition of requiring a full day's work of clerks in the Government service in Washington. If an eight-hour day is fair to postal employees throughout the Nation, it is fair to Government Printing Office and in the ordnance factory at the navy yard, it is fair to the Washington. If the eight-hour day is fair in the Government Printing Office and in the ordnance factory at the navy yard, it is fair to the Washington in the world that of bookkeeper has the longest industrial life. I have seen men who have been bookkeepers for 50 years. Their heads are bowed, their eyes are dimmed, and their hands are shaky, but they a

of Government clerks. Very truly,

WM. P. BORLAND.

CULPEPER, VA., February 29, 1916.

Hon. Representative Borland, Washington, D. C.

Washington, D. C.

Dear Sir: I wish to express to you a few words of commendation for the Borland amendment that you may know that your efforts are appreciated by those who are not directly beneficiaries of the system as it is at present.

We who are not in the Government employ work as a general rule about 10 or 12 hours a day, and many of us receive much less for our labor than the Government employee. They get 30 days holiday each year on full pay and we get none. Why should they be treated so much better than the average citizen of the Nation they are supposed to be serving? The newspapers of Washington appear to think that one holding a Government job is a luxury that the rest of the Nation is under obligation to maintain.

Trusting that you will not consider this as an intrusion,

I am, very truly,

WASHINGTON, D. C., February 29, 1916.

Hon. WILLIAM BORLAND,
House of Representatives, Washington, D. C.

Dear Sir. Regarding your eight-hour proposition and the fear of the business men of this city that Government clerks may be compelled to labor eight hours instead of seven, would it not be a good plan for you to amend your amendment by providing that all employees in the District of Columbia, including those of business houses, be employed seven hours only? The business men who feel so kindly toward the Government clerks must certainly entertain the same kindly feeling for their own employees, although they pay probably on an average of not more than \$8 or \$10 per week, while the Government pays its employees generally considerably more. Looking at it from this angle it would appear that solicitude of the business men is not

so much for the Government clerks as it is for their money and op-portunities for spending it.

Yours, very truly,

P. S.—We have an eight-hour law for female employees; why not have seven hours for all? I would like to see how the business men would regard such an amendment. It certainly would benefit their poorly paid employees.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 28, 1916.

Mr. HUMPHREY of Washington. Mr. Speaker, the Post Office bill as it passed the House certainly does credit to the Members of Congress, at least, in so far as it relates to the postal employees. The action of the House is in striking contrast to the attitude of the department in this respect.

The bill did not do all for the employees that perhaps ought to be done, but certainly it shows that the House was not unmindful of their interests. I will refer to some of the provisions of the bill that are carried for the first time bearing upon this subject.

It carries a provision providing that all clerks, when they are disabled, may draw full pay for a period not exceeding one year, and the Postmaster General is authorized to pay the sum of \$2,000 to the legal representatives of the clerk in case of his death. This provision is extended to all clerks in the classified civil service, something that does not exist under the present

Again, it provides that clerks in offices of the first class may have an increase in salary to \$1,400 and in the second class to \$1,200. This is also new.

Again, it provides that the clerks shall be allowed compensatory time on one of the 30 days following a holiday on which they perform service, and provides that, for the purposes of the act, holidays shall be all National and State holidays. This is another change in favor of the clerks.

One of the most important changes that was made was one that provided that hereafter there should be no distinction in salary made between letter carriers assigned to collection duty and letter carriers assigned to delivery duty; and this section further provides that the letter carriers whose salaries have been reduced as the result of any order of the Post Office Department making the minimum salary \$1,000 to be paid letter carriers assigned to collection duty shall be restored to their former grades. This corrects one of the greatest injustices that has ever occurred in the Post Office Department. The Postmaster General I do not believe had any legal right to make such an order, and such order ought not to have been made even if he did have the right to do so. It was clearly an unjust and unauthorized discrimination. The House has shown its desire to do justice to a splendid class of Government employees who were wronged by the action of the department.

I have not mentioned all of the changes made in the bill in

favor of the Government employees, but have mentioned some of the most important. It is to be hoped that the postal employee generally will remember, in considering the action of the House, that there is an unusual condition existing in the National Treasury, and that for the first time in the history of this Government in time of peace we are compelled to levy direct taxes upon the people to meet the expenses of govern-Had the situation been as it has always been under a Republican administration, the House would undoubtedly have felt justified in doing more than it did for those who are serving the Government in this great department.

The department, to make the Postal Service self-sustaining, reduced a large number of postal clerks and letter carriers to the substitute list, and in cities where these reductions took place required other employees to perform extra work. This was an attempt at economy that can not be justified. The result shows that it was not economy, but a great injury to the service.

Notwithstanding a statement given out from the Post Office Department in July, 1915, that the Postmaster General had saved a sum in excess of \$14,000,000 from the amount appropriated by Congress for carrying on the Postal Service during the fiscal year ending June 30, 1915, it is doubtful whether any such saving was made, and it is certain that if such saving was made that it was done at the expense of the public service. From the public press it is learned that the Postal Service has been inexcusably bad in most of the great cities of the country. In tests made by the merchants' association in New York City it took from Saturday noon until Tuesday at different hours for the delivery of some third-class mail sent out by the merchants' association in a test of Greater New York's postal service. The merchants' association of that city also state that bulletins mailed before noon on Saturday did not reach the Borough of Richmond until Wednesday at 9.15 o'clock, taking for the 6½-mile journey 93 hours. I have heretofore on the floor of the House referred to this incident as showing the result of the so-called economy in the Post Office Department.

This association also makes a statement in which it shows

This association also makes a statement in which it shows that it required longer to deliver mail matter within the confines of Greater New York than it did to send it from New York to Denver, a distance of approximately 2,000 miles. The conditions that exist in New York City have existed in all the great cities throughout the country. This sort of economy may satisfy the Postmaster General, but it does not satisfy the

country.

I am opposed to economy and I believe that Congress is opposed to economy that starts with a reduction of the low-class salaried employees. If we are going to have economy and retrenchment we should find somewhere else to exercise it, at least to commence it. If the present administration would replace the present free-trade tariff law with a protective tariff law they would have sufficient revenues to pay the expenses of the Government without either levying direct taxes upon the people or reducing the salaries of the Government employees.

The figures in the year 1915 conclusively show that it is not the war in Europe but the free-trade law upon our statute books that have emptied the National Treasury and made necessary these petty economies in running the various departments of the Government in an effort to keep within the revenues

received.

I wish now to refer to another matter, the information concerning which has been gleaned from various postmasters who attended the Postmasters' Convention in Washington in October, 1915. This convention was composed of postmasters of the first and second class offices, and was held in the city of Washington. At this meeting it was estimated that there were approximately 400 postmasters in attendance. All the arrangements for this meeting were looked after by the postmaster of Washington, the directors of the postal savings, and the chief post-office inspector. Special topics were assigned to postmasters, who were required to prepare papers to be read before the convention. The resolutions adopted at the close of the meeting were prepared in the Post Office Department and submitted through a committee, who, of course, made a very favorable recommendation on them. These laudatory resolutions were approved without debate. The proceedings of that convention were taken by stenographers paid by the Government and employed in the Post Office Department. They were sent by the Post Office Department, paid for, of course, by the Government, was utilized in sending out press reports of this meeting. Everything was directed here by the Post Office Department at Government expense.

When it came to holding their next annual meeting, several cities in different parts of the country were anxious to have next year's convention there, but directions were given from the Post Office Department that the next meeting should be held here in Washington City. It was argued that Washington was the logical place for such meetings. It was also pointed out that the next meeting would be held just prior to the general election. The department did not overlook the fact that it would be a wise plan to have all postmasters throughout the country gather in Washington just before the next campaign, where they could advise with the powers that be and learn just what was expected of them. Before the adjournment of this convention provision was made for taking in postmasters of the third class, which, it is estimated, will add 10,000 additional members. It can be easily seen what political power may be exerted through this meeting next October that will be held here in Washington City under the direct supervision of the Post Office Department, the proceedings directed by the department, reported by stenographers furnished by the department and paid for by the Government, and the whole affair given wide publicity throughout the United States by the publicity bureau of the Post Office De-partment, for which the Government pays. Here is a splendid opportunity to play politics at Government expense that the Post Office Department is not going to overlook.

Another thing worthy of mention, according to information that has been given general circulation: The Postmaster General at this meeting made the statement that the department conducted its affairs strictly according to civil service and that no politics were permitted in the Post Office Department. But this statement of the Postmaster General was to a certain degree softened by the fact that the secretary of the Postmaster General informed the visiting postmasters of the true faith that, if they had anything of a political nature that they desired to discuss or if they had any changes that they would like to have made in their offices on account of politics, that such matters could be submitted to him, the secretary of the Postmaster General, in confidential communications, and he would see to it that they came to the attention of the Postmaster General.

If these statements that have been generally circulated are correct, it will appear that the nonpartisan attitude of the Post Office Department is probably not so strictly carried out as

they might wish the public to believe.

While this particular convention of the postmasters had the indorsement of the department and the encouragement of the Postmaster General and his subordinates, and while they attended and did what they could to make the event an enjoyable and memorable one, their action in this matter is in strange contrast with their attitude toward the conventions and meetings of postal employees. The meetings of postal employees everywhere throughout the country have not received any great encouragement from the Postmaster General, nor has he or his subordinates extended any unusual courtesies to them. fact, if we can believe press reports, the meetings of post-office employees in every branch of the service have been discouraged by the department. If there is no politics in the Post Office Department, it seems at least to require an explanation why the postmasters that are appointed by political influence receive so much encouragement and courtesy while the employees of the Post Office Department who are under civil service receive very different consideration.

The post-office clerks, the letter carriers, both city and rural, the railway mail clerks, the supervisory officers in the various post offices, are the men who perform the real valuable work connected with the Postal Service. These are the men that enter the service through a competitive examination at a small salary, and their promotions are slow and limited. The men who fill their positions through political influence do not, as a rule, hold them a sufficient length of time to learn the post-office business; and it does seem that if there is any class of men that should receive the encouragement and the assistance in every way of the Post Office Department it is that class that

for small salaries devote their life to the service.

Justice J. Hay Brown on Preparedness.

EXTENSION OF REMARKS

HON. WILLIAM W. GRIEST,

In the House of Representatives,

Friday, February 25, 1916.

Mr. GRIEST. Mr. Speaker, my distinguished constituent, the Hon. J. Hay Brown, Chief Justice of the Supreme Court of Pennsylvania, delivered on February 22, at the university day exercises of the University of Pennsylvania, held annually in commemoration of the birth of the "Father of his Country," an able and patriotic address entitled "Washington on national preparedness." Having exceptional merit, this address has deservedly attracted Nation-wide attention. The House having consented to my suggestion that the address be reproduced in the Congressional Record, I herewith present it for that purpose,

ADDRESS OF HON. J. HAY BROWN, CHIEF JUSTICE OF THE SUPREME COURT OF PENNSYLVANIA.

Mr. Provost, friends, and guests of the University of Pennsylvania, ladies and gentlemen: Self-preservation is the highest law of a nation, as it is of an individual, and disregard of it by either is disregard of life itself, the preservation of which divine law enjoins no less upon nations than upon individuals. The great, wise men who framed our National Constitution, which is the Nation's source of life, thus wrote the preamble to it:

We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

By the first article of that instrument-the ark of the covenant of freemen set up in this new world before all the nations of the old-it is declared that Congress shall have power "to raise and support armies" and "to provide and maintain a With this authority delegated by the States to the National Congress there is a corresponding duty constantly resting upon that body to exercise it for the purpose for which it was conferred—"the common defense" of our common country.

On this day, when the people of a happy, prosperous, and peaceful Nation are gratefully honoring the memory of the Father of his Country, it is well for them to pause and consider what he, in his wisdom and in the intensity of his interest in the lasting welfare of the Republic, believed to be necessary for its preservation. In his first annual address as President of the United States to the Senate and House of Representatives, after expressing his great satisfaction in congratulating them on the then favorable prospects of public affairs, Washington spoke as follows:

Among the many interesting objects which will engage your attention, that of providing for the common defense will merit particular regard. To be prepared for war is one of the most effectual means of preserving peace. A free people ought not only to be armed but disciplined, to which end a uniform and well-digested plan is requisite; and their safety and interest require that they should promote such manufactories as tend to render them independent of others for essential, particularly military, supplies. The proper establishment of the troops which may be deemed indispensable will be entitled to mature consideration. In the arrangements which may be made respecting it, it will be of importance to conciliate the comfortable support of the officers and soldiers, with a due regard to economy.

In his second annual address to the same bodies, less than a year later, he uttered words singularly appropriate to the distressing conditions now existing in the lands across the sea:

The disturbed situation in Europe, and particularly the critical posture of the great maritime powers, whilst it ought to make us the more thankful for the general peace and security enjoyed by the United States, reminds us at the same time of the circumspection with which it becomes us to preserve these blessings.

Later, in his seventh annual address to the Senate and House of Representatives, he said:

of Representatives, he said:

Gentlemen, among the objects which will claim your attention in the course of the session, a review of our military establishment is not the least important.

* * In this review you will doubtless allow due weight to the considerations that the questions between us and certain foreign, powers are not yet finally adjusted, that the war in Europe is not yet terminated, and that our western posts, when recovered, will demand provision for garrisoning and securing them. * * It will merit inquiry what imperfections in the existing plan further experience may have unfolded. The subject is of so much moment, in my estimation, as to excite a constant solicitude that the consideration of it may be renewed until the greatest attainable perfection shall be accomplished. Time is wearing away some advantages for forwarding the object, while none better deserves the persevering attention of the public councils.

In his eighth and last address to the National Congress was

In his eighth and last address to the National Congress was the admonition of Washington as to the necessity for a sufficient navy:

navy:

To an active external commerce the protection of a naval force is indispensable. This is manifest with regard to wars in which a State is itself a party. But, besides this, it is in our own experience that the most sincere neutrality is not a sufficient guard against the depredations of nations at war. To secure respect to a neutral flag requires a naval force organized and ready to vindicate it from insult or aggression. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violations of the rights of the neutral party as may, first or last, leave no other option. From the best information I have been able to obtain it would seem as if our trade to the Mediterranean without a protecting force will always be insecure and our citizens exposed to the calamities from which numbers of them have but just been relieved. These considerations invite the United States to look to the means and to set about the gradual creation of a navy. * * Will it not, then, be advisable to begin without delay to provide and lay up the materials for the building and equipping of ships of war and to proceed in the work by degrees, in proportion as our resources shall render it practicable without inconvenience, so that a future war of Europe may not find our commerce in the same unprotected state in which it was found by the present?

Finally, in his farewell to his fellow citizens, almost the last words of Washington were that they should take care always to keep themselves, "by suitable establishments, on a respectable defensive posture." I have quoted at length the words of Washington upon the consumingly interesting question of these times because his words, as the father of his country, ought not to be unheeded by its children, who, if they will stop to consider, will know that what he said was the truth then, is now, and forever will be. While he spoke under conditions then existing, it seems as if with prophetic vision he must have seen from afar what is now transpiring throughout the world.

Preparedness for war is not war; it is for the prevention of war, or of successful war, against peace. To be saved from war and bloodshed we devoutly pray, and for perpetual peace we fondly hope. The former must be averted, except as the sword must be unsheathed for the honor and dignity of the Nation for war.

in defending itself from invasion or from violation of any of its rights or in protecting every American in his rights wherever he may be, whether in the frozen zones, in the Tropics, or upon an island of the sea. The simple utterance, "I am a Roman citizen," carried with it protection to the uttermost parts of the earth, and wherever the tread of the Roman legion was heard or the banner bearing the Roman eagle floated the rights of a Roman citizen were safe; and whenever any man can now say, "I am an American citizen," the folds of the flag of his country must give him protection wherever he may be. In protecting him his Government is but protecting itself, for he is one of it; and, if need be, the sword must be unsheathed for such protection.

National security, peace, and prosperity are constantly men-aced on the one hand by the acts and utterances of those who, imagining themselves to be the only patriots in the land, clamor for war on every pretext; and, on the other, by the hysterical cries of equally unreasonable creatures for peace at any price. The public welfare is in as great danger from one of these classes as from the other, and it seems to be impossible to reason with either, if there be any reason in them. The safety of this "heaven-ordained Union, the light of nations, the hope of the world, the protector of States, the defender of personal rights, the guaranty of free government" is in the patriotic conservatism of the masses of the people, guided and directed by wise and conservative leaders in thought and action. Following such leadership, that patriotism will be as intense and will endure as much as the patriotism of those who are always for war or of those who are everlastingly shouting for peace and against preparedness for war, even with the insulted flag of their country flaunted before their faces. To the first, always avowing their patriotism in the name of Washington, let his hope be repeated, That we may never unsheath the sword except in self-defense so long as justice and our essential rights and national respec-tability can be preserved without it." And let those chronic And let those chronic advocates of war read his letters and contrast his calm, patriotic utterances with their unrestrained clamorings. To David Humphreys, who went abroad with a commission to negotiate treaties of commerce, Washington wrote, in 1781, concerning war:

My first wish is to see this plague to mankind banished from the earth, and the sons and daughters of this world employed in more pleasing and innocent amusements than in preparing implements and exercising them for the destruction of mankind.

In the same year he wrote to the Marquis de la Rouerie:

My first wish is (although it is against the profession of arms, and would clip the wings of some of your young soldiers who are soaring after glory) to see the whole world in peace and the inhabitants of it as one band of brothers striving who should contribute most to the happiness of mankind.

To Rochambeau he wrote in 1789:

Notwithstanding it might, probably, in a commercial view, be greatly for the advantage of America that a war should rage on the other side of the Atlantic, yet I should never so divest myself of the feelings of a man interested in the happiness of his fellow men as to wish my country's prosperity might be built on the ruins of that of other nations,

And to Lafayette, he wrote:

Would to God the harmony of nations were an object that lay nearest to the hearts of sovereigns and that the incentives of peace, of which commerce and facility of understanding each other are not the most inconsiderable, might be daily increased!

And again:

There seems to be a great deal of bloody work cut out for this summer in the north of Europe. If war, want, and plague are to desolate those buge armies that are assembled, who that has the feelings of a man can refrain from shedding a tear over the miserable victims of regal ambition? It is really a strange thing that there should not be room enough in the world for men to live without cutting one another's throats.

At the same time he wrote to Jefferson:

In whatever manner the nations of Europe shall endeavor to keep up their prowess in war and their balance of power in peace, it will be obviously our policy to cultivate tranquility at home and abroad, and to extend our agriculture and commerce as far as possible.

By the second class, equally prone to appeal to the memory of Washington in support of their cries for peace, let it be remembered that he declared that "to be prepared for war is one of the most effectual means of preserving peace," and that in his second inaugural address he said:

his second inaugural address he said:

I can not recommend to your notice measures for the fulfillment of our duties to the rest of the world without again pressing upon you the necessity of placing ourselves in a condition of complete defense and of exacting from them the fulfillment of their duties toward us. The United States ought not to indulge a persuasion that, contrary to the orders of human events, they will forever keep at a distance those painful appeals to arms with which the history of every nation abounds. There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

And, in their protest against war and preparedness for war, let the advocates of peace at any price, in appealing to the Bible to sustain them, not forget that the God of Israel was the Lord of Hosts and the God of battles for His chosen people, and that the trumpet blast for self-defense which fell from the lips of the Prince of Peace Himself when he stood before Pilate,

My kingdom is not of this world; if my kingdom were of this world, hen would my servants fight, that I should not be delivered to the

It is said, and with much force, too, that if the nations now at war had not for years prepared for war there would not now be desolating war among them. They all did prepare, however, and what would have been the fate of any one of them if it had not prepared itself for the conflict in which it is now involved? What may be the ultimate fate of any one of them no one can now tell, but all know that it would have been doomed at the very threshold of the contest if it had not prepared itself for No one member of a family of nations can remain unprepared for war when all the other members have prepared for it, for when a family fight occurs each member must be on an equal footing with all the others, if assailed rights are to be defended and preserved. We, the United States of America, are an unprepared member of the family of the nations of the earth. How long are we to remain defenseless against enemies that may come upon us, and how long are we to be powerless to protect and preserve our rich inheritance from those who covet it?

The firebrands of war are now upon the earth spreading death and desolation as they were never spread since man first drew his sword against his fellow. Those brands have not reached our shores, but they may reach us. God be prayed that they do not, but if they should we must be prepared to shield ourselves from them by now preparing to meet them, and down to us through 125 years we hear a voice saying:

The disturbed situation of Europe, and particularly the critical posture of the great maritime powers, whilst it ought to make us the more thankful for the general peace and security enjoyed by the United States, reminds us at the same time of the circumspection with which it becomes us to preserve these blessings.

These words of Washington are being heeded. On all sides there are the evidences of a rapidly growing and constantly spreading conviction that this great Nation must be prepared for war if its peace and all the blessings of peace are to be secure. The considerate judgment of the people is calling for preparedness, and the call comes from each side of party lines. It is the call of no particular party, but of united patriotic Americans, forgetting for the moment mere political alliances and remembering only that they are fellow citizens of the United States for whose common defense against all enemies they, too, are ever ready to pledge "their lives, their fortunes, and their sacred honor." There is not—or there ought not to be—one among us who does not feel that the President of the United States reflected the sentiment of the great majority of his fellow citizens when, in speaking of preparedness a short time ago, he said:

when, in speaking of preparedness a short time ago, he said:

I have not the embarrassment in standing before you to-night of making the impression that I am urging the advantage of a party or the advantage of an individual. There are just as many men interested in national defense on the one side as on the other. They are all actuated by the same motives; they differ as to details, but they do not differ as to their objects, and I thank God that there is no party politics when it comes to the life and welfare of the United States. Do you suppose if the country were in danger any man would hesitate to volunteer on the ground that he belonged to this party or to the other? Do you suppose that if a Republican administration were in power at Washington any Democrat would hesitate to enlist, or that a Democratic administration being there an. Republican would hesitate to enlist? Why, he whole history of the country gives an emphatic negative to that question. We are not Democrats or Republicans to-night. We are Americans

While there may be differences of opinion as to just what ought to be done to make the country safe from every foe, there is no difference among the vast majority that we must be prepared for war from every side. Against whom we are to arm no one knows, but all know, or ought to know, that if we wait until danger is upon us it will be too late to avoid it. to do now is to prepare, then we shall be ready. What the details of the physical preparation ought to be is not a matter for discussion here. These must be left to those who know how strong armies are to be raised and an efficient Navy is to be provided, and let us have faith to believe that our Representatives in the National Congress and the President of the United States. inspired only by the loftiest patriotism, will strive to maintain the peace of the country with honor and dignity and promptly adopt such means as will preserve the peace of the Nation, maintain its honor throughout the earth, defend it against every foe, and protect every American in all his rights in every clime

If this is neither the time nor place to discuss the particular means of physical preparedness which should be adopted for the

defense of the country, the time and place are opportune for referring to the duty resting upon each individual to help his country by his personal morality and patriotism to prepare to meet every foe that may assail it. "Righteousness exalteth a nation; but sin is a reproach to any people." The righteousness that exalts and strengthens a nation is the morality of its people, the standard of which is found in the precepts of the great lawgiver of God's chosen people and in the teachings of our later system of truth. God-fearing men and women were our forbears. The strength of the arm of the patriot from Concord and Lexington to Yorktown was his moral virtue, and it bore him up through all the sufferings at Valley Forge. Sustained by it patriotism will to-day endure all things for home and country. Man's first duty is to fear God and keep His commandments, and the people who do so are thrice armed against all danger. all due regard to religious tolerance and for the absolute right of every man to worship God according to the dictates of his own conscience, it is a matter of judicial notice that we are a Christian people and that the Christian religion is interwoven with our whole system of Government.

In Pennsylvania this is not a mere theory, for those clothed with the highest judicial authority in the Commonwealth have solemnly adjudged that-

Christianity, general Christianity, is and always has been a part of the common law of Pennsylvania—Christianity without the spiritual artillery of European countries, for this Christianity was one of the considerations of the royal charter and the very basis of its great founder, William Penn; not Christianity founded on any particular religious tenets; not Christianity with an established church and tithes and spiritual courts; but Christianity with liberty of conscience to all men. (Updegraph v. Commonwealth, 11 S. & R., 394.)

The greatest constitutional lawyer of his time, in addressing the highest court in the land, declared:

There is nothing that we look for with more certainty than this general principle that Christianity is part of the law of the land. This was the case among the Puritans of New England, the Episcopallans of the Southern States, the Pennsylvania Quakers, the Baptists, the mass of the followers of Whitfield and Wesley, and the Presbyterians; all brought and all adopted this great truth, and all have sustained it. And where there is any religious sentiment amongst men at all, this sentiment incorporates itself with the law. Everything declares it The massive cathedral of the Catholic; the Episcopalian church, with its lofty spire pointing heavenward; the plain temple of the Quaker; the log church of the hardy pioneer of the wilderness; the mementoes and memorials around and about us; the consecrated graveyards, their tombstones and epitaphs, their silent vaults, their mouldering contents; all attest it. The dead prove it as well as the living. The generations that are gone before speak to it and pronounce it from the tomb. We feel it. All, all, proclaim that Christianity, general, tolerant Christianity, Christianity independent of sects and parties, that Christianity to which the sword and the land.

We hear much of dangers which beset us from within as well as from without. There can be no danger from within unless, as a Nation, we become sinners against the laws of God, and there can be no danger from without if we observe them, for against the patriotism of the united people of this country, panoplied with the fear of God and keeping His commandments, the gates of hell shall not prevail. But will the manifold blessings of the Almighty continue to rest upon us, making us strong as a Nation, if we have another god before Him, if we blaspheme His name, forget to keep His Sabbath day holy, and children cease to honor their parents? Are we to escape punishment for violations of the commands, "Thou shalt not steal" and "Thou shalt not bear false witness against thy And what penalty is being paid for the disregard neighbor"? of the commandment to be chaste?

The heart sickens at the scandalous records of our divorce courts and over the ever-broadening prospects of broken marriage vows, followed by shattered homes, parted husbands and wives, separated fathers and mothers, and scattered children. The sin of violating that commandment is sapping the very foundations of society. May the day be hastened when we shall hear less of alleged violations of constitutions and statutes, Federal and State, and more of those comandments without the keeping of which we can not hope to prosper and be exalted as a Nation. Again, hear words of Washington in his farewell to his fellow citizens:

Of all the dispositions and habits which lead to political prosperity, religion and morality are indi-pensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness—these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked, "Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice?" And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason, and experience, both forbid us

to expect that national morality can prevail in exclusion of religious principle.

Patriotism, pure and undefiled, is the handmaid of religion. Love of country is twin to the love of God. The instinct of love of country, of patriotism, dwelling in every human breast, is the abiding and unchangeable source of every nation's strength and safety and the inspiration of the most enlightened civilization has been the inspiration of all the people of the earth through all the ages: "Dulce et decorum est pro patria mori." Strong as love of country is instinctively, it can, by cultivation, be made stronger in each individual and thus become a source of greater national strength. It is a part of the education and experience of a true man and of the real business of life that he should be a patriot. The instinct of the love of country is as natural as the parental or filial love or as the attachment for home. As the bird returns to the nest, so every fiber of a well-educated and well-developed man swells in sympathy with associations of family, home, community, State or Nation. No man liveth to himself and no man dieth to himself. There can be no well-rounded character in selfish individualism.

The aim of all sound education is to broaden the vision and to enlarge the horizon. True patriotism consists in maintaining the right relation of the individual to the family, to the municipality, the State, and to the Federal Government. Treason consists in the derangement of these. The duty of intensifying patriotism starts in the home, and first rests upon the fathers and mothers of the land. It is for them to instill in the youthful minds of their children the principles of morality and patriotism; and if they do so, their children will not depart therefrom. Intenser patriotism is next to be taught in the schools, colleges, and universities, and that is what the great University of Pennsylvania is doing at this hour, for, after all, when these exercises are over, what will be longest remembered of them will be that they made still stronger love for country. This day in every year should, as here, be set aside at all seats of learning in the land for the special teaching of lofty patriotism. This used to be a custom at a spot once dear to me. You, Mr. Provost, and I have a common alma mater. For a moment I now go back in memory for 50 years or more to the old college church at Gettysburg and hear again the leading of Washington's Farewell Address and listen once more to the patriotic words of faithful teachers, whose shadowy forms are passing before me. The resolution of every boy who left that church on a 22d of February was to lead a better, purer, and more

And as memory brings the light of other days around me, I see again a crowd of happy boys and girls, of young men and women, and of their elders, too, gathered in a grove on a Fourth of July for rational recreation and to drink deeper from the fountain of patriotism as they listen to the reading of the Declaration of Independence or hang upon the lips of an orator of a class now almost extinct; and I am not persuaded that patriotism is being better fostered to-day than then, or that the new methods of strengthening it are better than the old; but I do know that as a people we are as devoted to home and country as were those from whom our inheritance has come.

The duty of teaching patriotism rests largely with the public press, which reaches every home. Its vigilant eye is upon the whole world, and faithful editors stand as sentinels upon the watch towers. To them the people look for signals of danger, and from them no false signals must come. As the people heed the warnings of a faithful editor, so they look to him for words that will strengthen the common patriotism and intelligently point out the way of common duty. With a due sense of the great and grave responsibility resting upon the public press, those who control it and have controlled it have not been faithless, but, with rarest exceptions, have strengthening the patriotism of the people, who will continue to leak to them for strength. look to them for strength.

And what should our patriotism be? It should be love of country as strong and pure as love of home; it should be as intense upon the field of battle as in defense of the hearth; it should remember the regret of the dying patriot that he had but one life to give for his country; and it should lead every soldier of his country, going anywhere in her defense, to speak last words of love for her, his country, as did England's sweet young singer just before he started to become a soldier in her service:

If I should die, think only this of me:
That there's some corner of a foreign field
That is forever England. There shall be
In that rich earth a richer dust concealed,
A dust whom England bore, shaped, made aware,
Gave once her flowers to love, her ways to roam,
A body of England's, breathing English air,
Washed by the rivers, blest by the suns of home.

For this measure of love for our country let us strive, praying always for her lasting, honorable peace, as we repeat one to the other:

But we grow old. Ah, when shall all men's good Be each man's rule, and universal peace Lie like a shaft of light across the land And like a lane of beams athwart the sea Thro' all the circle of the golden years?

Woman Suffrage.

EXTENSION OF REMARKS

HON. DANIEL R. ANTHONY, JR., OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 1, 1916.

Mr. ANTHONY. Mr. Speaker, I desire to present for the consideration of the House these resolutions passed at a meeting of 100 representative women of the State of Kansas, urging that this Congress take steps immediately toward submitting the suffrage amendment to the legislatures of the various States:

Whereas the political freedom of the women of this country is a vital question that demands immediate attention; and Whereas we as women who already possess the franchise regard it as our first duty to use our political power to gain this right for other women: Therefore be it

women: Therefore be it

Resolved, That we women voters of the State of Kansas urge upon Congress the necessity of submitting the suffrage amendment immediately to the legislatures of the various States in order that this measure of justice may soon be a part of our national Constitution.

The above resolution was passed at a meeting of 100 women held February 23 at the state house, Topeka, Kans.

LILLA DAY MONROE,

Chairman of Meeting.

TOPEKA, KANS., February 24, 1916.

Armed Merchantmen.

EXTENSION OF REMARKS

HON. EDMUND PLATT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 4, 1916.

Mr. PLATT. Mr. Speaker, the statement, which was published in the newspapers of Massachusetts on Friday, February 25, is as follows:

STATEMENT OF MR. ROGERS.

The issue seems to be this: Germany claims the right to sink, without warning, any armed merchantman of another belligerent, entirely regardless of whether the vessel's armament is for offensive or defensive purposes, or whether she carries among her passengers or crew the citizens of a neutral nation. President Wilson denies this claim of Germany in so far as it includes any merchantman armed solely for defensive purposes and in so far as it involves the lives of American citizens. The consensus of opinion of Congress-certainly in the House of Repseems overwhelmingly in accord with the German program and in favor of warning all Americans not to travel on any armed merchantmen of a belligerent.

In my judgment the President is absolutely right. Ever since scattered precedents began to coagulate into international law the right to arm merchantmen for purely defensive purposes has been unalteringly asserted and unswervingly maintained. It has been asserted again and again by the United States since

the present war began, notably in our note of September 19, 1914, and recognized by both Germany and Great Britain.

If we should modify this axiomatic doctrine or assent to its modification, we should be changing international law in the modification, we should be changing international law in the midst of the war and in a most vital respect, in a respect which would materially aid one belligerent at the expense of the other. Yet no principle of law or fair play is better settled than that the rules of the game shall not be changed during the progress of the game unless by unanimous consent.

Suppose we should acquiesce in the German program, and by officially warning our citizens not to travel on armed merchantmen, tacitly agree in advance that if the warning is dis-

regarded and our citizens lose their lives we will make no protest. We thereby necessarily recognize that merchantmen, even though only defensively armed, are vessels of war. See the Austrian memorandum of February 10, 1916, which says:

Every merchantman provided, for any purpose whatever, with cannon, loses, through this fact alone, the character of a noncombatant ship. Under these conditions the order has been given to the Austro-Hungarian naval forces to treat such ships as combatants.

The German memorandum reads in part:

Under the enumerated circumstances, enemy merchantmen armed with guns no longer have the right to be regarded as peaceable merchantmen. The German sea forces therefore will be ordered to treat such vessels as warships.

In no other way can we justify acquiescence. Either the merchantman is a vessel of war or a vessel of peace. There is no third classification. But if such a merchantman is a vessel of war for some purposes it is a vessel of war for all purposes. It has no chameleon qualities. If it is a vessel of war it must be treated as such when it appears off our coast and seeks to enter our ports. The principles of the neutrality act apply; for example, if it stays in port longer than 24 hours it must be interned. It would have precisely the status of the Kronprinz Wilhelm, now interned at Newport News, when she entered Hampton Roads. Would the allied powers tolerate The question carries its own answer. such a result? should be instantly plunged into a far more bitter quarrel with the allies. In other words, acquiescence in the German program does not avoid a quarrel; it picks a worse one.

The practical difficulty of determining whether a merchantman is armed for offense or defense is emphasized by believers in acquiescence. The difficulty is doubtless great; so is the difficulty experienced by a submarine commander in determining whether the merchantman is armed or unarmed. Yet he

must decide this point to-day.

In our note of September 19, 1914, just after the outbreak of the war, we discussed precisely what constituted the differences between an armed and an unarmed merchantman; we reviewed the 10 or 12 tests (such as size, number, and location of guns) which usage has settled upon to determine whether armament is offensive or defensive. That note was good law when sent; it is good law to-day. It should not be repudiated. The determination of a given case is doubtless difficult as are all questions involving intent and degree. But the importance of the underlying principles demands that they be settled now and

settled rightly.

It must be admitted that our present and future course is made difficult because of three past missteps of the administra-tion: (1) Nine months' faltering over the Lusitania perhaps made Germany believe that we would view complacently this further step or at all events discuss it endlessly while German submarines were exacting their toll; (2) the warning to Americans in Mexico that neither their lives nor their property would be guarded or respected by the American Government makes a "warning" program seem easier and less ignominious in the present case; (3) our unfortunate note of January 18 last in which, according to newspaper reports, it was said that the United States was "impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent government and is seriously considering instructing its officials accordingly," practically invited Germany to undertake what she has now joyfully undertaken.

But two or three or more mistakes or wrongs do not make a It is not too late to do our national and international duty. Further yielding will inevitably mean further aggression. The camel's head is already within the tent, but if we can not expel him altogether, we can at least keep out his body.

Armed Merchantmen and an American Policy.

EXTENSION OF REMARKS

HON. MARTIN B. MADDEN, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES, Monday, March 6, 1916.

Mr. MADDEN. Mr. Speaker, I am opposed to having the United States involved in the war with Europe and I want everything possible done to prevent it.

There can be no question of the right of Congress to say that Americans shall not travel on armed belligerent ships, except at

their own peril, and we will not have performed our full duty if we fail to do so.

I am willing to concede the right of an American citizen to travel on an armed belligerent ship. But simply because he has that right I do not think he should so exercise it as to jeopardize the peace of his country. It is one thing to have rights and quite another to exercise those rights without reference to the rights of others. No American citizen should so far forget his obligation to his country, to its peace, prosperity, and happiness as to insist on the exercise of his privilege, when by the exercise of that privilege he may involve 100,000,000 of his countrymen in war.

The honor of the United States is not now involved in the European controversy. When it is it will be soon enough for us to consider the question of our participation in it. that time comes it is our duty to remain neutral and to give

heed to our own welfare.

Think of the loss of life, the widows and orphans, the misery, want, despair, devastation, the cripples, suffering, and agony that would result from our participation in the war, to say noth-

ing of the cost, and for what?

Americans should be warned against travel on armed belligerent ships, and I hope a resolution so advising them may come before the House in such form that I can vote for it. man will go further than I to preserve the honor of the Nation. Everything I have, even to life itself, would I offer for my country if need be; but until the necessity arises to do that I consider it my duty as a Member of this body to do everything within my power for the maintenance of the peace and prosperity of the country. I can state my views in no more appropriate language than that found in the editorials of the Chicago Tribune of March 2 and 3, which I herewith append as part of my remarks.

ARMED MERCHANTMEN.

"The present issue between the German Government and our own respecting the conduct of submarine operations seems to Shall German submarines concede to armed merchantmen of the enemy the first shot because citizens of the United States have elected to travel on such merchantmen?

"The structure of the submarine is, and at this stage of its development must be, such that the first properly directed shot is virtually certain to be the last, in that only one shot, even

that of a 1-pounder, is fatal to the submarine.

"Put in another form, the issue is whether a merchantman armed sufficiently to destroy a submarine with one shot is defensively or offensively armed.

"Under a rule formulated before the creation of the submarine the presence of a relatively small gun is held consistent

with the presumption of defensive armament.

"That rule was founded on the facts. A small gun could not seriously injure a warship. It could not be made offensive at the will of the commander of the merchantman summoned to surrender.

"The rule does not square with the facts of the submarine. The principle upon which the rule is founded does not apply to them. A 1-pounder can destroy a submarine. The presumption that such a gun will be used only in defense must rest entirely upon the will of the commander or his instructions.

"The position now taken by our Government, therefore, is that a German submarine approaching a British, French, or Italian merchantman which carries a gun capable of destroying such submarine shall challenge the merchantman to surrender

and accept the hazard of destruction.

"Furthermore, the presence of defensive armament on merchantmen was justified by facts, now nonexistent-namely, the practice of privateering and the existence of pirates. As pirates have disappeared from European waters and privateering is no longer permissible under international law, no presumption of defense can attach to the presence of guns on merchantmen.

"Enemy ships consist of only two kinds, combatant and noncombatant. If a ship is noncombatant it will not be equipped to combat. If a ship is equipped with armament sufficient to destroy an enemy warship, as in the case of a merchantman mounting a 6-inch, 4-inch, or 1-pounder gun, such merchantman having no use for such armament except against enemy craft, it can not claim the character of an 'unarmed' merchantman, but should be held what in fact it is, a combatant ship.

The object of any armament on a ship of the belligerents is one and one only, to use against enemy warships—to be explicit, the submarine. It is therefore an armed ship and the distinction as to defensive and offensive armament, founded on the practice of privateering and piracy, and having no application to use against enemy war craft, is not involved.

This is the issue as between Great Britain and Germany.

"What is the issue between the United States and Germany? It is whether the right of citizens to travel on unarmed merchant ships of belligerent nationality is a right to travel on merchant ships of Great Britain armed in fact against German submarines.

"Or, put in another way, the issue is: Does the presence of Americans on a British ship compel a German submarine to allow the British ship to pass or by challenging it accept the

hazard of destruction?

"If this were conceded Great Britain by mounting guns on its merchantmen and Americans by traveling on them can insure such part of the British merchant marine from otherwise lawful operations by Germany against what are in fact armed

and therefore combatant enemy craft.

"The object of arming the allies' merchant craft is to protect them from capture or destruction by German or Austrian submarines. Such destruction is of great importance to the central powers in their conduct of the war and a legitimate measure of sea warfare. British shipping is conveying necessary supplies to the allies. The interruption of this service is of great, if not vital, importance to the central powers. If it is to the interest of the United States to insure this supply, the Government should do so as an ally and not under the pretense of defending neutrality.

"The President asserted the right of neutrals to travel on 'unarmed' merchantmen by the belligerents. He asserted the duty of war craft to challenge 'unarmed and unresisting' merchant ships. Both these contentions have been accepted by the

German Government.

"Yet we now assert that by virtue of a rule framed to meet facts not now involved merchant ships armed in fact are not armed, and must be accepted as unarmed by Germany because Americans are 'raveling on them. The principle that rules of international law must not be altered during the course of the war begs the whole question of whether the rule as to defensive armament applies to merchantmen armed in fact offensively against submarines.

"If American honor is involved in this controversy, it calls upon us to look the facts in the face, to apply to them principles, not a mere formula, and to adopt fearlessly the course which

justice dictates.

"If it is American sympathies or interests that are involved, let us not talk about honor and let us consider sensibly and candidly what those interests are."

FOR AN AMERICAN POLICY.

"Within a week, a few days, 48 hours, or overnight President Wilson's policy with regard to submarines may be, perforce, and without a chance of escape, the policy of every citizen in the United States.

"We approach a point beyond which there can be nothing but action. It will have to be united action. The Nation can not in part accept and in part reject any policy which by event or by the determination of the Government becomes the policy of the

Nation.

"Just now the submarine policy is that of the President. It has almost, but not wholly, been made the Nation's policy. It may be made wholly so any day, either by the act of a German submarine or by the act of the United States Government.

"For the present, however, it is subject to modification. There still remains an opportunity for public opinion, clearly expressed,

to change it.

"The agency for the expression of public opinion is Congress. We believe the national interests demand that Congress refuse to allow Mr. Wilson to commit the country as he wishes to do. If he does commit the Nation, his policy becomes ours. That distinction must be made and emphasized. If he commits the Nation, we haul down our opinions and must stand by his. But there is yet time for protest.

"Congress can check this dangerous procedure. Unchecked it may not lead to war, but it contains the dangerous possibility of war. It is a possibility that can not be ignored. We must look at the most serious possible outcome. We are not justified in taking chances. What is the worst thing that is within

rational consideration? That is the question.

"There is only one thing that can justify President Wilson's policy. It must be stated frankly if it is to be a justification. That is the belief, the assumption, or the fact that Germany's success and Great Britain's defeat will imperil the United States.

"If that be so, or if there be good reason to think that it would be so, the Nation is justified in aiding Great Britain and injuring Germany. It would be more courageous and more honorable to do so as an ally of Great Britain, but it is permissible to do it in the form of benevolent neutrality.

"We can do as Portugal does and as Greece has been forced virtually to do. This Nation does not class itself with Portugal and Greece. It is stronger and is not imposed upon by circumstance.

"A good many Americans may think that the President is insisting upon a matter of national right, supported by international law, and that the national honor is involved. The President tells them this. It is not so. It can be regarded so only by an unusual and inexcusable insistence upon words.

"The trouble is that the submarine is damned in American opinion. It is an illegal craft, a pirate, commanded by murderers. It is to be destroyed. It is not to be permitted to

operate.

"The truth is that if we were in war it would be still more desirable for us than it is for Germany to permit to submarines wide latitude of operation. We have a smaller Navy. We have almost no merchant marine. We have an enormous coast line. Germany has a powerful navy. Germany has a wonderful merchant marine. Germany has a small coast line, and that coast line is impregnable. The largest navy in the world can not reach it.

"If our smaller Navy were to be forced into a protected harbor by greater power or were destroyed, our great coast line could be protected, so far as it might be protected, only by the submarine. This boat can be built quickly, transported easily, and assembled, and it could do the only effective work we could hope to do against a greater naval power.

"We should want to attack the merchant shipping of the enemy. We have no merchant shipping to defend. We should need to cut the enemy line of overwater communication by which supplies were being forwarded to any base established on our

shores.

"This is absolutely certain as a human prospect can be. If President Wilson's policy become the Nation's policy now it will be revoked by national need in the very first emergency which brings it home to us. We shall no more abide by it in danger than we should surrender at the first touch of danger.

"It can not apply to this Nation, and it will not be permitted to apply. If the situation ever touches us we shall not permit a peaceable ship to carry guns and slnk our submarines while our boats are endeavoring to destroy an enemy's commerce and yet give strict consideration to every dictate of humanity.

"If a peaceable ship intends to remain peaceable it does not need guns. If it has guns the submarine takes a chance every time it arises to command surrender. It can be wholly certain of its safety only if it sinks the ship without giving it warning.

"But sinking without warning is unnecessary if peaceable ships will go unarmed. Shall we now direct our policy to such consequence that some day an American commander of a submarine seeing a peaceable ship carrying supplies to an enemy established in a base somewhere on the American Continent had either to expose his boat and his mission to possible ruin or permit the ship to go on undisturbed or to sink it without warning?

"We do not believe that a policy so inimical to the present security of the United States, and so embarrassing to its future, ever was insisted upon before by an American administration.

"It is true that the President has committed himself to a procedure which will help Great Britain more than anything else that could be done short of becoming her ally. It has as its possible consequences the chance that it will end in our fighting by her side and the chance that it will protect her shipping.

"Germany's only chance of success may lie in destroying British shipping. If she can not do that she may not be able to break out of her encircled position or to wear out any one of her strong enemies. If we, by insisting upon words that are as inimical to us as they are to Germany, stand between Germany and the British shipping we are Britain's ally in deed.

"It may be it is the President's plan that we shall be. He may believe that a victorious Germany would threaten our national security. We are far from convinced that it would not. But let's have an understanding of what we are doing.

"If we must help Great Britain to defeat Germany Congress ought to proceed with knowledge of that fact. At least Congress ought to know the seriousness of what we are doing. If we are not helping Great Britain, but are merely inviting difficulty, possibly war, with Germany to insist upon the letter of international law, modifications of which already have been accepted by the American Government, Congress ought to intervene.

"This Nation does not want war to protect the guns which a peaceable ship of another nationality insists upon carrying."

Collectors of and Deliverers of Mail.

EXTENSION OF REMARKS

HON. WILLIAM A. AYRES,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 1, 1916.

Mr. AYRES. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a letter from the Postmaster General relative to the collectors of and deliverers of mail; that is, the reduction of city carriers to collectors. The letter is as follows:

OFFICE OF THE POSTMASTER GENERAL, Washington, D. C., February 28, 1916.

Hon. WILLIAM A. AYRES,
House of Representatives.

Hon. WILLIAM A. AYRES,

House of Representatives.

My Dear Mr. Ayres: Referring to your personal call at the department this morning at which time the question of the assignment of letter carriers to exclusive collection duty was discussed. I am furnishing herewith the following history of the department's action in connection with this matter:

Two years ago the department began a very careful survey of the field service with a view to correcting inequalities and endeavoring as nearly as possible to standardize the service. In the course of the investigations the attention of the department was drawn by a number of postmasters to the fact that an injustice was being done the great body of carriers engaged in delivering mail by the continuance of the practice of giving the highest salaries to carriers exclusively engaged in the duty of collecting mail. In January, 1915, this situation was brought to the attention of the department without any suggestions on its part in the form of a recommendation by two committees of postmasters assembled at Washington to advise the department on service problems. The first of these committees consisted of the postmasters of New York City, Chicago, St. Louis, and Washington, D. C. A second committee followed the first immediately and concurred with the first committee in its recommendation to the effect "that the maximum salary of carriers assigned exclusively to collection duty be fixed at \$1,000 per annum." This second committee consisted of the postmasters of Boston, Brooklyn, and Cincinnatl.

Subsequent to the report of these committees it was discovered by going through the files of the department, and by personal inquiry, that the suggestions of the service advisability of having mail collected by carriers receiving a salary not to exceed \$1,000 per annum was first made by the department in 1908 in connection with an investigation of the Wilmington. Del., post office, to determine what clerks and carriers should be promoted. At that time the department instructed that pr

motions of carriers in the service, in which the following language was used:

"The law now in effect provides that no promotion of a clerk or carrier shall be made except upon evidence satisfactory to the department of the employee's efficiency and faithfulness during the preceding year. It will be observed, therefore, that the faithfulness of an employee—his willingness, carnestness, and punctuality—must be coupled with efficiency before he is entitled to promotion, and the term 'an efficient employee' is construed to mean one who can and will perform the duties assigned to a clerk or carrier of the grade to which promotion is recommended. It is realized, of course, that all clerks can not be assigned to the higher classes of service, and that all carriers can not be given a route that requires more than ordinary alertness, activity, and intelligence, but it is believed to be the intent of the law that only such employees as are clearly capable of earning a higher salary shall be recommended for annual promotion. For example, clerks who are competent to do only directory work or to carry mail from the drops to the canceling machines should not be given the benefit of a yearly increase in salary nor should carriers who are able scarcely to do more than make collections or serve an easy residential district be recommended for endering."

Your further attention is called to the fact that the First Assistant Postmaster General, under date of February 4, 1911, addressed a communication to the postmaster at Boston, Mass., from which I quote as follows:

"I begieve to state that while it is believed that in considering the

Postmaster General, under date of February 4, 1911, addressed a communication to the postmaster at Boston, Mass., from which I quote as follows:

"I beg seave to state that while it is believed that in considering the promotions of carriers a clear distinction should be made between carriers who are available for assignment to collection service only and those who are capable of performing efficiently the duties of a carrier in the delivery service, yet it is recognized " that this rule can not be arbitrarily applied, " nor should carriers who are scarcely able to do more than make collections or serve an easy residential district be recommended for advancement beyond a salary commensurate with the character of service they are capable of rendering. In the future when recommending for promotion carriers assigned to collection duty exclusively to the sixth grade you should satisfy yourself that such promotions go to the carriers who are thoroughly capable of performing all the duties that may be required of a carrier, and not to those who are capable of doing duty only as collectors or whose principal qualifications is a long period of service. " I appears desirable, therefore, that you carefully scrutinize the records of the force of carriers assigned to collection duty at your office, especially those receiving \$1,200, and make such reassignments and submit such recommendations for changes in the salary as will result in the pay received being more nearly commensurate with the capacity of the carrier and the work to which he is assigned."

As the result of this letter, which was similar to a number of other communications sent to postmasters throughout the United States, the postmaster at Boston recommended for reduction six carriers.

In the course of the correspondence with postmasters regarding this matter it is found that Postmaster Campbell, of Chicago, under date of June 10, 1912, stated, among other things:

"The work of a collector is mechanical in character. It is simply that of emptying the boxes on his route and depositing their contents in the place prescribed, requiring only that he be punctual and honest in the place prescribed, requiring only that he be punctual and honest in the performance of his very simple duties. If the maximum salary of an efficient carrier in the delivery branch is fixed at \$1,200 per annum, the maximum salary of the carrier in the collection branch might well be set at \$1,000 per annum."

From the foregoing you will note that the department is at present pursuing a well-defined and uniform policy that was approved by an earlier administration in relation to the compensation of collectors in the City Delivery Service; and, further, that the principle underlying this is one that has been recognized and repeatedly recommended by postal experts and postmasters for a number of years.

In closing permit me to call your attention to the further fact that the department is operating under the classification act of 1907 and that it is clearly its duty, within the meaning of this act. to pay only such salary to any employee as he is actually earning. To continue a carrier engaged in collection duty at the maximum salary of \$1,200 per annum when it has been clearly demonstrated that he can not deliver mail, either because of mental or physical inability, would be a violation of this act. It will be noted, therefore, that if inefficient carriers are restored to \$1,200 per annum, as contemplated by certain amendments to the Post Office appropriation bill, supervisory officials in post offices will be compelled, in order to maintain the efficiency of the service, to prefer charges against them in accordance with this law and recommend their removal from the service. The department will then, as the only alternative,

A. S. Burleson, Postmaster General.

Letter from the Merchants' Association of New York City in Reference to a Speech Made by Mr. Tague.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March S. 1916.

Mr. BENNET. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter from the Merchants' Association of New York City in reference to the speech made by the gentleman from Massachusetts [Mr. Tague] some time since.

The letter is as follows:

NEW YORK, March 1, 1916.

Hon. William S. Bennet,
House of Representatives, Washington, D. C.

Hon. William S. Bennet.

House of Representatives, Washington, D. C.

Dear Mr. Bennet: We are informed that in the debate on the postal appropriation bill (with especial reference to the Moon rallway mail pay rider) an attack was made on this association's good faith in opposition.

We have not a copy of the remarks before us, but we understand that they were to the effect that this association is dominated by railroad inducate and that our report on railway mail pay was procured thereby. This association has about 3.400 members, representing every important business interest of the community, including transportation. Of this membership the representatives of railroads comprise only about I per cent. In all the numerous questions relating to transportation which arise, this association invariably seeks to defend against wrongful aggression the just rights of shippers, to give due regard to the just rights of carriers, and to promote the interests of commerce by securing adequate transportation facilities.

In pursuance of this policy we have hitherto been parties to numerous proceedings against the railroads and have promoted numerous laws restrictive of carriers' practices which we believed unjust.

We attach hereto a list of some of the matters in which we have been in opposition to the railroads, and especially call your attention to the proceeding against the express companies which this association organized and directed to a successful conclusion and also to our opposition to a further extension of the Parcel Post Service, on the ground that it would interfere with and probably destroy needed transportation facilities.

Our attitude in these and other matters should be conclusive as to the fact that this association, in any action it may take, is not dominated by railroad influence, nor seeking unjustly to promote railroad interests, but that, on the contrary, it deals with each proposition involved on its merits, with the purpose of promoting equitable relations between shippers and carriers and with a

The scope of the investigation made by this association was broad and thorough. Nearly three months' continuous work was applied to it, during which the entire record of the Bourne Joint committee, the reports of previous committees of Cougress, the reports of the Post Office Department from 1900 onward, and the reports of the Interstate Commerce Commission germane to the subject were examined with thoroughness and all the essential propositions advanced by the Post Office Department and the Bourne Committee were analyzed and tested with care.

It may fairly be said, therefore, that this association is in position to speak with complete knowledge and to reach conclusions in this important matter which it is amply prepared to sustain.

It was further developed as a result of our study that the conclusions reached by both the Bourne Committee and the Post Office Department completely ignored the relations that should exist between rallway mail pay so far as it affects the carriage of commodities and the ordinary freight charges upon similar commodities—unquestionably the most Important factor involved in the whole controversy, inasmuch as the proposed adjustment of raliway mail pay will affect not alone the mail pay revenues of the railroad but greatly and even dangerously deplete their freight revenues—a result to which both the Bourne Committee and the Post Office Department gave no consideration and of which they appeared to be in ignorance.

This association believes that the best interests of the country will be served not by harsh and unjustifiable attacks upon the revenues of railroads, but by such a readjustment of them as shall compensate them properly for all services rendered to the public, and at the same time assure just treatment of the public.

We are convinced that the Moon bill does not promote the true interests of commerce and the country because it embodies an unjust and harmful attacks upon the proper revenues of the railroads and impairs the power of the latter to provide the facilities whic

In the Matter of the Investigation of Rates and Charges by Express Companies and of the Individual and Joint Classifications, Regulations, and Practices of Said Companies.

I. The petitioners are mercantile associations, 209 in number, located and with their principal places of business, respectively, in the cities and towns throughout the United States as above specifically set forth, and said associations represent a total membership of many thousands of merchants residing and engaged in business in all parts of the United States.

II. The said merchants in the regular transaction of their business find it necessary to make general and extensive use of the service of express companies, and said merchants have suffered for many years past, and now suffer, from unjust and unreasonable charges, classifications, regulations, and practices of each and all of the express companies doing interstate business as common carriers within the United States.

III. Owing to changes in business methods and conditions, shipment by express instead of by freight, in many classes of commodities, have of necessity greatly increased, the use of the speedier express service having become practically compulsory. Because of this forced substitution of express carriage for freight carriage, a large volume of commodities, which formerly paid freight charges that amounted to but a very small percentage of the value of the merchandise now are compelled to pay express charges of such an amount as in many cases to consume the entire margin of profit on the commodities, the ordinary selling prices of which can not be varied to include abnormal and extortionate transportation, collection, and delivery charges. In consequence, the annual aggregate express charges paid by merchants have gradually increased from an almost negligible amount to a heavy item, which in many instances represents an actual loss. It is, therefore, of much importance to merchants and to the business

being charged for express service is unjust and unreasonable and in violation of the act to regulate commerce approved February 4, 1887, as amended by the several acts amendatory thereof and supplemental thereto.

IV. Express service as conducted in the United States is at variance with the usual practice in England, Germany, and other foreign countries, where the railroad companies themselves take up and deliver express freight. In the United States express business as conducted by an individual association or corporation, separate and distinct from the railroad company, was first organized about the year 1839. In about 1854 the Adams Express Co., the American Express Co., and the United States Express Co. were organized and by agreement divided the territory among themselves, and the said Adams Express Co. subsequently, in 1861, surrendered a portion of its territory to the Southern Express Co. The National Express Co. was organized and is controlled by the American Express Co. Wells, Fargo & Co. was organized in 1866 and, like other express companies, has exclusive rights over the railroad lines over which it operates. Through understandings and agreements with one another, in part, and through contracts with the several railroad companies, in part, all of the express companies doing interstate business have exclusive express privileges over railroad lines over which they respectively operate, and competition in express service has been thereby largely climinated, unjust and unreasonable regulations and practices enforced. All of said express companies, by virtue of said contracts with railroad companies and by virtue of the exclusive privileges granted thereby and thereby preventing competition, so base rates for express regipt in units of 100 pounds is from two and one-half to (in some instances) as high as four times the first-class freight rates.

V. Said contracts between the express companies uniformly provide a compensation to the railroad company for express privilege of approximately 50 per cent of

train haulage charge, therefore, should not increase because of subdivision of weight into small parcels, no additional rail haulage cost resulting from such subdivision. A progressively increasing rate is, however, exacted by express companies as the weight of the parcel decreases, and approximately 50 per cent of this increase goes to the railroad. This increase is warrantable in so far as it is imposed to compensate for increased cost of handling and terminal service resulting from the subdivision of a given weight into numerous parcels, but it is not warrantable for the purpose of increasing the train haulage charge, the cost of such haulage service not being increased by the subdivision of weight. In practice the increased rate imposed for subdivision of weight is exacted not only for terminal service but for train haulage service also, so that the haulage charge becomes grossly disproportionate to the fair value of the service rendered by the railroad when the value of that service is measured by the ordinary tonage standard of railroads. By far the greater part of express shipments are in smail parcels which are charged the higher rates of the graduate scale. Under the graduate scale the railroads receive for moving 100 pounds in small parcels as high as thirty-seven and a half times the amount received by them for moving 100 pounds first-class freight.

VI. Notwithstanding the large proportion of gross receipts under said agreements paid by the express companies to the railroad companies for the express privilege, the net returns to the express companies have been out of all proportion to the service performed and the capital invested by them, and each of them—a disproportion so enormous as to seem incredible but for indisputable evidence. The inventories of assets filed with the Interstate Commerce Commission by express companies represent in most part the accumulations from the extortionate charges exacted from the public; and these petitioners, while not claiming that the amount of original capital actually invested is controlling to the exclusion of other elements entering into the service performed, nevertheless urge and charge that the enormous accumulations and enormous dividends paid upon a small investment establish the extent to which extortion has been practiced in the past upon the public by express companies, and will enable the Interstate Commerce Commission the better to determine what are just and reasonable rates for the future; and these petitioners ask for an investigation as to the allegation herein made.

For the purpose of this petition one instance in support thereof will

the extent to which extortion has been practiced in the past upon the public by express companies, and will enable the Interstate Commerce Commission the better to determine what are just and reasonable rates for the future; and these petitioners ask for an investigation as to the allegation herein made.

For the purpose of the specifion one instance in support thereof will allege that the Great Northern Express Co. was organized in 1892 with a capital of \$100,000; that the total cost of this property—read estate, fixtures, and equipment—to June 30, 1909, amounted to only \$71,288.91; and that upon this total investment it has paid during the past 10 vears \$2,200,000 in dividends, and its last annual dividend was \$500,000, in addition to which it has accumulated \$1,488.881.58, all of which dividends and accumulations have arisen from its proportion of its total charges to the public, after payment to And your petitioners charge that the investment of the express companies, other than the Great Northern Express Co. is, approximately, no greater in proportion to the amount of business transacted than in the case herein cited of the Great Northern Express Co., and that the profits of some oi the other express companies are as excessive as, or more excessive than, therein stated of the Great Northern Express Co. VII. Charges for express sortice include, in addition to charges for or though shipments passing over lines of two or more companies include the sum of the local charge of each company, each company imposing the full graduate charge for the distance covered by it. When the service is thus rendered by more than two companies, the full graduate charge for the distance covered by it. When the service is thus rendered by more than two companies, the furnish services with the result that in numerous instances packages, attlough sort by any interest that payment for two terminal service whatever is performed.

VIII. The several express companies, by virtue of the agreements and understandings to which they several

XII. The said express companies impose additional charges, other than the additional charges mentioned in the paragraph numbered XI. Among such additional charges your petitioners allege that said express companies collect in excess of tariff rates, for delivery beyond specified limits, and for delivery to steamship companies; and in this connection your petitioners call attention to the printed tariff express rate from Buffalo to New York, the rate being 90 cents on a package of 44 pounds weight. When such a package is addressed in care of a steamship company an additional charge of 50 cents is exacted for delivery to steamship pier

XIII. Express companies, in addition to the express service performed by them, engage in the business of selling money orders which, by the terms thereof, are payable at the express companies' offices at the points to which the renittances are to be made. But it is not the practice of the said companies to provide sufficient funds in the hands of their agents in the numerous small offices throughout the country to enable said agents in all cases to pay such express money orders. Therefore, in many instances, the merchant is required to deposit the express money order in his local bank and to pay the collection charges to the bank, the bank being required to send the express order to the nearest large central express office and being often required to pay the return express charges upon the currency. Either the conduct of such banking business by the express companies, common carriers, is improper, or it should be sanctioned. If it is to be sanctioned, then the said companies should be required to keep sufficient funds on deposit in all local offices with which to pay said express money orders when issued by the express companies. This, in practice, being an impossibility, the express companies holding themselves out as common carriers should not be permitted to impose upon the public, as they do impose, in claiming to sell an express money order at a cost of, say, 15 cents, wherea

in remitting the funds.

XIV. Petitioners further allege that it is the practice of said express companies, their agents and employees, to transact business other than legitimate express business, in addition to the banking business as set forth in the preceding paragraph No. 13, and allege that said express companies engage in a brokerage and commission business in competition with the legitimate merchants who are obliged to employ the services of said express companies, in which competition the said merchants are necessarily under a serious disadvantage through self-favoritism on the part of the express companies, their agents, and employees.

merchants are necessarily under a serious disadvantage through self-favoritism on the part of the express companies, their agents, and employees.

XV. Petitioners further aliege that said express companies impose unjust discriminatory rates against American merchants in favor of parcels originating in British territory, and aliege as an instance that among other discriminatory rates an 11-pound package of merchandise delivered to the American Express Co. by the British postal authorities at New York will be carried by said company to any point of the United States—San Francisco, for instance—at a charge of only 24 cents, whereas the rate for New York merchants to San Francisco is \$1.65.

XVI. These petitioners further charge that the indirect method of handling express freight in the United States through the agency of separate and distinct express companies was in some instances adopted by the railroad companies, in part through undue favoritism to those in control of the railroad companies and in part through the direct ownership of express company stock by the railroads, as a means of concealing from the public the unjust and unreasonable excess of charges received by the railroads for express freight when compared to the rates of first-class freight. To the end that these practices may be fully understood and corrected and just and reasonable charges established, these petitioners ask that this honorable commission include in the scope of the investigation herein prayed for an examination of the origin and terms of each and all of said contracts for express privilege and a disclosure of the names of the stockholders of each of said express companies, particularly as to express company stock held by railroad companies, their officers and agents.

XVII. Frequently these petitioners receive from merchants and shippers, members of said organizations, complaints of unjust and unreasonable charges imposed by express companies and of unjust and unreasonable charges for insurance, and impositions regarding money or

panies.

Special reference may be here made to the delays of said express companies in settlement of claims. Correspondence covering a period of more than a year from the merchant members of these petitioning organizations indicate that such delays are the rule and not the exception, and are of such frequent occurrence and of such prolonged duration as to indicate either gross inadequacy of methods, with defective internal organization, or systematic and intentional procrastination to avoid reavener. payment.

To bring a separate complaint before this honorable commission for each of said complainants upon each specific instance of unjust and unreasonable charges and unjust and unreasonable regulations and practices would, in sustaining each complaint, largely duplicate the amount of work involved and the evidence to be introduced, thereby imposing unnecessarily upon the time of this honorable commission in the trial of each such separate proceeding, as well as imposing upon all parties the time and expense of trial to reach determinations which largely relate to the general basis of charges and to similar unjust ruses and practices of said express companies. Upon information and belief these petitioners allege that separate complaints upon specific charges have heretofore been made and are now pending or have been determined by this honorable commission, and your petitioners seek through the investigation herein requested to avoid the duplication of such work, time, and expense.

Wherefore your petitioners pray that this honorable commission will of its own initiative institute an investigation of interstate express service and of the companies engaged in the express business and doing interstate business as to the unjust and unreasonable rates, classifications, regulations, and practices herein charged against said companies, to the end that this honorable commission may determine and prescribe what will be the just and reasonable individual and joint rates and charges to be thereafter observed as the maximum to be charged and what individual and joint classifications, regulations, and practices are just, fair, and reasonable to be thereafter followed.

Counsel for Petitioners.

NOVEMBER 19, 1910.

THE MERCHANTS' ASSOCIATION OF NEW YORK AGAINST FURTHER EXTENSION OF THE PARCEL POST SERVICE.

NEW YORK, February 20, 1915.

The following preamble and resolutions were unanimously adopted by the board of directors of the Merchants' Association of New York at a meeting held February 20, 1914:

"Whereas the Postmaster General is empowered by law at his discretion to determine the weight limit of parcels which may be transmitted by mail, to make regulations relating thereto, and to fix and change the rates therefor; and
"Whereas the parcel post, although useful and desirable within its present limits, is by reason of numerous limitations unfitted effectively to meet all the needs of commerce for quick transportation; and and

and

Whereas the express service fully provides for those needs in a highly efficient manner, and at rates fairly proportioned to the cost of rendering the service; and

Whereas the extension of the parcel post weight limit to 100 pounds would so deplete the volume of traffic available to the express companies as to make their operation profitless and force their retirement:

panies as to make their operation profities and force their retirement:

"Resolved, That in the opinion of this board the express service is an indispensable agency for quick transportation, whose continuance is imperatively required by the needs of commerce; that the parcel post as at present organized would be a wholly inadequate substitute, inferior in many respects to express service; that it is lacking in many important features essential to a complete service, and being unadapted to many classes of traffic, its substitution would leave that traffic unprovided for.

"Resolved, That if the parcel post be so expanded as to cover the entire field of quick transportation it can not in any event perform that function more efficiently or economically than it is now performed by the express companies, and that in all likelihood the cost will be greater.

"Resolved, That in the opinion of this board no social or economic benefit will result from substituting the parcel post for the express service beyond the limits now established, but that on the contrary, serious harm to the country's traffic facilities will ensue, with a probable loss resulting from the parcel post's operations, to be borne by the Public Treasury.

"Resolved, That the further extension of the parcel post be opposed by this association, and that the reasons for such opposition be stated in full in a proper memorial to Congress."

W. A. Marrie, President.

W. A. MARBLE, President. S. C. MEAD, Secretary.

AGAINST FURTHER EXTENSION OF THE PARCEL-POST SERVICE.

W. A. Marrie, President. S. C. Mero, Secretary.

Against further extension of the parcel-post service.

Under the existing law, the Postmaster General is authorized, at his discretion, to modify the regulations as to fourth-class, or "parcel-post" matter, either by changing the prevailing rates or by increasing the weight of parcels which may be transmitted by mail.

It has been stated that the Postmaster General contemplates extending to 100 pounds the weight limit of such parcels.

This association is opposed to any further extension, for the reason that it would so deplete the volume of traffic available to the express companies as to make their operation profitiess, and thereby force their retirement.

The Merchants' Association has hitherto been a chief agent in subjecting the express companies to effective regulation by the Interstate Commerce Commission. It formulated a proceeding against them (and secured the concurrence therein of 213 business organizations, representing every section of the United States) whereby their rates were radically reduced, numerous defects were remedied, and greatly increased efficiency was secured. The previous record of this association in opposition to the express companies is therefore a quaranty that in taking its present position it is acting primarily as the champion of shippers and of the public interest, and not as the special advocate of express interests.

The express service is a highly efficient agency for completely and economically performing transportation functions indispensable to the business community. The parcel post is a much less efficient agency, omitting elements of service which are imperative for business needs. To supplant the express companies by the parcel post will deprive the business community of a complete and wholly adequate service, and substitute one that, under existing conditions, is incomplete, inferior, and in many ways inadequate.

We contend that the Government is justified in invading the transportation filed only within the limits

Thus reformed, the express companies perform the function of quick transportation within their field as efficiently and as cheaply as is reasonably possible. As to a large part of this field, the service can no more efficiently or economically be provided by the parcel post or any other agency. As to another part of the field, the parcel post can not on any justifiable grounds undertake the necessary service. The abolition of the express companies, and the substitution of the parcel post (for which no sound reason of economics or public policy can be shown) would therefore leave a considerable transportation gap, and important industries and interests would be without means of quick transportation.

We have above stated the broad grounds upon which we oppose the expansion of the Parcel Post Service. We shall now show in sufficient detail the conditions which warrant our conclusions.

I. THE PROPER FIELD OF THE PARCEL POST.

I. THE PROPER FIELD OF THE PARCEL POST.

expansion of the Parcel Post Service. We shall now show in sufficient detail the conditions which warrant our conclusions.

I. THE PROPER FIELD OF THE PARCEL POST.

Means for the speedy and cheap transportation of small parcels to every part of the country is a public necessity. Where such means do not exist, or are insufficient, the Government may properly supply them. Where the Government can provide a particular quick transportation service better or more cheaply than can existing agencies, it is justified in competing with such existing agencies. Where the Government can give neither better nor cheaper service, competition by it is unjustifiable.

By cheaper service is meant not lesser charges but lesser cost. No efficient private agency has hitherto undertaken generally to provide quick and cheap transportation service to those extensive areas not immediately contiguous to railroads. While efficient service might be supplied by private agencies, the cost would be so great as to make it economically impracticable. The existing extensive machinery of the ordinary postal service penetrates every part of the large areas hitherto without adequate quick transportation service. By utilizing that machinery the Government can, besides the ordinary postal functions, perform to a moderate degree the added function of quick transportation without disproportionate increase in cost.

The Government, therefore, in areas away from railroads, can more efficiently and economically than any private agency perform a necessary and highly useful public service which, without its intervention, would not be performed. Within the field noted, the assumption by the Government of the transportation function is justified on grounds of public policy.

Within the territory directly served by railroads the carriage of small parcels has hitherto been done mainly by the express service; but within this field there is room for a particular transportation service, less complete and at lesser charges than that of the express companies of the

has the option of a partial service by the parcel post for a small charge or a complete service by the express companies for a higher charge.

Here, then, is a legitimate field in which the parcel post can render a service acceptable to and demanded by the public but impracticable to the express companies.

But the limits within which this competion is of economic advantage are narrow. The collection service is indispensable to regular shippers. Indemnity for loss and damage is likewise requisite to that class. The costs of these factors can not be escaped by omitting them from the transportation charges. In that event they will merely be paid in another form. The omission by the post office of receipts and controlling and accounting records, while it lessens operating costs, increases the volume of loss. The limit of possible economics in deliveries is reached when additional carriers or wagon service are required for the movement of parcels.

It is obvious, therefore, that the parcel post can effect a true economic saving in this field only in the case of small parcels of little value, for the reason that large parcels can not be delivered by the shipper to the post office except at a cost equal to or greater than the collection charge, and that in the case of valuable parcels the lesser charges would not meet the costs of loss or damage.

We have now denoted the limits within which, and only within which, the parcel post can supply an otherwise unsupplied social necessity and effect an economic saving, namely, the provision of quick transportation service where it does not otherwise exist and the carriage of small parcels of low value for small charges and with incomplete service.

The most rigid scrutiny of the remainder of the quick transportation field will fall to reveal any economic saving, any increase in efficiency, or any social benefit that can be effected by the parcel post. This we shall show.

II. THE ESSENTIALS OF ADEQUATE QUICK-TRANSPORTATION SERVICE.

Over 90 per cent of small parcel shipments originating in cities are merchants' shipments. For regular, prompt, and economical dispatch of these a thoroughly organized collection system is indispensable. By no other means can the assembling of great numbers of small parcels at railroad stations be so well or so cheaply effected. The omission of this service would impose upon merchants a greater expense than at present and tend to lessen celerity of movement.

The delivery of a shipment to a carrier, when evidenced by a receipt, constitutes a legal delivery to the consignee. The lack of such receipt would make proof of delivery difficult and sometimes impossible, and in case of nondelivery merchants would often be seriously embarassed in enforcing their rightful claims against consignees. Nor can claims against carriers be enforced without the proof of responsibility afforded by a receipt. It is of the utmost importance, therefore, to merchant shippers that receipts be given, as the payment of debts due them will often depend thereon.

Indemnity for loss and damage must be assured, otherwise shippers will be debarred by the risk of heavy loss from using quick transit

whenever it is possible to avoid it. They will thereby often be deprived of an extremely useful facility.

Records controlling movement, locating responsibility, and for tracing shipments when necessary are necessary to secure proper care by employees and to the adjustment of claims. They are essential to any system assuming indemnity, and without them the volume of loss through carelessness and theft would be greatly increased. The passage of unrecorded articles of merchandise through numerous hands offers far greater opportunities for and temptation to theft than in the handling of letter mail.

Security for valuable packages during transmission must be provided. Without special means for security the transmission of currency, coin, bullion, jewelry, valuable papers, and similar articles involves so much risk as to be impracticable. Provision for indemnity does not do away with the need for security, as a loss, even if paid for, involves long delay, effectually defeats the purpose of quick transportation, causes much trouble to both shipper and consignee, and often causes the loss of disappointed customers.

Protection against damage in transit is of importance, especially in the case of fragile articles. Indemnity is no substitute, for the reasons stated above.

Meny fragile articles recovers a careful and skillful necking to prevent

Protection against damage in transit is of importance, especially in the case of fragile articles. Indemnity is no substitute, for the reasons stated above.

Many fragile articles require careful and skillful packing to prevent damage in transit. If the packages are opened it is impracticable properly to repack the articles, and frequent damage is certain. It is highly important, therefore, that parcels be not opened in transit, in order that the original packing be not disturbed. The objections to opening packages containing delicate fabrics or any articles liable to damage from handling are obvious. If a shipment contains such articles as hosiery, gloves, handkerchiefs, or numerous small units opening in transit is certain to result in frequent pilifering.

Provision must be made for the movement of all commodities for which quick transportation is needed, irrespective of character, weight, or size. Upon the provision and perfect organization of quick service without weight limit depends in very large degree the movement, especially to distant markets, of perishable fruits, meats, milk, poultry, and various food products. The absence of this service involves a great curtaliment of the present outlets for important food Industries and detriment to the consumer. For this branch of traffic refrigeration is necessary. This requires refrigerator cars, ice houses at numerous points, feing en route, and solid-train movement on special schedule. The service must provide for glassware, liquids, live animals, machines, carriages, automobiles, boats, for uncommon bulk, for heavy weight—in short, for anything that requires quick movement. The range of articles of this class is large.

A completely efficient quick transportation service, therefore, must provide not merely for the ordinary, most frequent, and least difficult demands, but also for the less common, more difficult, and those which require special facilities.

III. THE PARTIAL SERVICE OF THE PARCEL POST AND THE COMPLETE SERVICE OF THE EXPRESS COMPANIES.

The parcel post omits the following essentials of a complete service:

1. It does not collect parcels.

2. It does not give receipts.

3. It does not provide indemnity for loss, except upon extra payment, and only to the amount of \$50.

4. It does not provide any indemnity for damage.

5. It does not provide controlling records, by reason of which omission the volume of loss is increased.

6. It does not provide special means of security for valuable parcels.

7. It does not provide adequate protection against damage, but, on the contrary, promotes damage and loss by opening in transit.

8. It does not provide for the transportation of a wide range of special commodities.

6. It does not provide special means of security for valuable parcels.

7. It does not provide dequate protection against damage, but, on the contrary, promotes damage and loss by opening in transit.

8. It does not provide for the transportation of a wide range of special commodities.

Unless the parcel post removes these defects it can not by any possibility fill the entire field of quick transportation. It can invade it to a considerable extent, but the service performed by it will be materially less efficient and less comprehensive than that now supplied by the express companies. The result of that invasion would be twofold two did partially supplant an adequate service by an inferior service, and by compelling the express companies to retire by depletion of their traffic would leave a considerable part of the field without needed traffic facilities:

No reasonable person will contend that to destroy an adequate transportation system and replace it by an inadequate system will in any way benefit the community.

It will, however, be said that all the enumerated defects of the parcel post can be removed and an efficiency equal to that of the express service be attained. It is unquestionably true that the parcel post might be so organized as to supply a service as complete and efficient in every respect as that of the express companies.

In that case, however, the parcel post would be compelled to provide every essential to a complete service, as enumerated in Section II above. To do that it would have to employ methods and equipment in all respects substantially identical with that of the express companies. It would need wagon service for collection and delivery, terminal and transfer buildings in all great cities, additional quarters in smaller towns, employees equal in number to those now employed in the express service, and the assumption of full liability for loss and damage. Moreover, it would be required to remove all weight limit and provide whatever facilities are necessary for any commodity requiring

To conclude, we repeat that we see no possible public advantage in so extending the operations of the parcel post as to destroy an efficient and economical agency of transportation and substituting therefor an agency at present decidedly inferior in vital particulars and which it so expanded as to be fully efficient will in all likelihood result in an annual loss to be borne by the Public Treasury.

Very respectfully,

The Merchants' Association of New York,
By W. A. Marble, President.

Crippling the Parcel Post.

EXTENSION OF REMARKS

HON. J. CHARLES LINTHICUM.

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 4, 1916.

Mr. LINTHICUM. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of March 1, 1916: The editorial is as follows:

CRIPPLING THE PARCEL POST.

On the face of it the action of the House of Representatives in prohibiting any increase in the existing limit of 50 pounds on parcel-post packages looks like a very narrow and short-sighted proceeding. It looks even worse. It would seem to indicate that the express companies had somehow got a snap judgment on the people in this matter. We trust that the action of the House was due to lack of understanding rather than to corporation activity; but whatever the cause it made a very serious mistake, which it is to be hoped the Senate will correct. Congressman Lewis did not hesitate to say that its practical effect, whether so intended or not, will be directly in the interest of the express companies, which is equivalent to saying that it will not be in the interest of the people. This extract from Mr. Lewis's speech of opposition is worth repeating:

"If this bill passes with this heart stab in it aimed at the parcel post and with the parcel post hog-tied in comparison with the express companies of the country, the stocks of the express companies will go up \$25,000,000 in a week. All the express companies want is to have their great competitor hog-tied, and they want him hog-tied especially on rails. Our experience in the last three years is that of the seven parcels now moving, the express companies in the past could move only three. Their rates were so high, their limitations of service were so great, that four out of seven of the people's parcels were killed at the very point of origin. The proof of that is that 700,000,000 parcels are now moving, counting the service of the express companies and the post office combined, as against only 300,000,000 moving by the express companies in 1912."

It would be interesting to know the reasons which induced the majority of the House to ignore both Mr. Lewis's conclusive statement and the protest of the Postmaster General. If any sinister influences have been at work, the country shoud be informed of it. We hope Mr. Lewis will not give up the fight, but will follow the b

Preparedness.

EXTENSION OF REMARKS

HON. JOHN Q. TILSON, OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 6, 1916.

Mr. TILSON. Mr. Speaker, I have no desire to lay claim to extraordinary prescience, but on the now much-talked-about subject of preparedness I wish to bring to the attention of the membership of the House a few remarks made by me more than membership of the House a few remarks made by the more than five years ago. The circumstances under which I made those remarks were that an amendment to the Army appropriation bill was pending which provided for additional field artillery, and I was urging its adoption. Many of those now most vociferously proclaiming the need of preparation were then

either indifferent or actively opposed.

The present war has emphasized the importance of this particular arm of the service, as it has revealed our comparative weakness in this arm. At a later date I hope to submit to the House some observations on the subject of national defense, supplementing what I said a few days ago, along practical lines as to the best way of accomplishing it. For the present I am content to reproduce here, under leave to extend in the Record, the remarks made by me on January 17, 1911, appearing on pages 1014-1016 of the Congressional Record of the third session of the Sixty-first Congress, without addition and without subtraction:

SPEECH DELIVERED ON JANUARY 17, 1911.

Mr. Tilson. Mr. Chairman, I doubt if this paragraph is subject to a point of order; but even if it were, it seems to me that the importance of it is such that the point of order should be withdrawn.

We have heard much in an earlier discussion to-day in regard to preparedness for war. In our enthusiasm, while listening to these patriotic utterances, we have grown brave, and no doubt all of us feel that we could safely discard most of our present preparations for war and go out and whip almost any country without them. It seems to me, however, that we should come down to earth again, look cold facts in the face, and go along the even tenor of our way in making such appropriations as may be necessary and proper for military pur-

poses.

We frequently hear from well-informed people, and even on the floor of this House, sneering references to the large appropriations for wars, past and future. Varying figures are given showing the proportion of the appropriations for these purposes to the total expenditures of the Government, running as high as 73 per cent. Just a few days ago this House added to the percentage by passing, under suspension of the rules and by a very large majority, a bill generally increasing pensions and augmenting the pension rolls by more than forty millions per annum. The wars of the past have cost much and are still costing very large sums in claims growing out of war and in pensions "for him who has borne the battle and for his widow and orphans." There is no denying the fact that the expense of maintaining the Army and the Navy is very large.

Mr. Goulden. I know the gentleman desires to be entirely fair, as he always is, but in his statement about the amount appropriated the other day, \$40,000,000 annually, I think he should have said that that amount will decrease from year to year, owing to the large death rate among the old soldiers. The gentleman's statement might create the impression that the charge upon the Treasury would be \$40,000,000 annually for years to come, and I know he does not wish that impression

to go out to the country.

Mr. Tilson. I am very glad to be corrected if I am wrong. As I remember the report on that bill, it stated that it added \$45,000,000 to the pension roll. In order to be conservative I

made it \$40,000,000.

Mr. Goulden. That will be the first year, but there are 36,000 deaths now annually among the veterans of the Civil War, and will be 40,000 deaths next year and very likely 50,000 deaths five years from this time, and so on, so that the amount will decrease very rapidly from year to year.

Mr. Tilson. I am not complaining at all of pensions for the

old soldiers.

Mr. Goulden. Of that fact I am confident, as the gentle-

man has always been friendly to the veteran.

Mr. Tilson. It is said, or at any rate assumed, as a basis for the apparent criticism of these large expenditures, that there is no danger of this country's being involved in war within the near future. I am in accord with the belief that war is not imminent. I do not believe that war is coming soon, and I certainly most fervently hope and pray that it may never come. My service on the Committee on Military Affairs of this House has not caused me to fear immediate war, but it has increased my sense of responsibility for the awful consequences if war should come and find us unprepared. No one can rightfully accuse me of being afflicted with "bellophobia." In fact, I am second to none in my abhorrence of war, for I realize that Gen. Sherman in his famous declaration on that subject only very mildly described its character and consequences.

I have had a brief service as a soldier in the Volunteer Army of the United States and a somewhat longer service in the National Guard of my own State. This service has caused me to know something of the hardships of the soldier's life in the field, even when not in the presence of an enemy, and we all know from history the terrible consequences of actual conflict. It is, in fact, easy to picture the most gruesome scenes of blood and carnage without in anywise going beyond the truth.

In our study of the past as a guide in our preparation for the future it is proper to consider how much could have been saved of both blood and treasure by a proper preparation for those wars in which our country has heretofore engaged. Take the case of the War of 1812; we had in the field at that time a little more than half a million men.

We spent quite a large sum of money, large for that day, and the history of the military operations of that conflict is made up largely of a series of defeats and disasters. With the exception of the battle of Lundys Lane and at New Orleans (fought after a treaty of peace had been signed) there is practically no other tale to tell, so far as the land operations were concerned. Owing to the fact that Great Britain was at that time engaged in the Napoleonic wars we escaped rather fortunately. The entire force of regular troops used against us amounted to less than 60,000 men. This very Capitol was captured and burned, so far as it was inflammable, by a small force which was opposed by a body of our own men more than twice as large, certainly just as brave, but without proper preparation or training. For the Mexican War we were somewhat better prepared than for the War of 1812, and we had an enemy much less prepared than ourselves

The greatest object lesson, however, came in the War of the Rebellion. At no time in our history had military preparations or military interest sunk to so low a point as at the beginning of the Civil War. The State Militia of that time could only by a figure of speech be called the Organized Militia. The small regular force was not well equipped. If it had not been for the fact that the arms of the United States were opposed by arms in the hands of men not even so well prepared the results of that war would have been more disastrous than they were. There is the best of ground for the opinion that 50,000 regular troops, well equipped and well trained, on the Union side at the first battle of Bull Run, would have decided that conflict and terminated the war in the summer of 1861.

In the War with Spain it was the same old story. Lack of preparation caused us to rush into the field regiments half equipped and less than half trained. Yes, more; we had to rush into the market and buy all sorts of transportation facilities, both by land and sea, as well as supplies, ordnance, and ammunition at almost any price they might be offered, and to accept almost whatever quality of goods that might be fur-

nished—a very costly as well as dangerous necessity.

Preparation for war and lack of preparation are quite analogous to insurance. You can not insure when the risk against which you would insure is at hand, and in this generation you can not prepare for war after hostilities have begun without running the risk of not having your preparation complete until the war is over I have the honor to represent on the floor of this House a State small in area, but great in other respects. and especially so in the field of insurance. Connecticut believes in insurance for her own people and for others, so shown by the millions of risks written every year by her great insurance companies. In fact, she stands preeminent among her sisters as an insurance State. The life insurance companies of Connecticut write millions of insurance annually and receive vast sums in premiums in payment therefor. Why do men insure their lives, paying premiums that often become a heavy burden? They do not expect to die this year or next year. And what should we say of the man who postponed insuring his life for the protection of his family until the death malady had seized him? His place of business may have been for years a popular resort of life insurance soliciting agents, but when it is known that some fatal disease has finally seized him, the agents pass him with a shrug of the shoulders, saying "too bad." if he applies in person the insurance companies decline to do anything for him. Everyone knows the result: He probably dies and leaves his wife and children paupers.

A prudent man purchases accident insurance at considerable expense to protect his family and himself against temporary or permanent loss of earning power through accident. What would you say of the man who attempted to take out an accident policy after the train in which he is traveling had left the

track and started to roll down the embankment?

Mr. Goulden. Mr. Chairman, will the gentleman yield?

Mr. Tilson. I will yield to the gentleman.

Mr. GOULDEN. I would like to answer the question that the gentleman has just asked in the words of the Good Book, which says:

He who fails to provide for his own, they of his own household, hath denied the faith and is worse than an infidel.

Mr. Tr.son. I thoroughly agree with the gentleman from New York.

A careful business man insures his building against loss by fire and renews the insurance year by year, at considerable expense without expecting his building to burn—that is, if he is honest. What would you say of the man who had all of his property engaged in a single business who waited until the corner of his building was on fire before attempting to take out a fire-insurance policy? Or more broadly, what would property owners and the public generally say of a city government that took no steps toward procuring fire apparatus or training firemen until after fire had already broken out in the city? A volunteer bucket brigade would then be the best that could be done.

Instead of this we see cities spending millions for costly firefighting apparatus and for the maintenance of a well-trained

In my own city of New Haven, with a population of a little less than 150,000, there is invested in fire-fighting apparatus and equipment a half million dollars; and we have a force numbering nearly 200 of the bravest and sturdiest of our young men, all maintained at an annual expense to the taxpayers of a quarter of a million dollars, because our mayor and aldermen and the people back of them fully realize the wisdom and necessity of being ready for the conflagration which they hope will never come, and because they know that it requires months and years to secure the proper and necessary apparatus and train the most efficient firemen. All these are but analogies to our lack of preparation for war and illustrations of the arguments and insinuations against proper appropriations for this

In former times and even in the days of our fathers when wars came they came with more or less deliberation. Communication of intelligence was limited to the speed of a courier or a sailing vessel, and transportation by land and sea was both sailing vessel, and transportation by land and sea was both slow and difficult. Preparation for war in those early days of our history was a simple matter. Firearms were more generally owned and used both for hunting purposes and for protection against wild animals and savage men. The largest guns then used could be literally cast overnight, while the preparation of ammunition was a quick and easy matter. Those simple times have passed. Communication of intelligence is now instantaneous. The sea itself, then the greatest barrier against stantaneous. The sea itself, then the greatest barrier against our enemies, as well as our own best defense, is to-day the very best and quickest means of conveying an enemy to our shores. In contrast with the weapons of those earlier days the weapons used to-day are of a highly complex character, delicately adjusted, and require much time and money to make; while the men who are to use them require skill and careful training for the effective handling of such delicate instruments. Even the ammunition requires much time and skill to manufacture. Our guns are now of long range and in the preparation of am-

our guns are now of long range and in the preparation of ammunition for these guns great precision is required in order to make them accurate and effective.

The last paragraph of this bill, against which the gentleman from New York [Mr. Michael E. Driscoll] has reserved the point of order, aims at supplying in part one of the most urgent needs if we would keep our small military establishment in any reasonable degree of readiness for possible hostilities. Our stock of small arms is reasonably adequate, about two-thirds of which are of the latest improved model of the Springfield of which are of the facest improved floods of the Springhen rifle; and the reserve stock of ammunition for these arms, though somewhat small, can without great danger be replen-ished quickly. Lack of field artillery and ammunition is much more serious. If a war of any magnitude were suddenly precipitated, it is very clear that raw troops would have to be used, and it is a well-known fact that the proper use of an abundance of field artillery is the best possible means of giving confidence to and securing steadiness among raw troops. Yet the proportion of field pieces to the number of bayonets and solves of even our small force is ridiculously small as compared sabers of even our small force is ridiculously small as compared to the armies of other countries, while the amount of field artillery ammunition on hand is less than half that required

by the military regulations for a single campaign.

I yield to no one in the fervor of my desire for peace, not even to that distinguished apostle of peace in this House, my friend from Missouri, Mr. Bartholdt. I joyfully welcome to the field that latest and newest peace organization with the longest name, "The American Society for the Judicial Settlement of International Disputes." I am rejoiced to see the very large and imposing gifts of Mr. Carnegie to be used to promote the peace of the world. I may have my own doubts as to whether the manner in which those large sums of money have been and will be spent will accomplish as much for the promotion of lasting peace as if they were expended for the pay and training of the Organized Militia, the raising, equipping, and maintaining of a few good batteries of field artillery, or even the building of a battleship, but that is only a matter of honest opinion and is not for me to decide.

If I did not believe that every dollar we appropriate in this bill and all other bills for the support of the Army and the Navy, for the training of the Organized Militia, and for the strengthening of our seacoast defenses, either directly or indirectly, aids in preventing war and securing a more permanent peace, I should vote to keep it in the Treasury. Because I stand on this floor to advocate such an appropriation, I shall not permit myself to be forced into the attitude of favoring war and be classed in the list of bloodthirsty ogres hungering for human gore. I feel that I am advocating only such appropriations as

common prudence dictates as the minimum necessity for proper preparation. I am a peace-loving man and long for that day when "the peace of God which passeth all understanding" shall possess the hearts and minds of all men everywhere so that they shall never again desire war; but in order to help hasten that millennial day I deem it the part of the highest wisdom as well as my solemn duty to favor reasonable, yes, ample, appropriations for military and naval purposes.

The Colombian Treaty.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 6, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, in the course of my remarks on the Colombian treaty and the prerogative of the House of Representatives in connection therewith on February 19 last the gentleman from North Carolina [Mr. Kitchin] asked me to insert a comparison of the so-called Bryan treaty of 1914, now under consideration by the Senate, with the Root-Cortes treaty of 1909. I have had these two treaties put in parallel columns for the convenience of those who are interested and present them herewith, with a few remarks and comparisons, showing the differences existing between them:

THE TWO TREATIES COMPARED.

ROOT-CORTES TREATY, 1909.

BRYAN TREATY, 1914.

There shall be mutual and inviolable peace and sincere friend-ship between the Governments and peoples of the two high contract-ing parties without exception of persons or places under their re-spective dominion.

I.

The Government of the United States of America, wishing to put at rest all controversies and differences with the Republic of Colombia arising out of the events from which the present situation on the Isthmus of Panama resulted, expresses in its own name and in the name of the people of the United States, sincere regret that anything should have occurred to interrupt or to mar the relations of cordial friendship that had so long subsisted between the two nations.

The Government of the Republic of Colombia, in its own name and in the name of the Colombian people, accepts this declaration in the full assurance that every obstacle to the restoration of complete harmony between the two countries will thus disappear.

[Senate committee amendment: The Governments of the United States and the Republic of Colombia, in their own names and in the names of their respective peoples, wishing to put at rest all controversies and differences between them arising out of the events from which the present situation on the Isthmus of Panama resulted, express sincere regret that anything should have occurred to interrupt or to mar the relations of cordial friendship that had so long subsisted between the two nations.]

II.

II.

In consideration of the provisions and stipulations hereinafter contained, it is agreed as follows:

The Republic of Colombia shall have liberty at all times to convey through the ship canal now in course of construction by the United States across the Isthmus of Panama the troops, materials of war and ships of war of the Republic of Colombia without paying any duty to the United States; even in the case of an international war between Colombia and another country.

While the said interoceanic canal is in course of construction, the troops and materials for war of the Republic of Colombia, even in the case of an international war between Colombia and any other country, shall be transported on the railway between Ancon and Cristobal, or on any other railway substituted therefor, upon the same conditions on which

The Republic of Colombia shall enjoy the following rights in respect to the interoceanic canal and the Panama Railway.

1. The Republic of Colombia shall be at liberty at all times to transport through the interoceanic canal its troops, materials of war, and ships of war, even in case of war between Colombia and another country, without paying any charges to the United States.

[No exception in case of war between Colombia and Panama; or between Colombia and Panama; or between Colombia and Nicaragua, with which the United States is concluding a treaty conveying options and leaseholds which are claimed by Colombia to be in violation of its sovereignty. (S. Doc. 474, 637d Cong., 2d sess., pp. 250-252.)]

4. During the construction of the interoceanic canal and afterwards, whenever traffic by the canal is interrupted or whenever it

similar service is rendered to the United States.

United States.

The officers, agents, and employees of the Government of Colembia shall, during the same period, be entitled to free passage upon the said rallway across the Isthmus of Panama upon due netification to the rallway officials and the production of evidence of their official character.

The foregoing provisions of this article shall not, however, apply in case of war between Colombia and Panama.

The products of the soil and industry of the Republic of Colombia, such as provisions, cattle, etc., shall be admitted to entry in the Canal Zone, subject only to such duty as would be payable on similar products of the United States of America under similar conditions, so far as the United States of America has any right or authority to fix the conditions of such importations.

Colombian laborers employed in the Canai Zone during the construction of the canai who may desire that their own families supply them with provisions for their personal use shall be entitled to have such provisions admitted to the Canai Zone for delivery to them free of any duty, provided that declaration thereof shall first have been made before the commissary officers of the Isthmian Canai Commission, in order to obtain the previous permit for such entry and subject to such reasonable regulations as shall be prescribed by the commission for insuring the bona fides of the transaction.

Colombian mails shall have free passage through the Canal Zone and through the post offices of Ancon and Cristobal, in the Canal Zone, paying only such duties or charges as are paid by the mails of the United States.

During the construction of the canal Colombian products passing over the Isthmian Railway from and to Colombian ports shall be transported at the lowest rates which are charged for similar products of the United States passing over said railway to and from the ports of the United States passing over said railway to and from the ports of the United States; and see sait, exclusively produced in Colombia, passing from the Atlantic coast of Colombia to any Colombian port on the Pacific coast shall be transported over said railway free of any charge except the

shall be necessary for any other reason to use the rallway, the troops, materials of war, products, and mails of the Republic of Colombia, as above mentioned, shall, even in case of war between Colombia and another country, be transported on the railway between Ancon and Cristobal or on any other railway substituted therefor, paying only the same charges and duties as are imposed upon the troops, materials of war, products and mails of the United States. The officers, agents, and employees of the Government of Colombia shall, upon production of proper proof of their official character or their employment, also be entitled to passage on the said railway on the same terms as officers, agents, and employees of the Government of the United States. The provisions of this paragraph shall not, however, apply in case of war between Colombia and Panama.

[The wording of this paragraph, unlike that in the Root treaty, ex-

Panama.

[The wording of this paragraph, milize that in the Root treaty, excepts the use of the railway only, and not the canal, in the event of war between Colombia and Panama. Both railway and canal may be used by Colombia in a war with Nicaragua.

Equal transportation charges allowed, after completion of canal, instead of during construction, as in the Root treaty. Congress fixes charges and has not authorized this arrangement.]

2. The products of the soil and industry of Colombia passing through the canal, as well as the Colombian malls, shall be exempt from any charge or duty other than those to which the products and mails of the United States may be subject. The products of the soil and industry of Colombia, such as cattle, salt, and provisions, shall be admitted to entry in the Canal Zone, and likewise in the islands and mainland occupied or which may be occupied by the United States as auxiliary and accessory thereto, without paying other duties or charges than those payable by similar products of the United States.

I This adds the privilege of equal canal toils to that of equal duty for entry in the Canal Zone, as provided in the Root treaty. Congress fixes rates of duty, and has not done so in this case.]

3. Colombian citizens crossing the Canal Zone shall, upon production of paper proof of their nationality, be exempt from every toil, tax, or duty to which citizens of the United States are not subject.

[Congress fixes toils, taxes, and

subject.

[Congress fixes toils, taxes, and duties, and has not authorized this privilege.]

(Included in II.2.)

5. Coal, petroleum, and sea salt, being the products of Colombia, passing from the Atlantic coast of Colombia to any Colombian port on the Pacific coast, and vice versa, shall be transported over the aforesaid raliway free of any charge except the actual cost of handling and transportation, which shall not in any case exceed one-half of the ordinary freight charges levied upon similar products of the United States passing over the rallway and in transit from one port to another of the United States.

actual cost of handling and transportation, not exceeding one-half of the ordinary freight charges.

The United States recognizes and accepts notice of the assignment by the Republic of Panama to the Republic of Colombia of the right to receive from the United States payment of \$250,000 in American gold in each year from the year 1908 to the year 1917, both inclusive, such assignment having been made in manner and form as contained in the treaty between the Republic of Panama bearing even date herewith, whereby the independence of the Republic of Panama is recognized by the Republic of Panama is released from obligation for the payment of any part of the external and internal debt of the Republic of Colombia.

[From the Cortes - Arosemena treaty of same date, between Co-lombia and Panama.]

[The Republic of Colombia recognizes the independence of the Republic of Panama and acknowledges it to be a free, sovereign, and independent nation.

IX.

IX.

[It is agreed between the high contracting parties and is declared that the dividing line between the Republic of Colombia and the Republic of Panama shall be as follows, to wit:

[From Cape Tiburon on the Atlantic to the head waters of the Rio de la Miel, and following the range by the Cerro de Gandito the Sierra de Chugargun and that of Mali, going down by the Cerros of Nique to the heights of Aspave, and from there to the Pacific at such point and by such line as shall be determined by the tribunal of arbitration hereinafter provided for, and the determination of said line shall conform to the decision of such tribunal of arbitration as next provided.]

[A temporary equal-rate expedient in the Root treaty, effective during the construction of the canal, is here made a permanent half-rate privilege on the railway; and to sea sait, the only product named in the Root treaty are now added coal and petroleum. These products are to pay permanently the actual cost of transportation, which it is stipulated shall not exceed one-half ordinary freight charges. Conversely, this means that coal, petroleum, and sea sait from the United States must always pay twice the cost of transportation and twice the rate charged like Colombian products, and that freight charges must be double the transportation cost. If canal tolls should be higher than railway charges as thus calculated, Colombia would be entitled to the benefit.

benefit.

But Congress fixes tolls and charges and has not authorized any such arrangement.]

III

The United States of America agrees to pay to the Republic of Colombia, within six months after the exchange of the ratifications of the present treaty, the sum of \$25,000,000 gold, United States maney. money.

[Senate committee amendment, \$15,000,000.]

IV.

The Republic of Colombia recognizes Panama as an independent nation, and, taking as a basis the Colombian law of June 9, 1855, agrees that the boundary shall be the following:

From Cape Tiburon to the head waters of the Rio de la Miel and following the mountain chain by the ridge of Gandi to the Sierra de Chugargun and that of Mali going down by the ridges of Niquo to the heights of Aspave and from thence to a point on the Pacific half way between Cocalito and La Arvita.

In consideration of this recognition the Government of the United States will, Immediately after the exchange of the ratifications of the present treaty, take the necessary steps in order to obtain from the Government of Panama the dispatch of a duly accredited agent to negotiate and conclude with the Government of Colombia a treaty of peace and friendship, with a view to bring about both the establishment of regular diplomatic relations between Colombia and Panama and the adjustment of all questions of pecuniary liability as between the two countries, in accordance with recognized principles of law and precedents.

[By the Root treaty Paname

recognized principles of law and precedents. (By the Root treaty Panama was released from all obligations connected with the Colombian debt.)

VI.

The Republic of Colombia grants to the United States the use of all

[Omitted.]

[Omitted: and as Colombia thereby retains the reversion of the Panama Railway, which would become Colombian property, according to the terms of the concession, on Aug. 16, 1966 (Report of the Isthmian Canal Commission, 1899-1901, p. 471), the United States Government, as present possessor thereof, remains liable to a claim for the delivery to the Government of Colombia of the entire railway and appurtenances, indissolubly connected as they now are, with the ownership and operation of the canal.]

[Omitted.]

the ports of the Republic open to the ports of the Republic open to commerce as places of refuge for an vessels employed in the canal enterprise and for all vessels in distress passing or bound to pass through the canal and seeking shelter or anchorage in said ports, subject in time of war to the rules of neutrality preserve andienche of neutrality properly applicable thereto. Such vessels shall be ex-empt from anchorage or tonnage dues on the part of the Republic

dues on the part of the Republic of Colombia.

The Republic of Colombia renounces all rights and interests in connection with any contract or concession made between it and any corporation or person relating to the construction or operation of a canal or railway across the Isthmus of Panama.

VII.

VII.

As soon as practicable after the exchange of ratifications of this treaty and the contemporaneous treaties of even date herewith between the United States of America and the Republic of Panama, and between the Republic of Panama the United States of America and the Republic of Colombia and the Republic of Colombia will enter into negotiations for the revision of the treaty of peace, amity, navigation, and commerce between the United States of America and the Republic of New Granada, concluded on the 12th day of December, 1846, with a view to making the provisions therein contained conform to existing conditions and to including therein provision for a general treaty of arbitration.

NOT A PARTISAN QUESTION.

It will be observed upon a careful reading of these treaties that both of them have to do with the revenues of the United States, unless, as I observed in my address of February 19, you can disassociate the Panama Canal Zone from the United States of America, a proposition which it will be difficult to establish, since the "purse strings of the people" of the United States are directly involved one way or the other. And so far as this discussion is concerned, it makes no difference whether a Republican administration sanctioned the Root-Cortes treaty or a Democratic administration sanctioned the more generous and vulnerable Bryan treaty; the House of Representatives has not been consulted with respect to a proposed expenditure of the people's money under a treaty negotiated by the President and the Senate. The House, which will be called upon to pay the lump sum granted by treaty, and which has been deprived of its prerogative to originate revenue legislation affected by the treaty, can not afford to permit this transaction to go by without notice. It is true that it may refuse to make the appropriation of the lump sum of \$15,000,000 which the Senate is reported to have agreed upon as a compromise figure under the Bryan treaty. but, in the light of the precedents of more than a century, it should assert its prerogative wherever the attempt is made to take away its right of initiative in the matter of revenues. due course, Mr. Speaker, I hope to be able to bring this matter more directly to the attention of the House, especially since common report indicates that the House will be called upon, without being consulted as to the merits, to pay another lumpsum appropriation of \$3,000,000 to Nicaragua, a treaty concession, by the way, against which Colombia is reported to have lodged a protest.

THE REMARKS OF MR. HELVERING. Mr. Speaker, with respect to the remarks of the gentleman Kansas [Mr. Helvering], commenting upon my address of February 19 and questioning the Colombian treaty data, forwarded to me by Mr. Wilfred H. Schoff, of Philadelphia, and by me previously inserted in the RECORD, I shall further extend my remarks by inserting an illuminating statement by Mr. Schoff as to the points made by Mr. HELVERING.

This statement, which is distinctly a contribution to the literature on this subject, is as follows:

The gentleman from Kansas argues-

"1. That the United States, having consented to negotiate a

in Colombia is estopped from setting up any contention as to the constitutionality of that government. "2a. That admitting that Panama had the right to secede, the revolution of 1903 was only a paper revolution which did not

represent the people of Panama.

"2b. That if Panama had the right to secede the United States had no right to negotiate with Colombia for rights possessed by Panama.

The remainder of the argument is based on the treaty of 1846 between the United States and New Granada and an alleged infraction thereof by the United States in recognizing an act of independence declared by Panama against Colombia, a political organization which had succeeded New Granada.

WHAT DID COLOMBIA INHERIT?

"The argument involves the basic question, What was comprised within the sovereignty exercised by the government at Bogota? If Colombia inherited all the rights possessed by the former Spanish viceroyalty of Santa Fe, it would be sovereign not only over the territory of Colombia as now constituted, but over the territories of Ecuador, Venezuela, Panama, Costa Rica, and Nicaragua. This claim, indeed, was set up when the Republic was formed, but never established. Costa Rica and Nicaragua gained their own independence from Spain and never entered the Colombian federation. Panama, Ecuador, and Venezuela gained their own independence from Spain and did voluntarily enter the Colombian federation. Ecuador and Venezuela seceded after about 10 years of union and set up for themselves. Panama seceded altogether four times and returned to the federation three times under explicit reservations of its separate sovereignty. These reservations made the Bogota government a mere trustee for the people of the Isthmus, who reserved the right to revoke the trust when the trustee violated its terms. That the trust was not revoked long before the secession of 1903 was due only to the fact that the Bogota government maintained permanent garrisons on the Isthmus in violation of the agreement of 1861 under the terms of which Panama reentered the federation.

LAYING CLAIM TO NICARAGUA.

"The government at Bogota still claims sovereignty over all the territory of the viceroyalty of Santa Fe, except in so far as it has itself recognized the independence of certain portions of those territories. It protested to the Department of State in 1902 over the signature of J. V. Concha, then Colombian minister in Washington, now President of the Republic of Colombia, against the negotiation of any agreement between the United States and Nicaragua affecting territorial or canal rights on the ground that sovereignty over the territory of Nicaragua was still inherent in the Colombian Government. 'Colombia holds perfect titles over the territory,' wrote the minister. (S. Doc. 474, 63d Cong., 2d sess., pp. 250–252.) This claim of sovereignty would cover the canal route option from Nicaragua contained in the treaty recently ratifled, also the two islands off the Nicaraguan coast, to be leased by the United States under the terms of that treaty, to which Colombia has never withdrawn its claim. Therefore the United States is in no position to admit such claim, which is further contravened by arbitration of the Emperor of Austria concerning Nicaraguan rights over the Mosquito Coast.

"But the history of the various Governments, republican in form, organized at Bogota, indicates that the present-day Colombia is the successor, not of the vice royalty of Santa Fe but of the Province of New Granada, which did not include the Isthmus, and that its claim to the broader sovereignty, which has never been established, does not merit recognition.

PANAMA FREE TO NEGOTIATE.

"The question of an infraction of the treaty of 1846 includes the question. What was guaranteed by that treaty? It guaranteed 'the neutrality of the Isthmus and the rights of sovereignty and property which New Granada has over said territory. These rights were not defined in the treaty and were limited by the various acknowledgments of isthmian sovereignty made by New Granada and its successors The rights reserved by the Isthmus were so broad and unusual that the United States, in dealing with the Bogota Government for territorial privileges on the Isthmus, was really dealing with the trustee of the property and not the owner. That trustee was discharged by the isthmian revolution of 1903. Had the Hay-Herran treaty been ratified, the United States would have entered into posses sion of the trust subject to a reversion which might never have been demanded, but when the proposed contract was vitiated by the Colombian Senate and the title reclaimed and recovered, a situation arose in which the sovereignty over the Isthmus —the Hay-Herran treaty—with the Marroquin government \ formerly held under limitations by the Republic of New Granada

and the Granadine Confederation, subsequently held in trust by the United States of Colombia, and for 18 years held illegally by force of arms by the Republic of Columbia, had reverted to the Republic of Panama. The treaty of 1846, then, applied only to the maintenance of neutrality on the Isthmus; a neutrality which, according to the agreement of 1861 on which Panama had reentered the Colombian Federation, was to be such as international law defines and constitutes as neutrality for foreign peoples.' The United States and the Republic of Panama were both free agents, competent to enter into a new agreement.

STATEMENT OF SECRETARY ROOT.

"As to the statement that the citizens of Panama did not participate in the act of independence of 1903, it may be said that they participated to the full extent of the administrative organization left to them by the acts of the Bogota Governmentapproval of their governor and ratification by all their municipal councils. (S. Doc. 474, 63d Cong., 2d sess., p. 354; also pp. 532-543, with dispatch of United States Minister Buchanan.)

Their legislature had been illegally abolished by executive decree promulgated from Bogota.

"The constitution of 1886, under which the present Government at Bogota is conducted, was ratified by the same procedure. (Colombian Constitution; preamble.) That Government is therefore estopped from setting up any contention as to

the legality of such procedure.

"The desires of the people of Panama were clearly manifested.
The members from the Isthmus warned the Colombian Congress in July, 1903, that adjournment on October 31 following, without ratification of the Hay-Herran treaty (S. Doc. 474, 63d Cong., 2d sess., p. 354) would bring about the revolt of Panama.

"The facts in this case have been nowhere more succinctly stated than by Secretary Root in his communication to Colombian Minister Mendoza in 1906:

bian Minister Mendoza in 1906;

"We assert that the ancient State of Panama, independent in its origin and by nature and history a separate political community, was federated with the other States of Colombia upon terms which preserved and continued its separate sovereignty; that it never surrendered that sovereignty; that in the year 1885 the pact which bound it to the other States of Colombia was broken and terminated by Colombia, and the Isthmus was subjugated by force; that it was held under foreign domination to which it had never consented; that it was justly entitled to assert its sovereignty and demand its independence from a rule which was unlawful, oppressive, and tyrannical." (S. Doc. 542, 60th Cong., 2d sess., p. 10.)

Rural Mail Service.

EXTENSION OF REMARKS

HON. CHARLES F. REAVIS, OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 6, 1916.

Mr. REAVIS. Mr. Speaker, under leave granted me to extend my remarks in the Record I append two letters written by me in reply to letters from the Fourth Assistant Postmaster General, and also a letter from Mr. Gus A. Hyers, sheriff of Lancaster County, Nebr.:

MARCH 1, 1916.

Mr. James I. Blakslee, Fourth Assistant Postmaster General.

Fourth Assistant Postmaster General.

My Dear General: Replying to your favor of the 24th ultimo, in reference to your criticism of remarks made by me and reported on page 3138 of the Congressional Record, will say that the remarks so used and so reported accurately express the substance of your statements to me when I called upon you last summer. I had no conversation with any member of your office save yourself, and the statement made by me on the floor of the House referred solely to the conversation between you and me.

Very truly, yours,

C. F. Reavis.

MARCH 1, 1916.

Mr. James I. Blanslee,
Fourth Assistant Postmaster General.

My Dear General:
My Merchant Ships Captured by a Belligerent, such of its crew as are nationals of a neutral State are not made prisoners of war.
The same rule applies in the case of the captain and officers likewise nationals of a neutral State, if they promise formally in writing not to serve on an enemy ship while the war lasts.

ARTICLE G.
The captain, officers, and members of the crew, when nationals of the enemy State, are not made prisoners of war, on condition

public views were given. You remember that when I spoke to you in your office last summer, you told me after I had made repeated visits to your office that you would send an inspector out there. I asked you when he would arrive and you said that he would be there before I reached home. He was not there when I reached home and weeks passed by, during the passage of which I wrote you several letters, asking you to abide by your promise to me, and eventually wired you. After the wire I received a personal notice from a friend whom I had asked to watch the matter for me, to the effect that the inspector was in Lincoln.

At my own expense I published in the daily papers of Lincoln that the inspector was there, just where he might be found, and invited the patrons to come in. The public hearing that resulted was not the result of any action on the part of the Post Office Department, but was the result of my own action in publishing these notices.

I desire to state to you that I think Mr. Randall, the inspector, is a very high-class man and made an earnest effort to rectify the deplorable condition into which you had put those routes, but the situation was so acute that it did not permit a complete and satisfactory restoral.

I have received many complaints especially from Repnet Walton

restoral. I have received many complaints, especially from Bennet, Walton, and Cheney as to the present inadequate condition of that service. You have made a slight change out of Roca on my complaint. The situation that now prevails is much better than when your inspector got through with it, in the first instance, but it lacks a great deal of being as efficient as it was before the original reorganization.

Very truly, yours,

C. F. REAVIS.

EXCELSION SPRINGS, Mo., March 2, 1916.

Friend REAVIS:

When postmaster and change of routes followed, agents from Post Office Department laid out routes from blue prints in hotel. I was there and talked to carriers, but never went over routes. This conforms with your statement in Congress.

Rights in Naval Warfare.

EXTENSION OF REMARKS

HON. S. D. FESS, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 6, 1916.

Mr. FESS. Mr. Speaker, the question of neutral rights on the sea is somewhat illuminated by the rules adopted by The Hague conference touching restrictions with regard to the exercise of the right of capture in naval warfare, signed October 18, 1907.

I herein insert the findings:

CHAPTER I .- POSTAL CORRESPONDENCE.

ARTICLE 1.

The postal correspondence of neutrals or belligerents, whatever its official or private character may be, found on the high seas on board a neutral or enemy ship, is inviolable. If the ship is detained, the correspondence is forwarded by the captor with the least possible

delay.

The provisions of the preceding paragraph do not apply, in case of violation of blockade, to correspondence destined for or proceeding from a blockaded port.

ARTICLE 2.

The inviolability of postal correspondence does not exempt a neutral mail ship from the laws and customs of maritime war as to neutral merchant ships in general. The ship, however, may not be searched except when absolutely necessary, and then only with as much consideration and expedition as possible.

CHAPTER II .- THE EXEMPTION FROM CAPTURE OF CERTAIN VESSELS. ARTICLE 3

Vessels used exclusively for fishing along the coast or small boats employed in local trade are exempt from capture, as well as their appliances, rigging, tackle, and cargo.

They cease to be exempt as soon as they take any part whatever in hostilities.

The contracting powers agree not to take advantage of the harmless character of the said vessels in order to use them for military purposes while preserving their peaceful appearance.

ARTICLE 4

Vessels charged with religious, scientific, or philanthropic missions are likewise exempt from capture.

Chapter III.—Regulations Regarding the Crews of Enemy Merchant Ships Captured by a Belligerent.

ARTICLE 7.

The names of the persons retaining their liberty under the conditions laid down in article 5, paragraph 2, and in article 6, are notified by the belligerent captor to the other belligerent. The latter is forbidden knowingly to employ the said persons.

ARTICLE 8.

The provisions of the three preceding articles do not apply to ships taking part in the hostilities.

CHAPTER IV .- FINAL PROVISIONS.

ARTICLE 9.

The provisions of the present convention do not apply except be-tween contracting powers, and then only if all the belligerents are parties to the convention.

ARTICLE 10.

The present convention shall be ratified as soon as possible.

The ratifications shall be deposited at The Hague.

The first deposit of ratifications shall be recorded in a proces verbal signed by the representatives of the powers taking part therein and by the Netherland minister for foreign affairs.

Subsequent deposits of ratifications shall be made by means of a written notification, addressed to the Netherland Government and accompanied by the instrument of ratification.

A duly certified copy of the process verbal relative to the first deposit of ratifications, of the notifications mentioned in the preceding paragraph, as well as of the instruments of ratification, shall be at once sent by the Netherland Government, through the diplomatic channel, to the powers invited to the second peace conference, as well as to the other powers which have adhered to the convention. In the cases contemplated in the preceding paragraph, the said Government shall inform them at the same time of the date on which it received the notification.

Nonsignatory powers may adhere to the present convention.

The power which desires to adhere notifies its intention in writing to the Netherland Government, forwarding to it the act of adhesion, which shall be deposited in the archives of the said Government.

This Government shall at once fransmit to all the other powers a fully certified copy of the notification as well as of the act of adhesion, mentioning the date on which it received the notification.

ARTICLE 12.

The present convention shall come into force in the case of the powers which were a party to the first deposit of ratification 60 days after the process-verbal of that deposit, and in the case of the powers which ratify subsequently or which adhere 60 days after the notification of their ratification has been received by the Netherland Government.

ARTICLE 13.

In the event of one of the contracting powers wishing to denounce the present convention, the denunciation shall be notified in writing to the Netherland Government, which shall at once communicate a duly certified copy of the notification to all the other powers, informing them of the date on which it was received.

The denunciation shall only have effect in regard to the notifying power, and one year after the notification has reached the Netherland Government.

ARTICLE 14.

A register kept by the Netherland ministry for foreign affairs shall give the date of the deposit of ratifications made in virtue of article 10, paragraphs 3 and 4, as well as the date on which the notifications of adhesion (art. 11, par. 2) or of denunciation (art. 13, par. 1) have been received.

Each contracting power is entitled to have access to this register and to be supplied with duly certified extracts from it.

In faith whereof the plenipotentiaries have appended their signatures to the present convention.

Done at The Hague, the 18th October, 1907, in a single copy, which shall remain deposited in the archives of the Netherland Government, and duly certified copies of which shall be sent, through the diplomatic channel, to the powers invited to the second peace conference.

[Here follow signatures.]

RATIFICATIONS, ADHESIONS, AND RESERVATIONS.

RATIFICATIONS, ADHESIONS, AND RESERVATIONS.

The foregoing convention was ratified by the following signatory powers on the dates indicated:
Austria-Hungary, November 27, 1909.
Belgium, August 8, 1910.
Brazil, January 5, 1914.
Denmark, November 27, 1909.
France, October 7, 1910.
Germany, November 27, 1909.
Great Britain, November 27, 1909.
Great Britain, November 27, 1909.
Guatemala, March 15, 1911.
Haiti, February 2, 1910.
Japan, December 13, 1911.
Luxemburg, September 5, 1912.
Mexico, November 27, 1909.
Notwerlands, November 27, 1909.
Norway, September 19, 1910.
Panama, September 11, 1911.
Portugal, April 13, 1911.
Roumania, March 12, 1910.
Spain, March 12, 1910.
Spain, March 18, 1913.
Sweden, November 27, 1909.
Switzerland, May 12, 1910.
United States, November 27, 1909.
Then, Mr. Speaker, the activities of the prize courts make it

Then, Mr. Speaker, the activities of the prize courts make it necessary to review the latest international agreement upon the powers of such a court as outlined by The Hague Conference in 1907.

PART I .- GENERAL PROVISIONS.

ARTICLE 1.

The validity of the capture of a merchant ship or its cargo is decided before a prize court in accordance with the present convention when neutral or enemy property is involved.

ARTICLE 2.

Jurisdiction in matters of prize is exercised in the first instance by the prize courts of the belitgerent captor. The judgments of these courts are pronounced in public or are offi-cially notified to parties concerned who are neutrals or enemies.

ARTICLE 3.

ARTICLE 3.

The judgments of national prize courts may be brought before the International Prize Court—

1. When the judgment of the national prize courts affects the property of a neutral power or individual;

2. When the judgment affects enemy property and relates to—
(a) Cargo on board a neutral ship;
(b) An enemy ship captured in the territorial waters of a neutral power, when that power has not made the capture the subject of a diplomatic claim;
(c) A claim based upon the allegation that the seizure has been effected in violation, either of the provisions of a convention in force between the belligerent powers, or of an enactment issued by the belligerent captor

The appeal against the judgment of the national court can be based on the ground that the judgment was wrong either in fact or in law.

ARTICLE 4.

An appeal may be brought—

1. By a neutral power, if the judgment of the national tribunals injuriously affects its property or the property of its nationals (art. 3, No. 1), or if the capture of an enemy vessel is alleged to have taken place in the territorial waters of that power (art. 3, No. 2b);

2. By a neutral individual, if the judgment of the national court injuriously affects his property (art. 3, No. 1), subject, however, to the reservation that the power to which he belongs may forbid him to bring the case before the court, or may itself undertake the proceedings in his place;

3. By an individual subject or citizen of an enemy power, if the judgment of the national court injuriously affects his property in the cases referred to in article 3, No. 2, except that mentioned in paragraph b.

An appeal may also be brought on the same conditions as in the preceding article, by persons belonging either to neutral States or to the enemy, deriving their rights from and entitled to represent an individual qualified to appeal, and who have taken part in the proceedings before the national court. Persons so entitled may appeal separately to the extent of their interest.

The same rule applies in the case of persons belonging either to neutral States or to the enemy who derive their rights from and are entitled to represent a neutral power whose property was the subject of the decision.

ARTICLE 6.

When, in accordance with the above article 3, the international court has jurisdiction, the national courts can not deal with a case in more than two instances. The municipal law of the belligerent captor shall decide whether the case may be brought before the international court after judgment has been given in first instance or only after an appeal.

If the national courts fail to give final judgment within two years from the date of capture, the case may be carried direct to the international court.

ARTICLE 7.

ARTICLE 7.

If a question of law to be decided is covered by a treaty in force between the belligerent captor and a power which is itself or whose subject or citizen is a party to the proceedings, the court is governed by the provisions of the said treaty.

In the absence of such provisions, the court shall apply the rules of international law. If no generally recognized rule exists, the court shall give judgment in accordance with the general principles of justice and equity.

The above provisions apply equally to questions relating to the order and mode of proof.

If, in accordance with article 3, No. 2c, the ground of appeal is the violation of an enactment issued by the belligerent captor, the court will enforce the enactment.

the violation of an enactment issued by the beingerent captor, the court will enforce the enactment.

The court may disregard failure to comply with the procedure laid down in the enactments of the belligerent captor, when it is of opinion that the consequences of complying therewith are unjust and inequitable.

ARTICLE 8.

(See art. 2 of the additional protocol.)

(See art. 2 of the additional protocol.)

If the court pronounces the capture of the vessel or cargo to be valid, they shall be disposed of in accordance with the laws of the belligerent captur.

If it pronounces the capture to be null, the court shall order restitution of the vessel or cargo, and shall fix, if there is occasion, the amount of the damages. If the vessel or cargo have been sold or destroyed, the court shall determine the compensation to be given to the owner on this account.

If the national court pronounced the capture to be null, the court can only be asked to decide as to the damages.

ARTICLE 9.

The contracting powers undertake to submit in good faith to the decisions of the International Prize Court and to carry them out with the least possible delay.

PART II-CONSTITUTION OF THE INTERNATIONAL PRIZE COURT.

ARTICLE 10.

The International Prize Court is composed of judges and deputy judges, who will be appointed by the contracting powers, and must all be jurists of known proficiency in questions of international maritime law, and of the highest moral reputation.

The appointment of these judges and deputy judges shall be made within six months after the ratification of the present convention.

ARTICLE 11.

The judges and deputy judges are appointed for a period of six years, reckoned from the date on which the notification of their appointment is received by the administrative council established by the convention for the pacific settlement of international disputes of the 29th July, 1899. Their appointments can be renewed.

Should one of the judges or deputy judges die or resign, the same procedure is foliowed for filling the vacancy as was followed for appointing him. In this case the appointment is made for a fresh period of six years.

ARTICLE 12.

The judges of the International Prize Court are all equal in rank and have precedence according to the date on which the notification of their appointment was received (art. 11, par. 1), and if they sit by rota (art. 15, par. 2), according to the date on which they entered upon their duties. When the date is the same the senior in age takes precedence.

The deputy judges when acting are assimilated to the judges. They rank, however, after them.

The judges enjoy diplomatic privileges and immunities in the performance of their duties and when outside their own country.

Before taking their seat the judges must swear, or make a solemn promise before the administrative council, to discharge their duties impartially and conscientiously.

ARTICLE 14.

The court is composed of 15 judges; 9 judges constitute a quorum. A judge who is absent or prevented from sitting is replaced by the deputy judge.

(Reservation of this article was made by Chile, Cuba, Ecuador, Guatemala, Halti, Persia, Salvador, Siam. Turkey, and Uruguay.)

The judges appointed by the following contracting powers, Geramany, the United States of America, Austria-Hungary, France, Great Britain, Italy, Japan, and Russia, are always summoned to sit.

The judges and deputy judges appointed by the other contracting powers sit by rota as shown in the table annexed to the present convention; their duties may be performed successively by the same person. The same judge may be appointed by several of the said powers.

ARTICLE 16.

If a belligerent power has, according to the rota, no judge sitting in the court, it may ask that the judge appointed by it should take part in the settlement of all cases arising from the war. Lots shall then be drawn as to which of the judges entitled to sit according to the rota shall withdraw. This arrangement does not affect the judge appointed by the other belligerent.

ARTICLE 17.

No judge can sit who has been a party, in any way whatever, to the sentence pronounced by the national courts, or has taken part in the case as counsel or advocate for one of the parties.

No judge or deputy judge can, during his tenure of office, appear as agent or advocate before the International Prize Court nor act for one of the parties in any capacity whatever.

ARTICLE 18.

The belligerent captor is entitled to appoint a naval officer of high rank to sit as assessor, but with no voice in the decision. A neutral power, which is a party to the proceedings or whose subject or citizen is a party, has the same right of appointment; if as the result of this last provision more than one power is concerned, they must agree among themselves, if necessary by lot, on the officer to be appointed.

ARTICLE 19. The court elects its president and vice president by an absolute majority of the votes cast. After two ballots, the election is made by a bare majority, and, in case the votes are equal, by lot.

ARTICLE 20.

ARTICLE 20.

The judges on the International Prize Court are entitled to traveling allowances in accordance with the regulations in force in their own country, and in addition receive, while the courts is sitting or while they are carrying out duties conferred upon them by the court, a sum of 100 Netherland florins per diem.

These payments are included in the general expenses of the court dealt with in Article 47, and are paid through the International Bureau established by the convention of the 29th July, 1899.

The judges may not receive from their own Government or from that of any other power any remuneration in their capacity of members of the court.

ARTICLE 21.

The seat of the International Prize Court is at The Hague and it can not, except in the cases of force majeure, be transferred elsewhere without the consent of the belligerents.

ARTICLE 22.

The administrative council fulfills, with regard to the International Prize Court, the same functions as to the Permanent Court of Arbitration, but only representatives of contracting powers will be members of it.

ARTICLE 23.

The International Bureau acts as registry to the International Prize Court and must place its offices and staff at the disposal of the court. It has charge of the archives and carries out the administrative work. The secretary general of the International Bureau acts as registrar. The necessary secretaries to assist the registrar, translators, and shorthand writers are appointed and sworn in by the court.

ARTICLE 24.

The court determines which language it will itself use and what languages may be used before it.

In every case the official language of the national courts which have had cognizance of the case may be used before the court.

ARTICLE 25.

Powers which are concerned in a case may appoint special agents to act as intermediaries between themselves and the court. They may also engage counsel or advocates to defend their rights and interests. ARTICLE 26.

A private person concerned in a case will be represented before the court by an attorney, who must be either an advocate qualified to plead before a court of appeal or a high court of one of the contracting States, or a lawyer practicing before a similar court, or, lastly, a professor of law at one of the higher teaching centers of those countries.

ARTICLE 27.

ARTICLE 27.

For all notices to be served, in particular on the parties, witnesses, or experts, the court may apply direct to the Government of the State on whose territory the service is to be carried out. The same rule applies in the case of steps being taken to procure evidence.

The requests for this purpose are to be executed so far as the means at the disposal of the power applied to under its municipal law allow. They can not be rejected unless the power in question considers them calculated to impair its sovereign rights or its safety. If the request is complied with, the fees charged must only comprise the expenses actually incurred.

The court is equally entitled to act through the power on whose territory it sits.

Notices to be given to parties in the place where the court sits may be served through the international bureau.

PART III .- PROCEDURE IN THE INTERNATIONAL PRIZE COURT.

ARTICLE 28.

(See art. 5 of the additional protocol.)

An appeal to the international prize court is entered by means of a written declaration made in the national court which has already dealt with the case or addressed to the international bureau; in the latter case the appeal can be entered by telegram.

The period within which the appeal must be entered is fixed at 120 days, counting from the day the decision is delivered or notified. (Art. 2, par. 2.)

(See art. 6 of the additional protocol.)

If the notice of appeal is entered in the national court, this court, without considering the question whether the appeal was entered in due time, will transmit within seven days the record of the case to the international oureau.

If the notice of the appeal is sent to the international bureau, the bureau will immediately inform the national court, when possible by telegraph. The latter will transmit the record as provided in the preceding paragraph.

celegraph. The latter will transmit the record as provided in the preceding paragraph.

When the appeal is brought by a neutral individual the international bureau at once informs by telegraph the individual's Government, in order to enable it to enforce the rights it enjoys under article 4, paragraph 2.

In the case provided for in article 6, paragraph 2, the notice of appeal can be addressed to the international bureau only. It must be entered within 30 days of the expiration of the period of 2 years.

ARTICLE 21.

If the appellant does not enter his appeal within the period laid down in article 28 or 30, it shall be rejected without discussion.

Provided that he can show that he was prevented from so doing by force majeure and that the appeal was entered within 60 days after the circumstances which prevented him entering it before had ceased to operate, the court can, after hearing the respondent, grant relief from the effect of the above provision.

ARTICLE 32.

If the appeal is entered in time, a certified copy of the notice of appeal is forthwith officially transmitted by the court to the respondent. ARTICLE 33.

If in addition to the parties who are before the court there are other parties concerned who are entitled to appeal, or if, in the case referred to in article 29, paragraph 3, the Government who has received notice of an appeal has not announced its decision, the court will await before dealing with the case the expiration of the period laid down in article 28 or 30.

ARTICLE 34.

The procedure before the international court includes two distinct parts, the written pleadings and oral discussions.

The written pleadings consist of the deposit and exchange of cases, countercases, and, if necessary, of replies, of which the order is fixed by the court, as also the periods within which they must be delivered. The parties annex thereto all papers and documents of which they intend to make use.

A certified copy of every document produced by one party must be communicated to the other party through the medium of the court.

ARTICLE 35.

After the close of the pleadings a public sitting is held on a day fixed by the court.

At this sitting the parties state their view of the case both as to the law and as to the facts.

The court may, at any stage of the proceedings, suspend speeches of counsel, either at the request of one of the parties, or on their own initiative, in order that supplementary evidence may be obtained.

ARTICLE 36.

The international court may order the supplementary evidence to be taken either in the manner provided by article 27, or before itself, or one or more of the members of the court, provided that this can be done without resort to compulsion or the use of threats.

If steps are to be taken for the purpose of obtaining evidence by members of the court outside the territory where it is sitting, the consent of the foreign Government must be obtained.

ARTICLE 37.

The parties are summoned to take part in all stages of the proceedings and receive certified copies of the minutes.

ARTICLE 38.

The discussions are under the control of the president or vice president, or; in case they are absent or can not act, of the senior judge present.

The judge appointed by a belligerent party can not preside.

ARTICLE 39.

The discussions take place in public, subject to the right of a government who is a party to the case to demand that they be held in

private.

Minutes are taken of these discussions and signed by the president and registrar, and these minutes alone have an authentic character.

ARTICLE 40.

If a party does not appear, despite the fact that he has been duly cited, or if a party fails to comply with some step within the period fixed by the court, the case proceeds without that party, and the court gives judgment in accordance with the material at its disposal.

ARTICLE 41

The court officially notifies to the parties decrees or decisions made in their absence.

The court takes into consideration in arriving at its decisions all the facts, evidence, and oral statements.

ARTICLE 43.

The court considers its decision in private and the proceedings are

secret.
All questions are decided by a majority of the judges present. If the number of judges is even and equally divided, the vote of the junior judge in the order of precedence laid down in article 12, paragraph 1,

ARTICLE 44.

The judgment of the court must give the reasons on which it is based. It contains the names of the judges taking part in it, and also of the assessors, if any; it is signed by the president and registrar.

(See art. 7 of the additional protocol.)

The sentence is pronounced in public sitting, the parties concerned being present or duly summoned to attend; the sentence is officially communicated to the parties.

When this communication has been made the court transmits to the national prize court the record of the case, together with copies of the various decisions arrived at and of the minutes of the proceedings.

ARTICLE 46.

ARTICLE 46.

Each party pays its own costs.

The party against whom the court decides bears, in addition, the costs of the trial, and also pays 1 per cent of the value of the subject matter of the case as a contribution to the general expenses of the international court The amount of these payments is fixed in the judgment of the court

If the appeal is brought by an individual, he will furnish the international bureau with security to an amount fixed by the court, for the purpose of guaranteeing eventual fulfillment of the two obligations mentioned in the preceding paragraph. The court is entitled to postpone the opening of the proceedings until the security has been furnished.

ARTICEL 47.

The general expenses of the International Prize Court are borne by the contracting powers in proportion to their share in the composition of the court as laid down in article 15 and in the annexed table. (Post, p. 203.) The appointment of deputy judges does not involve any contribution.

The administrative council applies to the powers for the funds requisite for the working of the court.

ARTICLE 48.

When the court is not sitting the duties conferred upon it by article 32, article 34, paragraphs 2 and 3, article 35, paragraph 1, and article 46, paragraph 3, are discharged by a delegation of three judges appointed by the court. This delegation decides by a majority of votes.

ARTICLE 40. The court itself draws up its own rules of procedure, which must be communicated to the contracting powers. It will meet to elaborate these rules within a year of the ratifica-tion of the present convention.

ARTICLE 50.

The court may propose modifications in the provisions of the present convention concerning procedure. These proposals are communicated, through the medium of the Netherland Government, to the contracting powers, which will consider together as to the measures to be taken.

PART IV-FINAL PROVISIONS.

ARTICLE 51.

The present convention does not apply as of right except when the belligerent powers are all parties to the convention.

It is further fully understood that an appeal to the International Prize Court can only be brought by a contracting power or the subject or citizen of a contracting power.

In the cases mentioned in article 5 the appeal is only admitted when both the owner and the person entitled to represent him are equally contracting powers or the subjects or citizens of contracting powers.

ARTICLE 52

ARTICLE 52.

The present convention shall be ratified and the ratifications shall be deposited at The Hague as soon as all the powers mentioned in article 15 and in the table annexed are in a position to do so.

The deposit of the ratifications shall take place, in any case, on the 30th June, 1909, if the powers which are ready to ratify furnish nine judges and nine deputy judges to the court, qualified to validly constitute a court If not, the deposit shall be postponed until this condition is fulfilled.

A minute of the deposit of ratifications shall be drawn up, of which a certified copy shall be forwarded through the diplomatic channel, to each of the powers referred to in the first paragraph. (See art. 8 of the additional protocol, post, p. 207.)

ARTICLE 53

ARTICLE 53.

The powers referred to in article 15 and in the table annexed are entitled to sign the present convention up to the deposit of the ratifications contemplated in paragraph 2 of the preceding article.

After this deposit they can at any time adhere to it, purely and simply. (Nee art. 9 of the additional protocol, post, p. 207.) A power wishing to adhere, notifies its intention in writing to the Netherland Government, transmitting to it, at the same time, the act of adhesion, which shall be deposited in the archives of the said Government. The latter shall send, through the diplomatic channel, a certified copy of the notification and of the act of adhesion to all the powers referred to in the preceding paragraph, informing them of the date on which it has received the notification.

ARTICLE 54.

The present convention shall come into force six months from the deposit of the ratifications contemplated in article 52, paragraphs 1 and 2.

and 2.

The adhesions shall take effect 60 days after notification of such adhesion has been received by the Netherland Government or as soon as possible on the expiration of the period contemplated in the preceding paragraph.

The international court shall, however, have jurisdiction to deal with prize cases decided by the national courts at any time after the deposit of the ratifications or of the receipt of the notification of the adhesions. In such cases the period fixed in article 28, paragraph 2, shall only be reckoned from the date when the convention comes into force as regards a power which has ratified or adhered.

The present convention shall remain in force for 12 years from the time it comes into force, as determined by article 54, paragraph 1, even in the case of powers which adhere subsequently.

It shall be renewed tacitly from six years to six years unless de-

nounced.

Denunciation must be notified in writing, at least one year before the expiration of each of the periods mentioned in the two preceding paragraphs, to the Netherland Government, which will inform all the other contracting powers.

Denunciation shall only take effect in regard to the power which has notified it. The convention shall remain in force in the case of the other contracting powers, provided that their participation in the appointment of judges is sufficient to allow of the composition of the court with nine judges and nine deputy judges.

ARTICLE 56

In case the present convention is not in operation as regards all the powers referred to in article 15 and the annexed table, the administrative council shall draw up a list on the lines of that article and table of the judges and deputy judges through whom the contracting powers will share in the composition of the court. The times allotted by the said table to judges who are summoned to sit in rota will be redistributed between the different years of the six-year period in such a way that, as far as possible, the number of the judges of the court in each year shall be the same. If the number of deputy judges is greater than that of the judges, the number of the latter can be completed by deputy judges chosen by lot among those powers which do not nominate a judge.

The list drawn up in this way by the administrative council shall be nottlided to the contracting powers. It shall be revised when the number of these powers is modified as the result of adhesions or denunciations.

The change resulting from an adhesion is not made until the 1st

nunciations.

The change resulting from an adhesion is not made until the 1st January after the date on which the adhesion takes effect, unless the adhering power is a belligerent power, in which case it can ask to be at once represented in the court, the provisions of article 16 being, moreover, applicable if necessary.

When the total number of judges is less than 11, 7 judges form a guorum.

ARTICLE 57.

Two years before the expiration of each period referred to in paragraphs 1 and 2 of article 55 any contracting power can demand a modification of the provisions of article 15 and of the annexed table, relative to its participation in the composition of the court. The demand shall be addressed to the administrative council, which will examine it and submit to all the powers proposals as to the measures to be adopted. The powers shall inform the administrative council of their decision with the least possible delay. The result shall be at once, and at least 1 year and 30 days before the expiration of the said period of 2 years, communicated to the power which made the demand.

When necessary, the modifications adopted by the powers shall come into force from the commencement of the fresh period.

SIGNATURES AND RESERVATIONS

[The deposit of ratifications provided for in art. 52, par. 2, has not yet taken place.]

taken place.]

Both the 1907 convention and the 1910 additional protocol have been signed by the following powers:
Argentine Republic, Austria-Hungary, Belgium, Bolivia, Bulgaria, Chile, Colombia, Cuba, Denmark, Ecuador, France, Germany, Great Britain, Guatemala, Haiti, Italy, Japan, Mexico, Netherlands, Norway, Panama, Paraguay, Persia, Peru, Portugal, Salvador, Siam, Spain, Sweden, Switzerland, Turkey, United States, and Uruguay.
Reservations: Chile, Cuba, Ecuador, Guatemala, Haiti, Persia, Salvador, Siam, Turkey, and Uruguay signed the convention with reservation of article 15.

Mr. Speaker, in view of the much-discussed question of warships or auxiliaries in neutral waters, I herein insert the findings of The Hague conference on the "Rights and Duties of Neutral Powers in Naval War," as adopted October 18, 1907.

ARTICLE 1.

Belligerents are bound to respect the sovereign rights of neutral powers and to abstain, in neutral territory or neutral waters, from any act which would, if knowingly permitted by any power, constitute a violation of neutrality.

ARTICLE 2.

Any act of hostility, including capture and the exercise of the right of search, committed by belligerent warships in the territorial waters of a neutral power, constitutes a violation of neutrality and is strictly forbidden.

ARTICLE 3.

When a ship has been captured in the territorial waters of a neutral power this power must employ, if the prize is still within its jurisdiction, the means at its disposal to release the prize with its officers and crew and to intern the prize crew.

If the prize is not in the jurisdiction of the neutral power, the captor Government, on the demand of that power, must liberate the prize with its officers and crew.

ARTICLE 4.

A prize court can not be set up by a belligerent on neutral territory or on a vessel in neutral waters.

ARTICLE 5.

Beiligerents are forbidden to use neutral ports and waters as a base of naval operations against their adversaries, and in particular to erect wireless telegraphy stations or any apparatus for the purpose of communicating with the beligerent forces on land or sea.

The supply, in any manner, directly or indirectly, by a neutral power to a belligerent power of warships, ammunition, or war material of any kind whatever is forbidden.

A neutral power is not bound to prevent the export or transit, for the use of either belligerent, of arms, ammunition, or, in general, of anything which could be of use to an army or fleet.

ARTICLE S.

A neutral Government is bound to employ the means at its disposal to prevent the fitting out or arming of any vessel within its jurisdiction which it has reason to believe is intended to cruise or engage in hostile operations against a power with which that Government is at peace. It is also bound to display the same vigilance to prevent the departure from its jurisdiction of any vessel intended to cruise or engage in hostile operations which had been adapted entirely or partly within the said jurisdiction for use in war.

ARTICLE 9.

A neutral power must apply impartially to the two belligerents the conditions, restrictions, or prohibitions made by it in regard to the admission into its ports, roadsteads, or territorial waters of belligerent warships or of their prizes.

Nevertheless, a neutral power may forbid a belligerent vessel which has falled to conform to the orders and regulations made by it, or which has violated neutrality, to enter its ports or roadsteads.

ARTICLE 10.

(See the declaration of Turkey as to the Dardanelles and Bosphorus.) The neutrality of a power is not affected by the mere passage through its territorial waters of warships or prizes belonging to belligerents.

ARTICLE 11.

(Germany made reservation of article 11.)

A neutral power may allow belligerent warships to employ its licensed pilots.

(The Dominican Republic, Germany, Persia, and Siam made reservation of article 12.)

In the absence of special provisions to the contrary in the legisla-tion of a neutral power, belligerent warships are not permitted to remain in the ports, roadsteads, or territorial waters of the said power for more than 24 hours, except in the cases covered by the present convention. convention.

(Germany made reservation of article 13.)

If a power which has been informed of the outbreak of hostilities learns that a belligerent warship is in one of its ports or roadsteads or in its territorial waters, it must notify the said ship to depart within 24 hours or within the time prescribed by local regulations.

ARTICLE 14.

A belligerent warship may not prolong its stay in a neutral port beyond the permissible time except on account of damage or stress of weather. It must depart as soon as the cause of the delay is at an end. The regulations as to the question of the length of time which these vessels may remain in neutral ports, roadsteads, or waters do not apply to warships devoted exclusively to religious, scientific, or philanthropic purposes. (China made reservation of this paragraph.) ARTICLE 15.

In the absence of special provisions to the contrary in the legislation of a neutral power, the maximum number of warships belonging to a belligerent which may be in one of the ports or roadsteads of that power simultaneously shall be three.

ARTICLE 16.

When warships belonging to both belligerents are present simultaneously in a neutral port or roadstead, a period of not less than 24 hours must elapse between the departure of the ship belonging to one belligerent and the departure of the ship belonging to one belligerent and the departure is determined by the order of arrival, unless the ship which arrived first is so circumstanced that an extension of its stay is permissible.

A belligerent warship may not leave a neutral port or roadstead until 24 hours after the departure of a merchant ship flying the flag of its adversary.

ARTICLE 17.

In neutral ports and roadsteads belligerent warships may only carry out such repairs as are absolutely necessary to render them seaworthy, and may not add in any manner whatsoever to their fighting force. The local authorities of the neutral power shall decide what repairs are necessary, and these must be carried out with the least possible delay.

ARTICLE 18.

Belligerent warships may not make use of neutral ports, roadsteads, or territorial waters for replenishing or increasing their supplies of war material or their armament or for completing their crews.

ARTICLE 19

(China, Great Britain, Japan, Persia, and Siam made reservation of article 19.)

Belligerent warships may only revictual in neutral ports or roadsteads to bring up their supplies to the peace standard.

Similarly these vessels may only ship sufficient fuel to enable them to reach the nearest port in their own country. They may, on the other hand, fill up their bunkers built to carry fuel, when in neutral countries which have adopted this method of determining the amount of fuel to be supplied.

If, in accordance with the law of the neutral power, the ships are not supplied with coal within 24 hours of their arrival, the permissible duration of their stay is extended by 24 hours.

ARTICLE 20.

(Germany made reservation of article 20.)

Belligerent warships which have shipped fuel in a port belonging to a neutral power may not within the succeeding three months replenish their supply in a port of the same power.

ARTICLE 21.

(Persia made reservation of article 21.)

A prize may only be brought into a neutral port on account of unseaworthiness, stress of weather, or want of fuel or provisions.

It must leave as soon as the circumstances which justified its entry are at an end. If it does not, the neutral power must order it to leave at once; should it fail to obey, the neutral power must employ the means at its disposal to release it with its officers and crew and to intern the prize crew.

ARTICLE 22.

A neutral power must, similarly, release a prize brought into one of its ports under circumstances other than those referred to in article 21.

ARTICLE 23.

(Reservations as to this article were made by Great Britain, Japan, Siam, and the United States.)

A neutral power may allow prizes to enter its ports and roadsteads, whether under convoy or not, when they are brought there to be sequestrated pending the decision of a prize court. It may have the prize taken to another of its ports.

If the prize is convoyed by a warship, the prize crew may go on board he convoying ship.

If the prize is not under convoy, the prize crew are left at liberty.

ARTICLE 24.

ARTICLE 24.

If, notwithstanding the notification of the neutral power, a belligerent ship of war does not leave a port where it is not entitled to remain, the neutral power is entitled to take such measures as it considers necessary to render the ship incapable of taking the sea during the war, and the commanding officer of the ship must facilitate the execution of such measures.

When a belligerent ship is detained by a neutral power the officers and crew are likewise detained.

The officers and crew thus detained may be left in the ship or kept either on another vessel or on land, and may be subjected to the measures of restriction which it may appear necessary to impose upon them. A sufficient number of men for looking after the vessel must, however, be always left on board.

The officers may be left at liberty on giving their word not to quit the neutral territory without permission.

ARTICLE 25.

ARTICLE 25.

A neutral power is bound to exercise such surveillance as the means at its disposal allow to prevent any violation of the provisions of the above articles occurring in its port or roadsteads or in its waters.

The exercise by a neutral power of the rights laid down in the present convention can under no circumstances be considered as an unfriendly act by one or other belligerent who has accepted the articles relating thereto.

ARTICLE 27.

(China made reservation of this article.)

The contracting powers shall communicate to each other in due course all laws, proclamations, and other enactments regulating in their respective countries the status of belilgerent warships in their ports and waters, by means of a communication addressed to the Government of the Netherlands, and forwarded immediately by that Government to the other contracting powers.

ARTICLE 28.

The provisions of the present convention do not apply except between contracting powers, and then only if all the belligerents are parties to the convention.

ARTICLE 29.

The present convention shall be ratified as soon as possible.

The ratifications shall be deposited at The Hague.

The first deposit of ratification shall be recorded in a procès verbal signed by the representatives of the powers which take part therein and by the Netherland Minister for Foreign Affairs.

The subsequent deposits of ratifications shall be made by means of a written notification addressed to the Netherland Government and accompanied by the instrument of ratification.

A duly certified copy of the procès verbal relative to the first deposit of ratifications, of the ratifications mentioned in the preceding paragraph, as well as of the instruments of ratification, shall be at once sent by the Netherland Government, through the diplomatic channel, to the powers invited to the Second Peace Conference, as well as to the other powers which have adhered to the convention. In the cases contemplated in the preceding paragraph, the said Government shall inform them at the same time of the date on which it received the notification. notification.

ARTICLE 30.

Nonsignatory powers may adhere to the present convention.

The power which desires to adhere notifies in writing its intention to the Netherland Government, forwarding to it the act of adhesion, which shall be deposited in the archives of the said Government.

That Government shall at once transmit to all the other powers a duly certified copy of the notification as well as of the act of adhesion, mentioning the date on which it received the notification.

ARTICLE 31.

The present convention shall come into force, in the case of the powers which were a party to the first deposit of the ratifications, 60 days after the date of the procès verbal of that deposit, and, in the case of the powers who ratify subsequently or who adhere, 60 days after the notification of their ratification or of their decision has been received by the Netherland Government.

ARTICLE 32.

In the event of one of the contracting powers wishing to denounce the present convention, the denunciation shall be notified in writing to the Netherland Government, who shall at once communicate a duly certified copy of the notification to all the other powers informing them of the date on which it was received.

The denunciation shall only have effect in regard to the notifying power, and one year after the notification has been made to the Netherland Government.

ARTICLE 83.

ARTICLE 33.

A register kept by the Netherland Ministry for Foreign Affairs shall give the date of the deposit of ratification made by article 29, paragraphs 3 and 4, as well as the date on which the notifications of adhesion (art. 30, par. 2) or of denunciation (art. 32, par. 1) have been received.

Each contracting power is entitled to have access to this register and to be supplied with duly certified extracts.

In faith whereof the plenipotentiaries have appended their signatures to the present convention.

Done at The Hague the 18th October, 1907, in a single copy, which shall remain deposited in the archives of the Netherland Government, and duly certified copies of which shall be sent, through the diplomatic channel, to the powers which have been invited to the Second Peace Conference. Conference. [Here follow signatures.]

Shorter Working Day.

EXTENSION OF REMARKS

HON. THOMAS D. SCHALL.

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 6, 1916.

Mr. SCHALL. Mr. Speaker, yesterday's mistake warns us against the blunder of to-morrow. Our mistake in the past has been an endeavor to transform our workers into high-speed machines without regard for the economic waste to the worker or to the race. Faster, faster, faster, pile up the garments, heap up the profits, no matter if rest and health and proper food be denied the weary laborer; no matter if girlish forms be withered and the promise of our national motherhood is blighted; no matter if the cheeks pale and the chest becomes hollow; no matter if women and children do starve and freeze and babes moan out their lives in misery. Work the men and the women, the boys and the girls for every ounce there is in them. When they are used up, throw them over in the dump. They are worn out; they are so much human junk. Get more; workers are chean.

Cheap labor and long hours have not helped to bring pros-The laborer goes home at night too weary to think after a long day of toil at underpaid wages to a meanly furnished, dark, insanitary home, a scant, unnourishing supper, and a humpy, comfortless bed. He wakens early, dons his sweaty clothes, and with them the hopeless, disspirited thoughts that envelop them. What chance for him to expand, to improve his mind, to enjoy God's fresh air and sunshine? Who says he has not the right to these things? This man can not make the return to his employer that he could if he were well rested, well fed. and full of courage. It has been proven to a certainty that overwork results in loss of productivity. The amount of work turned out in the longer day is not in proportion to the increase of hours.

If the hours of the day were shortened, so that the workman had time to think and wish, what effect would it have on the employer? We exercise ourselves mightly over the question of foreign markets, over providing ourselves with customers to keep pace with our ever-increasing production. But consumption, not production, is the goal. Why not provide for a market It is not the question altogether to the employer how many shoes are made, but how many shoes are sold. Let us look to it that fewer of our countrymen have shoeless feet. With more leisure, more time for reflection, comes desire for improvement, for better living. The man who comes home at had reduced their rates over 40 per cent and the express com-

night with a little life left in him improves his bit of ground, looks to his garden and fence, paints up around, and improves his yard. Within doors the time to think and wish expresses itself in a carpet perhaps, a picture, a better chair, better clothes. Here is your market, Mr. Merchant, Mr. Employer. Bread cast upon the water will return to you right speedily.

The conditions that welfare workers are seeking to bring about would be sooner compassed by the shorter working day than by any other mode. As long ago as 1816, in England, a report on the effect of shortening the work hours of children says that they grew stronger, could do more work, and several diseases to which that particular employment made them especially susceptible, tended to disappear. This, then, would be the cycle, shorten the day, think more, desire more, buy more. The result would be a higher standard of living, with improved sanitary conditions, lessening of diseases; hope, courage, a life that is better than the beasts of the field, some need for a man to have a soul.

The Government's aim should be the greatest good for the greatest number. Shorten the day of labor. Every movement toward the shorter day for the laboring man is a movement

toward his enfranchisement.

Every man should have the right to work, the right to sleep, and the right to play. The problem that confronts the United States to day is to lighten the burden of the working classes. The ideal of our country can never be realized; we shall never capture the spirit of liberty while half the people are starving and the other half faring sumptuously every day; while the majority are wearing out their life and strength and the sinew of the future at breaking toil through a too long day, and the favored ones are throwing golden hours away in a mad pursuit of pleasure; while countless numbers get only a pittance in return for their labor and a small coterie squander fortunes they have put forth no effort to earn. If our economic liberty is not developed, our personal liberty is of little value.

Madden Parcel-Post Weight-Limit Amendment-Fitzgerald and Siegel Bills.

EXTENSION OF REMARKS

HON. WILLIAM S. GOODWIN.

OF ARKANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 28, 1916,

On the bill (H. R. 10484) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1917, and for other purposes.

Mr. GOODWIN of Arkansas. Mr. Speaker, of all the important legislation of national character for the past few years possibly little if any exceeds in importance and popularity to the great masses of the people, especially the agricultural people, as the parcel-post law. Beginning at 11 pounds as the maximum weight it has gradually grown in public favor until it became necessary to increase the weight, and this has been done until now it is possible to carry 100 pounds by parcel post.

The question as to weight has all been thrashed out on the floor of Congress, and we finally reached the conclusion that Congress should not arbitrarily place a limit on a parcel-post After due consideration Congress decided that the Post Office Department should, just like a railroad or express company, change the limit and rate on filing a petition with the Interstate Commerce Commission and securing an order for the change. Is not that fair, is not that equitable, does not every other country operate a parcel post with a weight limit in excess

of 100 pounds?

This is not only a blow at the system, but the moment it is done, as the gentleman from Maryland [Mr. Lewis], author of this law, and who probably knows more about this question than any other man on the American continent, says, that at that moment the stocks of the express companies in this country will increase \$25,000,000 in value. For years the American people have been hamstrung by the express companies and the railroads. The express companies of this country had for 40 years prevented the enactment of a parcel-post law. When at last we enacted the present law they sent up a howl and solemnly de-clared that it would be impossible for them to remain in busi-ness. Have these predictions been borne out? No, Mr. Speaker; on the other hand, after the Interstate Commerce Commission

panies had reorganized themselves on a business basis, they found that they were still able to make money. Why did they wait for Congress and the Post Office Department and the Interstate Commerce Commission to force efficiency upon them? Look at the increasing amount of receipts reported month by month by the express companies of this country vying with the development in volume of parcel-post traffic. When, Mr. Speaker, did this Congress become an aggregation of experts on the subject of transportation, that it should attempt to take out of the competent hands of those institutions we have established for the specific purpose of nandling transportation subjects?

All through the long period the Republicans were in the majority in Congress the farmers appealed in vain for the enactment of a parcel-post law that would be of real service to them. It remained for a Democratic Congress to enact a parcel-post law which the farmers have conceded to be of real worth. In the few years this law has been in operation it has proved its worth and its power to serve the producer on the one hand and the consumer on the other, as well as giving the merchant of the small city and village equality of parcel service with the merchant of the terminal cities. In these first years the farmers have had patience to allow the parcel-post service to be developed slowly, satisfied to give the postal authorities ample time to meet the administrative difficulties incident to the develop-

ment of a new line of work of such magnitude.

But now, Mr. Speaker, in the hour when the farmer is be-ginning to feel the benefit of the Parcel-Post Service in a better price for his produce, and the consumer is feeling its beneficial effects in reducing the cost of living, and the further extension of the weight limit is urgently needed to increase these benefits to the people, like a thunderbolt out of a clear sky comes this Madden amendment, which, if carried into law, will, to quote the secretary of the Farmers' National Committee on Postal Reform, "have the effect of strangling the present parcel post" and "will ruin the people's express service." For the honor of the Democracy, I am glad that it should have been a stand-pat Republican who struck this fatal blow at this vital part of the people's express service. I regret that any Member of this House, calling himself a Democrat, should have supported this amendment. The only excuse is that it came suddenly at the close of the long debate on the postal appropriation bill, and that in the confusion of the parliamentary tangle they lost sight of the real issue and did not realize its importance.

Mr. Speaker, this amendment strikes out of the parcel-post law a provision for which the farmers fought most tenaciously. and which they considered vital to its success. No member of the Sixty-second Congress was left in doubt on this point by the farmers. Through their national committee on postal reform every Member received a letter setting forth their objections to the Bourne bill, and copies of their official statement of provisions essential to a system of parcel post adequate to meet the

service requirements of producer and consumer.

Copies of that letter and "essential elements" were sent to the President, the Postmaster General, to the members of the Committee on the Post Office and Post Roads, and a number of Senators and Congressmen on whose support of a real and not a sham parcel post the farmers knew they could count. I had the honor to have been one of the Members of the House to re-ceive these comments, and in order that Members of the House may see how tenaciously the farmers fought for this amendment, which the Madden amendment now seeks to kill, I submit here the letters and the statement of "essential elements" referred to:

FARMERS' NATIONAL COMMITTEE ON POSTAL REFORM, Washington, D. C., June 15, 1912.

Dear Mr. Goodwin: I inclose copy of letter I have sent on behalf of the farmers' committee to the chairman of the Senate Committee on Post Offices and Post Roads together with copy of the "indispensable element" forwarded therewith.

We keenly appreciate your past help in the vitally important matter of securing a real parcel post, and I know that we can count on your continued activity to get these "Indispensable elements" incorporated in the committee. This is the most important service that can be rendered the farmer.

GEO P. HAMPTON, Secretary,

FARMERS' NATIONAL COMMITTEE ON POSTAL REFORM, Washington, D. C., June 14, 1912.

Hon. JONATHAN BOURNE, Jr., Chairman Committee on Post Offices and Post Rouds, United States Schate.

Dear Senator Bourne: I am sending herewith the statement of "indispensable elements" in an adequate system of parcel post agreed to by the farmers' national committee on postal reform and beg to advise you that my instructions are to give no support to any bill that does not provide unmistakably for the use of hampers, the handling of farm products, C. O. D. privileges, and the regulation of weights, rates, and zones by the Postal Department subject to the review and control of the Interstate Commerce Commission. Under no circumstances will a rigid weight limit be acceptable.

Your bill as drafted is not acceptable and will not be unless amended to include the "indispensable elements."

I am sending copies of this letter to the President, the Pestmaster General, to the members of the Committee on Post Offices and Post Roads, and to other Senators and Congressmen known to me as taking a deep interest in enacting legislation that will give to this country an adequate postal package service.

Respectfully submitted.

George P. Hampton, Secretary.

GRORGE P. HAMPTON, Secretary,

STATEMENT OF PROVISIONS ESSENTIAL TO A SYSTEM OF PARCEL POST ADEQUATE TO MEET THE SERVICE REQUIREMENTS OF PRODUCERS AND

(By the Farmers' National Committee on Postal Reform.)

WASHINGTON, D. C., June 1, 1912.

Washington, D. C., June 1, 1912.

(a) An enlargement of the mailing privilege to include farm and factory and mercantile articles and products. (The present law and the proposed Bourne bill exclude nearly all of these from the mails.)

(b) A weight limit high enough to meet the needs of shippers whether of the farm, the factory, or the store. (A fixed 11-pound limit, that can not be enlarged administratively, will preclude the most important part of the traffic of all three, and force it, at higher rates, from its natural channel—the postal system—to the express companies.)

(g) Provision for the readjustment of rates, weights, and zones whenever the conditions of the service warrant, by expert rate makers who understand what rates the articles can pay and move the traffic necessary to be moved. (Rigid law-made rates will prevent, by their non-adaptation to the character of the traffic, more articles moving than they will move.)

(i) The same facilities and privileges from the railways that are given the express companies; and provisions for the insurance or indemnification of shippers for shipments lost.

W. A. HENRY, GEO. P. HAMPTON, Subcommittee.

Approved:
C. B. Kegley, master Washington State Grange; Wm. T.
Creasy, master Pennsylvania State Grange; C. S. Stetson, master Maine State Grange; C. E. Spence, master
Oregon State Grange; F. P Wolcott, master Kentucky
State Grange; George R. Malone, master South Dakota
State Grange; John Morris, master Colorado State
Grange; O. Gardver, president, and H. L. Loucks, vice
president, Conference of Progressive State Granges.

Executive Commi Executive Committee.

The Senate, Mr. Speaker, refused to accept these farmer amendments, and passed a bill which the farmers had shown they were opposed to, and it was the loyal band of workers for a real parcel post in the House who stood by the farmers to the last, who got these essentials into the law in conference. I can name a number of the Members, including the gentleman from Maryland, Mr. David Lewis, and Mr. Burleson, of Texas, now Postmaster General, who helped in the great fight, and I prize, Mr Speaker, among my records of that occasion the following letter of appreciation of my little part in that work:

FARMERS' NATIONAL COMMITTEE ON POSTAL REFORM.

Washington, D. C., August 24, 1912.

Dear Mr. Goodwin: In the name of the farmers of the United States accept my hearty thanks for your aid in helping the farmers get a real darcel post. But for your determined stand for the "farmers' amendment" along with our other loyal friends in Congress we could not have won, for, when the Senate passed the bill without these amendments, many were ready to quit, thinking further fighting useless, but our loyal band of courageous friends, who kept up the fight, brought us a victory after the bill went to conference, and you can depend on it that you, and all our friends in the House who helped in this fight, will be forever gratefully remembered by the rural people in all parts of our great country.

Sincerely, yours,

Geo. P. Hampton.

Mr. Speaker, the Farmers' National Committee on Postal Reform represented mainly the great farm organizations of the North, but it worked in close harmony with and really under the direction of a joint committee of the National Farmers' Union and the Progressive Granges. That joint committee was composed of President Charles S. Barrett, of the National Farmers' Union; the national secretary-treasurer, C. A. Davis, of my State; and Prof. T. J. Brooks, then of Tennessee, and now professor of rural economies in the Mississippi Agricultural College, representing the National Farmers' Union; and Hon. Obadiah Gardner, of Maine, and George P. Hampton, the secretary of the national committee representing the Progressive Granges. This, Mr. Speaker, shows that the farmers of the entire country were interested in demanding a parcel post with administrative control over the weight limit as well as over rates of postage, and for Congress now to nullify this part of the parcel-post law is to rob the farmer of the profits of his hard-earned victory. Can any Member of this House, can any Senator, say he is giving the farmer a loyal service who helps to perpetuate that wrong? THE FITZGERALD AND SIEGEL BILLS.

In connection with the power and authority of the Post Office Department, the most powerful of all of our departments for good. I desire to discuss another matter that is constantly being agitated throughout the country. A couple of bills to amend the

postal laws of this country, introduced by Mr. Fitzgerald, of New York, H. R. 6469, and Mr. Siecel, of the same State, H. R. 491, seek to increase the power of the Postmaster General, whereas the Madden amendment limiting the parcel post to 50 pounds seeks to arbitrarily limit and restrict the power of the Postmaster General. Now, the first two propositions are in direct conflict with the other so far as the power of the Postmaster General is concerned. The Madden amendment, if adopted by Congress, will be a blow not only at the producer and the consumer, but will increase the profits of the express companies and railroads, whereas the Fitzgerald and Siegel bills, if unfortunately these should ever become a law, would work even a greater blow, and would subvert and overturn the very mudsills upon which this Republic rests. If there is one guaranty out of which the sacred framework of our country is constituted, that guaranty is that every man may worship his Creator as his conscience directs without the interference of the State. If this Republic expects to cling to its pristine principles, that has made it better, freer, and more liberal in giving hopes and aspirations to all its people, it must forever keep separate and apart church and state, and as sacred as is that guarantee that every citizen may worship God according to the dictates of his own conscience, just so sacred is that other guarantee by the Federal Constitution, the freedom of speech or the press, that these may be never denied or abridged. Every school boy and girl 15 years of age, who has reached the sixth grade, knows that American shores were made the asylum to the peoples of the Old World in the early days of our country's history; that here they came fleeing from the tyranny not only of rulers but the mobs of the old country; that this land of the free, this home of the brave, might be consecrated to civil and religious liberty, to the freedom of the printing press and of speech. And if that day should ever come that these sacred and holy principles shall be over-turned—that the Congress shall step in and by its law trample under foot these holy and sacred principles for which our fore-fathers fought and cstablished—then the end of free Government is in sight.

No just man who favors the freedom and liberty of his fellow man can but repudiate such a heresy, such a doctrine to muzzle the press of the country. No student of history will fail to recall that the blood of martyrs for hundreds of years and that millions of people have bitten the dust of death in the Old World in defense of these sacred principles; that rivers have run red with the blood of men; that women and children have been butchered and sacrificed by the tyranny of those who would restrict the freedom of press and of speech and who undertook to say that people should not worship their Creator the way they chose to worship Him.

I can not believe, Mr. Speaker, that any religion, race, creed. or fraternal organization worthy of existence could have that existence threatened by the mere publication of some paper in Missouri or some magazine in Georgia or elsewhere. I think it quite evident that any paper that devotes its whole purpose to any one cause is likely to become extreme and overstate the We may concede that; but is that a sufficient reason why any citizen should have his property confiscated or that he may be deprived of his property, which is forbidden by the Federal and all State constitutions without due process of law, according to the guaranty of the Federal and every State constitution? What is depriving a man of his property without due process of law? It is not simply to steal it-to run away with it. There are criminal statutes that visit punishment upon the violators of these laws. If the legislature imposed certain hardships upon certain people or upon certain corporations, taxing them beyond endurance, making their freight and passenger rates so low that they could not continue to operate their trains to carry on the business of the country-this would be depriving our citizens and such corporations of their property without due process of law. Therefore the Federal and State constitutions and the laws based upon those constitutions all say that no citizen—and "citizen" here means likewise a corporation-shall be deprived of his property without due process of law; that is to say, without going into the courts of the country and ascertaining the facts and then rendering judgment according to the established facts.

But here in these two bills the authors undertake to say that because it may be represented to the Postmaster General that certain publications are being sent through the mails which tend "to expose any race, creed, or religion to either hatred, contempt, ridicule, or obloquy, he shall forthwith cause an investigation to be made under his direction and shall, within 20 days after receipt of such complaint if the facts contained therein are true, make an order forbidding the further use of the mails to any such publication."

Mr. Speaker, words beggar description of the blow here aimed at American institutions and American liberty. If such publications are indecent, immoral, or scurrilous in character, are not the courts of the country open to whatever punishment the courts may determine should be inflicted upon such publishers? If things appear in papers and magazines so indecent and obscene that they should not enter our homes, do you think, sir, that the courts of the country would not protect our homes? But these bills arbitrarily turn over to the Postmaster General the matter of determining, not through an investigation of some court or tribunal, but as some Postmaster General of the future may arbitrarily decide, whether certain publications should have access to the mails regardless of the religion of that Postmaster General or any prejudices that he may entertain on any religious subject. A man in this country has a right under our law and under the sacred principles on which this Government was founded to be of any faith or to belong to any political party or to hall from any particular race or to entertain ideas as to any creed.

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. JEFF: MCLEMORE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. McLEMORE. Mr. Speaker, the resolution under consideration is an American measure, intended to protect American interests and no other interests on earth. And I believe, moreover, that it is a measure which accurately embodies the wishes of an overwhelming majority of the American people, for in a critical hour like this the spirit, the soul, of a nation has ways of making itself manifest, and I think every man in this Chamber has felt during the last few days that the spirit of America is appealing to us for wise action, for patriotic action, for action which shall preserve us in pence, for action which shall be just and fair to all nations.

It has been contended by some very distinguished gentlemen that the Government should take and declare a positive stand in opposition to the German and Austro-Hungarian intention to sink armed ships on sight. They have told us how long ago the practice of arming merchantmen originated and have cited statutes and enactments of the reigns of Charles I and other English monarchs to prove the justice of that practice.

I am unwilling to follow these distinguished gentlemen and their school of thought so far back, or, indeed, to the other side of the ocean at all; but I invite them and those who think as they do to follow me, not backward but forward, not across the ocean to the atmosphere of either British or German interests, but to the realm of pure American interests.

I would remind those who favor upholding the English contention in this crisis that England once enunciated the doctrine of the "closed sen," which meant that wherever armed English ships chose to flaunt the English flag and claim dominion over the waters, those waters were English as much as any stone of the British Isles themselves, and no ship dared sail those waters without English permission. And to make that doctrine a fixed part of international law King Charles I caused the learned Selden to write a book called "Mare Clausam"—the "Closed Sea."

Does anyone wish to uphold that British contention at this time? And yet all that ever invalidated that law was the change of conditions. Conditions have changed, and international law changes with them; but at this point, where conditions have once more changed in a way radically unfavorable to British pretensions, England would arrest the course of nature and refuse to let the law change. And she would do this, not by her own might, but, with her great fleet locked by steel nets in a safe and secluded harbor, she would have us rush into the gap of danger and cry, "Halt!" to the forces opposing her, and all to protect her English interests.

Mr. Speaker, it is a most remarkable fact that there is not a single American right or a single real American interest threatened by the intended German-Austrian submarine campaign against armed ships. Armed ships! Why, Mr. Speaker, there are no American armed ships except our warships. There are no American "armed merchant vessels." There are no American merchant ships sporting "defensive guns." I reiterate, I em-

phasize, I invite the most earnest attention of this House and of every American to that remarkable fact, that not a single American ship is affected or threatened by the action which

Germany and Austria-Hungary propose.

Why, then, is this Republic diverted from the normal course of its peaceful progress to gravely debate a possible war with Germany and Austria-Hungary? With not a single American ship involved, in heaven's name what are we called upon to protect against Germany, against Austria? Why, sir, we are called upon to protect English ships, Italian ships, perhaps French ships, if France is induced by her predominant ally to abandon the hitherto unbroken French policy, which, mark you, is that a merchant ship has no right to bear arms. Yes; that is the only meaning of it-we are called on to protect the ships of one faction in the present war against the ships of the other. We are called on to take sides in this war; we are called on to take part in this war.

Mr. Speaker, from every scrap of information that can be gleaned in Washington it is—and I speak it solemnly—it is only gleaned in Washington it is—and I speak it soleminy—it is only too certain that we are deciding a question of war or peace. Germany and Austria-Hungary say they are determined; that they will not swerve; and what they are determined on is, I believe, nothing more than what we ourselves will unhesitatingly determine to do should we become involved in war. And for this we are told that we should break with that nation which first recognized the weak Republic—weak then, but glorious in principle—which the fathers of 1776 brought forth on this conbrinche—which the fathers of 1770 brought forth on this continent. We are told that we should break with the people who have contributed the second largest element of our own Nation. And what is our only excuse? That we demand that heedless and adventurous American citizens who, disregardful of their Nation's peace, insist on traveling on armed ships of a power at war. Was there ever a more uncalled-for proposition? To protect them in their foolish conduct we are to sacrifice the ancient tradition of the Nation, the more than century-old friendship of Germany.

Mr. Speaker, if anyone seeks evidences of denial of American rights at sea, let him examine why cotton is contraband; why milk for starving babies and rubber gloves can not go to Germany; why not a pound of American produce can move from any Atlantic or Gulf port to any neutral port in the world without the permission of an English consular spy; why hundreds of cargoes have been taken into English ports, confiscated or ruined; why not a single piece of mail can leave America for Europe with the assurance that it will reach its destination; why the American ships, Hocking and Genesee and Kankakee, are to-day impressed into English service, though they had not even attempted to cross the ocean, but only to sail along the coast of America. Let us learn why a distinguished American woman was stripped of every piece of her clothing by men in the presence of men—English "gentlemen," doubtless—because she talked to a German on a Dutch ship! Let us look upon these matters and we shall find plenty of stern business to do in the line of protecting the freedom of the seas!

Mr. Speaker, for the past three years American citizens who lived in Mexico and had their all invested in that country under treaty rights and a guaranty of the law and Constitution, have been repeatedly warned by our Government to get out of Mexico, and they were notified that should they remain they would do so at their own peril. It has often been proclaimed that this policy which we applied to American citizens residing in Mexico was adopted by our Government "to keep us out of war," and with this conclusion fresh in mind, I could not help but feel that the administration would welcome any movement that would mean a continuance of this same peaceful policy if applied to American citizens in countries other than Mexico.

In my resolution warning American citizens against traveling on the armed vessels of the belligerent nations, it was not even so much as intimated that Americans do not have the right to travel on such vessels, for most undoubtedly they have; but what I contend for, Mr. Speaker, is that they have no right to plunge this country into a war whose consequence no one can foretell, simply because a few American citizens may commit

an act of folly and indiscretion.

Much is now being said by the war-seeking press of this country about upholding the honor of our country. Mr. Speaker, "he jests at scars, who never felt a wound," and many of those who prate loudest of honor at this threatening hour measure honor by the almighty dollar and would force us into war that they might reap financial gain. I do not believe there is a Member of this House or Senate who has not the honor of his country at heart. As for myself, my Americanism began at a period prior to the Revolutionary War, and in that long and sanguinary struggle my ancestors, on both my father's and mother's side, endured untold hardships and bat-

tled for the cause of American independence and against the tyranny and oppression of an English King. They answered their country's call again at New Orleans, Mr. Speaker, and fought with Jackson to repel our country's invaders, and how well those volunteer American soldiers fought, the world knows

only too well.

Mr. Speaker, no man is more jealous of his country's honor than my humble self, and I accord to every other Member of this House the same love of country which I myself would claim. And with this love for my country's honor, I find it difficult to suppress my resentment when I recall how American citizens have been insulted and derided in Mexico the past three or four years, while we have pursued a "watchful waiting" policy that we might not be plunged into war. With these things in mind, it is hard for me to imagine how our country's honor can now be sullied if we warn American citizens against traveling on the armed vessels of the belligerent European nations that are now engaged in a death struggle.

Only a few days ago, Mr. Speaker, the President, in a letter to Senator Stone, denied the right of Congress, according to my interpretation of his letter, to make of him even a simple request regarding American citizens who wish to travel on the armed boats of the belligerent nations.

Now, Mr. Speaker, he comes to us and asks us if we are of the opinion that he should warn American citizens against traveling on such armed vessels. Mr. Speaker, the wind has changed so often in the past few weeks that I must admit my inability to exactly determine just where I am. It is a case of "you'll be damned if you do and you'll be damned if you don't."

When I was notified that the President regarded my resolution as an attempt to interfere with his application of the administration's foreign policy, I was willing, as far as I was individually concerned, to let the resolution rest peacefully, for a while at least, with the committee to which it had been referred. Now, he asks that the resolution, or a similar one, be put to a vote of the House and determine whether or not we shall warn American citizens against traveling on the armed

boats of the belligerent nations.

Mr. Speaker, as a Member of the Congress I feel it a proud duty to uphold the hands of our President when he is in the right, but I must know that he is right. With my country it

but, fight or wrong, my country forever.

Mr. Speaker, I am not asking the Congress to adopt this resolution. If the Members believe its adoption will assist in preventing war, they will wrong themselves and their country if they do not vote for it. If they believe otherwise, they will surely vote as their consciences dictate; and I leave it to every man to be the keeper of his own conscience.

In conclusion, Mr. Speaker, I wish to submit this proposition, that if we are to maintain an open sea for American travelers

and tourists, let us also maintain an open sea for the cotton, grain, and other products of our American farmers.

The Law of Armed Merchant Ships.

EXTENSION OF REMARKS

HON. GEORGE HUDDLESTON, OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. HUDDLESTON. Mr. Speaker, as a member of the Committee on Foreign Affairs I am impelled to discuss some of the difficulties with which we are confronted in the consideration of the McLemore resolution.

The central idea in the McLemore resolution is a warning to American citizens not to take passage upon armed merchant vessels of the European belligerents. Had this resolution been presented in time of world peace, or even at the beginning of the present session of Congress, the issue would have been very simple and it might have easily been disposed of. However, in the present situation the matter has taken on a vastly wider aspect, so that we are called upon to consider a subject of vital international significance.

Some few weeks ago the German Government gave notice that beginning March 1 it would sink armed enemy vessels without warning, whether such vessels were armed for defense only or not. Diplomatic discussions followed between the United States and Germany. Subsequently the rumor became general that Germany would not recede from the position which she had taken and that President Wilson had stated that if Germany should sink an armed merchant vessel of the entente powers without warning, and as a result an American should lose his life, diplomatic relations would be broken off with Germany. It was further believed that in the event of relations being broken off under such circumstances Germany would declare war. Thereupon the gentleman from Texas [Mr. Mc-Lemore] presented his resolution warning American citizens to stay off armed vessels.

The McLemore resolution was widely approved by the common sense of the American people. We are a practical people; we wish peace; we are not willing to go to war over a technicality. The spirit of America is to shed the last drop of blood in defense of its institutions; to die, if need be, for its liberties. It is not the American spirit to plunge into war over technical diplomatic disputes, to fight blindly and unquestioningly at the behest of governmental authority. This is fitting as the spirit of a great democratic people, a self-governing people.

For the reasons stated, many Representatives at the time the McLemore resolution was introduced were inclined to support it as the best way out of the difficulty. Had the question been presented as a naked abstract question, so that action upon it might have been free from implications, I should myself have voted for the resolution. No American citizen should take passage upon an armed merchant vessel of a belligerent. Even if he has no regard for his own life, he should not take a chance of embroiling his country in a controversy with another nation. He should value the peace and security of America to the extent that he would not do anything to jeopardize it. However, we must bear in mind that the right to sail on armed merchant ships is a right which a citizen has under the principles of international law. Mere warning to stay off can not lessen that right and would be in the nature of monition merely.

But Congress was not to be permitted to pass upon the McLemore resolution upon its merits. The temptation to play politics and to meddle was too great for the newspapers to resist. The section of the press voicing the political opposition to the President seized upon the opportunity to foment strife between the President and Congress. The differences existing were grossly exaggerated, and headlines such as "War Between Wilson and Congress," "Congress in Revolt," "Congress Resists Wilson's Demands," and so forth, of an inflammatory nature constantly appeared. Our militaristic friends and the munition makers also came in with scare heads, for they will permit no occasion to pass to agitate in favor of a great Army and Navy. The pro-German press and the pro-Allies press were also loud in their clamor, and certain silly supporters of the President shouted "cowards" and "poltroons," and insultingly demanded, "Are you for the President or for the Kaiser?"

With all this clamor the still small voice of true Americanism and clear-visioned wisdom was drowned out. Public sentiment was aroused to a high pitch and gossip was rife over the entire country. News of the situation reached European capitals, where, of course, ignorance of the institutions of democracy allowed no clear understanding. Our diplomatic adversaries were impressed that the President was without the support of his country and a deadlock in the negotiations was threatened.

The Committee on Foreign Affairs, upon authoritative information that the President had desired no action upon the McLemore resolution and no discussion upon it, withheld consideration of the subject. The President, finding that the country and foreign diplomats had been placed under a false impression, asked Congress to go forward with the matter. The question at the beginning was comparatively simple, but in the setting in which it was presented its aspect was so widened as to fill the whole horizon.

Conscientious Members have considered two phases of the matter. The first phase, that if the resolution should be adopted it would be the abject surrender of a clear legal right, a surrender made under pressure of a great foreign Government which had adopted an aggressive attitude toward our diplomatic representatives. To surrender would mean the breaking down of the President's case and the termination of the negotiations. It would mean the humiliation of the President, his unjust defeat at a critical moment. It would mean that no longer will foreign nations respect our diplomacy or the assertion of American rights. By the surrender of the right to travel on armed merchant ships we will surrender the right to arm them; it will be a logical concession that their status as merchant ships has been abandoned by merely arming them for defense.

The second phase of the situation was that to reject the resolution would have a much wider significance than the mere assertion of an international right. It was said by one member of the committee, in the discussion of the question:

If we vote down this resolution under the present circumstances, there will be an implied authorization to the President to insist upon the right of Americans to travel on armed merchant ships to the last extremity, even to taking action which meant war; by voting the resolution down we commit ourselves morally to supporting the President in any position which he may choose to take upon the question, and if later he should dismiss the German ambassador and should commit the United States to such a policy it would be the duty of Congress to declare war against Germany.

The second phase mentioned was shocking to the sensibilities of members of the committee. I think I may say without betraying confidence that every member of the committee desires peace with all nations, and that we will take no contrary action unless the national honor shall so demand. We are fully alive to the cost of war, to its cost in human blood, in morals, in political principles, and in treasure. War is a hideous nightmare, with not a single favorable aspect. It is never justified except in a clean-cut, single-hearted defense of national honor. It is never to be waged to vindicate abstract rights or technical principles. It may be declared only to avenge a direct, deliberate, and intentional affront to American honor. Certain members of the committee feared that by an adverse report on the resolution they would be committed morally to support the President in breaking off diplomatic relations in the eventuality named. They did not wish to be committed upon this point. They wished to sustain the President, in so far as was consistent and fair, but only in and about the particular matter which was under consideration.

As for myself, I feel it incumbent upon me to say that I shall vote to table the McLemore resolution. I do not think it is at this juncture a suitable matter for congressional action. I have not the slightest doubt that American citizens have the right to travel on merchant ships armed for defense, and that when so traveling their lives may not be taken without warning and without giving the ship an opportunity to surrender. The President is absolutely right in his contention upon this subject and should be sustained by every patriotic American citizen. However, in such action as I take, I must not be taken, by implication or otherwise, as intending to commit myself as to what action should be taken if our rights upon the sea are violated by the German submarine campaign. It must not be assumed that I shall favor breaking off diplomatic relations with Germany or war in any event. I do not bind myself in any sense to take a course which would lead the American people into war over a legal technicality. I reserve to myself full freedom of action in any phase of the German controversy which may be presented in future. This much I feel it my duty, both to our Executive and to the American people, to say.

The McLemore resolution to warn Americans off belligerent merchant ships armed for defense is a novelty. Never in the history of the world has a legislative body of any nation given such a warning to its citizens. Never, prior to the reputed action of Sweden a few days ago, has governmental authority of any nation given such warning. It would present the United States in a very poor light to the world to take such action at this time, especially under pressure from a foreign Government.

Congress has no warrant in the Constitution to advise American citizens as to how they shall exercise their rights under international law, nor whether they shall exercise them or not. Congress has never in our history assumed to give such advice. In only two instances has the Executive given such advice to citizens by proclamation—the first at the time of a filibustering expedition to Cuba in 1849 and the second during the recent troubles in Mexico. Although a lawyer by profession, I attach no undue weight to precedents. However, since we find no constitutional authority for taking such action and Congress has never asserted the privilege before, it seems to me most inexpedient to enter at this time upon the field of giving advice to citizens concerning delicate international matters.

The Committee on Foreign Affairs, having in view the reasons which I have stated, felt obliged to accompany any recommendation which it might make on the resolution with some sort of explanation, so that all intendments of their recommendation might be clearly understood. The explanation embodied in our report is as follows:

That House resolution 147, known as the McLemore resolution, requesting the President to warn all citizens of the United States to refrain from traveling on armed merchant vessels, be reported to the House with the recommendation that it be laid on the table. Under the Constitution, the practice, and precedents in this country, the conduct of diplomatic negotiations has been left to the President, and with this practice the committee does not feel it proper for the House of Representatives to interfere. We know that if the President reaches a point

in any negotiation with foreign Governments at which he has exhausted his power in the premises, he will in the usual way report all facts and circumstances to Congress for its consideration.

It may be well believed that this explanation is not wholly satisfactory to any member of the committee, but it was found necessary to make mutual concessions in order to bring out a report which would command the support of a large majority of the members of the committee.

For myself, I criticize the committee's report as being an evasion. Its statements are most obvious, but they do not respond to the subject matter of the resolution. The report attempts to explain without explaining. It does serve the purpose, however, to indicate that the committee does not intend to be bound by implications, nor to have its future actions hampered by its recommendation on the resolution except so

far as same is strictly applicable.

Notwithstanding this which I believe to be a just criticism, the explanation does after all indicate to Congress, to our country, and to foreign nations, our attitude upon the subject. The context clearly shows that we do not purpose to surrender American rights, rights guaranteed to us by well-settled principles of international law; also, that in making this decision Congress does not bind itself to support any aggressive foreign policy which would lead us into a war not necessary for the protection of national honor. Furthermore, we reserve our freedom of action, our freedom to decide when the time comes whether there is sufficient cause for war or not.

American citizens should not travel upon belligerent ships even though armed for defense only. Every consideration of patriotism dictates this, even if the travelers have no regard for their own safety. The peace of our country is the most important thing that any citizen can have in mind. He should do nothing which would jeopardize that peace, and I believe that every Representative in this Chamber, if the question were presented to him, would advise citizens to refrain from such

travel. I would most unhesitatingly do so.

MERCHANT SHIPS MAY ARM AND DEFEND AGAINST CAPTURE.

Under the laws of civilized warfare there is an essential difference between the capture of merchant ships on the high seas and the taking for military purposes of private property on land. In the latter case the property is requisitioned as a matter of military necessity; it is not confiscated, but must be paid for. The taking is not a hostile act against an enemy for property of citizens of the country requisitioning same may be taken to the same extent as that of other persons within the military

jurisdiction.

Capture of merchant vessels is justified only upon the theory that they are potentially a part of the fleet of the enemy country; their capture is an act of hostility against the enemy country and is done to destroy an enemy's commerce and his power for offensive. The theory is that merchant ships may be converted into war vessels and that their crews are potentially members of the enemy forces. This principle is brought into sharp relief by the long-established rule again recognized by article 6 of convention 11 of the Second Hague Peace Conference, which provides that the crew will be interned if they refuse to promise in writing not to hire during the continuation of the war for services connected with the war operations. Such capture of an enemy merchant ship entails the treatment of the crew as war prisoners, not as civilians entitled to immediate discharge. An attack upon the enemy merchant ship is an attack upon the crew. Its purpose is to restrain the crew of its liberties. The status of the crew is strictly analogous to that of a detachment of troops engaged in war on land. They may submit to capture and thereby curtail their liberty, or they may resist and take a chance at being overpowered. If they refuse to surrender, their potential membership in the armed forces remains, and they must either give parole or go into internment.

The status of the enemy merchant vessel which defends itself against an attack with intent to capture, is similar to that of a civil population of an unoccupied district which attempts to fight off invaders. It is certainly logical to treat the crew as pirates, if we consider the defense of an enemy merchant ship against attack for purposes of capture as unlawful. If the defense is contrary to law, then it does not matter who participates in it, and it is illogical to distinguish between the different persons of the crew. Why should the defense of a ship be lawful in so far as it concerns persons who are enrolled in the enemy forces? Apparently only because with the capture of the ship, internment threatens these persons, and they need not subject themselves to capture without defense. Persons of the crew who do not belong to the enemy forces, in case of capture, have the alternative as potential combatants, either of giving parole or of being interned. Why should they submit to this

curtailment of liberty without being permitted to defend them-

The rule is not obsolete. It has been repeatedly recognized recently, and its principles are being recognized to-day by the European belligerents in their internment of the crews of mer-The crew of a merchant ship has to-day the right to defend itself against capture by any means recognized by the laws of war-to defend itself and its ship. The right to defend carries the right to make an effective defense and to prepare for such defense, which means to carry such armament as may be desirable for the purpose. The weakness or strength of an attacker does not affect this right. Having the right to defend and the right to bear arms for defense, it necessarily follows that a merchant ship does not lose its status as such by arming for defense. It follows inevitably that the rights and immunities of persons on board a merchant ship armed for defense remain the same as though the ship was unarmed, and that neutrals lose none of their rights by taking passage on such ships.

Warships may be sunk without notice. The attacker owes no duty except to give quarter to those who surrender when the resistance has ended. This follows from the presumption that the purpose of the warship is offensive. Such presumption does not obtain as to merchant vessels armed for defense. The business of warships is to seek the enemy and destroy him. Merchant ships proceed from port to port in behalf of commerce. The purpose of attack on a merchant ship is not destruction, but capture. Destruction is permissible only if it be necessary to overcome the defense or to stay the defender's flight. It would be unreasonable to say that such ships may be sunk without notice. Neutrals on board such ships have no greater rights than noncombatant subjects of a belligerent country. All alike are entitled the privilege of surrender before being destroyed.

The difficulties which inhere in giving warning by a submarine or other weak war vessel which seeks to capture an enemy merchant ship do not affect the rule. These affect matters of

convenience and can not overturn the principle.

An authoritative exposition of the principles involved is found in the decision of John Marshall, Chief Justice of the United States, in the Nereide, Ninth Cranch, page 449. The Nereide was a British armed merchantman carrying 10 guns, and was chartered by Pinto, a Spanish subject, to carry his goods from England to South America. Pinto accompanied the ship, which under its charter was required to be armed. On the voyage the Nereide fell in with a United States privateer, declined to surrender on demand, and after a lively action in which loss of life occurred, was captured by the privateer and brought into port. The question came before the Supreme Court of the United States by Pinto's efforts to recover his goods. The right of the Norcide to arm for defense and to defend against capture was fully considered, ably discussed, and decided in the affirmative. It was held that Pinto, although he had stipulated that the vessel should be armed and was himself on board, retained his status as a neutral; that his goods were not forfeit and should be returned to Pinto. It was held that Pinto and his goods retained a neutral status, which was the same as though the vessel had been unarmed and had surrendered on demand.

The Nereide case was preceded by Brown against United States, Eighth Cranch, page 132, and has been followed by numerous cases including the *Dos Hermanos*, Second Wheaton, page 76; United States against Quincy, Sixth Peters, page 445; and numerous other cases. See also Kent's International Law, second edition, 1878, pages 225 and 226; Halls International Law 524. In the case of the Atlanta, decided in 1814, Chief Justice Marshall said:

A neutral merchant has the right to charter and load his goods on board a belligerent's armed vessel without forfeiting his neutral character.

The doctrine laid down by these authorities is not merely an American doctrine. It had its origin in British courts, but has been universally recognized. Recently it has been asserted that the doctrine is obsolete; that it had its origin in time of privateering and piracy; that the right to defend exists only against piratical and other unlawful attacks, such attacks without quarter, and so forth. These contentions are unsound. Their fallacy is clearly seen when the reasons for the rule are considered.

The right of a belligerent to visit and search neutral vessels wholly different from a belligerent's rights as to enemy ships. The belligerent is permitted to visit and search a neutral vessel so that he may see whether the vessel is, in fact, neutral, and whether there is on board contraband goods subject to seizure. In the case of enemy merchantmen the right to capture only exists. There is no reason to visit and search, for such proceedings could only show that the vessel is subject to capture, which if the ship be an enemy ship is an unnecessary preliminary. Merchant vessels owe no duty whatsoever to allow belligerent enemies to visit and search them or to come within gun range, but may flee at will or defend to the extent of their powers, all, of course, at peril of being captured when overtaken or overcome, and sunk if such course be necessary to overcome them. The crew and passengers aboard retain the same status as though the vessel had been unarmed and had surrendered without resistance. It is noted that a vessel, though unarmed, may seek to escape by flight and when overhauled loses no right which it would otherwise have had. sistance may even be made with small arms. Always there should be no treachery and no violation of the rules of war.

When this question first came up for consideration I was impressed with the argument that because torpedo boats and submarines were legitimate war vessels, but were frail and had small powers of defense, this affected the right of merchant vessels to arm and resist capture. However, it readily became apparent that the weakness of the offensive could not affect the right of the attacked vessel to defend itself. In principle there can be no limitation upon the armament which a merchant vessel may carry for defense only. The nature of the armament may, indeed, throw light upon whether the intent of the vessel is defensive or offensive, but once it is established that the armament is for defense only, principle does not limit the size of the guns nor the strength of the armor. Ships may arm themselves to defend against any strength of attack, whether from a fishing smack or a battleship, and may resist attack by any assailant irrespective of his strength or weakness. A battleship demanding the surrender of the weakest merchant vessel may be defended against even to the extent that the defender is totally destroyed. It is not the right of the assailant to dictate what kind of defense shall be made, nor the strength of the armament of his intended victim. Given a case in which a merchant ship intends in good faith to resist capture only, it may be clad in 9-inch armor and carry guns of the largest caliber. A merchant vessel may be compared to a man in his own home who may resist by any means necessary an unlawful intrusion.

The best consideration of this question which I have been able to find is the discussion by Oppenheim, professor of international law at Cambridge, who says (1913) :

In the dest consideration of tins question which I have been able to find is the discussion by Oppenheim, professor of international law at Cambridge, who says (1913):

Another objection, however, might be advanced against the doctrine here presented, namely, that the defense of enemy merchant ships is lawful. One could class the capture of these ships, which is doubtless lawful according to existing law, in the category of the many other lawful acts which every belligerent may commit against the property of enemy subjects, and against which resistance is not permissible. A belligerent who occupies enemy territory may make requisition which will be a heavy tax on the property of the inhabitants of the enemy territory. Resistance against these lawful acts is not permissible; armed resistance will be visited with severe punishment. Is not capture of enemy merchant ships a hostile act of the same class, which the owners of ship and cargo are liable to suffer as lawful consequence of the state of war, without being allowed to offer resistance?

At first glance, much might be said in favor of this contention, but it is found to be untenable on closer examination. First, requisitions, levy of contributions, and other acts of this category are acts committed in occupied enemy territory, where the inhabitants are under the jurisdiction of the occupant. Capture of enemy merchant ships, however, is regularly an act committed on the high seas; enemy ships are not subject to the belligerents' authority unless they are captured. When the enemy ship is captured, the crew is under the authority of the attacking party. Secondly, all measures such as requisitions, which affect the property of the inhabitants of occupied districts, are not intended as appropriation of private property itself, but they are steps which are taken in the interest of the occupaint gramp or of the administration of the occupain of private property itself, but they are steps which are taken in the interest of the occuping army or of the administration

from the outset regarded as futile. But since the use of submarines and torpedo boats and the conversion of merchant ships into warships threatens to be resorted to extensively in the future the present conditions of naval warfare have changed so much that defense is possible; and therefore the old rule, up to now hardly practicable, again attains practical importance; and it must be expected that at the next Hague peace conference, which it is hoped will soon convene, the rule will receive the same approval of the States represented with which it was accepted by an overwhelming majority at the Oxford Convention of the Institute of International Law, in 1913, during the discussion of the manual of the laws of naval war, because it is in accordance with the present law of custom and the nature of the subject.

The principles stated by Oppenheim have received the approval of the most eminent European authorities. Distinguished jurists of practically all of the leading European nations have within the last few years considered the identical subject, with similar conclusions. I will quote a few of these authorities:

A merchant ship has not the right to first attack the hostile ship, yet if attacked herself she may repel aggression. (Nys, E. (Belgian) Droit International Bruxellees, 1912, p. 113.)

Private vessels without any commission or authorization of their Government are not allowed to wage war or to attack any enemy at sea without classing themselves in the category of pirates. It is a different case, however, when they act in self-defense. "If private individuals confine themselves to simple defense," says Chancellor Kent, "they are to be considered as acting under the presumed order of the State, and are entitled to be treated by the adversary as lawful enemies." All agree that defensive hostflittes on the high seas, as well as on land, without a commission or public authority, are not criminal acts but acts fully authorized by the law of war. (Ferguson, Jan Helenus. (Dutch) Manual of International Law, 1884, V. II, pp. 355, 386; see also Kent, Com. on Am. Law, Vol. I, pp. 94-96.)

In case a noncommissioned merchantman gets possession of an enemy ship by the act of self-defense, the principle is that "she shall have no right to the prize, although it is a fair prize as far as the enemy is concerned if made according to the laws of war. (Boeck (French), De la Propriete privee ennemis sous pavillon ennemi. Paris, 1882, p. 245 ff.)

A merchant vessel surprised by the enemy may resist if she believes

A merchant vessel surprised by the enemy may resist if she believes herself able to hold out against him. If her resistance is unavailing the capture should not be aggravated by any severity. She was attacked by war. She had a right to meet force with force—to make her escape by fighting. If her resistance is successful and she overcomes her aggressor she may apply to him the treatment which she escapes. Her victory makes the enemy ship her conquest and the crew her prisoners. (Dupuis (French), Droit de guerre maritime. Paris, 1899, p. 121)

prisoners. (Dupuis (French), Droit de guerre maritime. Paris, 1899, p. 121.)

Any merchant ship which, during the prevalence of the tradition declaring her liable to capture in time of war, is attacked by an enemy ship, shall have the right to defend herself and perform any act of hostility. (Fiore (Italian), Diritto internazionale pubblico, 1891, v. 3, p. 103.) Private ships shall be allowed during maritime war to use force to defend themselves from enemy ships wishing to attack them, and any hostile act performed by them under these circumstances shall be characterized as an act of self-defense. (Ibid., p. 745.)

A neutral's act in shipping his goods in a hostile vessel is absolutely legitimate, and this vessel's act in resisting her enemy is equally legal; hence no illegality has been committed affecting either ship or cargo when resistance takes place in the case of two enemies. (Kleen (Swedish), Lois et usages de la neutralite, 1900, p. 312 ft.)

It will be noted that Oppenheim refers to the meeting of the Institute of International Law, held at Oxford in August, 1913.
At that meeting a manual of laws of naval war was adopted, article 13 of which manual expressly allows merchant ships to defend against capture. This article was fully discussed by the representatives of the major European nations present. After full discussion, in which the German representatives, Prof. Triepel and Prof. von Bar, participated, the article was adopted "by a large majority.'

The contention that the rule allowing merchant ships to arm and defend against attack is obsolete is an argument of convenience. It is made by those who wish submarine warfare to be more effective, who wish to make it appear that there is something unfair and illegal in a merchantman, devoted to peace, successfully resisting an attack by a submarine devoted to war. This argument is a part of the new militarism which would subordinate commerce, industry, and all instrumentalities of peace and the welfare and happiness of the world to the harsh activities of war. After all, we must not lose sight of the fact that the real business of civilization is consistent only with peace; that war represents a hiatus, a gap, a stopping place where humanity marks time. Civilization has not as its purpose the promotion of war and its instrumentalities; to the contrary, war and civilization are in perpetual conflict—one must destroy the other if it would have permanent dominion.

It is worthy of a great people—of the great democratic American people—that we should busy ourselves with the development of commerce, trade, and industry, the cultivation of the fine arts, and the amenities between nations—that we should make more perfect the instrumentalities of peace and peaceful methods more secure. This is much more worthy than that we should give fuller countenance or larger recognition to the hateful practices of war. I would that our country should always lead in insisting upon the rights of neutrals, upon the rights of com-merce, and of civilians generally, and that we should labor to reduce and restrict the privileges of armies and navies and the advantages of those who would rely upon war for greatness.

Foreign Relations an Executive, Not a Legislative, Function.

EXTENSION OF REMARKS

OF

HON.S.D. FESS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. FESS. Mr. Speaker, there are moments in the life of a nation when human destiny seems to hang in the balance. With most of the world in a death struggle and our peace threatened upon every hand, our Nation has reached such a moment.

The questions at issue are not only delicate, but the forces arrayed are insistent. From the very beginning we have realized the danger of the position of a neutral country. It is inevitable that neutrality will be both suspected and misunderstood. It is

bound to provoke hatred.

The exercise of our rights and the recognition of international customs and practices will be resented by those not favorably advantaged by our neutral position. Knowing the delicacy of the position, we at once took our stand upon the code of international law. We have repeatedly quoted the declaration of Paris, The Hague conference, and the declaration of London as the most recent expressions of international practices. We have also impressed upon all the belligerents the necessity of strict obedience to the code of international procedure in times of war.

The Constitution wisely intrusted diplomatic relations with foreign countries to the executive department. The questions are naturally too delicate to be placed in the political department of the Government, where unity of decision would be difficult to obtain. When diplomacy is exhausted and stronger methods are necessary, then the Congress has the final word.

Whether or not I agree with the results of our diplomacy, it is not of such character that we should transfer it from the proper constitutional and historical body to the Congress of the United States.

This proposal of Congress to interfere by the enactment of a resolution warning American citizens off defensively armed vessels is not wise. It interferes with the proper channels for such negotiations, and it will in all likelihood be fraught with grave consequences. Such warning, if it is to be given, must initiate with the department that controls our diplomacy—the President. He can withhold passports, and if it be necessary can warn citizens generally. Congress must not interfere unless he requests to be relieved from the responsibility.

We have taken our stand upon international law, and our only protection is to prove our sincerity to all belligerents by obeying its decrees ourselves while we press them upon the

warring nations.

Should we war citizens and withdraw the Government's protection from them if they go aboard these ressels, we not only surrender our rights upon the sea but we classify these vessels as dangerous, on the ground that they are naval auxiliaries. In that case Germany will exercise her right to so treat them and will demand that we do likewise. This would involve grave consequences.

Whether an American should go upon such vessels there is no doubt in my mind. He should not carelessly subject the Nation to war for his protection. Whether this country should withdraw protection from him if he does go on is another question. Whether the Congress should forbid him going on is still a

graver question.

The first raises the question whether any citizen has the moral right to do what might involve the Nation in war. It would be difficult to justify anyone in such conduct. The second raises the question whether any nation can maintain its honor and dignity by abandoning its citizens because it fears the consequences of the proffered protection. That would be a virtual surrender of national honor. Cases arise where it appears necessary to go on the sea. Waiving both of these questions, the warning is most serious. If the warning is issued, it will be placed upon the grounds of our note of January 18, made public the 12th of last month. In that note we declared that a small-caliber gun can be used effectively against a submarine. We also declared that "any armament on a merchant vessel would seem to have the character of an offensive armanent." We also declared that "merchant vessels of belligerent nationality should be prohibited from carry-

Ing any armament whatsoever" in order that submarines might respect the laws of search and seizure. We also declared it reasonable to consider a merchant vessel carrying any armament whatever as an auxiliary vessel. This negotiation of the Executive Department was an attempt to induce a discontinuance of a recognized custom.

Mr. Speaker, in the light of this note there can be no doubt in my mind what a warning resolution of Congress would mean to all the world. It would be a reaffirmation that any vessel carrying any gun is an auxiliary naval vessel. Germany so regarded it or she would not have at once announced her renewal of submarine warfare against armed merchant vessels without warnare.

ing

If Congress pass the McLemore resolution, we by that act declare these vessels "war vessels." Germany will so regard them and will demand that we so treat them. If we do not do so, we have given the central powers new grounds of complaint, viz, we declare them auxiliary as to our citizens but merchantnen as to commerce. This will give rise to a serious matter between us. If we refuse to respect the international code controlling naval auxiliary vessels in neutral waters, why should she respect its regulations as applied to belligerent waters? We will have lost our chief ground against her. On the other hand, if we treat them as auxiliary, then we must limit their privileges in American waters in accordance with the international code, the regulations of which I placed in the Record yesterday.

These restrictions will destroy all commerce with the allied powers, a result aimed at by Germany in this diplomacy to retaliate on the British blockade. This policy, hurtful as it would be to our own country's oversea trade, will not have its most serious consequences in a disturbance of our commerce, but we will give grounds to the allies to charge us with changing international law during war, and by so doing commit an unneutral act in favor of the central powers. Here is the real

danger.

It is the custom, not adhered to, it is true, by all countries, to place a defensive gun upon their merchant vessels. This custom has never been abrogated by agreement. True, the grounds for so arming have generally passed-piracy, danger of attacks on the shores of uncivilized peoples, and privateering-but as a right it has never been questioned. When belligerent countries exercise this right it can not be denied them during war without a mutual agreement. Our State Department attempted to secure such mutual agreement and failed. That was the burden of our note of January 18 of this year. It is now proposed to ignore the right and declare by resolution that such vessels are dangerous and should be avoided-that is, what our State Department failed to do by diplomacy we propose to do by act of Congress and against the expressed wish of the President. This is denying a right and changing the international law, not by agreement, which failed, but by resolution of this Congress. If we do this, where is our reliance? We have heretofore planted ourselves squarely on international rights as outlined in the various codes. We have protested to the central powers upon every occasion of their violation. We have done likewise with the allies. The moment we ourselves ignore the practices and customs of international law, that moment the sheet anchor of neutral rights is pierced. Then all guarantees are gone, and I tremble for what may follow. Upon this respect for international law I addressed this Congress January 11 of this year, in which I showed how England as well as Germany

What is defensive armament is a question of fact as well as law to be adjusted. It must come through diplomacy, not by resolution. It must be reached through diplomatic channels under the control of the Executive, not through partisan debate in legislative halls. Matters of international relations between sovereign countries must not be transferred from diplomacy to legislation. No man in the Congress has the facts in this controversy to enable him to vote an ultimatum to any government. It was a grave blunder to bring this question to the Congress. It should have been kept with the President. I shall vote to leave it with him. I shall therefore vote against the rule which brings it in here. If the McLemore resolution comes to a vote,

I shall vote against it.

When the President has exhausted his resources, then let him seek the cooperation of Congress, bring the matter to this body, which has within its constitutional prerogative the issues of war, and I, for one, shall not flinch from the performance of my duty.

Mr. Speaker, we are making history. Events are rapidly moving. We are neutral to-day, and I believe, if we make no mistake, we will be able to remain so. Acting as a neutral should, we must keep in mind the possibility of our becoming a beligerent. In our contention on the use of the submarine we

should keep in mind the possibility of our seeing the day when we will be compelled to resort to its use.

To me there is but one course to pursue. Leave the matter with the President, undisturbed by this branch of the Government. The State Department, in the attempt to win the consent of the allies to remove all arms from merchant ships, recognized the custom of such practice. It urged upon the powers the reasonableness of discontinuing that practice.

But, unfortunately, the powers would not agree. Now, it must be apparent that since we could not induce them mutually to agree we can not do so here by resolution. That would be a change of international custom, widely recognized, and the change would be made against the will of those most affected and during the continuance of war. This we could not do without subjecting the Nation to a serious charge. At least if this is done it must be as a matter of diplomacy, not legislation.

A vote against the rule is to refuse to consider the matter in the House. I shall so vote. In case the rule carries and the resolution comes up for action, I shall vote to table it, to avoid interfering with the President's function. This is consistent, for if we vote down the rule the resolution is dead, since it is left on the table, where it now is. The only way it can be brought to life is to carry the rule. That will necessitate another vote to put it back on the table, while a vote against the rule reaches the same result by but one ballot.

Mr. Speaker, I repeat, if warning seems necessary as a means of diplomacy, let all the facts covering the question of defensive armament be fully examined, and then give the President freedom to negotiate, looking to the best possible adjustment. If he finds that instructions of the British Admiralty treat armed merchantmen as offensively armed, he can so regard them and order them so treated in American waters. In that case these orders would be a warning to Americans of the character of the

And when he has exhausted his resources, let him come to Congress and lay the matter before us. Then it will be time for us to act. But until he reaches that point no vote of mine will be cast to interfere with his function.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WARREN WORTH BAILEY. OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BAILEY. Mr. Speaker, it is difficult for me to bring myself to accept the view of those who hold that to warn American citizens against taking passage on armed belligerent merchantmen is in some way to compromise the dignity of the Nation and to degrade this Government in the estimation of the chancelleries of the world.

My rights as an individual are limited by the equal rights of my neighbor. I think I have a right to travel the high seas, but not if in so doing I endanger the rights of the American people, as would be the case were I to take passage in an armed belligerent merchantman sailing into the zone of danger and falling a victim to an enemy submarine. My act would endanger the safety of the Nation; it would tend to draw the United States into the maelstrom of war; it would invite complications the outcome of which might be almost too serious for thought; and surely there should be no encouragement for me in this Congress or in any other quarter if my mind were set upon so foolhardy, so thoughtless, or so mercenary a course.

From the very beginning of this great tragedy across the seas I have urged in every way I could the importance of keeping the country out of it. At every opportunity I have spoken and written in praise of President Wilson's efforts to steer the United States clear of any entanglement with the warring nations. With the most devout, I have thanked God for Woodrow Wilson. And I still thank God for the patience, the forbearance, the skill he has shown in dealing with the perilous

situation which the conflict abroad has presented.

But, Mr. Speaker, I confess myself unable to see how we at this end of the Avenue can excuse ourselves if we do not take some thought regarding this situation. It is one that concerns us very closely. Unfortunately we are ignorant of most of the facts. We are children groping in the dark. We are uncertain as to what lies ahead. We can not know what preci-

pice may be at our very feet. If we were in possession of all the facts, as we are in possession of the law, it were a simple matter then to reach a fair judgment, to shape our course confidently, to grasp the duty which the law and the facts impose. But we are not thoroughly informed. All the evidence is not before us. And in reaching a conclusion in the matter now presented we must therefore trust to intuition rather than to knowledge

My intuition is against lending encouragement even by indirection to thoughtless, foolhardy, or corrupt Americans who may be disposed to risk the dangers of travel in armed merchant vessels sailing under belligerent flags. It seems to me that in some way the temper of this body on the subject should be made known. I am the last man to do anything to hamper the President in safeguarding the interests of the country. He is my President. He is the leader of my party. I sat in the

Baltimore convention and voted for him 46 times.

I have supported him earnestly in all his great work since taking office, except in so far as it has related to increased armament, which I think unnecessary and dangerous. I feel that in this matter the best support which can be given him is that which will tend to restrain Americans from any act or any course in the least likely to involve us in complications with any power now at war. And, feeling thus, I have consistently used every resource at my command in the effort to inculcate that patriotism which is the highest and the noblest, the patriotism that makes for peace. The patriotism which makes for

war is not patriotism at all; it is diabolism,

That Congress has already made its position reasonably clear to the world is my firm conviction. No formal action is required to make that position clearer. The temper of this body is almost obviously opposed to any act or effort, whether on the part of those in high places or in low, that may tend to embroil us in war. This country is for peace. It loves Woodrow Wilson because he has stood for peace. It stands with him to-day, because it still believes that his face is set against the jingoes who for one reason or another would drag us into the awful tragedy through which Europe is wading in its own blood. And the country has not concealed its thought from the Members of this body. My mails have been filled with letters imploring me to use every effort possible in keeping our Nation from plunging into the vortex of war. My own people seem to be almost a unit in favor of restraining Americans from taking passage on armed belligerent merchant vessels. And the mails of other Members have borne to them similar messages. The plain people back home are not swayed by the war traffickers and the war They are not obsessed with a false patriotism which finds its expression in terms of force. They are believers in peace and in all that makes for peace, and they profoundly feel that it will make for peace if we shall discourage Americans from risking their lives unnecessarily under conditions so fraught with evil possibilities in this hour of cruel stress and storm, when all the world is mad with passion and we alone with reason left and a sense of justice remaining.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JOHN JACOB ROGERS.

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. ROGERS. Mr. Speaker, the group in this House which favors the passage of a "warning" resolution of some kind seems to take the ground that it is unfair, and almost dishonorable, for anyone to insist that issue be joined squarely upon the McLemore resolution and upon nothing else.

I desire to show why, in my judgment, the attitude of the

"warners" is mistaken.

During the month of February the administration was engaged in admittedly delicate negotiations growing out of the armed merchantman-submarine controversy between Britain and Germany.

On February 22-on Washington's Birthday of all days in the year-a Texas Member of this House introduced a long and rambling resolution, the kernel of which requested the President to warn all American citizens to refrain from traveling upon a merchantman of any belligerent even though armed only for defense, and specifically stating that "in case American citizens do travel on such armed belligerent ships they do so at their own risk."

Naturally feeling that the passage of this resolution would be an invasion of his prerogative to conduct diplomatic negotiations, the President called into conference several of the majority leaders of this House. After their conference the report was spread broadcast through the newspapers that these very distinguished gentlemen, whose words were necessarily entitled to great weight, had told the President and the newspaper men that in their judgment the McLemore resolution would pass two or three to one.

The German newspapers, and through them the German public, were promptly advised that the President and his leaders in Congress were hopelessly out of accord. Speaking of the determination of Germany to destroy all British merchantmen, the Vossische Zeitung, for example, says:

It is not without risk; but the risk, perhaps, is smaller since the American Congress shows signs of demanding that the decision in international affairs be taken from the President's hands and placed in those of Congress.

I think it can not be denied by any reasonable man that utterances like these tended to strengthen, and did strengthen, the position of Germany in its negotiations with the United States on this matter and that they proportionately tended to embarrass, and did embarrass, the President of the United States in his dealings with Germany. Bear in mind that all this time the McLemore resolution, which states that Americans who travel on an armed merchantman did so "at their own risk," was the only proposal generally known in Washington and in the newspapers of the country. The agitation in Congress arose over the McLemore resolution and over nothing else. It arose, therefore, not over a mere "warning" resolution but over a resolution that an American, in effect, lost his citizenship when he walked up the gangplank of a merchantman bound for Europe and carrying even a single gun.

Under these circumstances it can not, I think, be regarded as surprising that the President has insisted upon a square declaration by Congress whether it believes in the McLemore resolution. The President still, of course, feels that the matter is Executive and not legislative, but certain majority leaders of Congress having seen fit to express themselves to the President and to the press that Congress would overwhelmingly pass the McLemore resolution if given the opportunity, the President finds it necessary to have Congress itself repudiate the utterances of its leaders if his hand is to be effective in dealing with Germany. The question is Executive and not legislative, but these leaders of Congress purported to say that Congress sought to regard the matter as legislative, and further that the Congress thought the President was wrong in his view of the merits of the case.

The McLemore resolution, therefore, is and should be before us to-day—not because it is the best resolution which could be drawn by the "warners" nor because it is the worst, but because it is the snake that has made all the trouble upon which the press of this country and Germany have laid stress. This particular snake, and not some other snake, whether more attractive or more repellant, must be "scotched" by Congress.

I confess that I should have been glad to see the question so presented that an affirmative resolution would be the proper one. I should have liked to have the House act upon some such resolution as the following, which I offered in the Committee on Foreign Affairs:

Resolved, That the Senate and House of Representatives, in Congress assembled, recognize that the direction of diplomatic negotiations is vested in the Executive, and, in the matter of armed merchantmen, will uphold the Executive in asserting and maintaining by diplomatic negotiations the existing rights of the United States and its citizens in conformity with the decisions of the United States Supreme Court, the accepted principles of international law, and the established usage of nations.

A "warning" resolution is, in effect, negative, and tabling or defeating a "warning" resolution is negativing the negative. It would ordinarily seem weak and perhaps puerile, as contrasted with a strong, definite enunciation of principles; but as the issue is presented we have no choice in the matter. The question is whether Congress shall uphold the President in the matter of the McLemore resolution, not whether it would uphold him in some other type of resolution which can plausibly be encreased.

I have no time to discuss at length the underlying merits of the armed-merchantman controversy. I confess that they seem not necessarily involved in the discussion of to-day. Just two or three very brief suggestions may nevertheless not be amiss:

First. Germany herself has recognized the distinction made by international law between warships, merchantmen armed for

offense, and merchantmen armed for defense. These distinctions are a part of international law. To change them now is unfair, unwarranted, and unwise. More than that, it instantly plunges us from the "frying pan into the fire," for, by acknowledging the German point of view as to merchantmen armed for defense, we thereby make them in effect warships, and must treat them as such in our ports. It is easy to imagine the viewpoint of the allies when the consequences which would flow out of this decision were made clear to them.

Second. The reason for the German demand that the rules of war and international law be changed in this matter is because the submarine is a puny and defenseless thing, and that she, therefore, ought to be given certain immunities which were never claimed for ordinary warships. But the use of the submarine has great and unprecedented advantages—advantages which Germany herself has found far outweigh its disadvantages—even under the existing rules of warfare. Is it fair that the submarine should preserve to the utmost all the advantages appurtenant to this type of craft and at the same time be as free from attack by the merchantmen who see her approaching as if she were a cup defender?

Third. It is the unvarying history of nations that yielding by one nation to the unwarranted demands of another is always followed by further demands, gradually becoming more and more insolent. The actual legal rights of the United States in this matter are probably denied by few in this House. Let us yield these rights and we shall see that we have started a train of trouble instead of bringing to an end the vexations of which we are so painfully conscious to-day.

All this deals with the duties of Congress, What of the duties of the individual? Of course, he should avoid traveling on an armed merchantman of a belligerent, except in cases of extreme necessity. Manifestly, too, it is proper for the State Department to do as it has been doing—namely, to issue passports only in cases of the gravest consequence. There is nothing more damnable than the spirit of the man who sails for fun and in the spirit of adventure or for the resulting thrill. But that has no bearing upon the duties of the Congress. We must as a Nation maintain our rights, even though as individuals we should be sparing in their exercise.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. THOMAS F. KONOP,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. KONOP. Mr. Speaker, owing to the short time allowed for a debate on the McLemore resolution yesterday, it was impossible for me to get time to discuss this question. I am therefore grateful for the privilege of being able to state my views on the proposition to-day under leave to extend remarks.

Mr. Speaker, on yesterday, I voted against the previous question on the rule submitted by the Rules Committee, because the rule reported deprived the House of opportunity to amend the McLemore resolution. If the previous question had been voted down, a substitute rule could have been adopted with opportunity for amendment and liberality of debate. Under the gag rule adopted three-fourths of the Members were deprived of the opportunity to discuss the question, and every Member of the House was bound hand and foot to vote to table or not to table the McLemore resolution. The defeat of the previous question on the rule compelled me to vote for the rule in order to be able to register my vote on the McLemore resolution.

Mr. Speaker, I am not in sympathy with everything stated in the McLemore resolution. I voted not to table that resolution, so that opportunity would be given to Members of the House to amend and perfect the resolution and make it purely a resolution of warning American citizens off armed belligerent merchant white

To my mind there has been much confusion in the debate on this question. There are two questions involved. One is an international question and the other is purely a national question—purely an American question.

Mr. Speaker, a question of whether or not belligerent merchant ships can arm themselves for defense or offense, and how much armament they can carry before they lose their identity as merchantmen and become auxiliary cruisers, is an international question. We, as a Congress of the United States, have nothing to do with that question. That question should be left to the executive department of our Government. I for one, Mr. Speaker, am willing to leave that question for solution in the hands of our great President, Woodrow Wilson, who has, by his patriotism and statesmanship, piloted the ship of state through a most angry sea. I have stood with the President on nearly every proposition. I believe he has done a great service to his country in keeping it out of war. I am willing at any time to let him handle all international questions for I believe that he has handled them in a way that has redounded to the glory of our country.

But, Mr. Speaker, the question of whether or not we should or should not warn our own citizens to keep off armed belligerent merchantmen is not an international question at all. That is a national question. That is an American question. That is a question which concerns the safety and welfare of American citizens. That is the question which was submitted

to us for action.

Why should we not warn our citizens of dangers not only to themselves but to their country? The warning of our own citizens to keep out of danger is our business. It involves no questions of international law. It concerns no nation abroad nor any of its citizens, nor does it involve any relations of our

citizens with foreign countries.

I for one, Mr. Speaker, am willing to warn American citizens to keep off armed belligerent ships. In doing that, I am asking American citizens to surrender no right. I am simply warning them of danger to themselves and to their country. I am simply appealing to their patriotism as American citizens and asking them not to jeopardize the peace of our beloved country and its peaceful people in this great crisis. In doing that, Mr. Speaker, I am not dishonoring my country. There is nothing dishonorable nor unpatriotic about this. I believe the men who favored the McLemore resolution are just as patriotic as those who voted to table it. The men who are in favor of keeping Americans off armed belligerent ships whose destruction is liable to bring us into international difficulties and war, are as loyal to their country as those who would plunge us into war, over some useless, resurrected, old international code, permitting the arming of merchantmen.

Mr. Speaker, we have warned American citizens to desert their property and their homes and get out of Mexico. I believe that we have even appropriated money and provided ships to get them out of that country. We did it for the simple reason that we did not want to be involved in a war with Mexico. If it was not dishonorable to warn the American citizens to desert their property and homes in Mexico, it is not dishonorable now to ask American citizens to keep off armed belligerent ships.

We have had international difficulties with the belligerents. We have maintained that the sinking of indefensible merchant ships by a submarine without signal for surrender and without adequate protection for the lives of passengers and crew was contrary to international law. This position of our country has been conceded by all the belligerents. This question has been settled

But what is the question now? What are the allies doing now, and what are they doing it for? They have armed and are arming their merchantmen with guns big enough to have sunk any and all warships used during the Civil War. arming them with 6-inch guns to do what? To sink submarines of the enemy. Just because some law of by-gone pirate and barbaric days permitted merchantmen to arm for defensive purposes only, the allies are arming merchantmen to sink submarines. Our own Secretary of State, Mr. Lansing, in his note of January 18, stated that the right to arm merchantmen was a "doubtful legal right." What do the central powers propose under these conditions? They serve notice and propose to sink armed merchantmen on sight without warning. Mr. Speaker, the question whether or not the allies have a right to arm their merchantmen, and the central powers a right to sink them when armed, is a question which I am willing to leave to the President to handle diplomatically; but whether or not while this ques-tion is being considered diplomatically our American citizens should needlessly bring about a war by traveling on armed merchantmen is a question for us to settle. Will any man claim that it is dishonorable to warn American citizens to keep off these armed ships while these questions are being settled? Shall reckless and indifferent men who take passage on armed belligerent ships "just for the thrill of it" plunge this country into war? No! Mr. Speaker, it is the exercise of the highest patriotism for our countrymen to forego and postpone the exercise of a "doubtful legal right" and for us, their Representatives, to warn them of the danger to our country,

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BRITT. Mr. Speaker, there is a law of the nations of the earth. We are one of the great nations. This law is therefore the law of the United States. We helped to make it; we owe it obedience; and we are entitled to its protection. Under that law the citizens of the United States have a right to travel on the armed merchant ships of nations at war with other nations, and we have a right to immunity from all hurt from either belligerents or neutrals. It is nothing to say that it would be foolish for neutrals to take passage on such ships. That goes without saying.

If my neighbors are carrying on a pistol duel across my yard I should be a fool if I needlessly went on the firing line, but if I should permit my neighbors to deny to me the right to go into my yard, then I am worse than a fool, I am a miserable coward. The question is not whether there are still fools in the world. That question is closed. Like the poor, they are always with us. It is a matter of fundamental right. It is a question of whether we shall claim our rights under the law, or whether we shall yield them. As for warning against taking such passage, all sensible men are already self-warned. Due regard for life should be its own monitor. But there is a difference, a vast difference, between discretion and right.

We are not called upon to say whether we shall give warning to save a few who are scarcely worth saving, but whether we shall save for ourselves, for this Nation, for future generations, those great fundamental rights by which we live and move and have our national being.

The question here in issue is a diplomatic question, and therefore an Executive question, and the right to deal with it, under our Constitution and laws, lies solely with the President of the United States, and I shall vote to commit it to his hands.

I, for one, have been deeply grieved that the President has not been more firm and aggressive in the protection of our rights on the seas and with other nations, and I have deeply deplored his course in this particular, and it would now come with poor grace for me not to vote to uphold his hands in a great and solemn matter in which he is trying to defend the sacred rights of our country. It will be time for this Congress to act when, and when only, diplomacy has failed, and the power of the Army and Navy shall be necessary to enforce the rights of the American citizens. Until that time comes, and I pray God that it may never come, let us, regardless of party, stand by the President, inspired only by a purpose to serve our common country.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. HENRY A. BARNHART,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BARNHART. Mr. Speaker, the intense agitation in Congress comes, as I understand it, from the belief of our national leaders that we, for safety sake, should get off the lid that holds the McLemore and similar resolutions out of consideration on this floor and bring them out and lay them on the table out of consideration. The ultimate helpfulness of such action may come in the awakening of impression abroad that we are all standing for our country as against all foreign opponents, and if such be the result our procedure will have been worth while.

This question of warning foolhardy and dare-devil citizens of the United States to keep off of armed ships of the belligerents, and, by their acquiescent action, assist in keeping us out

of war, is not only serious but it is complex—serious because action out of harmony with our President might embolden some of the fighting nations to feel that we are disagreeing, and thus encourage them to take larger liberties in warfare directly affecting our country; and complex because it places many of us of conscientious convictions in a situation wherein the question, as it comes before us, can not be voted on directly, and even if it did so present itself we would still be in the paradox of voting for what seems to us to be for the best and yet voting embarrassment to our President, who must conduct all international negotiations, who has so far conducted them safely and who believes he can continue to do so if the belligerent world is given to understand that he is backed up by his country and its Congress.

It would not be candid for me to say that I believe it impossible to in some way warn our people to keep off of armed belligerent ships and at the same time preserve all our rights under international law. Instead, I believe it could be done and that it ought to be done by influential authority, and that such action would solidify our people more completely behind our President than to ask them, by implication at least, to jeopardize our lives, our property, and our well-being by permitting, without protest, that the daring or the designing may invite trouble for us by unnecessarily risking their lives and our national safety by taking passage on armed ships which they know are liable to be blown up. It is a clear case of the safety of 100,000,000 people on one side against the probably reckless and unnecessary risk of a very few on the other.

I understand, Mr. Speaker, that international law gives citizens of neutral countries the guaranty of safe passage on belligerent merchant ships, "armed for defense," but warning them to keep off, it seems to me, would not curtail our right of reparation if they be damaged or killed. I understand, also, that the international law, which is our only legal protection on the seas, can not be changed while most of the nations that made it and acknowledge its supreme authority are at war with one another. And I admit that our adding to or taking from it now would weaken its binding force and probably nullify it as the final arbiter of all questions of international

rights and privileges.

But this situation is not of my making. I am not responsible for the questionably "whereased" McLemore resolution which makes it objectionable to all, nor for the reverse orders by which it was first hushed into committee-room sleep and then unexpectedly and surprisingly called into consideration by the same authority. However, it is but fair to say that we hear that changed conditions in satisfactorily progressing foreign negotiations were induced by reports that the importance of warning our people off armed ships met with the favor of most Members of Congress, and that such impression abroad halted our negotiations with the warring nations, one of which is alleged to have exceeded her international right in destruction of lives and property of a neutral and legally protected nation and another by illegal interference with our rights at sea. If this be true, it affords reason for most of the action we are asked to take, for we are in honor, and by the law of self-preservation, bound to stand by our country against all encroachments, be they direct or incidental.

From information in hand I believe that a large majority of

the people of the district I represent believe that wise pre-caution would be conserved by some warning to our people to keep off of belligerent ships. But the President, who more fully than any other man in this country knows our real international situation, insists that such action now would seriously complicate his plans to continue our neutrality and our peace, and therefore the rule to bring the matter into parliamentary form so as to lay it on the table until a safer time for its consideration neither commits us to reversal of our opinions as to the wisdom and efficacy of keep-out-of-unnecessary-danger ac-tion nor places us out of harmony with the President's position that it is his right and his constitutional duty to have unhampered and unquestioned charge of negotiations and settlements of international disputes without interference of Con-

gress unless its action is necessary.

Finally, our action here to-day will also be openly indicative, as set forth in the report of the committee and its approval, that the Congress, the people's direct representation for public welfare, shall be informed and its approval invoked and guaranteed before any radical action against a foreign nation is taken. And not only is such injunction binding while Congress is in session, but it implies that, if emergency arises, the President call Congress in special session for consultation and advice before relations with any other nation are formally broken off.

Under such a situation, Mr. Speaker, it seems to me every Member of Congress can consistently and safely vote for a rule,

if it provides adequate time for debate, to take up and consider the resolution and for a motion to table the resolution. Such action does not compromise the position of those who believe that our people ought to be formally warned to keep off belligerent ships, and yet it proclaims to the world that we are a united people and ready to rally to our flag and its world-famous significance of justice at any time our rights on land or sea are either ignored or abused by any foreign power. We may have personal sympathies in the awful struggle beyond the seas; we may also be prejudiced against England's domineering tactics or Germany's aggressiveness; but we are all Americans, and every loyal citizen of this land of the free is openly for his own country first and forever.

No avoidable war for us, no compromise of our national rights. no division of support of our national leader in a crisis, no intervention without due consideration, and no faltering in loyalty to our flag is and must be our national safeguard if this great bulwark of liberty is to endure as the shining light of

civilization.

The Navy League's Actual Organizers.

EXTENSION OF REMARKS OF

AUGUSTUS P. GARDNER, HON.

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. GARDNER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include some remarks on some matters of preparedness and a communication from the Navy League-nothing offensive:

THE NAVY LEAGUE'S ACTUAL ORGANIZERS.

the Navy League—nothing offensive:

The pioneer organization in the field of national defense in the United States was the Navy League. Over 13 years ago, on November 20, 1902, pursuant to a call issued by Jarvis B. Edson, chairman of the committee appointed by the Naval Order of the United States for the formation of a naval preparedness society, the pioneer meeting of the Navy League was held at the New York Yacht Club.

The men who founded the organization were not, for the most part, of national renown. At this meeting there were present Jarvis B. Edson, a naval veteran of the Civil War, who represented the Naval Order of the United States; Washington Irving, an officer of the New York State Naval Militia, who represented the Association of the Naval Militia, who represented the Association of the Naval Academy Alumni of Philadelphia; and Mr. J. D. J. Kelly, an editorial writer of the New York Herald, representing the Naval Academy Alumni of New York.

The league was incorporated under the laws of the State of New York January 2, 1903, and the incorporators named were as follows: Jacob W. Miller, Washington Irving, and Herbert L. Satterlee, who had served in the Spanish-American War as members of the New York State Naval Militia; Jarvis B. Edson, of the Naval Order of the United States; and Jennings S. Cox. The first meeting of the league was attended largely by Naval Academy graduates in civil life and members of the New York State Naval Militia. At this meeting the following directors were elected:

Allen S. Appar, Jennings S. Cox, William Butler Duncan, jr., Jarvis B. Edson, Alfred Ely, Washington Irving, J. D. J. Kelly, Charles H. Loring, Henry Eckford Rhoades, G. B. Satterlee, Herbert L. Satterlee, Robert S. Sloane, J. Frederic Tams. Aaron Vanderbilt, John Vander Poel, T. C. Wood, and Jacob W Miller.

Although few of these organizers of the Navy League were known to the general public outside of their immediate circle of friends and neusiness acquaintances, the organization which they formed fulfilled

The above statement was prepared by A. H. Dadmun, secretary of the Navy League of the United States. Mr. Dadmun writes that the facts contained are on record in the minutes of the organization.

WHY WE NEED A BIGGER NAVY.

What President Wilson said:

[At Cleveland, Ohio, Jan. 29, 1916.]

And the Navy of the United States. You have been told that it is the second in strength in the world. I am sorry to say that experts do not agree with those who tell you that. Reckoning by its actual strength, I believe it to be one of the most efficient navies in the world, but its strength ranks fourth, not second.

[At Kansas City, Mo., Feb. 2, 1916.]

Do you know the sweep of the coast from the canal to Alaska? It is nearly one-fourth the circumference of the earth. And the coast from the St. Lawrence to the Gulf? Do you think a Navy that ranks fourth is sufficient?

WHY WE OUGHT TO PREPARE AGAINST WAR.

What Secretary of War Garrison said in his report, November, 1915:

ber, 1915:

They are those who predict that war will never come to this country, and assert that therefore precautions with respect thereto are unwise and needless. Since wars have come upon nations from the earliest date of recorded history to this moment, there is no basis of fact for such a position but an actual demonstration of the nonexistence of such basis. We were early warned that there would be wars and rumors of wars, and that nation would rise against nation and kingdom against kingdom, and the end was not yet; and that prediction has been fully verified. There is no basis and no foundation to conclude that this great evil has been eliminated, and it therefore must be treated as are all other existing evils and must be prepared against.

THREE REASONS FOR PREPAREDNESS.

THREE REASONS FOR PREPAREDNESS.

First. Switzerland prepared against war. Belgium trusted to a "scrap of paper." Which country has fared best?

Second. The Monroe doctrine and the exclusion of Asiatic cheap labor are first-class policies. You can never uphold them with a third-class fleet. Dreadnaughts can never be stopped by hot shots from Chautauqua platforms.

Third. Armenia has always adopted a policy of passive non-resistance. Ireland for a thousand years has pursued the oppo-site course. Which is happiest to-day, the crushed Armenian peasant woman or the spirited Iris. colleen?

THE MONROE DOCTRINE AND CHINESE EXCLUSION.

Do you believe in the Monroe doctrine, which forbids foreign nations to set up any new branch establishments on American soil? Do you think that we do right in forbidding hordes of Chinese and Japanese to overrun our country?

I for one think those are first-class policies, but you never can support them with a third-class fleet.

ONE OF ÆSOP'S FABLES.

Let me read you what Æsop says about preparedness:

A wild boar was whetting his tusks against a tree, when a fox coming by asked why he did so. "For," said he, "I see no reason for it; there is neither hunter nor hound in sight nor any other danger that I can see at hand." "True," replied the boar, "but when the danger does arise I shall have something else to do than to sharpen my weapons." It is too late to whet the sword when the trumpet sounds to draw it.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. PERL D. DECKER. OF MISSOURI.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, March 8, 1916.

Mr. DECKER. Mr. Speaker, England, speaking for herself and her allies, contends that she has a right to arm her merchant ships for defensive purposes, and that these merchant ships so armed shall be treated in all respects the same as un-

armed merchant ships.

England contends that while a merchant ship armed for defensive purposes has no right to go out of its ordinary course in search of submarines, yet it is not required to wait to be attacked before offering resistance, but has a right to attack the submarine before the submarine has made a hostile move. In other words, England claims the right of an armed merchant ship to "attack in self defense." A recent issue of the London Times recites several instances where armed merchant ships have attacked and destroyed German submarines. She does not base this right on The Hague Convention or upon any definite and specific treaty obligation, but she bases it upon international law. International law is the result of the practices and precedents of various nations at different times, as well as the decisions of prize courts and the theses and essays of internationallaw writers. England contends that while these practices, precedents, theses, and opinions are not uniform and unanimous as to the right of a merchant ship of a belligerent to carry arms for defensive purposes, yet that the weight of authority sustains her contention.

Germany, speaking for herself and her allies, contends that armed merchant ships should be treated the same as warships, and that no practical distinction can be made between a ship armed for defensive and a ship armed for offensive purposes. Germany contends that the law giving merchant ships a right to arm came into existence for the purpose of allowing them to

defend themselves against pirates and privateers and not for the purpose of allowing them to defend themselves against warships.

She contends that since pirates have long since been driven from the sea and privateering was abolished by the declaration of Paris in 1856 therefore no reason now exists why merchant ships, armed to resist and destroy battleships, should not be treated the same as battleships. She invokes the principle of law that "when the reason for a law fails the law itself falls." Germany contends that, while international law can not be changed after the starting of a war, yet international law should be interpreted and applied in the light of changed conditions. And in support of this contention cites the note of our Government to Great Britain, in which it was said:

The Government of the United States is, of course, not oblivious to the great changes which have occurred in the conditions and means of naval warfare since the rules hitherto governing legal blockade were formulated. It might be ready to admit that the old form of "blockade," with its cordon of ships in the immediate offing of the blockaded ports, is no longer practicable in the face of an enemy possessing the means and opportunity to make an effective defense by the use of submarines, mines, and air craft.

Thus, briefly, I have stated the contention of England and the contention of Germany. I am constrained to the belief that there is argument on both sides. I may have been led to this belief by the fact that in the negotiations relative to the Lusitania case much stress was laid on the question as to whether the *Lusitania* was armed or unarmed. Germany insisted that she was armed. The United States insisted that she was not. An investigation was made. Testimony was taken, and one man was sent to the penitentiary for falsely swearing that she was armed. Stress was laid on the same question growing out of the sinking of other vessels by submarines. I was further led to the belief that the right of belligerent merchant ships to be armed was not a certain and established right by the dispatch which Secretary Lansing sent on January 18 to the foreign powers, in which he said:

While I am fully alive to the appailing loss of life among noncombatants which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control belligerents in the conduct of their naval operation, I do not feel that belligerents should be deprived of the proper use of submarines, since those instruments of war have proved their effectiveness in this particular branch of warfare on the high seas.

principles which should control belligerents in the conduct of their naval operation, I do not feel that belligerents should be deprived of the proper use of submarines, since those instruments of war have proved their effectiveness in this particular branch of warfare on the high seas.

I believe that a formula may be found which, though it may require slight modification of the precedents generally followed by nations prior to the employment of submarines, will appeal to the sense of justice and fairness of all the belligerents.

Prior to 1915 belligerent operations against enemy commerce on the high seas were conducted by cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a merchant vessel; * * * it could not be used effectively in offense against enemy nava vessels, while it could defend the merchant vessel against the generally inferior armament of piratical ships and privateers.

The use of submarines, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. A merchant ship carrying even a small-caliber gun would be able to use it effectively for offense against a submarine.

Pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on m-rchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destr

I am constrained to believe, then, that except from the technical standpoint of international law the right of a belligerent armed merchant ship to be treated the same as an unarmed ship under present conditions is not a certain and unquestionable right.

The importance to England of her contention is great. It is important to her that these merchant ships be armed, because by arming these ships with guns of small caliber they are more effective in resisting and destroying submarines even than battle ships would be, because of their greater speed. It is important to England that these ships while so armed be treated the same as unarmed merchant ships and so have free access to our ports. It is on these ships that she carries her munitions of war.

It is important to Germany that she have a right to sink these ships by every method and means that she would use against a warship, because she, the same as England, is fighting, as she claims, for her existence and is striving to keep the allies from getting cannon and bullets to be used against her

This contention is of vital importance to England and Germany, but, whether we sympathize with England or with Germany, we should not allow our judgment to be warped, but should consider this controversy solely from the standpoint of its importance to America. It is important to America only to the extent that it affects the rights of a few Americans to travel on these ships. America should not be interested in the question of immunity which the presence of American citizens on board would furnish armed merchant ships of England carrying munitions of war; nor should we consider the benefit which would accrue to Germany if the absence of Americans on these armed merchant ships would allow her to make her submarine warfare more effective.

The question which America must settle is, Is it for her welfare and consistent with her honor to prevent Americans

from using these armed merchant ships?

The situation as it now stands is this: England and her allies have placed guns and trained gunners on her merchant ships for defensive purposes and have instructed them not to wait to be attacked, but to "attack in self-defense" any submarine that may come in sight. Germany and her allies have given notice that their submarines will sink without warning any merchant ships so armed. The President insists upon the right under international law of Americans to travel on merchant ships thus armed, and insists that if Germany sinks a merchant ship thus armed without warning and lives of American passengers are lost, Germany will be held to strict account. To put this plainly and bluntly. I believe, as the situation now stands, if American lives are lost as the result of the sinking of any merchant ship by a German submarine without warning, it means war. Therefore I believe steps should be taken to prevent Americans from riding upon armed merchant ships before they are sunk and thus prevent war.

I admit that there are some things worse than war. I admit that war, dreadful as it is, is sometimes justifiable, but I do not believe that it is justifiable to wage war for a right that is in any respect doubtful or for a right that is not vital to our welfare. I do not believe that the right of Americans to travel upon armed merchant ships under present conditions is sufficiently clear and free from doubt as to justify war. I do not believe that the right of Americans to travel on armed merchant ships, even if it was clear and free from doubt, is of sufficient importance to our country to justify war. There are few places in the world that men can not travel to-day on neutral ships. These neutral ships are not so comfortable, so luxurious, so swift, as the belligerent ships, but from the standpoint of importance is it not better that a few who must travel should sacrifice their ease than that hundreds of thousands should

sacrifice their lives?

We may not have the right to change international law after a war starts, but the American Congress, in time of peace or time of war, has the right to regulate the conduct of its citizens in any reasonable manner that is for the welfare of its own people. We have a right to prevent the carrying of dynamite on passenger trains. We have a right to prevent passengers from riding on dynamite trains. We have a right to prevent citizens from riding on ships carrying munitions of war. We have a right to prevent citizens from riding on armed merchant ships of a belilgerent nation. If our Government should say to England, "When your armed merchant ships enter our ports, they shall be interned, the same as war ships," then England might justly say, "You are changing international law and committing an unneutral act." But if we say, not to England but to our own people, "You must not travel on these armed merchant ships," then we would not be changing any international law so as to affect any right of England and we would not be committing any unneutral act. England does not claim that she has the right to have Americans aboard armed merchant ships to furnish immunity against submarine attack.

It is the right and duty of the Chief Executive of this Nation to initiate diplomatic negotiations. This right and duty is based on practice and custom. It is not, as some claim, an exclusive constitutional right. Congress alone is the war-making body. This exclusive right of Congress to declare war implies the solemn right and imperative duty of Congress so to regulate the conduct of its citizens, if it can be done in an honorable

way, to prevent war.

Congress, and Congress alone, has the right to restrict or regulate the rights of a few citizens for the sake of all citizens. If the conduct of these few citizens who desire to ride on armed ships should be regulated, then it is the duty of Congress to regulate it. Congress can not shirk its responsibilities; it can not pass that responsibility to the President, however wise or good or great he may be. Pilate tried to shirk his responsibility and to wash the blood from his hands more than 2,000 years ago. If a Representative believes that these few Americans should be kept off these ships, when should he act? Should he wait until an armed ship has been sunk and American lives lost, when the minds of our people will have been inflamed, and he will have been called upon to vote for peace or war, when it will be difficult, if not impossible, for the President, with all his popularity, to prevent war? Should he wait till then or should he act now. I believe he should act now. Therefore, as a Representative in Congress, caring more for the welfare of the great mass of the people than for the convenience of a few of the people, I believe it is my duty to vote for a law that will prevent a few people from riding upon armed merchant ships of belligerent nations, or to vote for a resolution that will warn them that if they travel upon these ships they travel at their

I believe when we consider that the nations of Europe are in a struggle for existence and dangers lurk in every quarter of that war-stricken sphere, that this is not an unreasonable or humiliating precaution. American citizens had legal rights in Mexico that were valuable, definite, and certain, based on treaty obligations. In that anarchy-ridden country there was no government to call to account for the violation of these rights, but nevertheless we could have sent our Army to maintain those We did not send our Army to maintain those rights: but for the sake of the lives and welfare of the great mass of American citizens we warned the few American citizens in Mexico to come home. An American citizen has the legal right to receive a passport to travel in a belligerent country for business, pleasure, or any honorable purpose; yet the State Department has rightly refused to issue passports to persons who wish to travel in belligerent countries for pleasure or sightseeing. If it is wise for the State Department to use its discretion and restrict American rights, who will say that it is humiliating or unwise for the lawmaking body of this Government to use its discretion and restrict the American's right to travel on armed ships of a belligerent nation for the purpose of saving this country from war?

There are many people who do not appreciate what a calamity a war between the United States and Germany would be, regardless of who won. There is an opinion that we would only be expected to send our fleet. This is folly. Not only would we have to share the stupendous cost of this world war, but we would contribute our quota of lives and blood. When America goes to war her men and boys will not be content to let the men

and boys of other nations do their fighting.

I have no desire to embarrass the administration. My loyalty and devotion to the President has been measured by my capacity. I have helped in his every effort to carry out the mandate of the people who elected him as well as Congress. The issue is not "Shall we stand by the President?" The issue in Germany was, "Shall we stand by the Kaiser?" The issue in England was "Shall we stand by the King?" The issue in Russia was "Shall we stand by the Czar?" The people there did not know why they were called upon to die. This is a representative Government. If war is declared, we will stand by the President, but now the issue is "Shall the Representatives of a hundred million people, in order to prevent war, regulate the conduct of a few Americans who wish to travel on armed merchant ships?"

In this solemn hour I am not thinking of political parties or factions. I am thinking of my country. I am thinking of those who ride on the ships at sea, but I am also thinking of those brave men and boys who, if war comes, will have to die. I am not thinking so much about the price of zinc ore as I am thinking about the men who dig the ore. I am thinking not so much about the price of wheat and corn as I am about the men and boys who till the soil. I am not thinking so much about the success of business men as I am about the sons of business men

who will follow the flag when the call comes.

HON.

I have the great honor to be the Representative of brave men and women and I want to act as brave men and women would have their Representative act. These men who would have to die if war came, these men whose sons would have to lie in the trenches and breathe asphyxiating gas; these mothers, the flesh and blood of whose boys would be splattered over the fields of Europe; these men whose posterity would have to groan under the burden of war debts for countless generations; these are the ones that Representatives in Congress should consider before war is declared, and it is in behalf of these that I believe that Congress should act and use its legislative authority to prevent war before diplomacy has brought us, as it did the nations of Europe, so close to the brink of war that it is impossible to draw back.

It grieves me to differ from my friends. The situation may not be as grave as I think it is. I hope it is not. But entertaining the convictions which I do, my course is clear and I must follow it regardless of the effect on my political fortunes.

The Borland Amendment.

EXTENSION OF REMARKS

A. GALLIVAN. HON. JAMES

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Mr. GALLIVAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a copy of a letter written to the honorable Speaker of this House by the Hon. Samuel Gompers touching the Borland rider, so called.

written to the honorable Speaker of this House by the Hon. Samuel Gompers touching the Borland rider, so called.

American Federation of Labor, Washington, D. C., February 25, 1916.

Sir: Apropos of the proposition coming before the House of Representatives an amendment to House bill 12207, which, in effect, will increase the hours of service of Government clerks and other employees in the executive departments and of the District of Columbia, the executive departments and of the District of Columbia, the executive council of the American Federation of Labor, now in session at its headquarters in Washington, D. C., respectfully calls your attention to the fact that it is now generally recognized that shortening hours of work is a fundamental principle of human welfare. It is fundamental because of the effect upon workers in all the various relations of life. These facts make it doubly deplorable that the United States Government should be asked even to consider a proposition to increase the number of hours that its employees shall work daily, and it is exceedingly regrettable that the demand for a longer workday for Government employees should be made under a pretense of economy.

All industrial experience goes to prove that there is no saving in lengthening hours of toil. On the contrary, decreasing the hours of work to a normal workday always tends toward greater efficiency, greater accuracy of service, and a larger amount of work accomplished in a given time. Those workers who come to the office or places of work each morning refreshed and with quickened physical strength and mental interests and power are of greater value in their respective places of service than clerks warrange, to limit, or to forego entirely of the proposition of the agencies of organized society have as their ultimate purpose the promotion of the warrange, to limit, or to forego entirely of greater value to the Nation than asving public money. The State and all of the agencies of organized society have as their ultimate purpose the pro

SAMUEL GOMPERS, President American Federation of Labor.

Hon. CHAMP CLARK, Speaker of House of Representatives, Washington, D. C.

Armed Merchant Vessels of Belligerents.

EXTENSION OF REMARKS

WILLIAM L. IGOE.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, March 7, 1916.

Mr. IGOE. Mr. Speaker, when the question of warning our citizens against traveling on armed belligerent merchant vessels was under discussion in the House, I could not explain my position fully in the time given to me. I had prepared a statement of the reasons that moved me to vote in favor of such a warning, and under the permission just given I wish now to present that statement.

I do not intend to enter into a discussion of the law relating to armed merchantmen. The cases that have arisen in regard to them do not present facts similar to what we have to-day. The submarine and effective aircraft are used for the first time in warfare, and many accepted rules of international law are difficult of maintenance if these weapons are to be effective. For proof of the difficulty of enforcing the old rules in the face of new conditions the note of Secretary Lansing to all belligerents may be cited. In that note he said:

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government and is seriously considering instructing its officials accordingly.

As to the difficulty of determining what is offensive and what defensive armament we have only to read the rules laid down by this Government for port officers. It will be found there that we have stated that the presumption is that an armed vessel is armed for offensive purposes, but that the presumption may be removed by the existence of certain facts which only a careful examination and inquiry could disclose. Our Government concedes that a vessel armed for offense may be sunk without warning, and I am sure that all vessels that leave our ports will not be allowed to clear if they have armament for other than defensive purposes, as laid down by the rules of the State Department. Who can say, however, what changes may be made after leaving our ports? And who will pass on armed vessels that leave the ports of other countries and do not touch our ports? Take, for instance, the case of the ship upon which Consul McNeely lost his life. Suppose another such ship leaves England bound for Italy and is armed. Who will determine whether it is armed for offense or defense? And suppose an American takes passage on such ship, the ship torpedoed and sunk without warning, and the citizen loses his life? Will there be a presumption by our Government that it was armed for offense, since our port officials have never seen the ship? This and many other confusing questions may arise and probably will arise, and the only course is for our citizens to stay off all armed belligerent ships. The argument that it is dishonorable and a base surrender of the rights of our citizens on the high seas to warn them off such ships does not appeal to me.

We warned our citizens to get out of Mexico, not once but many times. They had to abandon their property and suffered many indignities. Some did not heed the warning and lost their lives. I believe the country sustains the administration in its action in warning citizens in Mexico and does not consider it either dishonorable or a base surrender of our rights.

Further, in his note to the American ambassador to Germany, November 7, 1914, Mr. Lansing discussed the efforts of this Government to see that only defensively armed merchant vessels were cleared from our ports. In concluding his letter, Mr. Lansing wrote this remarkable sentence:

Please bring the foregoing to the attention of the German Government, and in doing so express the hope that they will also prevent their merchant vessels from entering the ports of the United States carrying armaments even for defensive purposes, though they may possess the right to do so by the rules of international law.

Here we asked a great belligerent power to "prevent" its citizens from exercising a right upon the high seas if they wished to use our ports. If it was not dishonorable for the German Government to do this, why is it dishonorable for us to merely request (not prevent) our own citizens not to take passage on armed merchant vessels?

Just a few days ago the Government of Sweden, in the interest of the peace of that nation, warned its citizens not to take passage on armed merchant vessels. Sweden is trying desperately to preserve her neutrality. Has she done a dishonorperately to preserve her neutrality.

able thing in warning her citizens?

Our own State Department has adopted rules and regulations relating to passports. As a general proposition American citizens have the right to go where they please throughout the world, and it is our duty to protect them wherever they go. But while the present conflict is going on we have restricted this right of our citizens somewhat by refusing passports to those who would visit belligerent countries for pleasure. The rule adopted by our State Department is:

The department does not deem it appropriate or advisable to issue passports to persons who contemplate visiting belligerent countries merely for pleasure, recreation, touring, or sightseeing.

It must be admitted that this rule is reasonable. Has anyone charged us with doing a dishonorable thing in thus re-

stricting the rights of our citizens?

The statement has been made repeatedly that for Congress to pass a resolution warning our citizens not to take passage on armed belligerent merchant vessels would at this time be an invasion of the right of the President to exclusively handle and control all questions relating to our relations with foreign nations. With that view I do not agree, since the negotiations growing out of the armed-merchantmen question have reached no satisfactory conclusion, and each day may witness American citizens taking passage on armed merchant ships that may later be sunk without warning, and thus precipitate a discussion in Congress and the final answer upon this question. I believe that the Executive, in conducting negotiations upon this matter, is entitled to know where each Member of Congress stands and how far each Member will go to uphold his position. It seems to me also that in fairness and in justice to our fellow citizens who may wish to embark upon these vessels we ought to state plainly and unequivocally whether or not we believe they ought to exercise their right; and that if they do exercise them, whether or not we will resort to arms to vindicate and uphold their exercise of that right. We are told that it would be dishonorable to warn our citizens against exercising their rights on the high seas. If that is so, then, if we do not warn them, they are justified in assuming that this Nation will fight to the bitter end and at all cost to defend them in their exercise of that right. As for the President, if we say we will not warn our citizens, wc. in effect, say to him and to the world that he may insist in his negotiations upon the right of our citizens to tra el upon these ships; that we refuse to warn them; that he may go to any extent within his constitutional powers to vindicate that right; and that we will, if necessary, back up his position by a resort to arms.

In confirmation of this statement, while I do not know that the article appearing in the Washington Star of March 4, 1916, was authorized, I do think it may very properly be considered in this discussion. The following is taken from that article:

THINKS COUNTRY UNDERSTANDS.

THINKS COUNTRY UNDERSTANDS.

The White House was also gratified to-day by the belief that the country has not misunderstood the meaning of the Senate vote. Outside of Washington the impression, from the telegrams, seems to have been unanimous that the Senate, despite the complications injected, at the last minute by Senator Gorg, meant to give the President a free hand in his international work and did so. The country has evidently reached the same conclusion, if the many telegrams represent public sentiment.

Whatever the country believes, however, it is clearly known and understood that the President will proceed from now on with a firmer hand and will continue to stand by his position that Germany will not sink, without warning, defensively armed passenger or merchant vessels, with Americans on board, unless she wants to invite a break with the United States.

The President told the country that he stood for compliance with international rules and that the administration would back its position on that question by force, if necessary. He asked Congress to decide whether he was to be allowed to continue along those lines. He understands that Congress has given him a free hand and he is going to accept the responsibilities imposed upon him.

The President to-day feels that if Germany has not fully caught the spirit of the warning that is conveyed in the whole transaction, then she does not want to get it; that she is bent on submarining in all directions without care or concern for the interests of Americans or of humanity generally. He awaits Germany's next move and then it will be his.

Thus it will be seen that a refusal to warn our citizens may readily be accepted as an invitation to go to the limit, and an assurance that "the administration would back its position by force on that question if necessary," "he understands that Congress has given him a free hand."

Let us see, Mr. Speaker, what it is that the President asks in his letter to Mr. Pov. I quote the following:

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited, it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel

justified in asking that your committee will meet to urge an early vote upon the resolution with regard to travel on armed merchantmen which has recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of executive initiative that I venture the hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very earnestly commend it to their immediate consideration.

I do not know that any subsequent letters have been written, but this House is certainly not complying with his wishes unless we inform him in plain terms just what our position is. It is an invitation to each Member to frankly place himself on record either for or against a warning resolution, and far from being an invasion of the presidential prerogative to conduct foreign negotiations, the President himself now asks each of us to define his position, and we would be weak and cowardly did we not do so. I assume that we are also to speak what is in our minds and vote the convictions we have, without regard to the political effect upon party or individual.

I can not do otherwise than place myself on record as favoring a warning resolution. I do so because I feel that while our citizens may have a technical right to take passage on armed belligerent merchant vessels, they should refrain from exercising that right in the interest of the peace of the country and the happiness of their countrymen. I will vote to issue that warning now, because I wish to serve notice on such citizens. I feel that any Member here who votes against warning our citizens to stay off these ships obligates himself to vote for a declaration of war if

one of these citizens comes to harm.

Congress has the power to declare war. The Members of this House who believe in their hearts that our citizens should be warned ought to declare their opinion now, for the question we are considering is one that may or may not result in war, accordingly as we decide the matter here to-day. You can not hide behind the plea that you do not want to tie the hands of the President in his diplomatic negotiations, for he has asked your opinion.

If you vote against a warning, you tell him to proceed; and the next time the question comes before you it will be after an American citizen has come to harm, and you will not be able to weigh the question as coolly, calmly, and sensibly as now. Then your passions will be aroused; the press, which now denounces everyone who favors this proposition as an alien sympathizer or worse, will then demand war and call you a craven, a coward, and a weakling if you do not so vote. Your vote against a warning now will then return to plague you. You will realize too late that the blood of your countrymen must be shed and the wealth of your country dissipated, because you were too weak to record what your heart and your conscience told you was

It is not a pleasant thing to disagree with the President of the United States, especially at this time and upon such a question. I am the Representative here of 250,000 people, and I am sensible not only of the great responsibility that rests upon me as a Representative but also of the obligation to "well and faithfully discharge the duties of the office." The responsibility and the obligation are mine. I can not and will not shift them to

Neutrality of America.

EXTENSION OF REMARKS

HON. JAMES W. GOOD, OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

DUTY OF CONGRESS TO DECLARE REAL NEUTRALITY OF AMERICA.

(By John W. Burgess.)

To the EDITOR OF THE EVENING MAIL.

SIR: Replying to many questions concerning the submarine controversy between the Governments of this country and Germany, I beg to

say that, in my humble judgment, the administration has woven around itself such a web of fallacies in regard to the international duties of neutral governments toward belligerents that it has become practically helpless, and that Congress must take the matter in hand, extricate the administration from its self-imposed bonds and set it upon the right

say that, in my humble judgment, the administration has woven around itself such a web of fallacies in regard to the international duties of neutral governments toward belilgereins that it has become practically the administration from its self-imposed bonds and set it upon the right rick again.

In the course of a war, prohibit me manifecture and export of arms and munificions of war without committing a breach of neutral sustainable to the people of this country and to the world that this Government of arms and munificions of war upon the sustainable of th

exercise its full power and authority to save the country from foreign war, which, once entered on, will not in my opinion cease without a thoroughgoing internal economic revolution, as likely to be destructive as constructive JOHN W. BURGESS.

NEWPORT, February 28.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. SAMUEL W. BEAKES.

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. BEAKES. Mr. Speaker, on this momentous day, when we as Representatives of the American people are called upon to take a stand in reference to a question which requires delicate diplomatic handling, I wish to raise my voice as an American, and to raise it for peace. In this dreadful holocaust of war, when all the great nations of the earth excepting only the United States are locked in a death encounter, each straining every nerve to best the other, and none observing any of the rights of neutrals that they do not feel they have to observe, each man here should so act as to aid in keeping our beloved country out of the holocaust. For 18 long months President Wilson has maintained the honor and dignity of America and kept us at peace. Many delicate and difficult diplomatic situa-tions have been successfully met, and we are at peace. Should this House now step in and usurp any of the diplomatic powers which the Constitution, wisely, I think, imposes upon the Executive? If we can not trust the President, whom can we trust? Surely this House, with 435 men of different minds, is not fitted to pursue a straight and firm course the surely than the surely that the pursue of the surely than not fitted to pursue a straight and firm course through the dangerous storm clouds which threaten the ship of state. The dangerous storm clouds which threaten the ship of state. The ship can not survive with 435 pilots. When danger threatens, there must be but one pilot, who knows his business, who is unafraid, possessed of one idea, filled with one determination, that of bringing the ship into a safe and peaceful harbor. And when danger threatens it is the duty of every man of the crew to sustain the pllot. It is a duty the United States owes to itself and to the world to remain neutral. It is the duty of each representative of the American people to remain neutral. It is a duty the United States owes to its citizens to protect the lawful rights of American citizens; among these rights is the freedom of the seas.

International law is not what our reason tells us ought to be international law. It is what the nations of the world have agreed upon. We can not surrender part of our rights under international law to one nation without being called upon to surrender other such rights to another nation. We must either in the end maintain it all or surrender it all. For us to agree with one only of the warring powers to change international

law would not be to maintain our neutrality.

The McLemore resolution should never have been introduced in this Congress. It is not a neutral resolution. On its face it shows that it was not drawn with a clear knowledge of international law. On its face it shows that it was not drawn with an exact knowledge of facts. It has no business here; it certainly has no business on the calendars of an American Congress. Its long preambles set forth facts based only on newspaper reports, reports which have been denied as vehemently as they have been affirmed. In a delicate diplomatic situation is this House to declare mere newspaper rumors reflecting upon the integrity of one of the powers at war to be facts? Do we know absolutely, as this resolution declares, that Great Britain, by secret orders, has armed her merchant ships and manned them with "concealed and disguised" naval officers and men with instructions to use these guns for offensive warfare? Even the resolution admits in express terms that the proof which it says exists is not yet in the hands of the American Government. Why, then, should we declare as facts mere statements of newspapers that Germany has claimed these to be the facts? The Members of this House have no knowledge beyond newspaper statements that Germany so claims, just as we have no knowledge beyond newspaper statements that Great Britain denies ever issuing such orders. If proofs are to be presented to the American Government, why should not the mover of this resolution have waited until such proofs had been presented? Is this resolution anything more than a bid for the German votes? If that is what it is, I believe it will fail in its purpose,

for the gentleman does not know as I do the loyalty which underlies the German character.

In my home county practically half the voters are either of German birth or German descent. As between Great Britain and Germany, their sympathies are, of course, with the Fatherland, and none of us can blame them for that; but if the question ever comes, and God forbid that it should ever come, between their standing behind the German Kaiser or the American President, I know that the great mass of them will stand firmly and loyally behind the American President. And another thing, the German blood is not a cowardly blood. Our citizens thing, the German blood is not a cowardly blood. of German descent will not admire one who truckles for their votes or who shows that he doubts their loyalty to the land of their adoption or birth. If this resolution, which not only warns American citizens off of merchant ships, but also declares that we will not protect American rights on the high seas, was not a futile bid for the German vote, then it must have been for the ignoble purpose of securing peace by abdicating in advance American rights on the seas. When a weak and puny Nation, we fought one war with Great Britain for those rights. we now, a great and powerful Nation, out of fear alone, abdicate those rights? I yield to no man in my desire for peace, but I want peace with honor. If out of fear we surrender now to Germany, later out of fear we may surrender to Great Britain. When the dogs of war are loose, as at present, the coward who slinks before them has not as much chance of escape as the brave man who faces them. Much of the wonderful success which has so far attended the German and Austrian arms has been due to the fact that one man, the Kaiser, has had charge, and the Germans and the Austrians have stood loyally behind him. One man for 18 trying months has successfully upheld America's honor and rights and kept us at peace. He and his Secretary of State are the only men who know all the facts. Of necessity diplomacy is for the most part secret until its objects are accomplished. No man wants honorable peace more than Woodrow Wilson, and certainly none of us are better able to maintain it. And so every true American patriot should endeavor to uphold the hands of America's President, contending now with one nation for the protection of American lives and now with another for the protection of American property.

I do not regard the American who would, out of a spirit of bravado or needlessly, expose his country to the danger of war by traveling on merchant ships of the warring nations as an American patriot. But certainly if threats of a torpedo would not deter him a warning by this body would have no effect. If he is unpatriotic enough to risk the welfare of his country he would care little for the mere warning of an American Congress. And certainly the State Department, without issuing any statement that it is not prepared to defend American rights, is doing more than a mere warning can to keep American citizens out of danger by making it extremely difficult to secure the passport necessary to board the ships unless clear proof of the necessity of travel is shown. But what can be thought of any representative of the American people who would vote for a resolution that would say to any nation on earth that they could with impunity take the life of an American citizen traveling in a manner hitherto recognized in international law as lawful?

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JOSEPH B. THOMPSON, OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. THOMPSON. Mr. Speaker, this is a time for honest thinking and plain speaking. All admit that our country stands quivering on the perilous edge of the caldron of war. Men who will stand palsied and permit, by either their action or nonaction, 100,000,000 people to be drawn into this awful carnage of slaughter because, for sooth, their vote or the expression of their views might result in political destruction are unworthy a seat in this high place. If the bugle call of war should sound I doubt if there is a single Member of this House, including those over age and physically exempt, who would not gladly and heroically follow the Stars and Stripes into the jaws of death. If he would do this to the strains of martial music and the rythm of marching feet, why is he not willing to suffer political death and martyrdom by acting with like

courage and speaking the real truth—a truth which he will admit in private-in the presence of a very grave situation with which we stand face to face? Let no man deceive him-This issue is clear-cut; and it ought to be met with courage, without equivocation, and without regard to political con-

The President, in his letter under date of February 29 to Mr. Pou, acting chairman of the Rules Committee of the House,

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false; but so long as it is anywhere credited, it can not fail to do the greater harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolution with regard to travel on armed merchantmen which have recently been so much talked about, in order that there may be afforded an immediate opportunity for public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The President said in so many words that he desired a vote "upon the resolutions with regard to travel on armed merchantmen, which have recently been so much talked about, in order that there may be afforded an immediate opportunity for public discussion and action." On what? Why, of course, on the mat-ter of citizens of the United States traveling on these armed merchantmen. Are we doing that to-day? No! What are we doing? We are attempting, by parliamentary legerdemain, to avoid discussing and voting on the very question the President says he wishes discussed and acted upon.

The situation would be very humorous if it were not so serious. It is this: Last Saturday the Committee on Foreign Affairs reported House resolution 147, commonly known as the McLemore resolution, to the House, with the following recommendation:

That House resolution 147, known as the McLemore resolution, be reported to the House with the recommendation that it do lie on the table. Under the practice and precedents in this country the conduct of diplomatic negotiations has been left to the President, and with this practice the committee does not feel if proper for the House of Representatives to interfere. We have confidence that if the President reaches a point in any negotiations with foreign Governments at which he has exhausted his power in the premises, he will in the usual way report all facts and circumstances to Congress for its consideration.

Under the rules of the House this placed the resolution on the table. So on yesterday the gentleman from Illinois [Mr. Foss], in order that the House might vote to lay it on the table again, asked that it be taken from the table and placed on the calendar. Now we are called on to do what? Not to vote on whether or not Congress thinks American citizens should refrain from taking passage on armed merchantmen of belligerent nations, loaded with arms, munitions, and soldiers, but to lay the Mc-Lemore resolution back on the table, where it was placed by the Committee on Foreign Affairs. We are marching up the hill in order that we may march down again.

I shall vote to lay the McLemore resolution on the table if we are prohibited from amending it. It contains nine "whereases." These numerous "whereases" contain statements of fact which no one can say are true or false. For this reason I can not vote for this particular resolution. I am a member of the Committee on Foreign Affairs of the House and I tried there to amend this resolution, first, by voting for the substitute offered by the gentleman from Missouri [Mr. SHACKLEFORD]. Mr. SHACKLEFORD offered before the committee the following substitute:

substitute:

Resolved, That it is the sense of this House that all citizens of the United States should be warned that a serious controversy has arisen in relation to the arming of merchant vessels and the method of waging submarine warfare by the nations engaged in the European war; that the President is conducting negotiations with the belligerents for the purpose of securing an understanding concerning the disputed points of international law involved; that the House has full conductate that in the conduct of these negotiations the President will leave nothing undone in his efforts to safeguard the honor and peace of the Republic and the rights of its citizens; that pending such negotiations no citizen of the United States should take passage on an armed ship of any of the belligerent nations, lest his recklessness in so doing might plunge our country into war; that by the passage of this resolution it is not intended to express any opinion upon the question of international law involved. involved.

Had this resolution been adopted and reported to the House with a favorable report, the President's request for a discussion and a vote on the propriety of our citizens riding on armed merchantmen during the time he is conducting our very delicate foreign relations could have been settled in a manner that would have left no possible doubt as to the views of the House. By taking the action here proposed nothing will be settled and we will find ourselves in the position of another high lawmaking body, which acted on this question last week and has been attempting to ascertain ever since just what action was

Mr. Speaker, we had as well be frank and meet this question squarely, for we can be sure that no question is ever settled until it is settled right. The question is very simple, and it is this: Do we think American citizens should travel on armed merchantmen of nations engaged in armed conflict, the greatest in all history, nations pouring out their lives in rivers of blood for their very existence, or do we think, for their own safety and for the peace, happiness, and prosperity of all the people of this great country they should refrain from such reckless and foolhardy travel? I do not intend to argue the question of international law involved nor the right of, citizens of a neutral country to take passage on a merchant ship of a belligerent, whether armed for offensive or defensive purposes.

To say the least, it is a question not altogether free from doubt. It is an axiom of the law that when the reason for a law ceases the law dies also. The international law on the subject of arming merchantmen grew out of conditions that obtained in another age-an age when pirates infested the seas and before the day of submarines. I am willing to accept the views of our Secretary of State on this subject. On January 18 of this year he addressed a note to the belligerents, as follows:

It is a matter of deepest interest to my Government to bring to an end, if possible, the dangers of life which attend the use of submarines as at present employed in destroying enemy commerce on the high seas, since on any merchant vessel of belligerent nationality there may be citizens of the United States who have taken passage or members of the crew in the exercise of their recognized rights as neutrals. I assume your Government is equally solicitous to protect their nationals from the exceptional hazards which are presented by their passage on merchant vessels through these portions of the high seas in which undersea craft of the enemy are operating.

While I am fully silve to the appailing loss of life among noncom-

merchant vessels through these portions of the high seas in which undersea craft of the enemy are operating.

While I am fully alive to the appalling loss of life among noncombatants, regardless of their sex, which has resulted from the present method of destroying merchant vessels without removing the persons on board to piaces of safety, and while I view that practice as contrary to those humane principles which should control belligerents in the conduct of their naval operations, I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

In order to bring submarine warfare within the general rules of international law and the principles of humanity without destroying their efficiency in the destruction of commerce, I believe that a formula may be found which, though it may require slight modification of the precedent generally followed by nations prior to the employment of the submarine, will appeal to the sense of justice and fairness of all the belilgerents in the present war.

Your Government will understand that in seeking the formula or rule of this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally efficacious in preserving the lives of noncombatants on merchant vessels of belligerent nationalities. My comments on this subject are predicated on the following propositions:

First, A noncombatant has a right to traverse the high seas in a mer-

lives of noncombatants on merchant vessels of belligerent antionalities. My comments on this subject are predicated on the following propositions:

First. A noncombatant has a right to traverse the high seas in a merchant vessel entitled to fly a belligerent flag, to rely upon the observance of the rules of international law and principles of bumanity, and if the vessel is approached by the naval vessel of another belligerent the merchant vessel of enemy nationality should not be attacked without being ordered to stop

Second. An enemy merchant vessel, when ordered to do so by a belligerent submarine, should immediately stop.

Third Such vessel should not be attacked after being ordered to stop unless it attempts to flee or to resist. In case it ceases to flee or to resist the attack should be discontinued

Fourth. In the event that it is impossible to place a prize crew on board of an enemy merchant vessel or to convoy her into port the vessel may be sunk, provided the crew and passengers have been removed to a place of safety.

In complying with the foregoing principles, which in my opinion embody the principal rule, the strict observance of which will Insure the life of a noncombatant on a merchant vessel which is intercepted by a submarine, I am not unmindful of the obstacles which would be met by undersea craft as commerce destroyers.

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessels. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

The us

the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive

armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the 'removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing beligerents that

submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declarations by the belligerent Government, I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistance upon doubtful legal rights which may be denied on account of new conditions.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon your enemies making a similar declaration.

I should say that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent government, and is seriously considering instructing its officials accordingly.

Note carefully the last paragraph of that note to the powers. The Secretary of State says, "My Government." Of course that phrase can have but one meaning, namely, that the administration is seriously considering treating all merchantmen, whether armed for defensive or offensive purposes, as auxiliary Of course if they be treated as auxiliary cruisers, cruisers. either belligerent would have the right to sink them without warning, even though they might carry neutral passengers, But, Mr. Speaker, conceding that American citizens under international law have the right to take passage on armed merchantmen, by no means argues that they should do so. The administration of President Taft warned American citizens to stay out of Mexico.

President Wilson's administration has done the same many times, and it has gone further and warned those who were there to abandon their property and leave the country. Sweeden has warned its citizens to refrain from traveling on armed merchantmen of the belligerents within the past month. Our Department of State has refused passports to our citizens who contemplated visiting belligerent countries merely for "pleasure," "recreation," "touring," "sight-seeing," etc. The notice issued by the Secretary of State is as follows:

All American citizens who go abroad should carry American passports and should inquire of diplomatic or consular officers of the
countries which they expect to visit concerning the necessity of having the passports viséed therefor.

American citizens are advised to avoid visiting unnecessarily countries which are at war, and particularly to avoid if possible passing
through or from a beiligerent country to a country which is at war
therewith.

therewith.

It is especially important that naturalized American citizens refrain from visiting their countries of origin and countries at war

frain from visiting their countries of origin and countries at war therewith.

It is believed that governments of countries which are in a state of war do not welcome allens who are traveling merely for curiosity or pleasure. Under the passport regulations prescribed by the President January 12, 1915, passports issued by this Government contain statements of the names of countries which the holders expect to visit and the objects of their visits thereto. The department does not deem it appropriate or advisable to issue passports to persons who contemplate visiting belligerent countries merely for "pleasure," "recreation." "touring," "sight-seeing," etc.

As belligerent countries are accustomed, for self-protection, to scrutinize carefully aliens who enter their territories, American citizens who find it necessary to visit such countries should, as a matter of precaution and in order to avoid detention, provide themselves with letters or other documents, in addition to their passports, showing definitely the objects of their visits. In particular it is advisable for persons who go to belligerent countries as representatives of commercial concerns.

Not really a merican citizens who reading a merican prospects are

concerns.

Naturalized American citizens who receive American passports are advised to carry their certificates of naturalization with them as well as their passports.

American citizens sojourning in countries which are at war are warned to refrain from any conduct or utterances which night be considered offensive or contrary to the principles of strict neutrality.

ROBERT LANSING.

DEPARTMENT OF STATE, Washington, October 4, 1915.

Note.—An application for a passport must be accompanied by duplicate unmounted photographs of the applicant not larger than 3 by 3 inches in size, one affixed to the back of the application by the clerk of the court before whom it is executed, with an impression of the seal of the court; the other to be affixed to the passport by the department.

I am sure no Member of this House would permit a member of his family to take passage on an armed merchantman without a word of warning. If such a word would be proper to members of our families, why would it not be the right thing to do when the destiny of 100,000.000 people is involved? If it be proper to warn our citizens against going into Mexico; to warn those already there to flee; to refuse passports to travelers in belligerent countries, why is it not proper to request American citizens to refrain from traveling on armed ships on the high seas, and who, by their foolhardiness, may at any moment engulf us in an awful sea of blood and carnage?

Requesting our citizens to refrain from taking passage on armed merchantmen of belligerent nations by the Congress would be the exercise of an undisputed right. It is also in consonance with sound public policy. There is on the statute books of the United States at this time a law prohibiting the carrying of passengers on trains which convey explosives. If this is a wise provision of the law, why is it not also a good statute when applied to the sea? We now prohibit, by statute, the carrying of concealed weapons and, in many States, all character of weapons. We prohibit marriages between the whites and the blacks. In a number of States the sale of liquors is prohibited, and in practically all of the States it is impossible to purchase poisons or narcotic drugs. In times of great excitement and riot people are prohibited from congregating on the streets and all saloons and places of public amusement are closed. When riot stalks abroad in the land and the passions of men run high, people are warned to remain at home and not add fuel to the maddening flames. Why is all this done? It is the result of ages of experience and organized society has decreed, under circumstances of this kind, the individual citizen should for the moment curtail his pleasure in the interest of the whole people and for the public good.

At this time when all the nations of Europe are on fire with the mad passions of war and when it is suggested that citizens for the moment do no act that would hinder the President in guiding our country in safety through the perils of that conflict, we are answered that the interest, the happiness, and the blood of all our citizens is not to be weighed against the abstract right of one foolish man or knave, and in the name of patriotism the withering finger of scorn is pointed at those who do not believe that this Nation should be hurled headlong into armed

conflict because of the caprice of some silly fool.

Mr. Speaker, I had intended to vote against the previous question on the adoption of the rule until the gentleman from Illinois [Mr. Mann] disclosed what was in the minds of the minority should the previous question be adopted. He has just read to us what the minority intends to offer, and it is this:

Strike out all after the word "debate," where it last occurs, and insert

Strike out all after the word "debate," where it last occurs, and insert the following:

"The resolution and preamble shall both be open to amendment, with the following amendment considered as pending, to wit:

"Strike out beth the preamble and the resolution and insert in lieu thereof the following:

"Resolved, That in the opinion of the House of Representatives citizens of the United States, under existing conditions and irrespective of their legal rights, ought to refrain from taking passage on armed vessels of belligerent nations except in case of imperative necessity," and the consideration of the resolution and amendments thereto shall proceed under the five-minute rule to a final vote on passage."

It is evident that such a resolution as this would leave us in the exact position we now occupy. Every manufacturer of munitions who is trading with the allies, every Wall Street banker who is loaning them money, and every highbrow who desires to cross the ocean for financial or foolish reasons would be exempt under this resolution. No exemption should be made. There are an abundance of neutral vessels belonging to the citizens of Holland, Sweden, Norway, Denmark, and the United States that make regular trips across the Atlantic to carry all the people who desire to go from this country to Europe on legitimate business.

I regret that this matter has gotten into such a condition that the membership of the House can not vote directly for or against the question involved. The only effect the resolution proposed by the gentleman from Illinois [Mr. MANN] would be to request the poor people of the country to remain off these ships while extending to the wealthy people the right to take passage

The spirit of recklessness and utter abandon, the contempt felt by some people who claim to be American citizens for the lives and happiness of their fellow citizens, is illustrated by the remarks of Charles Bellows, of Brooklyn, N. Y., who sailed on the 3d of this month on the White Star liner Canopic. The news item carried in the papers on the morning of March 4 read:

Capt. James said that in the event of his encountering an enemy submarine he would make every effort to elude it. The use of the guns would depend on circumstances.

Two of the Americans were Mr. and Mrs. Charles Bellows, of 30 Peirrepont Street, Brooklyn. Mr. Bellows is an importer, and with his wife has made the trip through the danger zone three times. When asked if he did not fear to sail in view of the captain's announcement, he said:

"By no means. I have run blockades before this, and so has my wife, and I really enjoy the thrills that come with it."

Mr. Speaker, I think a man who is capable of treating so serious a matter, fraught with such grave consequences to the peace, the happiness, and the welfare of 100,000,000 people, should be restrained the same as we would restrain an escaped madman. At a time when practically all Europe is aflame with the mad passions of war, and when the sparks are falling, as the President tells us, even in our own country across the Atlantic-3,000 miles away-I can not consent for our citizens

to walk into the blazing furnace with uncovered vessels of kerosene on their shoulders, knowing as we all know that if it should be ignited an explosion would result that will plunge us into the charnel house of bloody war, I do not believe we ought to permit our country to be placed in a position where it would be possible for one of its citizens, so thoughtless of its peace, its welfare, its happiness, its prosperity, by gallivanting over the high seas on armed merchantmen for the measiy purpose of enjoying a "thrill," to levy so great a sacrifice on the mothers of this Republic. It were well to remember that if war should come these travelers will have already enjoyed all the "thrills that come with it" they desire, and countless thousands of the young men of our land—the very flower of its manhood-will march away never to return, and those who survive will come home mained and pitiful reminders of the folly of reckless "thrillers."

Mr. Speaker, the newspapers report that the action taken by the Senate when it tabled the Gore substitute was entirely satisfactory to the President, so when the Committee on Foreign Affairs met last Friday to consider the matter I offered that substitute as a substitute for the McLemore resolution, with a report that it be tabled in the House. My motion was as

follows:

Strike out all of House resolution 147 after the enacting clause and

Strike out all of House resolution 147 after the enacting clause and substitute the following:

"That the sinking by a German submarine of an armed merchant vessel of her public enemy resulting in the death of a citizen of the United States would constitute a just and sufficient cause of war between the United States and the German Empire, and that the resolution as amended be reported to the House with the recommendation that it is on the table. Under the practice and precedents in this country the conduct of diplomatic negotiations has been left to the President, and with this practice the committee does not feel it proper for the House of Representatives to interfere. We have confidence that if the President reaches a point in any negotiations with foreign Governments at which he has exhausted his power in the premises he will, in the usual way, report all facts and circumstances to Congress for its consideration."

When the Shackleford substitute was voted down I submitted this, as I felt it would more nearly permit the membership of the House to vote on the real question than by submitting the McLemore resolution. By laying this resolution on the table the House would have said, as the Senate did in a negative way, that it did not believe that a citizen's death, resulting as therein recited, would constitute a just and sufficient cause of war.

Mr. Speaker, the President said to the committee, through its chairman, Mr. Floop, that if an armed merchantman carrying one of our citizens should be sunk by a submarine without warning this country would not be plunged into war without the whole matter being submitted to the Congress, and the committee in making its report on this resolution used this language:

We have confidence that if the President reaches a point in any negotiations with foreign Governments at which he has exhausted his power in the premises he will, in the usual way, report all facts to the Congress for its consideration.

I therefore feel sure that our country will not be plunged into war unless there is a real, a substantial necessity for such action-a necessity that appeals to the honor, the dignity, and the prestige of our country-and that war will not be brought about, if it should finally come, which God forbid, on account of the rashness of some pusillanimous and pitiful madcap.

The chairman of the Committee on Foreign Affairs also re-

ported to the committee that the President said he desired action by the committee, but did not desire to be understood as requesting any member of the committee to take any particular

course of action.

Mr. Speaker, I am willing to trust Woodrow Wilson with the conduct of our foreign affairs. His patience, his restraint, his great abilities, and his passions for peace, as disclosed by his past conduct, convince me that he will not be precipitated into the maelstrom of the European conflict until all honorable means for peaceful settlement of any difficulties that may arise have been exhausted. For this reason I did not introduce a resolution on this subject. For this reason, as a member of the Foreign Affairs Committee of the House, when it was reported to me that the President did not want the matter acted upon, I joined with the other members of that committee and held the resolution in the committee. I think now that this agitation, this discussion, will not be productive of good.

Under the usages and precedents of our country, the President is the proper party to conduct diplomatic negotiations, and I doubt if any action taken by the Congress will add strength to his arm. I fear it may hamper him in his efforts for peaceful settlement of a very delicate controversy. I wish it were not here, for I can see no good that will flow from our action, no

matter what it may be.

But since the matter is here, Mr. Speaker, I must perform my duty as the Representative of nearly 250,000 American citizens as God gives me the light to see the right. I know that politicians who have always opposed me will accuse me of faltering in support of the President at a very critical time. I know that the changes will be rung on the patriotism of a splendid people who, when the critical hour arrives, will stand for their country against the world without counting the cost. But those who attempt, by appeals to patriotism, to becloud the issue here involved will be confounded. They are trifling with the lives, the happiness, and the homes of a hundred million freemen who are ready and willing to die for the honor and the glory of this Republic, but who are unwilling to send thousands of mothers and wives and children on life's weary way with the sad and bitter message that son and husband and father will come home no more, that a few reckless and feolish people may enjoy a "thrill."

Mr. Speaker, the people of the United States are not yet quite rendy to issue an insurance policy on every cargo of ammunition that sails from our ports aboard armed merchantmen, forsooth, because some hired madman, a citizen of this country, may be a passenger. When we flash the news to the world that the United States proposes to take a hand in this war if an armed ship carrying one of its citizens is sunk, there is little doubt that such a ship will be sunk and an opportunity afforded us to engage in the contest. The belligerents on both sides would like an ally that could furnish the ammunition and food and pay the bills. This is a splendid time for patriotism—a patriotism that places the interests of our country above the interests of any or all of the countries of the Old

World.

The fact that the premium on an insurance policy for the safety of armed merchantmen of any of the foreign countries now at war would be paid in the blood of our young men should sober us and not permit action to be taken here to-day that is likely to involve us in the inferno of slaughter now being enacted on the snow-crowned battle fields of distressed Europe.

In my anxiety to see our country pursue a course of honorable neutrality that will permit us in the future, as in the past, to walk upright amid the conflagration that is consuming the bravest and best manhood of all Europe, I can not close my eyes to the fact—for fact it is—should war come there will be many empty seats around the firesides of the homes out younder in Oklahoma. There will be many sad firewells as our young men, in the morning of life, with high hopes and brave Learts, march awa, to the music of war to return no more until hey are called from the silent city of the dead.

Mr. Speaker, I am thinking of the mothers and the wives who will be required to pay the awful price in the loneliness that will come from silent lips and vacant chairs. And yet, Mr. Speaker, there are those of our fellow citizens who would be willing for others to pay this awful price from emotions of sympathy or friendship for one side or the other in the contest. There are others who would be willing to loo! with complacency on the sacrifice that the nation might win whose bonds they hold. None of the warring nations are free from the just charge of violating the rights of neutrals. Germany has conceded that it was wrong to sink the unarmed Lusitania. England L. quite as much an outlaw against international law and the rights of neutrals when she arbitrarily prohibits the shipment of noncontraband articles to her enemies without establishing an effective blockade. She was quite as wrong when she confiscated the cotton during its voyage to Germany and paid our farmers 6 cents a pound for an article that had been sold for 20 cents.

War is not a Sunday-school affair. Battles are not opened by the singing of hymns. Nations engaged in deadly conflict for their very existence of necessity can not be overpunctilious of the rights of idle curiosity seekers who wander into the zone where shot and shell furnish the only music to the dying ear. An enraged man, standing on the streets fighting a duel to the death, would hardly be expected to cease shooting if his enemy should take refuge and continue the contest from behind some neutral. Our regard for the neutral who would permit himself to be used as a shield under such circumstances would not be very high.

There are no more truthful thoughts than those contained in Shelley's Queen Mab.

War is the statesman's game, the priest's delight, The lawyer's jest, the hired assassin's trade; And, to those royal murderers whose mean thrones Are bought by crime and treachery and gore. The bread they eat, the staff on which they lean.

* The pestilence that stalks
In gloomy triumph through some eastern land
Is less destroying. They cajole with gold.
And promises of fame, the thoughtless youth
Already crushed with servitude; he knows
His wretchedness too late, and chertshes
Repentance for his ruin, when his doom
Is sealed in gold and blood!

Mr. Speaker, the President having asked me for my views on this question, I have tried to give them to him as I feel them. I am sure when he asked me he wanted to know my honest views, and that he did not want me to first find out what some one else thought and express that thought rather than my own.

Mr. Speaker, the President, in closing his letter to Senator STONE, used the words:

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office and as your sincere and devoted friend. If we should unhappily differ, we shall differ as friends, but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation.

I have attempted in these remarks to live up to the high ideals so beautifully expressed by the President without regard to what the consequences may be to my own future.

Bonds for National Defense.

EXTENSION OF REMARKS

HON. JOHN M. MORIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 29, 1916.

Mr. MORIN. Mr. Speaker, for an enlargement of the Navy and increase of the Army, for the protection of the coasts, property, and people of the United States from invasion or the aggression of foreign nations, I have introduced a bill which provides for the issuing of \$1,000,000.000 in bonds. As this increase in the military and naval establishments will give protection and security to future generations as well as to the present, I believe this additional expense should not be carried alone by our citizens through the raising of funds for this purpose by taxation, but the burden should be shared by the citizens of future years.

zens of future years.

The bond issue of \$1,000,000,000, under the plan here presented, is to be payable in not less than 10 years nor more than

30 years.

This money can be used for the building of a Navy and the increase and equipment of the Army, and operations of every kind which will protect the people and the property of the United States.

It is my opinion that a bond issue is the sane and sensible method of providing for the safety of our country and the means of being prepared, which will not bear hardly upon the industry, commerce, and manufactures of our country, as does the present method of taxing everything under and over the earth which will yield more or less revenue to be used for the payment of the expenses of our Government and will relieve the people from the inconvenient and objectionable features of placing stamps on all kinds of instruments, papers, checks, and documents and release awakening business and the industrious life of the Nation from this unsatisfactory stamp exaction.

My plan will distribute the expenses of preparedness to preserve peace for at least 25 or 30 years and not burden the people for the immediate consequences of a policy which is intended and will protect the future of our country, because at present there is no apparent reason to believe that we will be involved in a foreign war, and, therefore, should not be required to provide for the protection of future generations' safety, but as these war preparations are intended to benefit our people in the future it is only fair and just that those who come after us should pay their reasonable share for the protection which we have provided for them.

It appears to me plain that the preparedness which we are providing for is not for our immediate protection and safety, but is for the protection and safety of our future in the United States. It follows that those who are protected should pay their share for such protection, and, therefore, this bond issue i rovides that they shall contribute for their own safety. It may be argued, and has been, that there is no reasonable belief that the United States should be precipitated into a war with any foreign country, but it could have been just as sincerely believed and dogmatically uttered before now of all the civilized and Christian nations of Europe engaged in the terrible and fratricidal war of to-day that it was impossible for such a calamity to arise; yet we have the fact before us that there is now going on in Europe a war unparalleled in its scope, purpose, slaughter, and desolation.

May we not fairly infer that this military frenzy may spread to our beloved country and cause us to be embroiled, with or without cause, with some of the nations of the earth? God forbid that such should be the case! But history, experience, and reason teaches that "in times of peace prepare for war," and we are always in danger of the savage and violent parts of our nature asserting themselves and blasting our hopes and expectations of that glorious time when-

Drums shall beat no longer,
And the battle flags be furled
In the parliament of man,
The federation of the world.

The McLemore Resolution.

EXTENSION OF REMARKS

HON, FREDERICK R. LEHLBACH,

OF NEW JERSEY.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. LEHLBACH. Mr. Speaker, in considering the question underlying any resolution by Congress concerning armed belligerent merchantmen there should be borne in mind certain fixed principles of international law, and also certain undisputed facts which constitute a situation to which these principles of law are applicable. It is unquestioned that an unarmed merchantman of a belligerent nation may not be destroyed by an enemy warship until reasonable provision has been made for the safety of its passengers and crew, provided, however, that such merchantman neither offers resistance nor attempts to escape. This same principle of law applies also to belligerent merchantmen who are armed for defense only. It has been suggested that the reasons for applying this principle to such merchantmen were as follows: The prevalence of piracy at the time of the development of this principle rendered it inexpedient for any ship to sail the seas without some means with which to protect herself against the sea robbers, and such armament for that purpose was incapable of inflicting serious damage to a war vessel. Be that as it may, the principle is recognized as valid existing law.

The war between the central powers and the allies has brought into naval warfare a new weapon-the submarine. The legitimacy of the use of the weapon is manifestly admitted by all the powers, including this country, because all the powers, including this country, have heretofore built and equipped such boats. Therefore the submarine, being a recognized war vessel, differs in no respect from any other type of war vessel, such as the dreadnaught, cruiser, or destroyer, with regard to the rules it must observe and the principles of law applicable to its use. What any war vessel may legally do, a submarine may do. Whatever is prohibited to any war vessel is likewise prohibited to a submarine. It may well be that the development of this naval arm may in time alter established rules of warfare and other international principles regarding the rights of noncombatants, whether of a belligerent or neutral nation. Such is not the case at present. As has repeatedly been said, while the game is in progress the rules may not be changed. Therefore the principles of law to which I referred at the beginning are applicable to the submarine.

Let us now examine the admitted facts which make up the situation to which this law is to be applied. The submarine as it is at present constructed is extremely vulnerable. Such armament which in the past has been classified as armament for defense only, with reference to then known war vessels, now with reference to the submarine may constitute offensive armament.

A belligeren' merchantman thus armed, coupled with the purpose of destroying submarines when occasion arises, does not, in my opinion, come within the principle of international law to which I referred. To the submarine such a vessel stands to all intents and purposes in the position of a formidable and dangerous combative opponent, and the submarine consequently has the same rights with reference to it as it has with reference to any other armed enemy ship. Here the acknowledged principles of law and the ascertained facts end in our present situation. That any belligerent merchantmen, armed ostensibly for defense, have instructions or the intention of attacking submarines has not as yet been established, although asserted. But the fact whether such instructions or such an intention exists or not goes to the very crux of the controversy.

Now, what is the duty of Congress in the premises? Manifestly to leave the ascertainment of the facts and the insistence upon the application of the proper legal principles thereto, in so far as they affect the rights of Americans, to the administrative branch of the Government to which the Constitution intrusts it. It has been said that the passage or defeat of any resolution suggesting the inexpediency of Americans sailing upon armed belligerent merchantmen would mean either that Congress did or did not support the President in his insistence upon the rights of American citizens; and, further, that its passage would embarrass the President and injuriously affect the progress of the negotiations he is now conducting. not so. A resolution so drawn does not expressly or impliedly surrender a single right we have under the established principles of international law, nor does it serve notice upon the President or any foreign Government that Congress does not expect him to insist upon every American right. Congress does demand and the people do demand that the President preserve the dignity and the honor of the country by insisting that our rights everywhere be respected, whether on land or sea. In Mexico or in Europe, the people insist not only that their lives be safe but that their mail shall be inviolate and that their commerce with other neutrals be free. No American wants any American right surrendered. Every American wants American rights maintained, from whatever quarter they are invaded.

But such a resolution gives some sound advice to those people who are so unspeakably wicked or so abysmally foolish as wantonly to jeopardize the peace and welfare of their hundred million of fellow citizens by the exercise of a technical right. Abstention from the exercise of a right is not at all inconsistent with the assertion of the existence of the right. By such conduct recognition of the right may be won by an appeal to reason and law. Another course may lead to indescribable

catastrophe. Any American who wants in the present situation to exercise this disputed right of sailing on an armed belligerent vessel has not in his heart, first of all, the best interests of his country. Hyphenated Americanism is not predicated upon origin, but upon state of mind. He who gives his first consideration to the welfare and prosperity and happiness of the American people, no matter on which side of the European conflict his sympathies may be, is a true American, although he may have received his naturalization papers yesterday. He who would subvert the welfare, prosperity, and happiness of the American Nation to the success of either of the belligerents is hyphenated, though

his lineage dates back to the earliest settlers.

MONTCLAIR, N. J., March 4, 1916.

Montclair, N. J., March 4, 1916.

Hon. Frederick R. Lehlbach,
Washington, D. C.

Dear Sir. In connection with the report in to-day's Newark Evening News that you are in favor of obeying the German Emperor's suggestion that Americans be warned not to travel on ships which carry defensive armament, I would like to ask a question or two:

In view of the acknowledged fact that the present prosperous condition of the country is due wholly to the large exportation of its products, is a friend of mine who is now a representative of the International Harvester Co., at Paris, and who has crossed the Atlantic twice since the war began "unspeakably wicked and abysmally foolish" because he and his company are trying to hold their export business together, thereby adding to the prosperity of this country? He is a man of splendid character and certainly no fool, in spite of your sweeping assertion, and I feel is entitled to protection by his and our Government. Joy riding across the Atlantic has lost its popularity, so those who go are really serving in the cause of their country's welfare. There are very few of them now, however, for a few days ago a large liner left New York with only three passengers.

Is it strange that American manufacturers are slow to enter foreign markets when hyphenated Congressmen seriously consider warning them not to send representatives outside the 3-mile limit except at their own risk? The Germans have taken the lives of many Americans who have sailed on unarmed liners and none where the boat was armed, and as our Government has been impotent to exact reparation, it would seem that the only way was for each boat to try to protect itself.

The attitude of some of our legislators on this matter is rather effectively shown by a paraphrase of an old familiar rhyme—

Congress, may I get export trade?

Oh, yes, my darling daughter;

But your clothes you'll lose in a German raid,

So don't go near the water.

Yours, truly,

GROVER B. SMITH.

House of Representatives, Committee on Alcoholic Liquor Traffic, Washington, D. C., March 6, 1916.

Washington, D. C., March 6, 1916.

Washington, D. C., March 6, 1916.

Dear Mr. Smith: No authority on international law nor the Government of any civilized power has ever contended or does now contend that an armed vessel capable of destroying any kind of a warship, including a submarine whose master has explicit instructions from his Government to attack a submarine on sight, comes under the rule laid down for the protection of unarmed vessels or vessels armed for defense only. In order to take a merchantum out of the protection of the rule two facts must exist: (1) The presence of sufficient armament for the purpose, and (2) the instructions and intention of attacking, not resisting, a submarine at sight. In the present controversy the first fact is established, the second is in dispute. If the President, with the assist-

ance of the Department of State, after examining the evidence should come to the conclusion that such vessels are armed for offense, then they are not under the protection of this principle of international law. If he comes to the conclusion that they are armed for offense, then they are not under the protection of this principle of international law. If he comes to the conclusion that they are armed for defense only, then they do come within the rule, and Americans sailing thereon are entitled to protection. The determination of this fact was the subject matter of the pending negotiations between the President and the representatives of foreign Governments, and under the Constitution his jurisdiction was exclusive and Congress had no right to interfere in any way. The President very properly resented the suggestion that Congress might interfere with him in his exercise of this prerogative. Then suddenly he unreasonably, illogically, and petulantly reversed his correct attitude and is insisting that Congress take immediate action on this subject over which it has no jurisdiction.

If the facts as found by the President determine that an American has the right to sail on the class of vessels mow in dispute, of course he is entitled to full protection in the exercise of that right by this does so it his own is leaded in the protection of the class of the right by this involved in exercising the prudence of sailing on vessels other than of the class whose status is as yet undetermined, particularly when any part of the world can be reached upon other ships. I did not say, nor have I ever said, that I would vote for any way to interfere with the functions of the President in this matter or to embarrass him in their exercise. I did not say, nor have I ever said, that I would vote for anything that did not in express terms make clear that Congress and the people expect the President firmly to insist upon very American right, and that Congress will back him up in his course. If the President would only let Congress mi

NOTE .- Mr. LEHLBACH voted to table the McLemore resolution.

Eight-Hour Day for Government Clerks.

EXTENSION OF REMARKS

HON. WILLIAM P. BORLAND, OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BORLAND. Mr. Speaker, under the leave given me, I desire to give some expressions of opinion outside of Washington on the subject of abolishing the discrimination which now exists in favor of certain Government clerks in Washington.

The first editorial is from the largest Democratic paper in Missouri, the St. Louis Republic, of the issue of March 4, 1916:

WHAT DOES BORLAND MEAN?

The Washington papers are criticizing Congressman "WILL" Bor-Land, of Missouri—and well they may. For he has succeeded in inserting into an appropriation bill the requirement that the Government clerks, who now work seven hours and a half, be required to work a full eight hours.

We want to assure the esteemed Washington Post, which leads the attack, that we share its scandalized surprise. The Post says that the saving of \$4,000,000 a year would be "theoretical" only. This means that the clerks would do no work in the additional half hour. From all we know of Government business we regard this as highly probable. Where did Mr. Borland glean the superstition that the Government expects its employees to give value received?

The Post quotes with approval the statement of a former clerk that the quality of Government clerks has deteriorated; that formerly they went to Washington to study law or other professions, and that now they don't. Just when this lamentable change came about we are not advised. No man's mind goes back to the time when they went to Washington to work. The traditions are squarely against Borland. Just what onght to be done to a Congressman with the temerity to advocate the doing of business by the Government on business principles? The spirit of Washington—no, no! we mean the city, not the

Father of his Country—ought to rebuke him. All honor to the Post, which practically counsels the clerks to soldier on their jobs, when the day is lengthened. There you get the real genius and flavor of departmenta! Washington, after 50 years of Republican rule.

For ourselves, we favor presenting each Government clerk with a set of Blackstone, a chafing dish, or a bag of golf sticks, according to sex and inclination, the reduction of hours, and the increase of pay. And we are glad to do our humble best to give currency to the Post's profest against "the mere adding of a weight to an overladen beast of burden."

Work elght hours? Work? And for the Government? Whither are we drifting?

The next is an editorial from the New York Herald (independent) of February 28, 1916:

PITY THE POOR GOVERNMENT CLERK.

Washington newspapers, doubtless reflecting the sentiments of many of their readers, are up in arms in concerted protest against a proposal of Representative Borland that clerks protected in their positions by the civil-service law shall give to the Government eight hours of service each day instead of the present maximum of seven hours a day.

It will be difficult for the rest of the country to join in the Washington resentment over Mr. Borland's proposal. Government service looks very much like a "private snap" to a vast number of Americans uncomplainingly toiling away at smaller pay for similar service and to whom a 30 days' annual vacation and a 30 days' annual sick leave, both at full pay, represent luxury not only unattainable but existing only in forgotten dreams. It is not unlikely that the thousands of workers in all parts of the country who are striving for the establishment of an eight-hour working day instead of one of longer hours will be somewhat shocked at the discovery that they have been contributing to the support of a favored class, to which eight hours of daily work seems an uncalled-for hardship.

Mr. Borland has incorporated his proposal in an amendment to the legislative appropriation bill now pending before the House. The fact that his amendment would save money to the Government seems a sufficient assurance that it will not become law.

The next is from the Kansas City Star (Independent Wilson

The next is from the Kansas City Star (Independent Wilson paper) of March 6, 1916:

THE CRISIS AT WASHINGTON.

The war scare, the presidential campaign, and the spring fever can go and hold an indignation meeting over their reception in Washington. They called at the National Capital expecting to get a hand. These innocents didn't know how ill timed their visit was to raise a stir; they didn't know that Washington had a sensation of its own that made their little show look like a one-ring affair on a vacant lot.

Washington has been assailed in its tenderest spot and is up to defend itself. Representative W. P. Borland, of Kansas City, is the man responsible for the call to arms. He has proposed that the Government clerks in the Capital be required to work eight hours a day like Government clerks elsewhere. The Government clerk is Washington's Infant industry, and Washington demands Government protection for him. There are about 42,000 of him, and he is the Washington storekeeper's very present help in time of trouble—that is, in the summer time, when Congress buttons up its pockets and goes home. But for the Government clerk Washington would have to shut up shop between Congresses. He is the butcher's friend, the grocer's rich relation, and the haberdasher's rock in the desert.

Mr. Borland's attempt to snatch away Washington's meal ticket naturally is resented. If the Government clerk has to work eight hours a day instead of seven—if his 30-day vacation and 30-day sick leave is abolished or cut down—it requires no great mathematical facility to figure out that the Government can get along with fewer of him. Washington, being good at figures, got at that result right away. It reached it while anybody else would have still been deciding whether to use long or short division. And having reached it, Washington rose as one man—one groceryman—and demanded that this Congressman from Kansas City, that has railroads and wheat fields and pay rolls of all kinds, to work eight hours a day. It can afford the luxury of work. But Washington can't. It has to watch itself closely to keep from overworking. The minute it begins to overw

The next is from the Kansas City Journal (regular Republican) of March 6, 1916:

EIGHT-HOUR-DAY BILL.

EIGHT-HOUR-DAY BILL.

The "revolt" of the Government clerks in Washington against Mr. Borland's eight-hour-day bill was generally regarded at first as more amusing than otherwise. Most people who paid any attention whatever to what appeared to be more or less of a comic-opera "rebellion" laughed at the idea of Government clerks in the Capital seriously objecting to working as many hours each day as their far harder-working colleagues throughout the country put in. Having had his checkle, the average man probably turned to more important matters.

But it now develops that so august an individual as President Samuel Gompers, of the American Federation of Labor, which has been fighting for an eight-hour day year after year, has arrayed the full power of his organization against the measure introduced by the Kansas City Congressman. Either this body or some other potent influence has arrayed a large number of civic organizations in the city of Washington against the bill. Many politicians on both sides of the political fence have east their strength on the side of the toiling seven-hour clerks of Washington and declared that they should not work as long as the hundreds of thousands of clerks throughout the country. The reason of this opposition is quite evident, and it is not difficult to see what is going to become of the Borland bill.

Mr. Gomper's argument against the seven-hour workday is not that eight hours is an ideal daily stint for employees, but only a maximum, which should be reduced as fast as voting power can west concessions from employers. If there was any chance whatever to get a universal seven-hour day instead of an eight-hour day, the opportunity would of course be selzed. Mr. Gomper's contends that a very "mischlevous precedent" would be established if the seven-hour sinceure enjoyed by the Washington clerks should be lengthened to the standard eight-hour day in Government offices throughout the country, and private employers would jump at the "precedent" to make their men work longer hours.

So far as the 42,000 clerks in the departments at Washington are concerned, they are negligible in comparison with the immense numbers of men and women in Government offices from one end of the country to the other who are compelled to work eight hours a day. There appears to be no good reason why they should ever have secured the concession, but having secured it, it becomes a "precedent," to modify which becomes in some interested quarters another "precedent," of iniquitous tendencies.

After all, it is not quite certain that all the humorous features of the clerical "revolt" have been lost in the larger rebellion of the politicians. No matter on which side of the fence they would take their stand if left to their own sense of fairness, they have their own particular "fences" to keep in repair, and it therefore does not require a telescope to see Mr. Bostand's finish in this particular effort to equalize a discrepancy which ought not to exist.

The next is a letter from a Republican physician of Kansas

KANSAS CITY, Mo., March 5, 1916.

Hon. W. P. BORLAND, Washington, D. C.

Washington, D. C.

My Dear Sir: I see you stirred up a hornet's nest amongst Government employees in Washington the other day, and they are threatening to "get your goat," for insisting that they do eight hours' work a day the same as other Government employees do outside of Washington. Just tell them there were some Democratic politicians tried that game at the last election and that some thousands of Independent and Republican voters came to your rescue then, and they stand ready to do so again, only more so, next time.

Every honest man here at home applauds your honest and efficient work in Congress, and we want you to know that we are with you body and soul. Keep up the good work. Would to God we had more like you in Congress to help rid the country of those petty gramwhose only thought is to draw their pay without giving value in return. In my humble opinion you have been on the right side on every vital question, and by so doing, I opine you will go further eventually. Wery truly, yours,

E. T. Phillips.

Address of Hon. Martin H. Glyan at the Democratic State Convention in New York.

EXTENSION OF REMARKS OF

HON. CHARLES B. SMITH, OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. SMITH of New York. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by the Hon. Martin H. Glynn at the Democratic State convention in New York. I will state that the speech of Senator Root has been printed in the RECORD.

The address is as follows:

ADDRESS OF HON. MARTIN H. GLYNN.

Fellow Democrats and gentlemen of the conference, we assemble here under conditions which it has not been given to any of our predecessors to share. Outside the American Continent the whole world is plunged into war, with all its horrors, famine, suffering, grief, desolation spread over civilized Europe. Family ties, which spell joy and happiness in life and render the struggle for existence bearable, have been ruthlessly destroyed within the bounds of the warring nations, and yet we are able, though with sadness, to look upon this horrible spectacle from the confines of a nation absolutely at peace with the world-a nation that is more prosperous than at any time in its history, and a nation whose people enjoy more of liberty and of opportunity and of happiness than has ever been known in the history of mankind. We occupy this wonderful position of peace and prosperity not because of any accident but because of the wise and careful and successful policy of those in charge of our National Government. At any time during the progress of the European war the slightest error in judgment or mistake in action might have plunged us into the same conflict which is now impoverishing the nations of Europe. Our people fully sensing what this condition means to them are standing loyally behind President Wilson in his efforts to maintain peace, and are united in supporting the measures which he proposes to defend this country from any aggression in the future and so perpetuate for all time the peace which the European war has shown means so much to us as a nation and as individuals.

SEA OF NEUTRALITY.

On the sea of neutrality President Wilson has had to sail a hard and dangerous course as captain of our ship of state, but he has sailed it bravely and well. No other pilot of the Nation since Washington, Jefferson, and Lincoln has had to sail a sea so beset with storms and floating mines. The old charts have been torn up, the lighthouses extinguished by the belligerent that was not criticized by some one, because phraseology is

nations throwing international law to the winds, but Pilot Wilson insists upon sailing the old course according to the old maps, Great Britain, Germany, and France may interpret international law each day to suit their whims and needs, but America persists in interpreting it with justice, with reason, and with national dignity. If we were to fight foreign nations for a violation of international law, as Mr. Root insinuates, we would fight not only Germany, as Mr. Root seems to imagine, but also every other nation participating in Europe's carnival of woe. Mr. Root's policy would make the United States a whirling dervish of war and send us into a perpetual dance of death. Mr. Root would make the United States the policeman of the world, but the teachings of Washington and Jefferson and Franklin about the avoidance of entangling alliances with foreign nations forbid the United States from attempting any such fantastic rôle. Rome tried to be policeman of the world and went down; Portugal tried to be policeman of the world and went down; Spain tried and went down; Napoleon tried and went down, and the United States proposes to profit by the experience of the ages and not attempt a policy that would surely turn into a Frankenstein to destroy us.

WHERE WILL IT END?

If we start this policy, where are we to stop? There is no stopping. It is a vicious circle leading to destruction. It would mean a reversal of our traditional policy of government. It would mean the adoption of imperialistic doctrines, which we have denounced for over a century. It would make all other na-tions the wards of the United States and the United States the keeper of the world. We would be so busy settling other people's quarrels that we would have no time to attend to our own business. It would make the United States either the bully of creation or else a "globe-trotting, earth-perambulating missionary of good government all over the world." It is founded on no reasonable principle. What becomes of the Monroe doctrine under such a policy? How long do you suppose we would be allowed to meddle in European affairs while denying Europe the right to meddle in American affairs? The policy is a dream; it never could be a possibility. It was not even advanced in good faith; it is simply an appeal to passion and pride, to sym-

pathy and prejudice, to secure partisan advantage.

Under the stress of war international law has been battered out of recognition. As the devil quotes the Bible to suit his own purpose, so the warring nations quote documentary international law to suit their own course, without regard to the existence of neutrals, the rights of neutrals, or the trade of neutrals. Mr. Root says that Germany does this. He fails to say that the other warring nations also do it. Germany brands the seizure of provision ships as a violation of international law, adopts a policy of reprisal, and promises reparation under a treaty that has nothing to do with the case. England ruled the question of maritime law in war time out of The Hague conference in 1898 and failed to adopt the London declaration of 1911. But when war breaks out England says she will stand by the declaration of London. No sooner said, though, than she medifies the list of contraband, and no sooner modifies it than she alters it again, and then rejects the whole theory of contraband by proposing to seize all vessels bound for the enemies' ports or carrying cargoes ultimately destined for the enemies' territory. Between shifting winds from every side, between varying currents all about, America is thus caught in the maelstrom of war. The problem is the same which Washington had, and Jefferson had, and Adams had, and Lincoln had, and Woodrow Wilson is treating it as Washington treated it, as Jefferson treated it, as Adams treated it, and as Lincoln treated it.

"HONOR BY PEACE IF WE CAN, BY WAR IF WE MUST."

"To maintain our national honor by peace if we can, but by war if we must" is the motto of Woodrow Wilson. But before submitting to the chance and misery of war, true statesman that he is, he proposed to put the reason and justice of negotiation to the test. Just as Horace Greeley criticized the form of Lincoln's negotiations, just as Alexander Hamilton and Rufus King criticized the form of the Genet negotiations when Washington was President, just as the members of John Adams's own cabinet criticized his negotiations in averting war with France, just as John Randolph criticized the form of Jefferson's negotiations with France, and just as fanatics condemned Lincoln for overruling his Secretary of the Navy and even the House of Representatives in the Trent affair with England, just so for personal and political purposes men of Elihu Root's stamp criticize Mr. Wilson's policies.

IN DIPLOMACY FORM IS SECONDARY, RESULT PRIMARY.

There never was penned an important diplomatic document

largely a matter of education, taste, and temperament. In diplomacy form is secondary, result is primary. Form is a matter of opinion; result is fact. And what is the result of the form of Mr. Wilson's diplomatic negotiations with the warring nations of Europe? Why, simply this: While Europe is drenched in the blood of a sinister war, we are enjoying the blessings of an honorable peace. The men in society's salons, lettered dilettantes in libraries, and swaggering devotees of fashion who would fight our battles on the carpet of parlor trenches, in the restaurants of clubs, or amid the dangers of afternoon teas, may be primarily interested in the form of our diplomatic negotiations. But the men who must fight our battles where the cannon roars and the bullets sing and death stalks-also their wives, their sons, their daughters, and their mothers—these are primarily interested in the result of our negotiations and not in the form. And the men who would do the fighting stand where Woodrow Wilson stands. Their motto is, "We will maintain our national honor by peace if we can, but by war if we must." For this reason Woodrow Wilson, with malice toward no nation, with justice for this Nation, and with sympathy for all nations, champions and will continue to champion the policy that the United States stands upon its unas-sailable right to be a neutral nation and to act as a neutral nation though-

The heathen rage and the people imagine a vain thing. The of the earth set themselves, and the rulers take council together. FOLLOWING GEN. GRANT.

Mr. Root says this policy has satisfied no one. means that it has satisfied no one who is a partisan in this conflict. The very fact that it may not have satisfied partisans is a proof of its neutrality, a proof of its success, for in a vital war like this neither side is satisfied with justice unless it can tamper with the scales. But Mr. Root forgets that in this strife most Americans are neutral and as neutrals approve of Woodrow Wilson following the policy that the founders and the saviors of this country followed in somewhat similar circum-The policy of Abraham Lincoln in the sixties demanded neutrality, and this is the policy of Woodrow Wilson to-day. Washington, Adams, Jefferson, and Lincoln insisted that the United States had a sovereign national right to stay out of war just as much as to go into war, and so does Woodrow Wilson. Gen. Grant said there never was a war that could not have been settled better some other way, and the people of this country are in favor of taking Grant's advice and trying the other way before trying war.

DOMESTIC TO THE FOREIGN AFFAIRS,

So palpably successful has been the domestic policy of the Wilson administration that our opponents are able to find few loopholes for assault. Our foreign policy the prominent leaders of the opposition have repeatedly indorsed during the past few months, but now on the eve of a presidential election they suddenly turn front and treacherously attack. Their challenge we gladly accept, confident that a fair-minded American public will uphold the honorable, patriotic, and highly American policy which the Democratic Party has pursued, beset by difficulties, hampered by conditions for which the Republican Party is responsible, and surrounded by pitfalls on every side wherein a single misstep would have hurled this country to disaster and to woe. Others may make expediency the star of their course in foreign affairs, but we follow the star of justice. Others for vain glory or for selfish purpose may cry up a policy of "blood and iron," but we contend that in the long run true humanity is true statesmanship and true statesmanship true humanity. NATIONAL HONOR.

Mr. Root talks of "national honor" as if by some divine commission he had been appointed the keeper and interpreter of the honor of the Nation. Now, real honor and real dishonor can be felt and are felt even by the lowliest toiler in the land as acutely and as accurately as by even Mr. Root. Instinct serves better here than legal speculation or metaphysical distinction. The man in the street, the toiler in the fields, the artisan in the shops, the man who shoulders his musket and marches away at his country's call needs no lawyer, no statesman, no interpreter to tell him when the honor of his Nation is outraged or the glory of his flag is sullied. It is an elemental instinct which knows without knowing why. It is an elemental instinct which enables even the unschooled to know right from wrong, justice from injustice, principle from prejudice, passion When the honor of our country is outraged and the glory of our flag sullied the people will know it without Mr. Root or anyone else telling them. If such an insult ever comes to this country, the great mass of the people who will have to do the fighting will not have to be called to war. They will call themselves to war. They will rally around the Stars

and Stripes as their fathers rallied at Lexington and Concord, at Saratoga, and at Yorktown and a hundred other battle fields, and they will rally with the blessing and the prayers of those left at home sorrowing in anxiety, but exulting in self-sacrifice to preserve our honor and to glorify our flag.

WAR DRUMS AND WAR DRUMMERS.

For a man who has signed more arbitration treaties than any other man in the country save one, Mr. Root's warlike speech is a mysterious performance. He is about the last man in the land from whom the country had a right to expect it.

For years Mr. Root has been the star performer at peace conferences, and yet he condemns President Wilson for maintain-Mr. Root may forget, but Woodrow Wilson remembers, that the leader of a nation who plunges his people into an unnecessary war vainly washes his hands of innocent blood, like Pontius Pilate, while the earth quakes and the heavens are darkened and thousands give up the ghost.

R. ROOT BECOMES A DRUM AND TRUMPET STATESMAN—TRANSFORMS HIMSELF FROM A LOVING DOVE OF PEACE TO A SWOOPING HAWK OF WAR—ALSO MR. LODGE.

For years Mr. Root has been acclaimed an apostle of peace, and in 1912 was awarded the Nobel prize for the promotion of peace, but now he sallies forth as a drum and trumpet states-

From a cooing dove of peace Mr. Root suddenly transforms

himself into a swooping hawk of war.

Years ago enthusiasts in Bohemia took the skin of John Ziska, the patriot, and stretched it as a drumhead to rouse their followers to war. So to-day Ellhu Root would stretch the skins of the victims of the *Lusitania*, the skins of the victims of the Belgian invasion, into a drumhead to rouse the kindly sentiment of sympathy into the frenzied craze of war.

Mr. Root may beat his drum and blare his trumpet, but President Wilson will go right on winning the plaudits of the American people by appealing to reason, humanity, and com-mon sense and by keeping the United States the uncompromising champion of the neutral world and the undaunted maintainer of the principles which have guided this Nation since 1776.

And what a glorious rôle is this; what a badge of honor the neutral nations wear to-day! Upon the neutral nations depend the salvation of justice, the preservation of moral balances, and the conservation of the natural energies which will be needed to set this world aright when the present cataclysm is over.

Our opponents say that Mr. Root's speech is not a declaration for war, but hardly have its echoes died upon the air before Senator Lodge, the other great spokesman of the Republican Party, makes a speech at Washington, in which, between the lines, he glorifies the purple testament of bleeding war and minimizes the grandeur of peace. If Senator Lodge is right, Washington and the other leaders of this Nation were like Achilles, who "fed on bears' marrow and lions' hearts." Senator Lodge is not right. James Bryce, one of the greatest living historians, says so. In his American Commonwealth James Bryce says that Washington and his fellows were no sanguinary lords of war. Senator Lodge is not right, and this we can prove by the words of Washington, Thomas Jefferson, and Benjamin Franklin.

Thomas Jefferson says, "I recoil with horror at the ferociousness of men," and then he calls upon nations "to devise a more rational umpire of differences than force." He says, "War is an instrument entirely inefficient toward redressing wrongs, and it multiplies instead of indemnifying losses." Benjamin Frank-"There is one improvement I wish to see in moral philosophy-the discovery of a plan which would induce and oblige nations to settle their disputes without first cutting one oblige lations to settle their disputes without list cutting one another's throats," and then he says that in his opinion "there never was a good war or a bad peace." In 1785 Washington wrote to David Humphrey, "My first wish is to see war, the plague of mankind, banished from the earth." To Lafayette, Washington wrote, "It is really a strange thing that there should not be room enough in the world for men to live without cutting one another's throats," and in his Farewell Address he expressed the hope "that we may never unsheath the sword except in self-defense, so long as justice and our essential rights and national respectability can be preserved without it." upon that declaration the Democratic Party stands to-day. til self-defense and essential rights and national respectability require us to unsheath the sword we are for peace, but when national respectability, essential rights, justice, and self-defense

require it we are for war and war to the hilt.

But, say our opponents, the doctrines of Washington, Jefferson, and Franklin are so old they are dead. Well, if they are dead, how comes it that Mr. Root as Secretary of State handed

these doctrines to our representatives at The Hague as the lamp to guide their feet and light their way?

Both Mr. Root and Senator Longe say they do not plead for war, and yet they plead to passions which cause war, and when you plead for a cause you plead for its effect. Senator Lodge and Mr. Root are both like the craven army drummer who. when captured on the field of battle, begged for release, because he was not a soldier and did not fight, but his captors declared that he should be treated with more severity than an ordinary

soldier because the beating of his drum inflamed his followers to carnage. Unless I am mistaken, the American people to-day look at the present moment upon Senator Longe and Mr. Root as his captors looked upon that caviling drummer.

CHANGE OF MIND.

Mr. Root finds fault with President Wilson for changing his mind. All men, including Mr. Root, change their minds now and If they did not, life would be stagnation instead of

The instructions which Mr. Root as Secretary of State handed to our representatives at The Hague and his words at Carnegie Hall on Belgium show that Mr. Root sometimes changes his mind. The expressions of Mr. Root at Carnegie Hall on Mexico compared with his speeches on our relations with the southern Republics during his South American tour as Secretary of State again show that Mr. Root sometimes changes his mind. Mr. Roosevelt sometimes changes his mind. He once thought Mr. Root the only one of his kind, but when they broke he still thought Mr. Root the only one of his kind, but quite another

But in this Mr. Root and Mr. Roosevelt and President Wilson

keep good company. In 1775 George Washington was opposed to a war for independence; in 1776 he said that a war for independence was the only thing that could save us. Benjamin Franklin thought we should not come to terms of peace with England in the Revolutionary War unless we got Canada, but he changed his mind before the treaty was signed. When Thomas Jefferson bought the Louisiana tract he reversed the position he formerly maintained as a strict constructionist of the Constitution. he became President Thomas Jefferson was opposed to the use of Federal money for internal improvement, but as President he sent a message to Congress advocating the use of public money to improve our rivers and our harbors. For a long while Abraham Lincoln resisted the idea of the emancipation of the slaves. He revoked the order of some of his generals emancipating slaves within the limits of their command, and he struck from the annual report of his Secretary of War a paragraph advocating the adoption of this policy. Yet when the need was pressing and the hour ripe Abraham Lincoln did issue the emancipation proclamation. These examples may have no direct bearing upon the issues of the hour, but they do show the pettiness of criticism running through Mr. Root's speech.

PRESIDENT WILSON FOLLOWS THE PRECEDENTS OF THE MOST ILLUSTRIOUS AND BEST-BELOVED MEN WHO HAVE EVER OCCUPIED THE PRESIDENTIAL CHAIR.

President Wilson has only shaken his finger; when he has to shake his fist the world will find it mailed.

Mr. Root says no man should draw a pistol who dares not shoot, and that a government should not shake its first and its finger afterwards. Like most epigrams containing the wisdom of the world in capsule form, these epigrams are partly wisdom of the world in capacity for the true and partly false. Many a fight with a bully has been averted by shaking first the fist of strength and then pointing the finger of reason; many a necessity for shooting has been averted by pulling a pistol. The experiences of everyday life and the history of diplomacy disclose these truths.

But if Mr. Root means to apply these epigrams to President Wilson he has made an unhappy application of his trick of speech. President Wilson has only shaken his finger thus far; if necessity compels, though, he can shake his fist and the world will find it mailed. Despite Mr. Root's glittering epigrams President Wilson is following and will continue to follow the policy pursued under similar circumstances by the most illustrious and the most beloved men who ever occupied the presi-

dential chair.

The President stands where George Washington stood in 1793, when England in the war with France seized and held hundreds of vessels floating the Stars and Stripes. He prepared for war—he built warships; he erected forts—but he didn't shoot. He settled our differences with England by negotiation, just as Woodrow Wilson is trying to do to-day. And here parenthetically let me remark that, while Secretary of State, Elihu Root

neutrality of this country while he met unmoved the clamor of the people wickedly crying for war is a greater man than Washington crossing the Delaware or taking Cornwallis's sword at Yorktown." Yet Mr. Root condemns President Wilson for the very policy for which he praised George Washington, Verily, Elihu Root agrees with the man who said, "Consistency, is the hobgoblin of little minds." President Wilson stands where John Adams stood in 1799, in our dispute with France. He prepared for war-he created the Navy Department; he built 12 new warships; he brought Washington out of retirement from Mount Vernon to lead the Army-but he didn't shoot. He settled our differences with France by negotiation. just as Woodrow Wilson is trying to do to-day. The President stands where Abraham Lincoln stood during the Civil War in our dispute with England over the Alabama and other privateers which destroyed a hundred million dollars worth of our commerce. Through his Secretary of State he threatened England; he listened to all the talk of the House of Representatives for war and the clamor of the country-but he didn't shoot. He initiated the policy that Grant finished, which settled our differences with England by negotiation, just as Woodrow Wilson is trying to do to-day. The President stands where President Grant stood in our controversy with Spain in 1873, when Spain seized the ship Virginius, flying the American flag, and shot 50 Americans—the captain of the ship, 36 of the crew, and 12 passengers. Grant prepared for war; he authorized the putting of the Navy on a war footing-but he didn't shoot. He settled our difficulties with Spain by negotiations, just as Woodrow Wilson is trying to do to-day. The President stands where James G. Blaine, Secretary of State, steod in the controversy with Chile for shooting the sailors of the U. S. battleship Baltimore; where Grover Cleveland stood in our controversy with England over Venezuela in 1895-they made preparations for war-but they didn't shoot. They settled our difficulties by negotiations, just as Woodrow Wilson is trying to do

Jefferson settled our maritime troubles with France by negotiations, and as a result won the Louisiana tract for a song. We settled our dispute with England about our northwestern boundary line by negotiation, and Daniel Webster pronounced this negotiation a boon to mankind. Though we conducted the presidential campaign of 1844 on the issue of "Fifty-four forty or fight," we didn't fight; we settled the Oregon dispute with England by negotiation, just as Woodrow Wilson is trying to do to-day. And so the record stands that the United States has won more victories by the pen than it ever won by the sword.

LEST WE FORGET THE WORDS THAT MADE US PREE.

Mr. Root may talk in epigrams all he pleases, but it is cowardly for him to hide himself in a cloud of verbal dust. If Mr. Root believes-despite the example of Washington and Jefferson, Lincoln and Grant-that the United States should go to war for every violation of international law, why doesn't he say so like a man? If he desires to make the United States the brandisher of the "big stick" in the face of all the world, he should make his position clear. The United States has not yet drawn a pistol, has not yet shaken its fist. It has expressed disapproval and it has appealed to reason and to law. It has placed itself on record in a way that can not be mistaken, but it has not yet taken the irrevocable step; it has not yet appealed to force.

Would the Republican Party reverse this order? Would the Republican Party shoot first and protest afterwards? Would the Republican Party write its disapproval first in blood and then in ink? Is this the Republican notion of the duty of a Republic which boasts of the brotherhood of man? Mr. Root truly declared that the American people have "embodied their principles of government in fixed rules of right conduct."

If Mr. Root will turn to the Declaration of Independence, he will find a reminder that this is a country which resorts to war

only after every other form of redress has failed.

He will find that before the American Colonies drew the pistol they "warned," "reminded," "appealed," and "conjured" the British Government "to disavow" the usurpation of which they complained. Then as now a race of freemen claimed the right to be patient, and now as then a race of freemen will not falter in a final appeal to arms should their patience be exhausted and all other means of asserting their rights be in vain. As a nation we deprecate the waste, the horror, the unreason of war, because we are masters of our own destiny. We do not desire to seek that destiny, unless we must, over the bodies of our youth and the tears and lamentations of desolated homes. Because each American knows that his country repre-In a speech in Argentina practically repeated the great sentiment of Charles Sumner—"Washington upholding the peaceful his country's flag stands for justice, for opportunity, for reason, sents the highest hopes of all mankind, because he knows that and for liberty, he holds himself every ready to rally to that flag, to lay down his life if need be in defense of the Republic.

No other land must ever mistake this fundamental truth.

No other land should ever mistake our unwillingness to seek war for unreadiness to sacrifice life and all that life holds dear to preserve the glory and the integrity and honor of the United States.

And just as President Wilson observes the truest spirit of America in appealing to reason before he appeals to force, so he now reflects the temper of the Republic in making ready for an appeal to arms should diplomacy become useless and reason without avail.

LUSITANIA.

For a statesman who had long enjoyed a reputation for poise and balance Mr. Root's attitude on the Lusitania issue is amazing and inexplicable. He claims that if the Lusitania notes meant anything they meant that action was forthcoming, and he concludes that the correspondence is now approaching its end without securing even that partial protection which is desirable for the future. He ignores what has been accomplished. He overlooks that assurances for the future have been given and that reparation for the past has been assured. If he had before him the proposals made by Germany a week before his speech, would Mr. Root, as Secretary of State, have dared go before the country and say that they should not be accepted, and that we must enter an armed conflict over a matter of mere words? As Secretary of State Mr. Root would not have dared to do so, and as ex-Secretary of State a proper apprecia-tion of the true equation of things should have prompted him to keep his tongue in consonance with the proprieties. Furthermore, Mr. Root, even as a distinguished citizen suddenly turned political incendiary, would not, in view of the note on the Lusitania which the German ambassador handed Secretary of State Lansing on Monday last, dare to repeat on this plat-form to-night the inflammatory language he lately used in Carnegie Hall.

MR ECOT AND THE DIFFERENCE BETWEEN THE CONSERVATISM OF RE-SPONSIBILITY AND THE ANARCHY OF SPEECH.

Again, the difference between Mr. Root's actions and Mr. Root's words illustrate the difference between the conservatism of responsibility and the anarchy of speech. Since leaving public office Mr. Root seems to have lost the sense of responsibility which officials of government should feel and which should guide their every act. He states that our first Lusitania note was conceived in events which marked them as impotent. One of these events, he states, was the alleged intimation to the Austrian ambassador by Mr. Bryan that the note of February 10, 1915, was intended for American consumption. Mr. Root accepted a sensational story as the truth, which he could easily have disproved by reference to the Department of State. The fact is the Austrian ambassador agreed with Mr. Bryan that no such statement or intimation had been made to him, and he sent a message to his Government to that effect. Mr. Root, moreover, is doing an unprecedented thing for an ex-Senator of the United States, an ex-Secretary of War, and an ex-Secretary of State when he endeavors to make political capital in a speech before a political convention out of not only foreign relations of the United States, which he well understands are in a critical stage, but out of pending diplomatic negotiations in what is probably the most important case that has been before the State Department since Lincoln's day. He states that it should have been foreseen that cases of this nature were likely to arise, and that American lives would be worthless unless power was maintained. He points to Switzerland and Holland as countries which are properly defended in their rights by organizations and other measures, and states that, "Nobody has run over them, because they have made it apparent that the cost would be too great." He does not mention, although he must have read it in the press, that Dutch ships have been sunk by submarines, that Dutch passengers and sailors have lost their lives from such belligerent action, and that Dutch ships are constantly being violated in British waters, and Dutch mail to the United States, including diplomatic pouches, are being removed from them. He does not mention the fact that, though Switzerland is mobilized, she is allowed to continue her manufacture of certain articles only at the sufferance of belligerents on both sides, who portion off exports from this mountain country and imports into it with the minutest care. Brass is furnished by the allies for the manufacture of various articles and Switzerland is held to strict account for every pound. Germany supplies Switzerland with aluminum, steel, zinc, and coal and compels a return in machinery and parts.

It is easy to say that things "should have been foreseen," but foresight is not so common an attribute. Mr. Root, I am informed, approved the American notes on the Lusitania case,

but said nothing at the time about preparation for action in case America's demands were not complied with.

Mr. Root would have had our Government protest in regard to the invasion of Belgium, and if in the case of Belgium, certainly he would have had this Government continue to protest all the numberless violations of international law by all the belligerents, no matter whether the violations were against this country or another. Such a course would have been futile, would have amounted to nothing and made us ridiculous in the eyes of the world. And these protests Mr. Root would have backed by force if he were to be true to his position. Mr. Root's course would surely "lead us into inevitable war"says our present course will. The violation of international law in regard to which Mr. Root would have this Government make its attitude clear and enforce its demands occurred within a few months after the war opened and before it was possible to make sufficient preparation, which he says has been neglected by the present administration. Preparation to back up a policy such as Mr. Root has outlined should have been begun years ago by administrations of which Mr. Root was the moving spirit. All the world has known that for years prior to the beginning of the present war the nations of Europe had been preparing great armaments. During that time Mr. Root was Secretary of War, Secretary of State, and United States Senator. "Ordinary practical sense in the conduct of affairs," using the words of Mr. Root, should have taught him and his associates the necessity of voting large amounts for suitable preparation against the outbreak of such a war. Does it therefore become Mr. Root to criticize the President and the administration for not enforcing its demands when previous administrations with which he was intimately connected failed to use ordinary foresight in laying the foundation for suitable military and naval forces? He appears to forget in his suggestion of an aggressive policy that the countries now at war are the great nations of the earth, fully equipped and armed, conscious of their strength and their position in the family of nations, which will not brook the domineering tactics of another nation. Moreover, in this great war the participants are wrought up to a state of excitement which must not be lost sight of in dealing with international situations which arise. While a breach of diplomatic relations might be regarded in ordinary times as not leading to war, such action at the present time with any of the belligerents would inevitably lead to an armed conflict.

TRUE PRIDE

In this phase of the question Mr. Root undervalues but the world holds in proper place a true pride in all the relations of life.

There is a pride of national duty which is incapable of sacrificing peace and happiness; there is a pride of high responsibility which forbids an appeal to the sword until all other means have failed; there is a pride in the possession of calm understanding and patient foresight which stands firm against the protest of the partisan and the blood lust of the brute; but the man who disdains to plunge millions of his fellow beings into the dismal abyss of war until he has exhausted every honorable means for peace will never be too weak to guard the honor or the liberties of his country when assailed.

The man who bravely avoids an unnecessary war will never be too cowardly to wage a just one.

Mr. Root would make of the President of the United States an incendiary in a world of fire. He would make the Chief Executive a swashbuckler instead of a statesman. He would have the President insist upon the propriety of the duello, while the combatants reel upon the cliffs of national existence. He would have the President forget that while we debate men are dying by thousands across the ocean; that while we are inconvenienced the rest of the world is enduring the agonies of the damned; that while we are sitting quietly by our fireside the rest of the human race is writhing in the torments of the firing line.

Is it Mr. Root's conception of American honor that we should assert that honor by adding to universal misery? Is it his idea that our national duty is to make no allowance for the naked passions and desperate needs of the white-heat conflict that now inflames and distorts the reason and humanity of Europe? Surely it is not the part of American honor to shut our eyes to the situation of those with whom we are dealing. Surely President Wilson has been true to the highest ideals of America in prolonging negotiations until a people impassioned by war should have time and opportunity to pass calmly upon the justice of America's claims.

BELGIUM.

The efforts of politicians like Mr. Root to make political capital out of the course which President Wilson deemed it

wise for this Nation to follow in respect to Belgium during the early stages of the present war deserve, and will receive, unqualified condemnation and rebuke at the hands of the most right-thinking and patriotic Americans. The horror and sufferings and devastation of this little nation have sunk deep into the American heart.

No fair-minded man can question the wisdom and integrity of our Belgium policy. To say that it has sullied our honor or besmirched our conscience, as Mr. Root intimates, is an insult to the intelligence of the Nation. On this question Mr. Root quibbles with the genius that has made him famous. He was Secretary of State when The Hague conference of 1907 was held, and from him the American delegates received the instructions to make to the conference a declaration of America's policy, which covered every act and every convention which the American delegates signed. That declaration later on specifically attached by the Senate to the most important of these conventions and now standing as a part of them was as follows:

Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions of policy * * * of any foreign State, nor shall anything contained in the said convention be construed to imply a relinquishment by the United States of its traditional attitude toward purely American questions.

As Secretary of State Mr. Root himself adopted the same policy in handling the Japanese-Korean situation. When by force and duress, and against the will of the Koreans, Japan placed the Kingdom of Korea under a Japanese protectorate no protest was lodged against this action, notwithstanding the provisions of an outstanding treaty between Korea and the United States wherein, among other things, it was agreed that if other powers should deal unjustly or oppressively with either party to the treaty the other would use its good offices, on being informed of the case, to bring about an amicable arrangement of the difficulty. Mr. Root was requested by duly accredited representatives of Korea to act under the provisions of this treaty, and he refused on the ground that, Japan having forced a pro-tectorate upon the Koreans, the treaty between the United States and Korea could no longer be enforced. Here we have a distinct recognition by Mr. Root of the principle of international law underlying the Belgium case. It matters little what Mr. Root may say, yet now, with the presidential election coming on, Mr. Root unworthily seeks to disparage the President of the United States for doing in respect to Belgium precisely what he himself had done as a responsible Government officer a few years before in a very similar case, and precisely what he him-self would, of course, have done in the case of Belgium if he had been President instead of Mr. Wilson.

It is absurd and preposterous to assert that any of The Hague conventions, or any clause in the convention, nullified this general policy of the United States. The argument that one of The Hague conventions specifically bound us to go to the defense of Belgium is of no weight, because England never ratified it and was not even technically bound by it. The whole world knows that Great Britain entered the war at the earliest possible moment after the Belgium invasion because of another

When Mr. Root made his speech his former instructor and leader was on the Atlantic Ocean. This probably enabled Mr. Root to steal Mr. Roosevelt's clothes while he was in swimming and run away with them. Mr. Roosevelt is now condemning President Wilson's Belgium policy, but only a few months ago he praised it. When would Mr. Roosevelt have the Nation take him seriously; now or some months ago?

MR. ROOSEVELT ONCE SPOKE AND WROTE IN FAVOR OF PRESIDENT WILSON'S ATTITUDE ON BELGIUM.

Four days after the invasion of Belgium the colonel made a speech in New York, in which he said that "we should be thankful beyond measure" because we are Americans and not at war, and urged support for the administration in securing peace and justice. But he said nothing of any duty to Belgium.

He discussed at Hartford, Conn., on August 15, 1914, the Byran peace treaties, but had no whisper for obligations under The Hague treaties. Seven weeks after the Belgian invasion he printed in the Outlook, on September 23, 1914, an elaborate article on the war, with long discussions of its Belgian phases. Here are some of its passages:

A delegation of Belgians has arrived to invoke our assistance. What action our Government can or will take, I know not.

It has been assumed that no action can be taken that will interfere with our neutrality. It is certainly eminently desirable that we should remain entirely neutral and nothing but urgent need would warrant breaking our neutrality and taking sides one way or the other.

Of course, it would be folly to jump into the gulf ourselves to no good purpose, and very probably nothing we could have done would have helped Belgium. We have not the smallest responsibility for what

has befallen her, and I am sure that the sympathy of this country for the suffering of the men, women, and children of Belgium is very

real.

Nevertheless, this sympathy is compatible with full acknowledgment of the unwisdom of uttering a single word of official protest unless we are prepared to make that protest effective, and only the clearest and most urgent national duty would ever justify us in deviating from our rule of neutrality and noninterference.

FORMER PRESIDENT TAFT PRAISES THE BELGIUM POLICY OF PRESIDENT WILSON,

But all the Republicans of the Nation do not condemn President Wilson's Belgium policy. Former President Taft does not, At a speech delivered at Morristown, N. J., Mr. Taft said:

At a speech delivered at Morristown, N. J., Mr. Taft said:

While I sympathize with the Belgians in this war, whose country, without any fault of theirs, has been made its bloody center, I approve and commend to the full the attitude of President Wilson.

We are not sitting as judges of issues between countries in Europe in this great war. We are seeking to maintain strict neutrality, and until our decision is involved with an agreement to abide by our judgment and recommendation for settlement, we need not embroil ourselves by official expressions of criticisms or approval of the acts of the participants in the war. This is not only the wisest course for us to pursue in maintaining an attitude that may give us influence in promoting mediation when mediation is possible, but it will help us to avoid being drawn into the war.

The insintentity of the Permyllican Borten in its Belgians with the promotine of the property of the Permyllican Borten in the Research of the country of the Permyllican Borten in the Research of the promotine of the promo

The insincerity of the Republican Party in its Belgium attitude is shown by the words of Mr. Taft and Mr. Roosevelt, and by its record between 1901 and 1909. During those years Mr. Roosevelt was President and Mr. Root in the Cabinet most of the time. In 1903 occurred the massacre at Kishinev and for many years after 1903 Macedonia ran red with blood; in 1905 the horrors of the Kongo were officially published; in 1905 Korea lost its independence; in 1906 Morocco was parceled out by the powers; in 1906 the Russian Government shot, hanged, and massacred thousands of her people; in 1909, 25,000 Armenians were slaughtered at Adana, and yet no note of protest came from the Republican Party seated in the seats of the mighty at Washington. What reason, then, has the Republican Party to expect people to believe that it would have acted any differently in 1914 than it did from 1901 to 1909?

MEXICO.

A great deal of criticism has been directed against the present administration because of the President's advice to Americans in Mexico to leave that country and return to the United States. As is the case in many matters involving our foreign relations, a great part of this criticism is based upon an incomplete knowledge of the facts and a failure to take into consideration all the phases of the situation. President Wilson's advice to Americans to leave Mexico was not by any means a radical departure from the policy of the previous administration. It was merely an affirmation and reiteration of an apparently wellconsidered and wholly justifiable position taken by Mr. Taft in 1912, when he advised Americans to withdraw from localities where conditions or prospects of lawlessness threatened the personal safety of Americans and when he directed consular officers to take charge of abandoned effects of American citizens. This advice was applied to practically the entire Republic. This plainly shows, therefore, the opinion of the Taft administration at that time. On November 21, 1910, the commanding general of the Department of Texas was authorized to send troops to the border to enforce the neutrality laws. Additional troops were later sent to patrol the entire border. The War Department early in February, 1912, held all troops in readiness for service along the Mexican border. This created a situation in Mexico which made some of the people doubt the stability of the Madero government, and gave rise to widespread brigandage throughout Mexico. On February 24, 1912, the Washington authorities hinted to the Mexican authorities that military force was contemplated.

The truth of the matter is, if the Taft administration had given Madero one-tenth part of the support and assistance that this administration is giving the de facto government, President Madero would most assuredly have been successful in establishing peace and order, the alleged crime of Huerta would not have been committed, the loss of American lives and property since that time would not have occurred, and Mexico would have been spared the horrors of the fratricidal war which has

Since prevailed there.

On April 15, 1912, the Department of State under President
Taft sent what was practically an ultimatum to the Madero
government in which intervention was threatened.

This ultimatum stated that "until more headway was made in unseating Madero, no interviews could be granted and no communications received from insurgents.'

It seems that the Taft administration had devoted itself to a campaign of nagging and persecuting the struggling government of Madero. During the early part of September, 1912, President Taft stated to Ambassador Calero that this Government was dissatisfied with internal conditions in Mexico. The newspapers in reporting the matter said:

Mr. Taft is opposed to intervention except as a last resort. It is admitted, however, that conditions in Mexico have become much werse in the last few weeks, and if the Madero government is unable to check the attacks on American citizens the United States will be constrained to take action.

So it will be seen that the situation in Mexico when Woodrow

Wilson became President was an unfortunate inheritance.

Mr. Root says it was President Wilson's duty to do the very things which President Taft did not do and for which he fails to condemn President Taft while condemning President Wilson.

The Taft administration had nagged and persecuted President Madero almost up to the breaking point; it had shifted its troops down to the border for the supposed purpose of protecting its ambassador to Mexico, at a time when such a move weakened and embarrassed the Madero government; it had allowed Americans to be killed in Mexico and American property to be looted and menaced. About 60 Americans are known to have been killed during the Taft administration, and yet Senator Root assumes for his part a "holier than thou" at-

In view of all the circumstances, the last administration had all the opportunity it could wish for to send an army into Mexico if it had desired to avail itself of the justification which Senator Root is now urging upon this administration.

Mr. Taft did not believe it wise to sacrifice thousands of lives and millions of dollars in order to intervene in the internal affairs of Mexico.

President Wilson has found nothing so far which would justify the great sacrifice of human life which would be necessary to obtain military control of Mexico.

President Wilson's Mexican policy has been born of the belief that no permanency in government would be obtained in Mexico or in any other American Republic so long as this Government was ready to recognize every revolutionist who might

President Wilson's Mexican policy is consistent with the American idea that the government of any Republic should be the choice of its people.

So long as governments created by force and financed from without can control in Mexico, just so long will there be no safety of life or security of property in that country.

For 50 years we have been talking Pan Americanism, and Pan Americanism has been impossible because the other American Republics have always suspected sinister purposes in our attitude toward them.

But President Wilson's policy has made every American Republic believe for the first time that our Government has no desire or purpose to take their territory or coerce their Govern-Out of this European war no man can tell what will come, but this much is certain that it is vital for the peace and prosperity and honor of the Western Hemisphere that there be a fidelity in the pretensions and an honesty in the relations between the Governments of the American continent.

Mr. Root charges that our policy has been vacillating; that the President invaded Mexico and then retreated. The charge is not true. Mr. Root has no evidence upon which to base such an accusation.

Here is the truth about the Vera Cruz incident. Admiral Mayo was at Tampico. American sailors and officers were insulted by Mexican soldiers. A boat crew and paymaster of the United States Navy were arrested on the wharf at Tampico by Huerta's followers. Without the knowledge and without any instruction from the administration at Washington Admiral Mayo demanded the release of his men, an apology, and a salute to the flag. Huerta's followers did not comply, and the President backed up the demands of our officers. The salute was denied. Vera Cruz was occupied, not for invasion, but to punish an insult to the flag and the Navy. With a loss of 300 men Huerta's band was punished and the incident was closed. Cruz incident did not have its origin in or any relation to the fixed policy of President Wilson toward Mexico and the other American Republics.

SENATOR ROOT MADE A SPEECH IN THE UNITED STATES SENATE AGAINST OUR INTERVENTION IN MEXICO—TALKS LIKE PHERSITES TO-DAY THOUGH YESTERDAY HE ACTED LIKE NESTOR.

Our opponents say we invaded Vera Cruz to help Carranza and hurt Huerta. They forget that Carranza protested at the landing of United States troops in Vera Cruz. Would Carranza have protested if this charge of our opponents were true?

On the Mexican question Senator Root again plays the weathercock and veers in the shifting winds of opportunism. What he urged President Wilson to do in Mexico, he advised President Taft not to do. And so I say that Senator Root's

conduct as an official and his talk as a political agitator illustrate the difference between the conservatism of responsibility and the anarchy of speech. And here is the proof that Mr. Root can blow hot one day and cold the next, can talk like Phersites to-day though yesterday he acted like Nestor.

When Senator STONE, the present Democratic chairman of the Foreign Relations Committee, introduced into the Senate a resolution which would have committed this country to the very Mexican policy which Mr. Root now urges, he rose in the Senate and condemned the effort of the Democrats to do the very thing which he says should have been done, and for want of which he says the Democracy has forfeited the respect of the citizens of this country. Here are the exact words of Mr. Root which expose the somersault he has thrown on the Mexican situation:

expose the somersault he has thrown on the Mexican situation:

Mr. President, before the subject is passed over and the resolution laid upon the table, I wish to express my entire dissent from the assumption which seemed to me to be carried by the expression of opinion on the part of the Senator from Missouri. Granting that injuries have been done to American citizens which ought to be redressed, that wounds have been inflicted that lives have been taken, that property has been destroyed, it does not follow, sir, that we should begin the process of securing redress for those injuries by a threat of force on the part of a great and powerful nation against a smaller and weaker nation. That, sir, is to reverse the policy of the United States and to take a step backward in the pathway of civilization.

There is no reason whatever, sir, to assume, if injuries have been done of the kind described, that the Government of Mexico is unwilling to make due redress upon baving those injuries and claims presented to ber in the ordinary course of peaceful negotiations; and for redress the passage of such a resolution as has been described, equivalent to a declaration of war, would be to preface the ordinary demand—the demand which it is the duty of every civilized power to make upon a friendly nation—with a threat that if the demand is not compiled with force will be used.

Sympathy with the people of Mexico in their distress, a just sense of the duties that we owe to that friendly people, and the duties that we owe to the peace of the world must forbid our assenting to or yielding to any such course.

** **

Evidently Mr. Root's opinion as to what should be our Mexico.

Evidently Mr. Root's opinion as to what should be our Mexican policy shifts from day to day. He is for any policy that at the moment promises the most votes for the Republican Party. Anyway it is a source of consolation to know that as a United States Senator he approved, though as a political agitator he condemns, the policy which President Wilson is following in Mexico.

GREAT NATIONAL LEGISLATION.

Four years ago the Nation committed its care and welfare to the Democratic Party, and the Democratic Party has been true to the trust. It has preserved peace, promoted prosperity, maintained national honor, observed international laws, and followed the traditions of the fathers of the country.

No other administration of our age and generation has enacted such a galaxy of laws for the public welfare.

It passed the Trade Commission bill, which created a tribunal that will arbitrate between disputants in commerce and do justice between the public and the great industrial corporations. It passed the Clayton antitrust law, which does away with interlocking directorates, defines and expands the prohibitions of the Sherman Act, modifies the powers of Federal courts to iscue injunctions in labor disputes, and nullifies a multitude of abuses that have been in controversy for years. It consummated the Federal income tax, which makes the fortunes of the rich bear their proportionate part of the burden of taxation and brings into the Federal Treasury over a hundred million dollars a year. It promoted the constitutional amendment which provides for the election of United States Senators by popular vote and frees the United States Senate from possible control by special interests and makes possible the election by the people of their representatives in the Senate at the polls. It repealed the law fixing discriminatory tolls for the Panama Canal, and thereby proclaimed to the world the sacredness of American treaty obligations. It passed the Lever agricultural extension act to help increase the productiveness of American farms. It passed the industrial employees arbitration act, which affords the Government facilities for settling great railway and industrial strikes that threaten to tie up the traffic and upset business of the country. It passed a conservation law, which will develop the water power of the country, facilitate manufacturing, and open avenues of employment. It drove the lobby out of Washington. It prevented railroad strikes which threatened industry and tranquillity. It enforced the antitrust laws always on the ground of justice, never for the purpose of political reward or partisan punishment. It extended the Parcel Post System, and for the first time in history distributed public funds fairly around the country for the purpose of moving crops. It started the application of scientific and modern business methods toward the elimination of waste in the transportation and distribution of farm products. It made the largest appropriation in the history of the country for educational work in the encouragement of rural and industrial education, education in the home, education in civics and principles of citizenship, education of the negroes and immigrants, education in home economics, home and school gardens, and along other practical lines. It has saved a million dollars a year to the old soldiers and their widows through the direct payment of pensions by check. It proposes to make \$500,000,000 available for the promotion of agriculture by the establishment of land banks that will build up a system of rural credits for the farmer. It has sent special commissioners of Great Britain, Germany, France, Russia, Chile, Argentina, Brazil, China, Japan, and India to promote our commerce abroad, and it proposes to send one to every other important point in the world.

And yet Mr. Root, as chairman of the Republican State conference held at Carnegie Hall, says this administration is "not an administration of force and foresight.'

FEDERAL RESERVE ACT.

In reply to this statement, I say that Mr. Root has no "hindwhen he says this in the face of the wonderful success which has greeted the workings of the Federal reserve act. When in the United States Senate Mr. Root opposed the passage of this law, which one of the most eminent economists in the world has said will prove of more value to the American people than the building of the Panama Canal. This law is one of the greatest achievements of any administration in the last 50 years. Force and foresight. Why, there never has been a finer exhibition of foresight and statesmanship than that exhibited by the President in insisting upon the passage, at the special session of the Congress in 1913, of the Federal reserve act and opposing, even against the advice of leading men in his party, the adjournment of the Congress after the passage of the tariff act of 1913 until the Federal reserve act was enacted. Subsequent events show that the President was prompted by wondrous economic insight. The Republican Party has had possession of the Government since 1861, with the exception of Mr. Cleve-land's two terms. Until Mr. Wilson was inaugurated the Democratic Party had not been in control of the Federal Govern-ment for 16 years. During all of that time, and especially during the last 16 years of Republican rule, the necessity for financial legislation in this country was never so great nor so imperative. The Republican Party stands convicted of absolute impotence and incompetence, because it failed utterly to meet the situation. With one of the most complex and difficult problems the Nation has ever had to face, and amid conditions that rendered the task doubly difficult, the President and his party exhibited in a superlative degree the qualities of statesmanship and prescience, and gave the Nation a financial system which, for all time, will confer incalculable benefits upon the American people.

GREATEST BUSINESS LEGISLATION IN 50 YEARS.

This great piece of legislation not only reestablished beyond the power of impairment that essential confidence upon which alone business could be revived and go forward with safety, but it also provided the enlarged credit facilities for the lack of which the country has suffered for many years, and also gave to these enlarged credit resources the quality of elasticity and automatic responsiveness to the needs of business and enterprise without which it would be impossible for the business of the Nation to expand healthfully and prosperously. Moreover, it put the people of the United States in possession of a financial system which has emancipated them from the control of selfish interests and enables them to go forward with business and enterprise on a safe and assured basis, and provides them with the credit resources to engage in the foreign trade upon a scale limited only by the productive capacity of the country and the enterprise of its people in seeking foreign markets. At last we have the means and the power and the ability to finance our foreign trade. We have never possessed it heretofore under the inelastic and wholly inefficient and unsatisfactory financial system provided by the Republican Party and from which the country has suffered repeated disasters in times past.

PREVENTED A PANIC.

By reason of this splendid piece of foresight the Democratic Party put the Secretary of the Treasury in possession of such adequate power that he was able to come to the relief of the financial and business interests of the country immediately upon the outbreak of the European war August 1, 1914. The country was saved by the administration from an imminent panic of such stupendous proportions that had it occurred we should have been involved in a terrible disaster from which we would not even yet have been able to recover.

Immediately after the first declaration of war that forecasted the involvement of the whole of Europe, the Secretary of the Treasury announced to the country that there was in the Treas-

ury \$500,000,000 of national-bank notes available for immediate issue under the Aldrich-Vreeland Act, as amended and made workable by the Federal reserve act. The prominent bankers of the city of New York appealed to the Treasury Department to save them from the threatened calamity, saying that unless measures were taken immediately to relieve the situation the measures were taken immediately to refleve the situation the banks of New York would be unable to keep their doors open throughout the day of August 3, 1914. Hesitation meant panic and inaction meant national disaster. The administration met the situation with unhesitating decision and lightning rapidity. In the first week of August, 1914, \$100,068,350 of emergency currency was issued under the Aldrich-Vreeland Act as amended and made workable by the Democratic administration, and altogether \$386,444,215 of such currency was issued. All of it has since been retired.

On the morning of the 3d of August, 1914, the Subtreasury in the city of New York was in position to issue and did issue millions of dollars of emergency currency to the banks of New York. The subtreasury was able to do this because a Demo-cratic administration had the foresight and intelligence to ship cratic administration had the foresight and intelligence to simp from the city of Washington, by express, on the Saturday preceding the 3d of August, 1914, something like \$40,000,000 of emergency currency to meet the very crisis the bankers described, and this currency was issued to the New York banks upon the condition that they would pay currency over their counters upon demand not only of their depositors, but of their correspondents throughout the country, so that a manager pages similar to that which beful the country in 1907. currency panic similar to that which befell the country in 1907

through Republican stupidity would not occur again.

The Democratic administration is fully and legitimately entitled to the credit for saving the people of the United States from the irretrievable disasters threatened by the European The President and the Democratic Congress and the Secretary of the Treasury are entitled to all praise for the magnificent statesmanship and foresight with which the business interests of the country and the honor of the country have been

protected since the 1st of August, 1914.

I say, without fear of contradiction, that if it had not been for the Federal reserve act and for the effective work of the administration at Washington the great business prosperity which the country is now enjoying would not be seen that the country is now enjoying would not be seen that the country is now enjoying would not be seen that the country is now enjoying would not be seen that the country is now enjoying would not be seen that the se which the country is now enjoying would not have been realized. Contrast this in 1907. That painful experience in American history will always and forever be an indictment of the Republican Party. In a situation which was a zephyr as compared with the "storm" of August, 1914, all of the Republican machinery of government broke down completely and incalculable loss and disaster overtook the American people. As a matter of fact, the present Democratic prosperity is the only prosperity the American people have enjoyed since the panic of 1907.

Mr. Root was a part of Mr. Roosevelt's administration in 1907, and shares with Mr. Roosevelt and the leaders of the Republican Party the responsibility for the wholly unnecessary and calam-

itous happenings of that panic.

MR. ROOT LOST THE "PEACOCK FEATHER" OF A PROPHET BY HIS FATUOUS SPEECH AGAINST THE FEDERAL RESERVE ACT.

One would assume from Mr. Root's speech that the Republican Party has been infallible and that Mr. Root himself has always acted with infallible judgment upon every occasion. The Federal reserve act is now conceded by everybody to be one of the greatest pieces of constructive legislation enacted in this country within the last 50 years at least. As an evidence of Mr. Root's qualities as a statesman and of his foresight and sagacity, I quote from a speech he made in the Senate of the United States on December 13, 1913. denouncing the Federal reserve act

on December 13, 1913. denouncing the Federal reserve act:

I say that this bill presents the financial heresy twice repudiated by the people of the United States. I say that the central reserve board appointed under this bill will have to represent that very heresy. If this bill passes as it stands, America atands to lose all we saved when Grant vetoed the inflation bill, all we saved when Grover Cleveland abolished the silver purchase, all we saved when we elected McKinley, all the Republicans, all the Gold Democrats saved when they helped in the repudiation of the vital principle which has been put into this bill. The country has become so deadened by the assaults of sounds, so wearled of discussion, so confused and dazed by complicated figures, that this vital and fateful reversal of the American policy is proceeding with but little attention. But unless all our history of human experience and all the previous judgments—the real judgments—of the American people upon this subject have been wrong, we stand to learn by hard experience what has really been done by the sixteenth section of this currency bill.

Not a single fundamental of the Federal reserve act as it

Not a single fundamental of the Federal reserve act as it stands to-day was changed or altered after Mr. Root's speech. This act was passed exactly 10 days later, namely, the 23d of December, 1913, and was approved by the President on the same day. Nearly every Republican in the Senate of the United States and most of them in the House of Representatives voted against the Federal reserve act. If this infallible party and this infallible statesman could not see the value of a great piece of

legislation of this character when they had the opportunity to vote for it in the Congress of the United States in 1913, upon what ground can they claim to possess superior wisdom and upon what ground can they ask the American people to confide their destinies to them?

After such a dismal failure at prophecy it would seem as if Mr. Root could well afford to refrain from prophecy as to what will be the condition of business in this country when the war in Europe is over and as to what might have happened in Mexico and Belgium if the United States had acted otherwise than it did. Failure as a prophet in one thing means failure in all. A prophet must never go wrong. Doubt follows a single slip and with doubt goes the "peacock feather" of the prophet. Mr. Root lost his "peacock feather" as a prophet when he made his fatuous speech against the Federal reserve act.

UNDERWOOD TARIFF-A SPECIAL PLEADER WHO WOULD WIN BY TRUTH IF HE CAN, BUT BY TRICKERY IF HE MUST.

In the Underwood Tariff Act the Democratic Party gave the Nation the first customs enactment of a generation in which neither lobby nor special interest had a hand. This great measure unfettered industry and commerce and deprived monopoly of its control over production, distribution, and prices. tariff stimulated American industry and commerce, met public expectations, and redeemed Democratic pledges for a tariff honestly and intelligently written in behalf of all the people. Until the foreign war reduced importations, no tariff ever worked more satisfactorily. Under it, from November, 1913, to June, 1914, the aggregate importations of merchandise were 10 per cent more than in the corresponding period of the preceding year before the present tariff act was passed and the country's bank clearings in the eight months ending June 30, 1914, following the new tariff law were practically equal to the bank clearings of the corresponding period for the preceding year. These figures show Mr. Root's attack upon the present tariff to be mere words. Mr. Root talks about deficits in trade balances, but says not a word about the fact that out of the entire 48 months of the administration of Benjamin Harrison 25 months showed unfavorable trade balances; that 6 out of the 12 months immediately following the enactment of the Payne-Aldrich tariff showed unfavorable trade balances; that at no time in the last 13 years has the favorable balance on merchandise transactions in our foreign trade been as small as it was for the fiscal year ending June 30, 1910, under the Dingley and Payne tariffs; that the favorable balance for the fiscal year ending June 30, 1914, during 9 months of which the Underwood law prevailed, was nearly \$300,000,000 greater than under the corresponding year when the Payne law was in effect; and that if we select 10 months from the passage of the Underwood law until the breaking out of the war and compare them with the like period following the enactment of the Payne law we find a favorable trade balance of over one hundred and fifty millions greater than was the case under the Payne law.

Comparisons are always odious, but in this case the odium lies

The figures of the comparison show that Mr. Root has stretched to a high degree the lawyer's prerogative of suppressing all evidence save evidence of value to his side. But the Democratic Party did not put all its eggs in one basket. It had sense enough to compel, long before the war broke out, the internal revenue to bear its proper share of governmental taxes, and the soundness of this economic principle is now everywhere acknowledged. No man knows better than Mr. Root that in the latter part of 1913 and the early part of 1914 there was an extreme trade depression the world around, even in countries having a high protective tariff and in which no tariff changes had been made. Every student of economic history knows that at that time the whole world suffered from depression and that our share of the depression was both less and less long than the depression of It is a surprising and not a very admirable act on the part of Mr. Root, who knows the facts as well as any man alive, to cull a portion and suppress the rest of the facts in a desperate attempt to make the country believe what he wanted it to be-lieve regardless of the truth. Perhaps it is a fault acquired from long practice at the bar and unconsciously indulged. In a vital question like this, though the country has a right to know the truth, the whole truth, and nothing but the truth, he who gives it less is a special pleader who would win by truth if he can, but by trickery if he must.

PREPAREDNESS.

Our opponents claim the Republican Party is the friend of military preparedness. But Grover Cleveland and William C. Whitney started our Navy on whatever ascendency it enjoys to-day, and Samuel J. Tilden is the father of our present system

of coast defense. The truth of the matter is that Theodore Roosevelt as President and Elihu Root as Secretary of War cut down the authorized enlisted strength of the United States Army.

In 1906 President Roosevelt declared in his message to Congress that the Navy should not be enlarged, that it was adequate for our national purposes, and if existing warships were replaced as they were abandoned all our needs would be met. In 1908 Germany began its new naval program which gave its navy a superiority over ours, and from that time till the present the ratio of superiority of the German Navy has been continuously maintained. This is the preparedness that the Republican Party enforced and is the policy which is directly responsible for our present condition and is far different from the preparedness for what the Republican Party claims credit to-day.

If during all the years it had been in power the Republican Party had adopted a definite and gradual program for the increase of the Army and Navy the defensive strength of the country would be what it ought to be to-day,

Former Secretary of the Navy George von L. Meyer was in charge of the Navy for four years under the Taft administration, and he is strong in his denunciation of President Wilson's administration of the Navy Department. Yet, compared to what the Wilson administration has done for the Navy, Mr. Meyer did very little. The four years that Mr. Meyer was at the head of the Navy he obtained six battleships. In the first two years of the Wilson administration five battleships were authorized and authorized before the European war began. In his whole four years Mr. Meyer obtained \$115,000,000 for the increase of the Navy, while in two years the Wilson administration obtained \$87,000,000, and obtained this authorization before the European war began.

In his recent trip through the West President Wilson made clear his policy on military and naval preparation, and this policy we submit is entitled to the fullest approval from men with the welfare of the country at heart, no matter whether they live on the coast or in the interior part of the country and no matter to what political party they may happen to belong.

Changed conditions brought about by the European war have changed opinions on preparedness. Mr. Roosevelt, including others, has been obliged to change his mind. At the beginning of the Fifty-seventh Congress President Roosevelt in his annual message to Congress said: "It is not necessary to increase our Army beyond its size at this time," but he now recognizes changed conditions and has changed his mind.

At the beginning of the present session of Congress President Wilson, appreciating these new conditions and doubtless with information not entirely given to the public and probably not advisable to be given, presented a reasonable and practical plan for such a state of preparedness as present conditions seem to demand, and he has taken occasion to impress upon the people the necessity for action by Congress on the plans so carefully outlined by his experts. In his speech in New York he said: Americans would not seek a contest or cravenly avoid one. They would fight for the vindication of their honor and character, for liberty, and for free institutions." Thus does President Wilson "point out the way, the straight, sure road that leads out of the fool paradise to the firm ground of armed readiness, where we shall know no fear and be equal to defending our At St. Louis, Kansas City, Chicago, and other places the President's plea was, "Speed up preparedness legislation." He did not insist on the precise program presented by his experts who have had the matter in hand. What he wanted and what he wants is a system of preparedness that will best serve the people and put the country in the best possible position to resist attack by sea and land. At Chicago the President said: "The Army as at present constituted is not large enough for time of peace." At Des Moines he said: "I want to tell you that the men who say that we should prepare and prepare immediately are telling you the sober truth. I think you will agree that no one is in a position to know the truth better than I." In Kansas Ciy he said: "Speaking with all solemnity I assure you there is not a day to be lost."

PLACING THE BLAME WHERE IT BELONGS.

In his declaration that we are unprepared for war, Mr. Root alludes to President Wilson's strenuous efforts to secure adequate defenses, and holding up his hands in mock horror exclaims, "God grant he be not too late."

If he be too late, upon whom should the blame fall? Upon Mr. Wilson, who has been President for two years, or upon the leaders of the Republican Party who controlled the military and naval policy of this country for 20 years? And among those leaders responsible for the present unprepared condition of the

country must be included Mr. Root, for years at the head of the military department of this Government. Upon whom should the blame fall? Upon the Democratic Party, whose responsibility is only two years old, or upon the Republican Party, who has controlled the destinies of this Nation for 40 out of the last

50 years?

The Democratic Party is for a policy of preparedness just as Tilden was, just as Whitney was, just as Cleveland was, but for a policy of preparedness for the benefit of the Nation, not for the benefit of stockjobbers, money lenders, steel makers, or munition manufacturers. The Democratic Party is for enough preparedness to man the walls of the Nation and to sail the seas with honor, but the Democratic Party is for so much preparedness as will insure the serenity of defense and the impossibility of invasion; but the Democratic Party is not for so much preparedness as will beget the insolence of offense or the mania of aggression.

WILL HOLD HIS RUDDER TRUE.

History repeats itself historians say. In the annals of old there is a story of a ship caught at sea in a storm which raged as if the very heavens were at war. Havoc threatened on every side, confusion beckoned, and nature seemed to be out of joint, but to the elements in their wildest fury the captain of the ship calmly said:

"You may sink me, you may save me, but I'll hold my rudder

true"

So to-day the American people, hot-heads and cool heads, partisans, and neutrals—whether they follow wisdom or coax on fury—Woodrow Wilson says by his deeds, not by words:

"You may sink me, you may save me, but I'll hold my rudder

true."

ON THE RED-LEAVED TABLETS OF GRATEFUL HUMAN HEARTS.

From this laudable course no oratorical thunder can drive Woodrow Wilson.

Glittering epigrams, distorted facts, mental quibblings, and verbal twistings will fall upon him like darts without barbs.

When the ship of state is rocked and tossed by angry waves and howling winds the passengers may lose their heads, but the

captain will keep his.

Excitable people whose European sympathies one way or the other have for the moment blinded them to the welfare of this land, and whose spokesman Mr. Root seems willing to become, may just as well realize once and for all that Woodrow Wilson will not swerve from the course he has laid out for himself in this crists. He will refuse to surrender the powers of his great office to those who seek to plunge this country into needless war; he will continue to work for the preservation of its prosperity, the assurance of its happiness, and the maintenance of its honor, even if in so doing he brings down upon his head the bitter hostility that Washington had to face and that Lincoln silently suffered in every critical moment of his career.

No reward, no punishment will make him swerve from what he knows to be his highest duty. He has preserved, strengthened, dignified, and uplifted our noblest national traditions, and he will continue to do so no matter what the cost or what the

penalty.

His ripe wisdom, his knowledge, his infinite patience have contributed more than all other factors combined to rescue the United States from that weight of woe and misery to which the rest of Christendom is now subjected.

His fellow countrymen will not forget this,

Already his name is inscribed on the red-leaved tablets of grateful human hearts.

For these reasons the people of the United States will reelect Woodrow Wilson President to continue the good work he has

so nobly begun.

For these reasons the Democracy of New York follows where Woodrow Wilson leads; but we follow first and foremost for the reason that, amid dangers that threaten and criticism that misrepresents, with an admirable devotion to principle and a wonderful exposition of manhood, Woodrow Wilson stands for the Americanism which, under the magic spell of citizenship and the mystic influence of the Stars and Stripes, imbues Jew and Gentile, Russian, Austrian and Italian, German and Frenchman, Irishman and Englishman with the spirit of the country and teaches them to sing of this old flag of ours:

Your flag and my flag
And how it waves to-day
O'er your land and my land
Aad half the world away!
Rose-red and blood-red
Its stripes forever gleam
Snow white and soul-white
The good Forefather's dream;
Sky-blue and true-blue
Its stars that shine aright
A glorious guidon of the day
A shelter through the night.

Your flag and my flag,
And, oh, how much it holds
Of your heart and my heart
Secure within its folds.
Your heart and my heart
Beat quicker at its sight,
Sun-kissed and wind-tossed
The Red and Blue and White,
The One Flag, the Great Flag,
The flag for me and you
Glorified all else beside
The Red and White and Blue.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM SCHLEY HOWARD,

or GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. HOWARD. Mr. Speaker, for the past several days I have heard much discussion of a situation the graveness of which I fear but few of us realize,

Fugitive statements have filled the very atmosphere as to the attitude of the President of the United States toward the warring

nations of Europe.

Some would have you believe that in the twinkling of an eye the President has become enamored of the goddess of war; that he has been transformed from a clear-headed, cool, and conservative, though firm, being into a rabid declarant of belligerent tendencies, and that he would plunge this Nation into the European cataclysm, and that he is wandering about grasping at a diplomatic straw to involve us in war.

These statements have been positively and unequivocably denied by the President himself, and the American people can not be deceived at this critical moment by statements emanating from men who would capitalize their political fortunes with undemocratic, unpatriotic, and un-American statements.

Why all these resolutions to warn American citizens to withhold their undisputed right to use the high seas? Why, at the most critical moment of our diplomatic relations, should such resolutions be introduced into Congress, when the negotiations had not reached the stage where the President's duties ended

and Congress's duties commenced?

Was it an effort to discredit the President of the United States at home and abroad? Was it an effort to imbue the minds of the people of this country with the belief that the President's diplomacy, in his efforts to maintain American rights, had been a failure? Was it an effort to discredit this administration in every capital of Europe by this premature interference with the pending negotiations, so that the impression would be created abroad that the people of America were in fact not in sympathy with the President's attempt at the maintenance of American rights? Surely this did not inspire these resolutions to be introduced into this body or the body at the other end of the Capitol.

Some very prominent citizens who are red-blooded Americans can see something of a political character very adroitly and very vaguely connected with the newspaper propaganda that has

been carried on for the past several days.

This effort to discredit the President has been carried to the extent that heretofore reputable journals throughout the country have published the statement that the President was on the verge of sending his resignation to the American people.

Let me say to those who affiliate with the Democratic Party that if it is your purpose to capitalize your campaigns in the coming election by taking stock in a political propaganda other than that of President Wilson and his administration, you are taking stock in a bankrupt political machine. Your success depends upon your upholding your President and my President at this critical moment in the history of the United States. If you desert him now you will find yourselves lonesome citizens indeed when you return to your respective districts.

If the administration of President Wilson fails, then all fails; and in failing to maintain the honor, the dignity, and the humanity of this Nation those who seek to destroy him will be met with curses and condemnation, and those who uphold him in his effort to maintain peace with honor will be rewarded with the plaudit, "Well done, thou good and faithful servant."

Let me say a word in conclusion to the "doubting Thomases" in the Democratic Party. The President is stronger to-day with the American people than any organized party, Democratic or Republican. The people believe in him, and they believe in him because by his splendid courage he has thus far prevented

a clash with any of the warring nations and we are at peace; and if, in the negotiations with other countries the President should find it necessary to sever diplomatic relations, the peo-ple—the American people—will believe that the cause bringing about such a severance was a just and an honorable cause.

Mr. Speaker, this is the sentiment of the rank and file back

home, not the sentiment of the mercenary business man, who puts dollars above the honor of his country, nor is it the sentiment of the political weakling, who would rather sacrifice the honor of his country than to lose a seat in Congress.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JAMES A. HAMILL.

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. HAMILL. Mr. Speaker, the President of the United States has urged that Congress express to him its opinion on a subject of vital international concern. He desires Congress to define at once what attitude it holds on the question whether American citizens shall be warned from traveling on the armed merchant vessels of any of the belligerent European nations.

At present the question is of crucial importance in the conduct of diplomatic negotiations. I quote a paragraph from his letter to Mr. Pou, ranking member of the House Rules Committee. He writes:

I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about in order that there may be afforded an immediate opportunity for full public discussion and action upon them.

The request is most unusual, for the reason that under the Constitution the President has a right to conduct the foreign policy of the Government without resorting to Congress for authority or aid. Evidently, therefore, he has turned to Congress for light and guidance in an effort to ascertain the thought and temper of the people, feeling that the sentiment of Congress would be a fairly representative reflection of the sentiment of the country. It is of the highest moment that we express our convictions frankly and honestly evasion or reservation.

The gentleman from Texas [Mr. McLemore] has presented a resolution which declares it to be the sense of the House that Americans be warned against traveling on armed merchantmen and withdrawing the protection of this Government in case they persist in doing so. This McLemore resolution, as it is termed, is now under consideration and calls up the whole matter for The committee has not brought the matter squarely before the House. It has endeavored to evade the issue by the indirect method of recommending that the resolution be laid on the table.

I firmly and fervently believe Americans should be warned from traveling on the armed merchant vessels of belligerents. Every consideration of patriotism, reason, and prudence irresistibly demands that such warning be issued. So believing I will vote against the motion to lay the resolution on the table.

In order to obtain a little clearer understanding of this socalled armed-ship controversy and its relations to the right of Americans to travel the seas, let us review some recent history and recall a few well-settled principles of international law.

The use of the submarine has created new conditions in naval Before the advent of the undersea boat it was admitted that a merchant vessel could not be assailed and sunk by a hostile ship of war without warning. Only if it resisted capture or endeavored to escape was it lawfully subject to de-struction. At the beginning of this war German submarines sunk British merchant ships without notice, and American passengers on board lost their lives. Notably was this so in the cases of the *Arabic* and the *Lusitania*. As a result of negotiations, the United States, in the interest of and for the protection of American travelers, reasserted this right and compelled Germany to accept and practice the doctrine that merchant vessels could not be torpedoed without warning. This applied, of course, to merchant vessels as classified by international law. But the merchant vessel as known to international law is an unarmed

The very fact of its being a defenseless messenger of commerce, bent on peaceful errands, is what clothes it with immunity from unheralded attack, a privilege which is not extended to an armed ship or man-of-war. It is true that in the days when pirates roved the seas and the fitting out of privatery vessels was authorized by Governments merchant vessels carried a small equipment of guns and ammunition without thereby losing their status as merchantmen. But piracy is now a thing of history, and privateering, which was little more than legalized piracy, is practically abolished. It has been abolished by all the belligerents engaged in the present war. It is consequently with great force contended that the reason and necessity for carrying armament having thus ceased the practice of doing so should cease

The British Government now contends that it has the right to equip merchant ships with an armament capable not only of destroying a submarine but even of warding off successfully an unarmored enemy naval cruiser. These armaments are to be operated by gunners either detailed from the regular navy or specially trained and selected from the ship's crew.

The United States is involved in the controversy for the reason that American citizens may take passage on ships so armed whose lives may be sacrificed in the event of an attack without warning, and has favorably recommended this contention to Germany with a strong request for its accepeance. The German Government refuses to accede. It represents that such a right of merchant vessels to arm is unknown to international law, and that armament of the character described transforms the merchantman into a ship of war, thus depriving it of the right to warning. It principally represents, and without contradiction, that the doctrine of warning to such ships would compel the abandonment of submarine warfare because the undersea boat, being frail of construction and having its protection mainly in its power to submerge, would surely court and be exposed to instant destruction from an armed merchantman the moment it rose to the surface to give the signal for the ship to stop.

In my judgment the best opinion on this whole matter was expressed by our own Secretary of State, Mr. Lansing. On January 18 last he addressed a note to the foreign powers dealing with this subject. I give his language word for word. states:

Prior to the year 1915 beligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offense against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

POWERLESS IN DEFENSE.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character, and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

INNOCENT LIVES AT STAKE.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

This note undoubtedly embodied and set forth the view of our Government at that time. No reason or necessity exists for reversing it now.

If belligerent nations regard armed merchantmen as ships of war amenable to destruction without notice, the wisest course for an American to pursue is to keep off such merchantmen at least until it is settled and agreed upon that such ships are entitled to warning. Any other course would be preposterous.

Why should an American in these days of peril travel the ocean on the armed ship of a belligerent? If he is a real American with a genuine affection and solicitude for the welfare of his country, he should in times like these, that call for the exercise of exalted patriotism, cross in a vessel that carries at its masthead the Stars and Stripes. If he prefers a foreign to an American ship, let him take passage on a Dutch ship or a Danish ship or a Norwegian ship, or the ship of some other neutral nation. But it is vociferously proclaimed he has the right to travel on any ship that suits him. We will not deny his right, but we ought to inform him that if he is brash enough to exercise it he must do so severely alone and at his own peril. He has also the right to enter the danger zone during the progress of a riot or to step between two men who are fighting each other with revolvers, and he has likewise the right to receive in his own body the bullet intended for some one else.

Why should we permit a few foolhardy Americans who are either reckless of their own safety or perhaps procured and paid to protect a cargo of munitions of war bring down upon America all the multiplied misery and havoc which attaches to modern warfare? Is not the protection of the very flower of our manhood and the welfare of our women and children and our aged of more consequence than the guaranteeing of protection to a fool in his folly? A day or two ago I saw a press notice that a certain American loved to travel through the war zone because he enjoyed the thrill of being chased by a submarine. He is, no doubt, a fair type of the class of citizen the prospect of the abridgement of whose rights occasions us such poignant grief.

How morbidly sensitive we are to-day over the invasion of our technical rights as compared with the exemplary resignation and placidity we exhibited when our dearest and most substantial rights were being ruthlessly trampled under foot in Mexico. I am not expressing any opinion on our Mexican diplomacy, and only for the sake of illustration do I refer at all to that harrowing page of human history.

Sweden as a neutral nation has adopted the policy of warning her citizens to refrain from traveling on belligerent ships, and there is the soundest reason why we should follow her wise example.

Those who advocate tabling this resolution offer no sound or even plausible reason to induce a vote in their favor. Uphold the President, they reiterate, and do not repudiate him; stand for the honor of the country. This is an intensely appealing demand and if grounded on righteousness should meet with an unhesitating favorable response. But let us look the situation in the face and take note of the facts.

The honor of the country is not involved in any manner. It is still intact and stainless. True it is that the Government strongly insists upon the right of notice to armed ships carrying American passengers; true it is that the expression of our desire for warning and the defeat of this motion may weaken or even cause the withdrawal of that contention. But this would not compromise the honor of the Nation. Why? Because the contention is still under discussion and has not been presented as an ultimatum. Diplomatic negotiations are still in progress and the final word has not been spoken. The situation is, indeed, delicate, but it is, nevertheless, in a state of flux capable of being changed, altered, or adjusted without loss of prestige to either of the participants. Let us hope it will be settled as the voice of justice and the welfare of America plainly directs.

What force lies in the demand that we stand by the President and not repudiate him? The President has not demanded our support, but has invited an expression of our honest opinion after full and free discussion. He has requested information and it can be no repudiation to tell him truly what we believe the country wants and is thinking about. He is not compelled to come here for support, for under the Constitution he alone has the right and power to conduct diplomatic negotiations. I admit he would be pleased if the view expressed by the House coincided with his own, and it may be he almost unalterably believes he is right. But are we to agree with him whether we think him right or wrong? I would hesitate to affirm that the President desires a vote recorded on that principle. Let us be not his flatterers but his friends. Let us in this delicate crisis tell him what we candidly believe particularly when he has waived his constitutional privilege to come here and ask for our belief.

It is strongly asserted by some that if we do not by our affirmative vote in this matter support the contention of the State Department for notice to armed ships, then, as a consequence, the strength of its contention may be weakened in for eign capitals. I fully appreciate all there is to that assertion, but I do not overestimate its value. In these days of the newspaper and the ocean cable the whole world knows in a general way what America is thinking about, especially on a matter of this nature. The facts are patent. We may solemnly attempt to deliver our districts by enacting a falsehood, but the people world knows the real sentiment and convictions of the people

throughout the country. Besides, does the administration believe it should persist in pressing a contention which, in the judgment of Congress, the people do not approve?

Some Members of this House are salving their consciences or else honestly deluding themselves by endeavoring to believe that a vote to table this resolution is merely a proceeding to delay consideration which does not affect the merits of the question. I am sure that if they will consult the precedents of parliamentary law they will find that while formerly a vote to table was merely a vote to defer action, the law is otherwise now. Under the present practice a vote to table is regarded as

a final disposition of a question.

We are therefore face to face with the question whether we believe or do not believe warning should be issued to our citizens to dissuade them from traveling on the armed merchant ships of belligerent powers. Let my colleagues impressively consider that their action to-day may entail disastrous consequences and necessitate an inconsistent attitude at a later date. I mean this: Suppose in the event of a favorable vote on this motion to table the Government refuses to recede from its contention regarding the right of armed merchantmen to re-Suppose Germany refuses to recede from her position that such vessels are not entitled to notice and torpedoes one of these vessels without warning, causing the loss of a few foolhardy Americans who were traveling on it as pas-Then the day may dawn which we piously hope never to see when this Congress will assemble to decide the awful issue of peace or war. If you vote in favor of this motion to-day, you commit yourself as a matter of consistency to vote affirmatively on a declaration of war in the event I have mentioned. But few here would vote to declare war for a cause so trivial, and, as a result, many will be compelled to repudiate their action of this day and stultify their consistency in order to vindicate their common sense and their patriotism.

I deeply deplore the necessity which compels me to differ with the President. I enfertain a true and lofty admiration for his sincerity of purpose, and only an overpowering conviction that he is in error causes me to withhold the support I gladly would render. He is, besides, the leader of the Democratic Party, and except for gravest reason is entitled to my support. But I can not complacently follow anyone in a course which may inevitably hurry the country into the horrors of war. I will not become a partner in a proceeding to plunge 100,000,000 of human beings into the European inferno of slaughter and then seek to justify my treachery to America on the filmsy pretense of personal esteem and party loyalty.

Armed Merchant Ships.

EXTENSION OF REMARKS

HON. SAMUEL H. MILLER,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. MILLER of Pennsylvania. Mr. Speaker, I favor the adoption of a resolution by the House warning all citizens of the United States, except in cases of absolute necessity, to refrain from traveling on any and all ships which shall mount guns, whether such ships are part of the naval forces of a beligerent power or merchant ships and whether such gun or guns or other armament be called offensive or defensive, and in case American citizens, after warning, do travel on such armed belligerent ships that they do so at their own risk.

I do not deny the right, under international law, of any of the powers at war to arm a merchant vessel for defense. Neither do I deny the right under international law of an American citizen to take passage on a merchant ship of a belligerent power armed only for defense. But, sirs, the armament carried by these merchant ships, it is admitted, is suitable and adapted for either offense or defense, and the passenger has no control over the armament; therefore, under existing conditions, I affirm that an American citizen should not willfully, premeditatedly, and recklessly disregard warning and take passage on an armed merchant ship.

It is true, as was recently said by a distinguished Cenator from Oklahoma—

of this nature. The facts are patent. We may solemnly attempt to deliver our districts by enacting a falsehood, but the world knows the real sentiment and convictions of the people

protected against the possibility of any one of the 100,000,000 citizens exercising the right and thereby plunge this Republic into the European carnival of slaughter; and the right of the 100,000,000 to be protected against becoming involved in war is not to be weighed in the balance with the right of a single irresponsible adventurer to imperil his own life and possibly cause the sacrifice of the lives of thousands of his fellow citizens.

If there were no other ships except armed ones on which American citizens could travel on the high seas the question might present a different aspect. There are, however, unarmed merchant passenger vessels upon which American citizens can travel with safety. There are merchant vessels which fly the American flag upon which they can travel if they so de-The American citizens who took passage on the Lusitania by waiting 48 hours could have taken passage on a ship sailing under the American flag. But it was not so fast, the furnishings were not so luxurious, the voyage would not have been so pleasant as on the Lusitania.

I will not, therefore, by my vote encourage any of our citizens to willfully, recklessly, and wickedly risk their lives on an armed vessel of a belligerent nation, with the possible result of embroiling our Nation in the world-wide war. For American citizens to do so would, in my opinion, quoting the language of the Senator from Missouri to the President in a recent letter, "be

so monstrous as to be indefensible."

I believe I am supported in my contention by a declaration of our State Department delivered as late as January 18, 1916. On that date Mr. Lansing, the very able and distinguished Secretary of State, with the approval of the President, addressed a communication to the foreign powers relative to the submarine question. In that communication Mr. Lansing said:

I shall add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of the undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and my Government is seriously considering notifying its officials according. officials according y.

This was the public and official communication of the convictions of our Government on this question six weeks ago.

Mark the language:

Our Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort should be held to be an auxiliary cruiser.

This is not a mere dictum. It is a deliberate and official declaration of an admittedly able lawyer, who knows the meaning and force of words, who was preparing an official communication to be delivered by his Government to its officials abroad, who in turn were to communicate it to the foreign Governments, belligerent and neutral. And why not? Who can foretell whether the armament on these merchant vessels is to be used for defense or offense? Our Government can not foretell. The American passengers on board can not foretell. The only safe plan is to keep off such a vessel. Can anyone give me a good reason why an American citizen should travel on such an armed ship?

Are we in favor by our vote, either direct or evasive, to encourage any American citizen to take passage on an armed ship, and thereby not only endanger his own life but possibly the peace and security of 100,000,000 American citizens, 90 per cent of whom condemn his reckless, unwarranted, and unreasonable conduct?

Assume that one or more of our citizens do unwisely and recklessly take passage on an armed belligerent merchant ship. Assume that the submarine of another belligerent nation torpedoes it and the American passenger loses his life. That our Government should, after a full investigation determine that the armed merchant ship was acting wholly on the defensive.

What next? Shall we avenge his or her death resulting from his or her own folly? Shall we go to war with the Government under whose flag the submarine sailed? Shall we sacrifice the lives of thousands and possibly tens of thousands of our brave men and bring sorrow and sadness to the fathers and mothers and wives of the men who will be thus sacrificed, all on the account of the wicked and unpatriotic conduct of American citizens?

Go ask the fathers and mothers and wives out on the farm, the fathers and men in the shops, or in the busy marts of trade. Do not ask the man that has no intention of going to the front. Do not ask the munition manufacturer. Do not ask the man that is now bravely talking war, but when war comes will seek the comfort, the joys, and the seclusion of his home, far removed from the blare of war trumpets and the sound of cannon. Do not ask the millionaire who already holds the bonds of one or other of the belligerent nations. Go ask the plain, honest, common people if they would not advise Congress to warn American citizens to keep off an armed merchant ship, and go by the slower, but safer way under a neutral, or the American flag, that floats over an unarmed ship.

In voting as I shall, I do not cast any reflection on the official action of the President of the United States. He is not alone your President; he is my President. He is the President of the whole country. I respect him as one of the ablest, most conscientious, most upright men who ever occupied the high office which he ennobles. Have I not the right to differ with him, if I am honest in that difference?

This resolution is before the House not by my seeking, nor do I believe by the seeking of a majority of this House. It is before the House on the demand of the President. At first he demanded that no action be taken by the House on the question of American citizens traveling on armed ships. The leaders of both sides of the House acquiesced. Then the President changed front and demanded of the Committee on Foreign Relations that they report out the McLemore resolution. That committee, not acting as promptly as the President desired, called on the Rules Committee to take the unusual course of bringing in a rule on the subject. Then we are asked, after all this routine, to take the evasive route and lay the resolution on the table. Some of my constituents—a very few—have written me to support the President. That is easy for them. They are 500 miles away. Right here on the ground if you wish to support the President you must take your bearings every morning.

For the reasons thus briefly given I would, if I had the opportunity, record my vote for a resolution to warn all citizens of the United States, except in cases of absolute necessity, to refrain from traveling on all armed merchant ships. I believe by so doing would be to follow a way that leads to assured and honorable

peace; the other way may, and possibly will, lead to war.

I do not propose that one foolhardy citizen shall drag 100, 000,000 people into war if by sensible, reasonable, patriotic, and honorable means it can be avoided. And this, sirs, is not "peace at any price"; this is "peace with honor," aided and abetted by good, refined, common sense.

The Constitution rests in the President all diplomatic questions. As one Member of Congress I am willing that he should exercise that prerogative. I do not think that Congress can as successfully and satisfactorily negotiate matters of diplomacy, and in my opinion I do not believe the President should have forced this issue. Until the President galvanized life into the McLemore resolution it lay upon the table lifeless and would have soon passed into forgetfulness. For myself I had never heard of it until the President resuscitated it.

There is so much in the resolution that the Committee on Rules has brought before the House that I do not approve of that I shall vote to lay it on the table. I voted against the motion for the previous question and against the motion to adopt the resolution reported by the Committee on Rules because the resolution was so framed that it shut out all amendment and thereby prevented the House from having the opportunity to vote for or against the simple proposition of warning American citizens to refrain, except in cases of absolute necessity, from traveling on armed merchant ships of any belligerent power in the present crisis. Having voted twice to prevent it coming before the House, I shall, when the opportunity occurs, vote to lay it on the table, where it had been for weeks, and where it should have remained and would have remained had not the President forced it before the House.

I submit the following letters and telegrams, to be printed with my remarks:

THE BOROUGH OF ST. MARYS, St. Marys, Pa., February 25, 1916.

Hon. Samuel H. Miller, Washington, Pa.

Washington, Pa.

Honorable Sir: In connection with the present agitation concerning the warning of American citizens to avoid traveling on ships of any of the beligerent nations, I wish to inform you that there is a very strong sentiment in this section in favor of issuing such a warning. The belief is quite common here that the safe and sane course for the United States to pursue in this crisis is to warn its citizens to avoid belligerent vessels of all kinds in their travels. The State Department does not appear to be inclined to issue such a warning. It appears therefore to be the duty of the Congress to enact such legislation as will not affect the honor of this country and at the same time will not engulf us in an unpopular and unnecessary war with any of the belligerent nations.

Your kind and serious attention to this matter is respectfully solicited.

Very truly, yours,

W. B. Bauer,

Chief Burgess.

Chief Burgess.

TEMPLETON & WHITEMAN, Greenville, Pa., February 26, 1916.

Hon. S. H. MILLER.

My Dear Judge: I hope you can see your way clear to sustain the President as against the proposition that our people will not be pretected in their rights under international law.

There is no use beginning concessions to Germany.

I hope the House wont turn tail and run.

E. S. Templeton.

FRANKLIN, PA., March 2, 1916.

Hon. Samuel H. Miller,

House of Representatives, Washington, D. C.:

We sincerely trust you can conscientiously support resolution warning Americans to keep off armed merchantmen.

DAVID B. MCCALMONT.

GREENVILLE, February 27, 1916.

Hon. S. H. MILLER, Washington, D. C.

MY DEAR SIR: I would be very much pleased if you can see your way clear to uphold President Wilson and his policy in regard to handling the question of merchant vessels armed for defense and the issues arising or growing out of this question.

Yours, very truly,

H. T. PORTER.

FRANKLIN, PA., March 1, 1916.

S. II. MILLER, M. C., Washington, D. C.

MY DEAR JUDGE: As one of your constituents I most sincerely trust that you will stand squarely behind our President in his handling of foreign complications. With very best wishes, I am, Very truly, yours, truly, yours,

GEO. J. CAREW.

NEBRASKA, FOREST COUNTY, PA., March 2, 1916.

Hon. S. H. MILLER, M. C.

My Dear Sir: I note by the papers there is to be a resolution introduced in the House to advise Americans not to travel on belligerent vessels. I think for the good of the country it should be supported by every Member. Kindly give it your support; also to get your friends to do likewise.

Yours, cordially,

FRANK X. KREITLER,
Of Company B,
Two hundred and eleventh Pennsylvania Volunteers.

THE MEDICAL WORLD, Philadelphia, Pa., March 3, 1916.

Hon. S. H. MILLER, Washington, D. C.

DEAR SIR: Can you 'magine an American traveling in the present time of stress on an armed belligerent ship except with unpatriotic motives?

time of stress on an armed belligerent ship except with unpatriotic motives?

Remember there are at least four first-class neutral lines in operation between this country and Europe—our own American Line, the Holland-American Line, and two Scandinavian lines. At least some of these do not carry ammunition, while practically all, if not absolutely all, the belligerent ships carry cargoes consisting chiefly or largely of ammunition. If we were in war, we would regard enemy ships carrying ammunition to be used against our soldiers as floating arsenals, and we would destroy them if we could, no difference who was on them. And if these floating arsenals were armed we would unhesitatingly class them as auxiliary naval vessels.

Can you favor the granting of passports to Americans to travel on such vessels in the present war with self-evident unpatriotic motives? If we intend to maintain neutrality, should we not keep our people out of the war? Should we not prevent mischief-makers from dragging the rest of us into international difficulties and possible war?

If we wish to go into this war, we should go into it right. If we do not wish to go into this war, we should not declare an intention to defend mischief-makers. Has any American a "right" to drag his country into trouble? Is it a matter of "honor" to uphold an American in a traitorous act?

The writer of these lines is strongly proallies in this war. But he is for peace and neutrality for America. Is it not inconsistent to give apparent immunity to German plotters on American soil and at the same time dictate how Germany shall fight her enemies in distant seas?

**Charles Freemont Taylor.

CHARLES FREEMONT TAYLOR.

MARCH 3, 1916.

Hon, S. H. MILLER.

DEAR SIR: I am for honorable peace at home and abroad, and I am against the sailing of Americans on armed merchantmen.

Yours, with respect,

URIAH KIESTER, Box 64, Marienville, Forest County, Pa.

CHICAGO, ILL., March 7, 1916.

Congressman Miller of Pennsylvania, Washington, D. C.:

Rather had I be a toad than have record of your to-day's vote against administration's effort to protect national honor, and herein pledge my energies, on stump or otherwise, against your reelection to represent Americans in National Congress; so, having expressed my contempt, I feel better.

Col. FRED E. WINDSOR, Warren, Pa.

Mr. FRED E. WINDSOR, Warren, Pa.

MARCH 8, 1916.

Mr. Fred E. Windson, Warren, Pa.

Dear Sir: Your telegram of March 7, 1916, is so discourteous that I am under no obligation to take notice of it, but as I try to be a gentleman at all times, and as I am representing the county you live in, I think I should answer it.

No Member of Congress, so far as I know, was in favor of the McLemore resolution. When the Committee on Rules reported a special resolution to bring the McLemore resolution before the House, and also moved to order the previous question, I voted against both motions for three reasons:

for three reasons:

1. Because the resolution reported by the Committee on Rules was so framed as to prevent any amendment or the offering of a substitute.

2. Because I was opposed to the McLemore resolution and was opposed to bringing it before the House.

3. I was in favor of bringing before the House the issue of warning our citizens from traveling on any armed merchant ships of any belligerent power, armed either for defense or offense, and carrying munitions of war for any belligerent country.

I therefore, when the first opportunity offered, voted to lay the McLemore resolution on the table.

Your threat to oppose my reelection to Congress does not worry me as I had not expected to be a candidate for reelection, and therefore you can save your "energies on stump or otherwise" for some other warthy marries.

you can save your energies on stump or otherwise for some other worthy purpose.

You close your telegram by saying, "so, having expressed my contempt, I feel better."

Are you really sure, desiring always, as I have no doubt you do, to be a gentleman that "you feel better."

S. H. MILLER.

GREENVILLE, PA., March 7, 1916.

Hon. S. H. MILLER, Member of Congress.

Dear Sir and Friend: I am not writing to advise you how to vote on any question before Congress. You know better how to act than any of us countrymen, but I believe that 90 per cent of the people in your congressional district are in favor of the resolution warning fool Americans who want to travel on armed ships that they must do so at their own risk. But no matter what you may see proper to do, we believe that you will act in the way of promoting peace in our country and good will among men, and your friends will stand by you in any event.

If convenient, I would like to have a Congressional Directory of this Congress.

Congress.

With good wishes and high regards, I have the honor to be,
Respectfully, yours,

JAMES SE

JAMES SHEAKLEY.

McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. COLEMAN. Mr. Speaker, I am convinced that the President should not have written his letter to Representative Pou. But that letter, having been written, presents to this House, however irregularly, a question which we should squarely meet nowever irregularly, a question which we should squarely meet in the discharge of our duties. Shall American citizens be warned against traveling on armed merchant vessels of belligerent powers? This is the question with which we are now confronted. I submit that it is not before us in the regular order of procedure; for if the President honestly desired this question to be determined by Congress, he should have submitted it by messers with such correspondence as was recessary for it by message, with such correspondence as was necessary for our enlightenment, in order that it could be dealt with intelligently after full public discussion.

So long as the McLemore resolution was slumbering peacefully in committee there was no unwarranted interference on the part of this House with the diplomatic negotiations with foreign powers, and it does seem strange, in view of these conditions, that the President in such an unusual manner as by letter to a Representative of the Rules Committee should call to the attention of this House a question which, according to his own letter, lies so clearly within the field of Executive initiative. Lying thus clearly within the limits of Executive authority, the President should have fearlessly performed his constitutional duties in dealing with the problem without invoking action on the part of this body; and if, after having exhausted his efforts he failed to bring about a satisfactory adjustment, he then, following well-established precedents, should have submitted the question, with message and correspondence, to

This was the course pursued by President McKinley in 1898 when, in his message of April 11, he placed before Congress a detailed statement of his efforts to adjust the Cuban problem with the Spanish authorities, and after setting forth the facts bearing on the situation he continued:

The issue is now with Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action.

A similar course was followed by President Cleveland in reference to the boundary dispute between the Governments of Great Britain and Venezuela involving, as it did, the Monroe doctrine, and when diplomatic negotiations failed to bring a satisfactory adjustment with the English Government, he sub-mitted the whole question by special message to Congress and, among other things, said:

It will be seen from the correspondence herewith submitted that this proposition has been declined by the British Government, upon grounds which in the circumstances seem to me to be far from satisfactory.

And President Wilson himself in dealing with the Mexican situation, which, however important, was not, I take it, as grave a condition as that with which our Government is now confronted, felt impelled to place the facts before Congress for the information and guidance of the Members, which he did, in his message of August 27, 1913, in which he stated:

It is clearly my duty to lay before you, very fully and without reservation, the facts concerning our present relations with the Republic of Mexico.

And, in laying those facts before Congress, he further said:

We should earnestly urge all Americans to leave Mexico at once, and should assist them to get away in every way possible—not because we would mean to slacken in the least our efforts to safeguard their lives and their interests, but because it is imperative that they should take no unnecessary risks when it is physically possible for them to leave the

But in this instance, where the situation is even more grave, the President has not seen fit to lay the facts fully and without reservation before this House, and yet asks of its Members that they, without the facts to guide them, go on record on a question that may possibly involve our Nation in war. I for one protest against this irregular proceeding. Likewise do I protest against the action of the Rules Committee in trying to force the Members of this House to vote on a warning resolution containing provisions unsatisfactory to many who would support a warning

resolution carefully and properly drawn.

It is in truth a parliamentary trick. It is an effort to convey to the people of this country that this House is opposed to a warning resolution, which, in my judgment, is not true, and the vote to table the McLemore resolution can not honestly be so construed. There was no good reason for the President forcing the issue in the House, but, having forced it, the House should honestly express its opinion, and to do less than express its honest opinion is a fraud upon the people, both of our own and of foreign countries.

It is because I believe this House this day should vote its honest convictions with reference to a warning resolution that I voted against the previous question and against the adoption of the special rule. It is because I contend for full public discussion of this important question, with freedom of amendment, in order that the action taken shall be the true expression of the opinion of the membership in this House, that I vote against tabling the McLemore resolution.

Following the President's message of August 27, 1913, in fact on the very same day that the message was delivered, Americans were warned out of Mexico, where they had an unquestioned right to be under every principle of international law, and the President was sustained by the general public in this action, because it was taken in the interest of peace. Again, in March, 1915, just about one year ago, Americans were for the second time warned out of Mexico, and again this action was taken in the interest of peace. Of course our people had a right to be in Mexico, and, in my judgment, they have a right to be on armed merchant vessels of belligerent powers, but it does not follow that because we have the right that we ought to exercise it. Even if it be an unquestioned right, we might well forego its exercise at this critical period in the world's history, when half of civilization seems to have broken down, in the interest of that peace which it is our bounden duty to preserve when so many millions are beside themselves-maddened by the hell of war.

If we can forego rights in Mexico for the sake of peace, surely we can waive the right to travel on armed merchantmen of the powers now engaged in war for the same noble cause. I have heard much in this debate of maintaining every right of an American citizen and of upholding the honor and the dignity of our Government. No one wishes to lessen the dignity of his country or in any sense to besmirch its honor. Nor do I believe that waiving the right to travel on armed merchant ships, with a view to preventing the slaughter of the young men of our land, can in any true sense be considered as reflecting upon the honor or the dignity of our Nation.

Certainly it is physically possible for our citizens to refrain from travel on armed ships, and just why the President should so firmly insist on our citizens traveling on whatsoever vessels they please, in view of his warning them out of Mexico, is difficult to understand. But just why the honor of our country is so much involved in the action of this House on a warning resolution, in the judgment of the supporters of the President, is not easy to explain in view of the President's action in ordering our armed forces out of Mexico without obtaining that salute for which they were sent to that country.

The question before us is of the gravest importance. Our action this day may lead to war, a danger which in the exercise of a reasonable discretion may be averted. Under these cir-

cumstances surely this House should have every opportunity to discuss this measure fully on its merits, with the right to amend freely, so that the action finally taken would be the expression of the true opinion of this legislative body.

The tabling of the resolution puts it out of the way, but in reality settles nothing. The refusal to table brings the whole question before us without restriction, permitting us to give it that deliberate consideration which its importance demands. It is for this reason that I cast my vote against the motion.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. CHARLES E. FULLER, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. FULLER. Mr. Speaker, I am in favor of Congress passing a resolution warning all Americans not to take passage on armed ships of any nation now at war. I could not vote for the McLemore resolution unamended, and I do not think there are a dozen Members of this House who would do so. I do not see why the Committee on Foreign Affairs could not have brought in a simple warning resolution, on which Members could vote intelligently for or against. Laying this resolution on the table means nothing. It is not an expression of the views of the Members in any respect. It is a farce. On the same day the McLemore resolution was submitted, February 22, I also submitted a resolution, which was also referred to the Committee on Foreign Affairs, as follows:

House concurrent resolution 17.

Whereas it is manifestly unsafe, owing to the unusual conditions prevailing throughout the world, for American citizens to take passage on belligerent ships that are armed or that carry war munitions; and Whereas the taking of such chances at this time may involve this country in serious trouble in its efforts to protect American lives and integrates and

whereas it is the earnest desire of all our people that this country shall remain absolutely neutral as between the warring nations of Europe: Therefore be it

Resolved by the House of Representatives (the Senate concurring). That the President of the United States be authorized and requested to issue a proclamation warning all American citizens of the great danger of taking passage on any belligerent ship that is armed or that carries munitions of war, and requesting them, for their own safety and in the interest of this country's neutrality, to refrain from so doing.

A vote on that resolution would mean something, but it seems Members are to be denied the privilege of recording their votes on the direct proposition of warning Americans off from armed ships of belligerents. The people will not be deceived by any such hocus-pocus, and if anyone can get any satisfaction from the action of the House in this matter they are easily pleased. The people of this country do not want war; they desire to remain at peace with all the world. They are in favor of this country maintaining a strict neutrality, favoring neither one side nor the other, and of letting the belligerent nations of Europe settle their differences themselves, without our aid or hindrance. It is little enough to ask of all loyal Americans that they do not travel on armed ships of belligerents and thereby involve the country in international complications, pos-sibly leading to war. Patriotic citizens will not thus run the risk of plunging this country into the maelstrom of European war.

There is no controversy over the fact that if a belligerent ship is sunk by a submarine, and no lives of Americans are lost or imperiled, it is not our fight and we are not as a Nation under any duty or obligation in the matter. Then let us not put a chip on our shoulder and dare some one to knock it off. icans should, one and all, recognize the obligation to maintain the strictest neutrality and thereby the peace of this country. The horrors of war are before us each day in the daily papers, but God grant they may not come home to us in dread reality. Let every loyal American so conduct himself that war will not be imminent but impossible. No matter about the niceties of international law. There is no settled international law as to We should be Americans first, last, and all the submarines. time, and, although Congress has failed to pass any resolution warning American citizens to not take passage on armed ships of belligerents, every person of sense and of patriotism is now so warned and will govern himself accordingly. Thereby we shall not hamper, but aid, the President in maintaining the strictest neutrality and the peace of the Nation.

The Solution of the Liquor Problem.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BENNET. Mr. Speaker, one of the inequalities of our system of government is the lack of opportunity of the minor parties to get their views before the American people. Mine is not a prohibition district. But the 154 enrolled Prohibitionists have the same right to look upon me as their Representative as have the Democrats, Republicans, Progressives, Socialists, Americans, and Independence Leaguers. I have been asked to lay their views before Congress, as expressed by their most recent candidate for governor of New York State, former Gov. William Sulzer:

[Reprinted from New York Critic.]

A GREAT SPEECH BY A GREAT MAN—THE SOLUTION OF THE LIQUOR PROBLEM—FORMER GOV. SULZER'S MASTERLY ADDRESS BEFORE THE STATE'S PROHIBITION COMMITTEE, SYRACUSE, N. Y., DECEMBER 20,

Last year the Prohibition Party did me the honor to nominate me for governor. That evidence of its confidence in my sincerity was deeply appreciated, and although it was impossible, for reasons which are known, for me to carry its standard to victory, yet I did my best for the cause. I made a good fight, and the result shows I more than quadrupled the vote of the Prohibition Party.

The chairman, Mr. Bishop, in his report has told us that the impetus of that campaign has not abated, but that the fight has gone on apace. That is gratifying to me and must be to every friend of our principles, so that to-day we know no mistake was made last year, and that by reason of that struggle we are now stronger in numbers and stronger in influence than we ever were before in all the history of the movement.

ment.

So to-day I come to you as one of you, one of you for the right. I would not be true to you, and I would not be true to myself, if I did not say this, and say again, that in the future, as in the past, all that in me is—every effort of my being—will be exerted to promote the cause of prohibition, to forward the cause of morality, to advance the cause of temperance, until the light of success dawns and victory crowns our efforts.

not say this, and say again, that in the future, as in the past, all that in me is—every effort of my being—will be exerted to promote the cause of prohibition, to forward the cause of morality, to advance the cause of temperance, until the light of success dawns and victory crowns our efforts.

It is not my purpose this afternoon to make a prohibition speech. You know I can do that, and you know that now to do it will be as useless as carrying coals to Newcastle. Everyone in this meeting is as good a prohibitionist as I am They say I have a rule which I never break, and that is never to waste time carrying coals to Newcastle.

Since the last campaign many of you know I have been very busy in the fight for the cause. This year I have made more than 200 speeches for prohibition. In making these speeches I have traveled over 14,000 miles—from ocean to ocean—through the West, the Intermountain States, up and down the Pacific slope, and from Alaska to Mexico. So you see I am doing my share of the work in your own way. I know I am accomplishing some good, and that is all the reward I want.

My purpose this afternoon is to say something practicable—and that is always a difficult thing to do. The trouble with some of the advocates of prohibition is that they travel in a circle. That is a fact, is it not? You know, and I know, that we can not succeed going around in a circle. We never get anywhere. Those that see clearly say that the Prohibition Party has been traveling in a circle for 40 years, and if it does not change its methods it will continue to travel in a circle for the next 40 years. It is a matter of knowledge that if one is lost in the wilderness he was wander about in a circle, never finding his way out my the prohibition is the wilderness—going around in a circle—chasing its tail—dog fashion. If that is true we must strike out in a new direction. The half was a statesman.

So, being that kind of a prohibitionist, it comes quite natural for me to say I want to win. To that end I believe in following the li

They say I know, through and through, most of the Democratic and Republican politicians. That is true. The reason it is said I am not liked by some of them as well as one would wish to be liked is because their respective parties fail to adopt it know too much about them—and the man who knows the truth is always the man who is hated and feared—but secretly respected. Let me fell you that very few Democrats and preclous few Republicans are as prohibition that parties because their respective parties fail to adopt the prohibition that parties because their respective parties fail to adopt the prohibition when the way to victory. That's politics, and until we put politics as well as patriotism into prohibition we can never achieve success.

Now, a few words about local option as a remedy for the evils of themperance. There is not a man in this room, and there is not a man as a remedy is a fallacy. So there is not a Prohibition is an index of the who does not believe that a prohibition amendment to the Federal Constitution is an iridescent dream. Local option is local humbug, and the Hobson amendment to prohibit the "saie," and not the "manufacture," is as important as it is impudent.

Is as important as it is impudent.

Is as important as it is impudent.

Is as important as it is into the "saie," and not the "manufacture," is as important as it is into the "saie," and not the "manufacture," is as important as it is into the "saie," and not the "manufacture," is as important as it is into the "saie," and not the "manufacture," is as important as it is into the "saie," and not the "manufacture," is as important as it is impudent.

Is as important as it is impuden

"An act to raise revenue.

"An act to raise revenue.

"Be it enacted, etc., That there shall be levided and collected on the manufacture and sale of all malt, vinous, spirituous, and alcoholic liquors, except for mechanical, medicinal, and sacramental purposes, a revenue tax of \$1,000 a gallon; that all laws or parts of laws inconsistent with this law are hereby repealed, and that any violation of this law shall be a felony, punishable by imprisonment for not less than two years or by a fine of not less than \$5,000, or by both such fine and imprisonment, in the discretion of the court.

"Sec. 2. That this act shall take effect on the 1st day of January, 1917."

That's the bill. If it were the law, not a callon of the court.

"SEC. 2. That this act shall take effect on the 1st day of January, 1917."

That's the bill. If it were the law, not a gallon of intoxicating liquors will be manufactured for personal consumption. The bill is a prohibition measure with a vengeance. My friend, Mr. Candler of Mississippi, will introduce it in this Congress. Leading Members of the Congress approve it and tell us they will vote for it. They know it is the real solution of the problem. They have asked a few prominent men who stand for the true remedy to come to Congress and urge its passage.

The bill is constitutional. There is not a constitutional lawyer in the land who will tell you to the contrary. There will be a hearing on the measure in the House. The genuine prohibitionists are going to fight for it. A majority vote will pass it through the National Legislature. No President will dare to veto it. If the honest friends of prohibition will get behind this legislation, it can be enacted into law ere the present Congress adjourns. Then the victory is won.

This bill is the simplest way and the quickest remedy. It it were the law there would not be, from one end of the country to the other, a gallon of intoxicating liquor manufactured. But if, for the sake of argument, there was one gailon manufactured. But if, for the sake of argument, there was one gailon manufactured. He man who manufactured it would have to pay the Government \$1,000 and the man who sells it would have to pay the Government \$1,000 and the man who could afford to manufacture and no man could afford to sell alcoholic liquors under these penalities. They are prohibitive. If either the manufacturer or the seller failed to pay the tax, he would be guilty of a felony and punished by fine and imprisonment. All the power of the

Government would be invoked to this end, and the enforcement of the law would abolish for all time, within the confines of our country, the manufacture and the sale and the importation of alcoholic liquors.

What a remedy! Can anyone propose a better solution? Is it not simple? Yes. Is it not honest? Yes. Is it not quick? Yes. Is it not constitutional? Yes. Then why not be for it? Why waste time going around in a circle talking local option while a few of its advocates capitalize it for their personal aggrandizement? Why waste time wandering in the wilderness, like the children of ancient Israel, hoping that some day, in the next century, the light of common sense will dawn upon the old political parties and that then, and not till then, will they have the courage to give you a constitutional amendment?

Do you not know it follows like the night the day that if no intoxicating liquors are manufactured none will be sold? If none were sold none would be drunk. If none were drunk the evils for which intoxicants are responsible would be things of the past. So I say to you, if you want to stop the woes and the wants, the fears and the tears, the trials and the troubles, the cries and the crimes, and the miseries and the inhumanities that follow fast upon each other the indulgence in intoxicating liquors, you must stop the manufacture; and the only way you can do that is by a tax so high as to be effectually prohibitive.

Are you really for prohibition? Then here is the remedy. Do you want to abolish the manufacture of intoxicating liquors? Then here is the solution. Do you want to win? Then stand for this law—so simple, so honest, and so speedy. Put this measure on the statute books and I tell you that the manufacture and the sale of alcoholic liquors will be a thing of the past; that the struggle of the brave men and the heroic women who, in season and out of season, have battled for prohibition will be won; and under the dome of the Union sky there will not be a drunken man or a drunken woman in all the limits of

GOV, SULZER POINTS THE WAY TO SUCCESS.

GOV. SULZER POINTS THE WAY TO SUCCESS.

[Editorial from the Sentinel, the leading Prohibition paper in the State of New York, Feb. 8, 1916.]

Former Gov. William Sulzer is a man who does things. His record proves that. He has that indefinable quality of knowing how. While others wait Sulzer acts

On the opposite page of this issue we print the Sulzer bill to tax the liquor traffic out of existence. This bill has been introduced in the Congress of the United States by Mr. Sulzer's friend, Representative CANDLER, of Mississippi.

The bill was prepared by former Gov. Sulzer. He has given the subject careful investigation and consideration. The bill, in the opinion of those most conversant with the matter, is the true remedy for the abolition of the liquor traffic. In this connection read the great speech of Mr. Sulzer, delivered at the Prohibition convention at Syracuse, N. Y. last December.

Circle, It gets nowhere, We know that a prohibition amendment to the Constitution of the United States is a difficult matter to secure. Those who know most about it declare that it would take half a century for its accomplishment. Why wait? Why wander in the wilderness?

The Sulzer plan is feasible. There is no doubt, as Gov. Sulzer says, that the bill is constitutional. It can not be successfully attacked in the courts. The United States Supreme Court has declared over and over again that the power to Congress to tax is incontrovertible, and that the power to tax is the power to destroy. The Sulzer bill is the practical way to destroy the liquor traffic.

Mr. Nulzer wants to abolish the manufacture and the sale of induced the liquor traffic.

Mr. Nulzer wants to abolish the manufacture and the sale of induced the sale of the constitutional amendment, every antisaloon leaguer, every local optionist, and every friend of the cause should get together and line up in the fight for the Sulzer bill.

Mr. Nulzer wants to abolish where any friend of the cause will fead, what man can say more? What man can do more? Where can the prohi

advocate, and the best-equipped supporters.

Mr. Sulzer is the greatest campaigner in America. He stands squarely for the reforms we want. He has the faculty of presenting them more eloquently and more convincingly to the voters than any other man in the country. He knows what to say and how to say it. He knows what

to do and how to do it. He knows how to get the votes, and votes tell. Without the votes we can not win. With the votes we will win. Why not get the votes? Why not win? It is all very clear to us.

Let us help Mr. Sulzer in every way we can. If he is willing to lead let us agree to follow him. If we do follow him he will lead us to victory. "Sulzer and success" should be the battlecry of all friends of the reforms we have so much at heart from now on until the polls close in the campaign of 1916.

Mr. Sulzer is the Moses to lead us out of the wilderness into the promised land.

MINNESOTA FOR SULZER.

[Editorial from the leading Prohibition paper in Iowa, Feb. 22, 1916.]

The time has fully come when the people should know who are among the prospective standard bearers for the responsibilities and honors for President of the United States. This high office, like all American business, is on a competitive basis. The platform and the candidate plus the partisan spirit determine the business transaction.

There is great value in keeping in touch with the people. This the leaders in Minnesota are doing. They have placed the name of ex-Gov. William Sulzer, of New York, on their primary ballot as candidate for the Presidency on the Prohibition Party ticket. The name of ex-Gov. Foss, of Massachusetts, has also been put on the primary ballot. Already the cry is heard from all parts of the State, "Sulzer and victory." Minnesota realizes that now is the time to make votes for the party candidate. The Nation can be thoroughly aroused for ex-Gov. Sulzer before the convention and at that time his nomination will bring the prenomination campaign to a white heat and spread like a prairie fire from the St. Paul convention to all parts of the Nation.

Now is the time to concentrate on a candidate. Much work can be done that will greatly add to the strength of the campaign. Thousands of votes can be made and thousands of workers lined up who will be doubly prepared for campaign work. The leaders should speak out through the party papers and thorough concensus of opinion established as soon as possible. The principles that will be built into a platform as well as the man who stards on it is a matter of interest to every voter in the Nation, more especially to every prohibition voter going into the national convention.

SULZER FOR PRESIDENT.

SULZER FOR PRESIDENT.

[Editorial from the Illinois Banner, the leading Prohibition paper in Illinois, Feb. 24, 1916.]

The presidential campaign is approaching and the Prohibition Party leaders should be looking out for candidates that will lead on to victory. The presidential nominee must be, first of all, an honest, conscientious man, a true prohibitionist, and a leader who can command men and women and secure votes. The Prohibition Party has always been true to its first principles, but we have been too long playing politics. We must change our methods and go to doing politics.

Our leaders may differ—in fact, they do differ on some of the important matters at issue—but these differences will all be adjusted before going into the national convention. We must have a broad and firmly constructed platform, covering all necessary reforms—a platform upon which all reform voters may unite and elect our Prohibition Party candidates. There is no doubt but that Teddy Roosevelt will lead a goodly number of Progressives back into the Republican Party, but they will not all go with him. There are a large number of the members of the Progressive Party that will go into some other reform party when their party goes to pleces, as it surely will at the twin national convention in Chicago. These reform voters are nearly all prohibition ists in theory, and they will become prohibitionists in reality whenever they can see signs of success in the Prohibition Party. The American Party has been organized in a number of States on a platform almost identical with the Prohibition Party platform. In the State of New York the American Party was merged with the Prohibition Party by the Hon. William Sulzer, who was the Prohibition Party candidate for governor of that State a few years ago. Mr. Sulzer made a wonderful showing in his campaign, receiving five times more Prohibition Party by votes than had ever before been given a prohibition candidate in that State. All these things look favorable for the Prohibition Party to urleaders se

IX I AM FOR PROHIBITION"—FORCEFUL SPEECH OF FORMER GOV. SULZER, OF NEW YORK, AT PITTSBURGH, PA., FEBRUARY 22, 1916.

[Reprinted from the Post.]

[Reprinted from the Post.]

Mr. Sulzer spoke as follows:

"When they ask you why I am for prohibition you tell them because prohibition is the salvation of humanity; because prohibition is the remedy for the evils of intemperance; because prohibition will save 50 per cent of your taxes; because prohibition will solve the problem of the high cost of living; because prohibition will cut in half the expenses of government; and because prohibition is an economic reform that will work a revolution in the industrial development of our country.

"When they ask you why I am for prohibition you tell them because I am against slavery—the slavery of alcohol; because I know strong drink is the enemy of the human race; because I am for the home and against the saloon. Tell them, I say, that every believer in the family, that every rent payer, that every taxpayer, and that every friend of civic righteousness should be with us in the struggle we are making to abolish the slavery of strong drink. Tell them that every man in the

State who is opposed to the evils of intemperance should come to our support, and if he will do so victory will crown our efforts. Tell them I am doing my part, and that we must summon to the standard to do their part every man and every woman who believes in the fatherhood of God and the brotherhood of man.

"Tell them that prohibition is a moral reform; that prohibition refuses to temporize with vice; that prohibition will not compromise with immorality; that prohibition is a principle; that a principle is either right or wrong; that we know the principle of prohibition is right; and that every workingman, every employer of labor, every farmer, every taxpayer, and every law-abiding citizen in the country should be for prohibition, because it will do more for morality, more to reduce taxation, more for the social upilit, more for economic betterment, more to make the home happy, more to remedy the high cost of living, and more for the common weal, take it all in all, than any other agency in America.

for the common weal, take it all in all, than any other agency in America.

"Tell them I have carefully studied the question of prohibition; that I know what I am talking about; that prohibition has become an issue in politics; that prohibition will never be settled until it is settled right; and that if we present the issue without fear to the voters, it will win in every State in the Union.

"When they tell you about the revenue derived from the liquor traffic you tell them you think so much of your country that you want it to get out of the saloon business, revenue or no revenue, so that we can cut to the depths the evils of strong drink. Tell them that prohibition and only prohibition will do it. Tell them that the first step to success must be the divorcement of government from its copartnership with John Barleycorn. Tell them that we are in a fight for a great cause—the cause of humanity—and that behind this great cause we must put the church, and the school, and the home, and every moral agency in the State.

"When they ask you why I am for prohibition you tell them because I have the courage of my convictions; because I am against intemperance; because I do not straddle a fundamental principle; because I will not be a hypocrite; because I love my fellow man; because I believe the time has come for the Government to get out of the liquor business; because I want no man to enslave himself, to shackle his friends, to wildow his wife, and to bring sorrow to the homes of his fellow man; because I want no friend of mine to make his children dotards, and the children of his associates tearstained orphans; because I am opposed to any man doubling his taxes; because I know from experience that a dollar saved is a dollar made; and finally, because I want to o my share, in my day and generation, to lessen the woes and the wants of humanity; to end the crimes and the criminals of society; and to decrease the poorhouses and the penitentiaries of the State.

pecause I am opposed to any man doubling his taxes; because I know from experience that a dollar saved is a dollar made; and finally, because I want to do my share, in my day and generation, to lessen the work of sectory; and to decrease the poorhouses and the penitentiaries of the State.

"When they ask you why I am for prohibition you tell them that if the people were to save the money the indulgence in strong drink costs annually, and the same were utilized for public purposes, it would develop our great water powers, and give us light, heat, and power free of cost; that it would build the best dirt roads since the days of the Casars; that it would build the best dirt roads since the days of the Casars; that it would erect the most beautiful public buildings the eye of man has ever witnessed—all poems in stone—challenging the admiration of every lover of the beautiful; that it would dig the deepest most magnificent schoolbouses, for the children of women, ever modeled by the genius of man; and that, beyond all, and above all, it would make our people sober and industrious and efficient, and capable of producing in every avenue of trade, every channel of commerce, and every line of human endeavor more than 20 per cent of what they now produce, and, hence, to that extent, increase the earning and the saving capacity of our workers.

"When they ask you why I am for prohibition you tell them that I may for prohibition because I want our men and women to come out of the prohibition because I want our men and women to come out of the prohibition because I know from facts that those who earn their wage in the sweat of their face and spend it for strong drink are robbing their families by picking their own pockets; because I know from statistist, medical and physiological, that the use of alcoholic drinks is death to brain and brawn and fetters to hope and ambition; because I want to make the hearthside happy; because I want to make mankind free; because I want to make mankind free; because I want to make mankind fr

McLemore Resolution.

EXTENSION OF REMARKS

HON. HOMER P. SNYDER,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. SNYDER. Mr. Speaker, with regard to the present diplomatic difficulties which are confronting the President of the United States, and referring particularly as to whether or not the Executive should be supported in a time like this, it is my belief that when a critical situation arises in which the vested power is with the President, and he asks for support, and be-lieves he is right, I am of the opinion that he should receive that support and assistance, and that his hands should be upheld by every good loyal American in the country. It is my further belief that, he having the power and authority. Congress should not be asked to pass upon a question of this kind, but inasmuch as the request has been made, it seems to me there is only one thing to do in the interest of the honor and the dignity of the country and the self-respect of the individual in the last analysis, and that is to support the President.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. EDWARD E. BROWNE, OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. BROWNE of Wisconsin. Mr. Speaker, Senator Stone, who is the spokesman for the President upon this subject, in his speech before the Senate, March 2, said:

The President is firmly opposed to the idea embodied in this resolu-tion. He is opposed to any form of official warning to American citi-zens to keep off so-called armed merchantmen.

This being President Wilson's position, it follows that if Congress sustains the President by laying this resolution on the table and an armed merchant vessel is sunk and an American life lost, that it will be followed by a declaration of war by the United States.

Assuming that those who are opposed to the passage of this resolution are technically right in their contention that under a strict construction of international law a citizen has a right to travel on merchantmen that carry guns and is entitled to protection to the same degree that he would be if she did not carry guns, is it expedient at this time, when almost every vestige of international law has been ignored and swept aside vestige of international law has been ignored and swept aside by all the belligerent countries, when a state of anarchy is said to prevail on the high seas, for the United States to jeopardize its peace and safety by insisting on an abstract principle of international law, a right that would be of no practical benefit to anyone?

The right to travel on armed vessels, if such a right exists, is a right that is a survival of the age of piracy.

It is not a reasonable right or a right that civilized nations in an international tribunal would agree to to-day. The rule was promulgated under conditions now obsolete.

We can see how the Secretary of State, Mr. Lansing, viewed

this right when he addressed his note to the powers on January 18, 1916. He closes his statement with the following language:

My Government is impressed with the reasonableness of the argument my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser, and so treated by a neutral as well as by a belligerent (Government, and is seriously considering instructing its officials accordingly.

Sweden has already warned her people not to embark upon these belligerent armed ships.

WE HAVE SUBMITTED TO MORE SERIOUS BREACHES OF INTERNATIONAL LAW.

We have already submitted to the gravest breaches of international law from the belligerent countries for the sake of

We submitted to a breach of international law by England when she issued her paper blockade. When she mined the open North Sea in November, 1914, the Scandinavian countries When England claimed the right to take our peaceful merchant vessels, flying the American flag and carrying noncontraband goods to neutral nations, and not only searched them but took them before her prize courts, holding their cargoes for months before rendering a decision and demoralizing our trade with other nations.

We submitted to a grave breach of international law when England intercepted vessels carrying United States mail and

rifled our mail bags We submitted to these grave breaches of international law for

the sake of peace. As the President stated in his message to Congress on the 8th

of December, 1914: And especially when half the world is on fire we shall be careful to make our moral insurance against the spread of the conflagration very definite and certain and adequate, indeed

WHY DID THE PRESIDENT WARN AMERICAN CITIZENS IN MEXICO?

Our citizens in Mexico were warned by this Government to leave Mexico, and left their property which meant to many a loss of their savings for a lifetime and made them paupers, and for what reason? Because if our citizens remained in Mexico and were killed it would result in international complications and maybe war.

There was no question whatever but what our citizens had a right to remain in Mexico. No one would contend for a moment that under any interpretation of international law a peaceful citizen in the pursuit of his business could be molested in another country.

GOOD CITIZENS ARE WILLING TO WITHHOLD EXERCISE OF THEIR RIGHTS. The exercise of many individual rights have to be withheld when their exercise is incompatible with the safety and peace of a whole nation.

Blackstone has said in his Commentaries "that any man that exercises all his legal rights was a scoundrel."

In times of quarantine the Nation, under its great police power, quarantines a whole community, and if necessary a whole State, withholding for the time from the people their most sacred right, the right to move from place to place. The right of the few have to yield to the rights of the many.

In this case the rights of the few should yield to the safety

No country can complain of the United States warning its own citizens on a matter that concerns their own safety, and any citizen that objects to this Government warning him can not object to taking his own risk when he refuses the friendly advice of his country. Peace is now within our borders and should re-Congress can not afford to endanger that peace on the pretext of giving the President a vote of confidence.

ABUNDANT OPPORTUNITIES TO TRAVEL ON UNARMED VESSELS.

Any American citizen who desires to go to the European countries can travel on vessels of neutral countries, or if he desires he can travel on merchant vessels of the belligerent countries. He can do this without inconvenience to himself and with perfect safety, and be protected by the United States.

What more can any sane citizen of the United States want? There are a sufficient number of these vessels that do not carry guns to enable any citizen to travel to any part of the world without any inconvenience. What good reason, then, can any citizen of the United States give for wanting to become a passenger on a vessel of one of the belligerent nations that is carrying

If there be such a citizen who wants to endanger his own safety, threaten the relationship of the United States with the belligerent powers, I say that such a citizen is foolhardy, and that the indiscreet act and willful disregard of such a citizen for his country's safety should not be allowed to involve this

country in war. I do not believe in protecting the lives of these hazardous,

foolhardy citizens of the United States who desire to travel on armed vessels, if by so doing it will jeopardize the peace and safety of the United States with its 100,000,000 citizens and involve this country in war, which may result in the loss of life of many thousands and maybe millions of people.

The question of giving notice to merchant vessels that are not armed and do not carry guns has been the subject of much discussion by our State Department and other countries. I indorse the stand taken by the United States in that particular, and Germany and all nations have conceded that our demands

vessels bound for neutral ports, carrying noncontraband goods, and rifling United States mail than they would to go to war because a citizen of the United States insisted upon traveling on an armed merchant vessel of one of the countries at war and lost his life by reason of his recklessness.

Some of the merchant vessels carry 6-inch guns that will shoot 6 miles. For what purpose do they carry these guns? They certainly could surrender if challenged by a submarine just as easily if they had no guns. But there is no question that these merchant vessels which are manned with guns have those guns for a purpose, and that purpose is to sink a submarine if they see one. They thus, by being manned by guns, lose their status as peaceful vessels.

One of these merchant vessels would be more formidable than most of our war vessels at the time of the Civil War.

For a submarine to give notice to such an armed vessel before attacking it would mean that the submarine would put itself at the mercy of the armed merchant vessels. They would not know whether the reply would be a surrender or whether it would be the reply of a 6-inch gun that would send it to the bottom. A submarine is a mere shell, and a single shot from a 6-inch gun will send it to the bottom.

Submarine warfare is recognized as legitimate by all the nations in the world, and all the belligerent nations are using

submarines

The nations involved in the greatest struggle the world has ever known, each nation fighting for its very existence, practically observing no international law, for necessity knows no law. Is it opportune for us at this time to insist upon an abstract principle of what we believe is international law and upon which there is a great difference of opinion, and which law if established or conceded would be of no practical value?

Some contend that although they think the policy of the President is inexpedient, yet that the responsibility lies wholly with the President, and that Congress should refuse to have anything to do with the matter and can accomplish this by laying

the resolution on the table.

Precedents are cited, such as the policy of President Cleveland on the Venezuelan boundary, and claim that other precedents

sustain this opinion.

In answer to this I say, first, that I believe there is a great distinction between the precedents cited and the present situation. In the Venezuela difficulty over her boundary line President Cleveland held that England's possession was contrary to the Monroe doctrine, and set forth his position to Congress in a very able message.

In the matter we are considering President Wilson himself makes this a matter for Congress to act upon by laying the matter before Congress and asking for an early vote upon the resolution

and for a full public discussion and action upon it.

If, instead of asking this, President Wilson had asked Cons to refrain from any action upon the subject, that he was dealing with the situation himself, there would be more strength in the contention of those who seek to lay this resolution on the table under the contention that it is a matter that the President should deal with and not Congress.

If the resolution before Congress is laid on the table, what is the effect of our action, taking the President's communication to Congress and all, and interpreting them together, as they should The effect would be that it would establish the President's policy, and it would go before the people of the country and the world as a policy that Congress was in favor of as well as the President, and thus those who are against this policy and who vote to lay the resolution on the table simply because that would leave it wholly to the President, would be recorded as being in favor of a policy that they did not believe in.

Following this up further, if an American citizen is killed in an encounter between an armed merchant vessel of one of the belligerent countries and a submarine, Congress, of course, after its action in sustaining the President's policy, would have to sustain it further and declare war against the violator of that policy. Thus Congress would be declaring war upon a policy that it thought was wrong and did not believe in.

Again, if Congress sits supinely by and acquiesces in the President's policy, that it believes wrong and inexpedient, and if the policy carried out should result in the death of an American citizen, of course Congress would have to declare war.

The only opportunity of the Congress of the United States to have a voice upon this matter is now, before there is a breach between this country and any foreign country over the policy as enunciated by the President.

were right, and that matter has been entirely settled.

I believe that the American people would fight quicker on account of the outrages perpetrated in seizing our merchant.

It is asserted by some that our national honor is involved.

I do not agree to this. But I do assert that if we allow the President of the United States to go any further upon this pol-

icy our national honor will be involved, and we will have to sustain the President, whether right or wrong.

That is why I am glad this resolution is up at this time, and that is the strongest kind of a reason why this matter should be given the fullest discussion and Congress accept the full responsibility that the President has placed upon it.

I believe for one that the President's policy when he sent the United States fleet to Vera Cruz was inexpedient and unjustifiable. I believe many other Representatives shared this opinion. The matter came before Congress when the fleet was about to land at Vera Cruz. The President's policy, right or wrong, was sustained.

No one wanted our fleet to turn back. We accepted the lesser of the evils and pursued a policy which it is very doubtful Congress would have pursued if the President had consulted it before he committed this great Nation to that policy.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JOHN Q. TILSON, OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. TILSON. Mr. Speaker, under the general leave given to extend remarks on the McLemore resolution, I wish to submit a few words on some of the parliamentary phases, and to call attention to some of the difficulties and dangers of attempting to deal with such questions in a large representative body.

The evolution of parliamentary procedure for the purposes of shaping and enacting legislation is one of the most interesting studies connected with representative self-government. Through constant hammerings on the anvil of experience it may be said to have reached a high degree of perfection for the purposes intended. The difficulty in changing the rules of this House so as to make such changes satisfactory or even workable is the strongest possible proof of the wisdom of the essential features wrought out through the years of our history. With only a few exceptions, and these for the most part the result of ephemeral reforms, the rules of this House are admirably adapted to the consideration of legislative propositions and vitalizing them into laws within a reasonable time.

No one will be able to maintain, however, that the rules of this or any other parliamentary body are adapted to the proper consideration of difficult and delicate diplomatic questions.

After the action of the Senate and the House within the last 10 days no doubt remains on this point as to either of these great bodies. No such question should be brought here. Our Constitution wisely provides that the President shall be charged with the duty of conducting all diplomatic negotiations with foreign powers. When conclusions are reached in the form of treaties they come before the Senate for ratification or rejection. When When conclusions are reached in the form of treaties no conclusion can be reached and all the resources of diplomacy have failed to solve a problem vital to the Nation, then it devolves upon Congress to decide the issue of war. Until this stage is reached and this issue is presented, it is extremely unwise, harmful, and even dangerous for either branch of Congress to attempt action upon questions that are the subject of present negotiation between the Executive and foreign powers. I am willing to go further and say that the public discussion of such questions should be avoided as far as possible. We are many men of many minds and are sure to differ sharply. In matters strictly domestic, partisan discussion is not only not objectionable but often useful. In our foreign relations it is entirely different. Partisanship ceases at the water's edge. We all belong to one party there. We are all Americans and would so act in any Therefore it is not well to emphasize our differences in the presence of outsiders. Such a course is not calculated to make it easier to reach a favorable settlement of our differences with others.

The debate and vote in the House on Tuesday last proved all I have said. The so-called McLemore resolution, with numerous whereases, more or less relevant, and a notice to the effect that this Government withdraws all protection from its citizens while traveling on armed merchant ships of belligerents, was ostensibly the subject of the debate and action. It had been adversely reported by the Committee on Foreign Affairs, and under the rules of the House was laid on the table, which, in accordance

with the usual practice of the House, finally killed and buried it. Not so with this resolution. For some strange reason it was decided that it should be resurrected, then killed, and buried again

with more elaborate obsequies. Accordingly this was done.

The resurrection consisted in placing the resolution on the calendar. Under the rules of the House it would probably remain on the calendar for the remainder of the session without being in order for consideration. A special rule was necessary to make it in order. The rule reported by the Committee on Rules simply made it in order, fixed the time of debate, and left it to the tender mercies of the general rules of the House, which meant, if adopted as presented, that at the end of the debate the preferential motion to lie on the table would be made, which, if carried in the affirmative, would again dispose of the resolu-

To prevent any change in the terms of the rule, the previous question was moved, which, when carried, precluded any change If anyone desired to make a change in any of the conditions under which the McLemore resolution was to be considered, his only chance was to defeat the previous question. This was in no wise a test vote. Many who were opposed to the resolution or to some part of it or to a whereas voted against the previous question so as to have an opportunity to change the rule in such manner as to make it possible to amend the original resolution. The previous question being carried, there was no alternative on the next vote, except to vote for or against the rule as it was presented. Those who favored as well as those who opposed the original resolution on its merits but who believed it was not a matter in which the House should interfere should have voted against the rule. The defeat of the rule would have stopped consideration and the four hours of debate, as the resolution was not otherwise in order.

The rule having carried and the debate having been finished. the motion to lay the resolution on the table was made. Not being debatable or subject to amendment, the vote was immediately taken.

It is not unfair to say that probably no Member of the House, except the gentleman from Texas [Mr. McLemore], would have chosen just the form and substance in which the resolution was presented, but the vote was to decide whether it should be tabled as it was or further considered. Those voting against the motion to table might do so for a number of reasons. If it were desired to pass the resolution without change, or to make it weaker, or to make it stronger, or to cut off an objectionable whereas, or to make any other change, the necessary vote was "no" on the motion to table. Those who were opposed to the resolution and wished to dispose of it in the most expeditious manner, those who opposed the consideration of any resolution on the subject, and those who desired to comply with the expressed wish of the President that the already-defunct resolution be resurrected and then ceremoniously slaughtered, all joined in voting "aye" on the motion to table.

The consideration and final disposition of this resolution will not have been altogether in vain if it be accepted as a sufficient object lesson of the futility and danger of bringing into this House questions that are the subject of difficult and delicate negotiations between our State Department and foreign powers,

The Borland Amendment.

EXTENSION OF REMARKS

HON. GEORGE EDMUND FOSS, OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 10, 1916.

Mr. FOSS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a statement which has been prepared not by myself but by some one else giving the standpoint of the clerks in reference to the Borland amendment. It is a short statement and is as follows:

ECONOMIZING AT THE EXPENSE OF THE GOVERNMENT CLERKS.

[A statement by one of the clerks.]

[A statement by one of the clerks.]

The Appropriations Committee of the House of Representatives proposes to add one hour to the day's work of the Government clerk in Washington. It is not proposed to accompany this imposition with any increase in the clerk's pay, because the avowed object of this proposition is economy, the economy consisting in getting more work out of the clerk without added expense to the Government. It has been computed that the saving thereby effected will amount to \$4,000,000 per annum. Say that the average salary of the Government clerk is \$1,000. Then this proposition must contemplate dispensing with the services of 4,000

clerks, their work to be done by working the other clerks an extra hour. In no other way ann the proposed economy be realized.

The notate of the proposed economy be realized.

The notate of the grant of the grant on which the computation was based. But, presumably, it rests on the assumption that by increasing the length of the working day by one-seventh, or about 14 per cent, the Government will obtain an increase of one-seventh, or about 14 per cent, the Government will obtain an increase of one-seventh, or about 14 per cent, the control of the day will not be as productive as the average of the seven preceding hours. It will be worth less to the Government than the seventh lour even, and very much less than the earlier hours. This is not attributable to anything peculiar or exceptional in Government work or in Government clerks. It is a fact of the control of the day will not be as productive as the average of the seven be not attribute to anything peculiar or exceptional in Government work or in Government clerks. It is a fact of the day the control of the day will not be as productive as the earlier hours. This is not attributable to anything peculiar or exceptional in Government work or in Government clerks. It is a fact of the day to the control of the day to the demands upon the attention and intelligence, as in the case with most of the work done in Government offices. No clerk can run a typewriter or add columns of figures or compute perventages for seven hours condemands upon the attention and intelligence, as in the case with most of the day. It is impossible. The work will be less in quantity and of poorer quality. It will contain more errors.

The increased output, then, which will accrue if this proposition to impose an hoor's extra work on the Government their will only the production of the day will appear to the time set of the day will be a liberal ostimate to say that it would be even half of that, or 7 per cent; and of poorer quality. It will contain more errors.

The increased output, the

and appropriate to itself is worth a lot to the clerk and very little to the Government.

But it is said that the Washington Government clerks are at any rate better off than many other people both in Government service and elsewhere who are doing a similar class of work; and this, it is maintained, is wrong. They ought not to be better off. It is not, it seems, contended the Government clerk is any too well off, or that he has any more money or any more leisure than are needed to maintain a decent standard of living. It is not charged that he is living a life of luxury and idleness. All that is contended is that he is better off than some other people. That is attributed to him as a fault, apparently; it is, at any rate, regarded as a condition to be remedied. Well, it might seem that the right way to remedy it would be to improve the condition of the other people. But this alternative is not being considered. On the contrary, it is proposed to make the Government clerk worse off than he is, in order that he may be no better off than some others. The change will not benefit the others in the least. The extra hour added to the Government clerk's day will not be taken off of their day. They will work just as long as before and receive no more pay. But it will, it is true, be a step—properly speaking a backward step—in the direction of equality.

Do we want equality? And if so, how should we go about to secure it, by keveling up or by leveling down? The Socialists, at least those of an extreme type, would establish equality for everybody on a basis of equal pay; and they would not except Congressmen. But they believe it possible to establish that equality on a basis of liberal pay and of freedom from hardship, and they are agitating with that end in view. Most of us, probably, do not believe that their ideals are possible of realization and do not sympathize with their propaganda. But all of us believe that conditions of the working classes of all grades, including our Government clerks, ought to be improved so a

society, the goal toward which the best efforts of the best men and women are being directed. In this movement lies the hope and promise of a better civilization, of a better manhood, and a better world. In this march of progress the Washington Government clerk occupies a position far in advance of those who work in sweatshops, mines, and factories, and perhaps slightly in advance of the average of those who are employed in doing the same class of work as himself. Now, because he occupies this slightly advanced position, for that reason and no other—except the aforesaid economy—he is to be thrust back. Where is the justice of this? What will be gained by it? Who will be any better off?

If the object in view is simply to increase the output of the Government clerks and the efficiency of the Government service as measures of economy there are several ways of doing this which ought to be carefully considered and will produce better results than this crude method of adding one hour to the clerk's working day.

If the proposition to increase the bours is really right and fair, it ought to be possible and it is surely very desirable that the clerks themselves should be convinced of this. The Government clerks are reasonable beings and they are not trying to do the Government; and the spirit in which they do their work will be greatly improved if they feel that they have been fairly dealt with.

If a commission or committee, composed of men who have no axes to grind and no reason to curry favor either with the Government clerks or with outside elements, should be organized to consider the general question of improving the efficiency of the Government service, and this commission, after due consideration of all phases of the question and of all interests concerned should reach the conclusion that it was right and fair as well as economical to have the clerks work another hour, the clerks themselves would cheeffully acquiesce in that conclusion. They will not feel, as they will now, if this proposition goes through, th

The McLemore Resolution.

EXTENSION OF REMARKS

HON. FRANK PARK. OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. PARK. Mr. Speaker, there being but 120 minutes allotted to the Democrats to discuss the motion to lay on the table the McLemore resolution, and this time being largely given to members of the Committee on Foreign Affairs in eight-minute and fiveminute and three-minute periods, it was impossible for a new Member on that day to get recognition in which to express his Taking advantage of the leave granted Members to extend their remarks, as I see it, the sole question before the House is the question whether or not Congress should break away from their legislative duties and interfere with the prerogative of the President in the conduct of negotiations with Germany on their submarine policy or whether we shall attend to the business which the Constitution lays upon us of legislating for the people of the United States.

Believing that we should not interfere and that interference would weaken the arm of the President, I shall vote for tabling

the resolution.

When we come to the merits of the proposition, which we have no right under the Constitution to take action upon unless the President should lay before Congress the facts, after he has exhausted all negotiations, and ask them to say whether or not the condition confronting the people of the United States in regard to denial of the right of American citizens on the high seas be sufficiently acute to warrant a declaration of war, neither the allied forces nor the entente powers nor any neutral country denies the legality of the established principle of International law that citizens of neutral nations have the right to travel on armed merchantmen belonging to belligerent coun-And while this is the law, and our people are standing squarely on international law, believing it is their only safety to avoid entanglements and occasions for war, nevertheless detest that spirit in any citizen of the United States that prompts him, for purposes of financial profit or for pleasure, to enter the war zone of the warring nations on an armed merchantman belonging to a belligerent nation, knowing, as he does, and having full warning through the press and the discussions in Congress, that an armed merchantman belonging to one of the countries at war may be struck by a submarine torpedo and thereby create cause upon which this country might diplomatic relations with one of the warring nations.

I would never be willing to vote for war, which would hurl the sons of the South to death and destruction because some fool or idiot or nonpatriotic rascal who has no good reason to risk a test being made at this time as to whether or not his death on a belligerent armed vessel at the hands of a submarine

would be sufficient provocation for war.

In the event Germany, by her submarine policies, should sink In the event Germany, by her submarine policies, should sink such a vessel, I would be governed largely by the situation presented in each individual case. No one denies that circumstances might arise in which any American would vote for war rather than have his country disgraced or dishonored in the sight of the world. And, so far as the Congress is concerned, I do not believe in the bottom of the hearts of the Members that they would be willing to declare war on Germany solely for sinking an armed merchantman of Italy or England on which is carried some American fool or idiot, traveling for pleasure or for profit. The very fact that such a citizen so disregards the safety of his country, is so reckless of plunging his country into war as to cause such a situation for pleasure or profit to himself, would make me feel that such a citizen was unworthy of the protection of this Government. And while I would be willing to demand a proper indemnity to be paid to his family—if he was worth anything to them—from the country whose submarine occasioned his death, I would not be willing to risk the lives of those who have to fight the wars of this country to average the death of such a contemptible fool. But that is a matter which—while I have taken occasion to refer to it—does not concern us at this time. We need not anticipate war, for I trust that we shall have no serious occasion for it.

It is only among the possibilities that a serious situation shall now confront our people, and these matters of diplomacy of the Government are placed entirely with the Executive, in whose hands they have safely rested up to this moment, and in whose hands, I confidently believe, they may rest in the future, with honor and peace and safety and dignity to the Republic.

Preparedness.

EXTENSION OF REMARKS

HON. RUFUS HARDY. OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 10, 1916.

Mr. HARDY. Mr. Chairman, on the 22d of February I placed in the Record a letter of mine answering petitions and resolutions sent me on the subject of preparedness. A distinguished citizen of my district has written me a letter vigorously attacking my stand on the subject, and has asked me to place his letter also in the Record. As a courtesy to him I ask leave to extend my remarks in the RECORD by printing that letter.

The CHAIRMAN. The gentleman from Texas [Mr. HARDY] asks unanimous consent that he may be permitted to print in the Record a letter from a constituent. Is there objection?

What is the request?

The CHAIRMAN. The request is to print in the RECORD a letter from a constituent in reply to a letter which the gentleman from Texas wrote.

Mr. HARDY. It is a letter attacking my position. The CHAIRMAN. Is there objection?

There was no objection. The letter is as follows:

BRYAN, TEX., February 29, 1916.

Hon. Rufus Hardy.

Hon. Rufus Hardy.

Hon. Rufus Hardy.

Honse of Representatives, Washington, D. C.

Dear Sir: I am in receipt of your letter of February 19, which I had already seen liberally quoted in the press of our State. It would not call for a reply but for some errors of statement, which I attribute to the haste of preparation or to careless reading of the resolutions adopted by your constituents of this city.

The resolutions do not ask you to follow the President blindly. They distinctly declare "that the details of needed and efficient expansion of the Army and Navy are matters of expert and technical knowledge, which we do not possess, but we will cheerfully approve any plans which the President, the Congress, and their advisers may evolve in the wisdom of counsel." There is in this expression no hint of blind following of the President. On the contrary, it is a broad avowal of confidence in the high purpose of both the Congress and the President, and it distinctly recognizes the fundamental principle of coordination between the legislative and the executive functions of our Government.

"The policy of better national preparedness for defense as advocated by President Wilson" was the policy deliberately recommended in his message to Congress which the mass meeting was considering. It was not the policy which alarmists might infer by a strained construction of chance phrases in his later public addresses. I was myself a little disturbed by his reported declaration for the greatest Navy in the world, but, in the light of pending complications and portents. I am not so confident that he is wrong even in that. I call your attention to an Amsterdam dispatch in the newspapers of February 27, quoting a distinguished German naval officer, who affirms that "a majority of German series of the pressure of the protest of the pressure of the protest of the protest

man naval officers believe that a complete breach between Germany and America would be conducive to a far earlier victorious termination of the war," and concludes with the statement that "America, when defeated, would have to surrender all German merchant ships which she had selzed and also to pay all war costs of the central powers and their allies." For aught we know, similar views may be entertained by other warring nations.

But more portentous then any contemplation of war and tribute less than any contemplation of war and tribute

the war," and concludes with the statement that "America, when defeated, would have to surrender all German merchant ships which she had selzed and also to pay all war costs of the central powers and their allies." For aught we know, similar views may be entertained by other war.

In actions the world war and the statement of the control of the property of the control of the property of the control of the property of the prope

plan. If so, it will not be the first time that pride of opinion provoked the amusing exercise of distinguishing between tweedledum and tweedledee.

I am glad that you say: "I am for preparedness for defense, but not for aggression." In this statement of policy you do not differ from those of your constituents who have expressed themselves in favor of the President's program, nor from the President's profession of policy which is wholly for defense. But you differ from us widely in the interpretation of the statement in your views upon our present military strength and in the spirit of the movement for preparedness.

The question at issue resolves itself mainly into the degree of preparedness that may be required for national safety. As to this, I profess no exact knowledge; I prefer to heed the advice of those who are best qualified to know—the Secretaries of War and Navy, with their expert advisers—in the light of the revelations of the European war as to new and more powerful instruments of destruction and methods of warfare. I challenge the intimation of pacifists to the effect that our Army and Navy officers seek to plunge us info war, and that military training makes men bellicose. Washington, Grant, and Lee, our most illustrious soldiers, abhorred war; they fought only for defense as they conceived the cause of defense. What excuse is there for assuming that our present generals and admirals are more blood-thirsty or less patriotic than they? Physicians carn their living and win distinction by fighting disease, but they do not encourage disease. On the contrary, they do all in their power to prevent it.

What may have seemed sufficient preparedness two years ago is not sufficient now. I do not ignore the contention of the pacifists that the nations of the world who are our possible antagonists of the future will emerge from this contest exhausted in resources and too humbled in spirit again to take up arms. I simply dissent from that view because it is not the lesson of history; it despises the unvarying

their powerful navies and veteran armies they will be sorely tempted to replenish their exhausted treasuries from our fat stores. Besides there are other militant nations than those now at war, and there is the turbulent land to the south of us whose borders the President solemnly declares we have not a sufficient Army even to police.

Your letter is strangely contradictory. You say, "With all the strength et my soul I do believe we could repel the invaders—any possible invader of our shores—even to-day." Yet you favor the new National Guard bill, involving an increase of the militia in men and money to about the strength of the proposed continental army, an increase of the Standing Army to the extent of about 30 per cent, as proposed in the bill of the House committee, and "the greatest possible number of submarines." If we are already able to repel any possible invader, why should we increase either branch of the service? If I believed as you believe, I would not approve the slightest increase in either Army or Navy.

With all respect for your sincerity, please pardon me for saying that the intimation of an aggressive purpose upon the part of those who favor the President's program is unwarranted and that the fear of militarism is pacifist hysteria. Democracy has grown into the very 6be of our being. The vision of a "man on horseback" is but a dyspeptic nightmare. As well talk about the possibility of making the King of England an absolute monarch or of restoring the temporal power of the Pepoe of Rome.

But suppose, Mr. Hardy, that the future should fulfill the grave apprehensions of the President and his supporters in this policy. You will admit the fallibility of your thinking as well as of his. If he should prove to be wrong, he would do not worse than to put the country to the expense of a few hundred millions of dollars, If you should prove to be wrong, he would do not worse than to put the country to the expense of a few hundred millions of dollars, If you should prove to be wrong, he would do not wors

McLemore Resolution.

EXTENSION OF REMARKS

HON. JOHN H. STEPHENS. OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, I am a Democrat in politics. Democrats have always been in favor of peace and against war, and I shall vote against any policy that would lead to war. In my judgment, if the President forces Congress to permit armed belligerent merchant vessels to carry our citizens on the ocean, over the protests of Germany, he will provoke a war with that country.

Col. Roosevelt and Mr. Root are jingoes, but are in private life and can only invite ridicule by putting forth the false doctrine that this country is the moral guardian of the earth and bound to go to war when a foreign nation acts immorally; therefore they say that it was our Nation's duty to fight Germany for invading Belgium.

Mr. Wilson, as our President, is the Commander in Chief of our Army and Navy and represents the moral as well as the

Mr. Wilson, as our President, is the Commander in Chief of our Army and Navy and represents the moral as well as the fighting strength of this great Nation. He can, therefore, wield a great power for good or evil in this, our Nation's, great crisis. I had hoped that his great weight might be thrown on the side of peace. Why should he back up foolhardy Americans in recklessly and wickedly traveling on armed ships instead of unarmed ships?

It would be criminal to bring on a war over a very doubtfup point of international law, and against the will, the sound indegment, and the sober common sense of the American people. I am confronted by a most unpleasant task, for I must either oppose the Democratic President or sacrifice on the alter of partisan politics my own solemn sense of duty to my country and to my race. I am a patriot before I am a partisan. No good man will, in such a dilemma, long hesitate to take the side of peace, for it is written in the Holy Book "Blessed are the peacemakers, for they shall be called the children of God." Neither presidential persuasion nor coercion can force me to cash a vote that my conscience and my judgment tells me may force this Nation into a cruel, bloody, and wasteful war, and believe in the end will make our Republic a military autocracy or a Prussianized despotism.

Mr. Speaker, I believe that all Americans should be warned by their Government against traveling on the armed merchant by their Government against traveling on the armed merchant by their Government against traveling on the armed merchant by their Government against traveling on the armed merchant of the United States or the Secretary of State shall at the many force this Nation into a cruel, bloody, and wasteful war, and believe in the end will make our Republic a military autocracy of a Prussianized despotism.

Mr. Speaker, I believe that all Americans should be warned by their Government against traveling on the armed merchant of the United States or the Secretary of State shall at the many force this pare

vessels of belligerents. So believing, I would have voted for the McLemore resolution if the parliamentary situation would have been such that a direct vote could have been had. The committee did not bring it fairly before the House. The rule bringing it before the House prevented any amendment of the resolution unless we could have voted down the rule, and I so voted, but the rule was adopted; therefore the vote was upon the resolution as a whole. It included several preambles, and there were two distinct paragraphs in the resolution itself, I could and would have voted for the first paragraph, which related to warning American citizens off of armed merchant vessels. I could not, however, vote for the preambles nor the second clause of the resolution because it clearly prevented the President from having a free hand in his negotiations with Germany on the question involved in the last clause of the resolution; therefore I could not and would not vote for that clause, and the only thing remaining for me to do was to refrain from voting at all, which course I was reluctantly forced to adopt. The resolution itself is as follows, and will more fully show my reasons as above stated:

Whereas the Governments of two of the powers at present in war in Europe and on the high seas have informed all neutral powers of their intention to instruct the commanders of their submarine naval vessels to attack upon sight after February 29 all armed vessels of their enemies, whether such armed vessels are admittedly naval vessels or carry their armaments under the name and guise of "defensive armament for merchant ships"; and Whereas the Government of Germany, one of the powers which have so informed the neutral powers, has submitted to the Government of the United States photographic facsimiles of alleged secret orders of the British Government, which secret orders direct that such so-called "defensive armament for merchant ships" shall be used offensively and shall be manned and directed by naval officers and men of the navy of Great Britain, and that such so-called defensive armament for merchant ships and such naval officers and men shall be, so far as possible, concealed and disguised when in neutral waters and ports, with the evident intention to deceive; and
Whereas the only possible use for a "defensive gun" is the same as the use for an "offensive gun," namely, to shoot and, if possible, destroy or damage the enemy ship, whether submarine or other naval craft: and

use for an "offensive gun," namely, to shoot and, if possible, destroy or damage the enemy ship, whether submarine or other naval craft; and Whereas the Government of the United States has neither the desire nor the right to dictate to any of the powers whether they shall arm their merchant ships with guns or other armament or not and has no interest in the success or failure of such ships so armed in using their armaments in the only way in which they could be effectively used, namely, in destroying or injuring enemy submarines or other naval vessels; and Whereas the Government of the United States has no interest in the success or failure of the submarines or other naval vessels of any power in escaping or destroying such merchant ships so armed and has no desire or right to dictate to any of the powers what steps they shall take to protect their vital interests and pursue their legitimate belligerent operations; and Whereas the Government of the United States can not look upon any naval engagement between any armed ships of opposing belligerent powers, no matter how such ships, or any one of such ships, may be designated or disguised, as other than a naval engagement undertaken by each belligerent with the purpose of destroying the other belligerent ships and the lives of the people thereon; and Whereas while it is indifferent as to quibbles about such terms as "offensive" and "defensive" as applied to guns on ships of powers at war, the Government of the United States is vitally concerned to offer its own citizens the best possible advice, counsel, and assistance in avoiding the hazards of war; and Whereas the Governments of Germany and Austria-Hungary have given the Government of the United States is vitally interested in preserving chiefly nonbelligerent passengers will not be sunk—unless while resisting the right of visit and search—unless this certain that the nonbelligerent passengers can be removed to a place of safety; and whereas the Government of the United States is vitally interested in preservin

That the House expresses the determination of the people and Government of the United States both to uphold all American rights and to exercise care, consideration, and wisdom in avoiding actions which tend to bring American citizens and American interests into the zone of conflict where the passions of wav are raging.

Mr. Speaker, the following letter from a distinguished Philadelphian, Dr. Charles Fremont Taylor, to myself so well expresses my views on this subject that I attach it hereto and make it a part of my remarks. It is as follows, viz:

PHILADELPHIA, PA., March 3, 1916.

Hon. J. H. STEPHENS, Washington, D. C.

DEAR SIR: Can you imagine an American traveling in the present time of stress on an armed belligerent ship except with unpatriotic motives?

Inne of stress on an armed beligerent ship except with unpatriotic motives?

Remember there are at least four first-class neutral lines in operation between this country and Europe—our own American Line, the Holland-American Line, and two Scandinavian lines. At least some of these do not carry ammunition, while practically all, if not absolutely all, the belligerent ships carry cargoes consisting chiefly or largely of ammunition. If we were in war, we would regard enemy ships carrying ammunition to be used against our soldiers as floating arsenals; and we would destroy them if we could, no difference who was on them. And if these floating arsenals were armed, we would unhesitatingly class them as auxiliary naval vessels.

Can you favor the granting of passports to Americans to travel on such vessels in the present war with self-evident unpatriotic motives?

If we intend to maintain neutrality, should we not keep our people out of the war? Should we not prevent mischief-makers from dragging the rest of us into international difficulties and possible war?

If we wish to go into this war, we should go into it right. If we do not wish to go into war, we should not declare an intention to defend mischlef makers. Has any American a "right" to drag his country into trouble? Is it a matter of "honor" to uphold an American in a traitorous act?

The writer of these lines is strongly proallies in this war, but he is for peace and neutrality for America. Is it not inconsistent to give apparent immunity to German plotters on American soll and at the same time dictate how Germany shall fight her enemies in distant

And is not our Government straining a point by quarreling with Great Britain concerning her control of shipments to Germany? Are we not wonderfully prosperous? Is there not a ready market at good prices for everything that America has to sell? Then why should we quibble and make trouble with foreign countries and make ourselves "the most-hated Nation"? We can afford to be friendly with all, and make ourselves the most-beloved Nation.

Now, while "the world is on fire," is not a time to quibble, but to mind our own business strictly, keep out of all entanglements, and be sweet and cool.

Allow me to attempt to clarify the situation by according to

mind our own business strictly, keep out of all entanglements, and be sweet and cool.

Allow me to attempt to clarify the situation by presenting the following analysis:

1. It is perfectly clear that the intent of the international rule concerning merchant ships was to bar any armament that could be really dangerous to a warship.

2. Hence if the small gun permitted under that rule has now become an offensive weapon against the U-boats, then it must come within the intent of the rule. Therefore merchant ships carrying such guns must be regarded as naval vessels.

3. The President's position disregards this plain fact of the situation and clings to the technical interpretation of the international rule under conditions now obsolete.

4. Hence I believe it to be the duty of Congress to prevent this error of Executive judgment from placing the Nation in a position where the act of a single American in sailing on an armed beligerent ship might drag the whole people into war with Germany.

As a citizen loving peace and abhorring what is now going on in Europe, I ask you not to permit, with your approbation or with false ideas of "honor," traitorous Americans to jeopardize the peace and welfare of our country. Shall a matter so important that it may lead to war be decided by the people's Representatives in Congress or by one man in the White House?

Yours, for cool, common sense, while the "world is on fire,"

CHARLES FREMONT TAYLOR.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. MICHAEL K. REILLY, OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. REILLY. Mr. Speaker, for some time I have had the conviction that Congress should give expression to the sentiment, that American citizens should refrain from traveling on armed merchant ships of the warring powers, and my views as to the duty of Congress in this regard are well known and have been repeatedly expressed to my constituents in communications addressed to them, in response to letters of inquiry as to

my position on that question.

I believe, that pending the settlement of the law and the facts of the present submarine controversy, for American to travel on armed belligerent merchant vessels is highly unpatriotic and that those of our citizens who insist upon traveling on such ships have no regard for their own lives or for the peace and happiness of their country and are richly deserving of severe censure and condemnation.

The President of the United States has asked this House to give the various warning resolutions pending in this body a full and fair discussion and to come to a vote upon the same.

I voted for the previous question and for the rule giving the House an opportunity to vote on the proposition, because I believed, that the President's demand was a reasonable one and that every effort should be made by the House to accede to the same.

I was not in favor of the McLemore resolution as it was drawn, and I doubt if the said resolution, in its present form, would command the support of more than a small percentage of the membership of this House and I voted against the tabling of the resolution because I believed it was capable of amendment so as to express the views of this House, that American citizens should avoid traveling on armed belligerent merchant vessels, without interfering with the constitutional rights of the President to conduct our foreign affairs and without any denial or infringement of the right of our Government to assert to the limit the clear rights of American citizens under international

The tabling of the McLemore resolution prevented its amendment and also prevented the House from expressing its judgment on the clear proposition as to whether or not American citizens should avoid traveling on armed belligerent merchant vessels.

I am not in favor of surrendering to England or to Germany or to any other of the warring powers any clear rights of our

citizens under international law.

The question whether this House, representing, as it does, the people of the whole country, shall express its belief that American citizens should keep off of armed belligerent merchant vessels pending the settlement of the submarine controversy is not an international question, but rather a domestic question, and it resolves itself in the simple proposition as to whether or not Congress should express its views on a vital question, without any impairment of the rights of our citizens or surrender of national honor, and with the sole object in view of minimizing the possibility of a conflict between our country and the warring nations, as a result of some reckless, thrill-loving, unpatriotic American citizen insisting on exercising his right under international law, viz, the right to travel on armed belligerent mer-chant vessels without regard to his own personal welfare or the welfare of his country.

The President of the United States, in my judgment, does not want war, and the best evidence of that fact is his record in the past 18 months in keeping our country out of war. But if reckless and unpatriotic American citizens are to be permitted to continue to travel on armed belligerent merchant vessels without any admonition from Congress to desist from such imperiling conduct to themselves and their country, the President of the United States, no matter how much he may be disposed toward peace, may be compelled, as the result of the death of an American citizen, the victim of a belligerent sub-marine, to plunge this country into war.

The present European war is not our war and if it is necessary for our people to refrain from exercising some of their legal rights in order that this war may continue to be a European war, it would seem to be the duty of Congress to express at this crisis its judgment that the highest patriotism of the hour demands that American citizens should so conduct themselves as to minimize, if not entirely to remove, the occasions that might create a crisis and involve our country in war.

I can not subscribe to the belief that for Cougress to express the judgment that American citizens should avoid taking passage on armed belligerent merchant vessels would sacrifice the honor of our country or surrender any rights that our citizens have under international law or in any way hamper the President in his handling of our foreign affairs.

Our country warned American citizens to keep out of wartorn Mexico, and it has not been claimed, as far as I can learn, that by so doing we dishonored our country, surrendered any rights that our citizens might have in Mexico, or made more

difficult our diplomatic dealings with that country.

In warning Americans to keep out of Mexico the President simply took a wise and patriotic course to avoid, as far as pos-

sible, any occasion for trouble with our sister Republic. My vote on the warning question was the result of a firm conviction on my part, that an expression of the sentiments of Congress, that American citizens should refrain from endanger-ing their lives and the peace and happiness of their country by taking passage on armed belligerent merchant ships, was the best way to assist the President of the United States in his great and laudable work of keeping our country out of the European war, and entertaining such views I would be recreant to my duty, as a Member of this House, if I did not vote my honest convictions on this question.

A Nation Muzzled by False National Honor.

EXTENSION OF REMARKS

HON. CHARLES A. LINDBERGH, OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 10, 1916.

Mr. LINDBERGH. Mr. Speaker, where did the edict come from that says all America may be juggled in order to protect foolhardy or designing speculators whenever they wish to travel on armed merchant ships controlled by nations at war?

I can not discuss so important a subject without a few preliminary observations. The general impression is that truth is No one seems willing to buy it, and since it costs money to compile and present it in practical form to be read not much of it comes before the public in concrete form so that everybody can get at it. Everybody is therefore puzzled about existing

DECEPTION AS A FINE ART.

At no period in the world's history has deceit been so bold and aggressive as now in attempting to engulf all humanity in the maelstrom of hell. The whole world is sizzling in the "melting Sober men and women who measure the conditions with unselfish judgment and suggest sane action are pounced upon by the devils in command of the "hell-storm" in an attempt to have them labeled "cowards" and to force us into war over a standard of false national honor. Many of the highest officers of Government fail to sustain their moral courage for common sense, and add to the confusion of the excited by trying to support the demands of speculators.

Amid all this confusion the lords of "special privilege" stand serene in their selfish glee, coining billions of profit from the rage of war. They coldly register every volley of artillery, every act of violent aggression, as a profit on their war stock and war contracts. They commercialize every excitement, scalp in and out of the market alternately, taking a profit both ways

on a fluctuating market. Deception has paid a few so well that its practice has become a fine art, and is maintained by many ingenious schemes. Those who earn their living by the sweat of many hours of daily

the ways in which the schemers gather in the cream of the products of toll.

THE INVISIBLE ORGANIZERS.

toil have little time left after their work is done to figure out

We have been buncoed, and a majority of us do not know how it was done. "Invisible organizers" did it. Special privilege employs many agencies for the purpose; Rockefeller Institute, Carnegie foundation, and the like; besides, most of the great city press are maintained by them for that purpose. Their work is even stealthily being introduced into the public schools. They do not leave the tender minds of the children free to unselfish tutorship by parents and teachers, but use adroit means in an attempt to warp the youthful minds in a belief in special privilege. They also seek to control civic bodies and league them with the United States Chamber of Commerce. Their articles disclose no selfishness. On the contrary, they are commendable in terms, but back of it all are the "invisible organwho make use of the organization to further selfish ends.

The ordinary work of these civic bodies is beneficial. Most of the members are from the best citizens, acting with the best motives. Little do they know when they join of the deep-laid schemes of the "inner circle," or even that an "inner circle" exists. It is the underground lines that are used by the "inner circle" only that influence village and city councils, legislatures, and Congress to grant special privilege.

Mr. H. L. Day, of Minneapolis, takes a keen interest in the public welfare and has, at his own expense, exploited a plan of the "secret organizers." We are indebted to Mr. Day for a difficult as well as dangerous task in presenting in concrete form one of their methods. No man can present the truth about the "secret organizers" for special privilege without bringing on himself the venom of those interests and attack by that part of the press which they support. Mr. Day does not say that the power possessed by special privilege is or will be wrongly used. He clearly shows that it can be. I say, however, that if past experience is at par the power will be used. In fact, the evidence is conclusive that it already has been used. A letter written by Mr. Day upon this subject is akin to my discussion. I will insert it later as a part of my remarks. THINGS THAT STAGGER.

(a) The toiler, whether in field, shop, store, or elsewhere, wonders why the better mechanical devices and effective appliances for production do not effect a material reduction in the hours of labor and a substantial increase in pay. They should, but the results give but little of that advantage to the toilers

(b) For nearly two decades conservation propaganda has been rife. Forest reserves have been created, coal lands in the public domain have been withdrawn, and other things done for conservation, much of it wisely, but, strange to admit, we follow a most wasteful policy in another direction wantonly destruc-tive of conservation. It is in regard to certain kinds of export. Enormous material resources are taken from Mother Earth in America daily, much valuable labor expended upon them, and then vast quantities shipped to foreign nations to be consumed in destroying valuable property, as well as human lives-conservation for destruction.

We even boast when exports exceed imports, without a thought as to what we get in return. Unless we receive imports equal in value to exports, the first of a class not so readily produced in our country and the latter not so necessary to our consumption, it is not conservation. The export of valuable goods in excess of the import of valuable goods is a loss. It is merely done as a scheme for speculators to scalp profits on the one going out and on the other coming in. That practice is the underlying cause of the world's war. Except when we need foreign goods more than we do our own, the exchange is the reverse of conservation.

(d) The labor and risk of effecting exchanges should be paid for according to the service value. There should be no interest charge. Interest is usury. "Credit," said a banker, recently, addressing school children in this Capital City, "is the universal servant of mankind, carrying him along the road of bar-barism to civilization." Originally that was true. The original statement of it is old. Things have changed, however, and under present conditions this banker tried to fool the children.

THE RAVISHER.

"Credit," the most useful agent of commerce, except transportation, one day was met and ravished by Usury. Usury ever since has been carrying on his hellish designs to destroy civilization. Credit herself, through the base seduction of Usury, has become an object of commerce and is no longer the agent of civilization, but, on the contrary, hand in hand with Usury, is leading civilization astray and back to barbarism, making of the existing civilization base mockery. The truth is testified to in the European carnage based on industrial slavery, the offspring of Usury.

ELEMENTS OF PEACE.

In paragraphs a, b, c, and d is seen the cause of social difficulties. Give the toiler the proper results for his toil, practice a correct conservation; carry on the commerce, domestic and for-eign, to supply needs and not as a means for scalping indi-vidual fortunes, and abolish usury. To do those four things would place us on a peace basis and prepare us for war if war would place us on a possible should be forced upon us.

"PREPAREDNESS."

This word "preparedness," according to its most frequent present use, comes under the title "deception as a fine art." It was seized on by the war-munition lords as a substitute for "armament," because armament would suggest what was really meant. Like stealth was practiced when special privilege seized "reciprocity" as a title to make the public accept a fake reciprocity. A like trick was used again when the phrase "Federal reserve banks" was taken to make the public believe them national banks, when, in fact, a more powerful Money Trust was created.

HONEST PREPAREDNESS.

(a) The first step in preparedness is to abandon false ideals and instead exercise common sense in dealing with conditions. War is a violation of all law, God's as well as man's, and we must exercise judgment when such violation occurs and do everything in our power to extinguish the flames instead of adding to them. To seek to apply "national honor" with no thought of existing conditions and without view of the general welfare is weakness instead of strength, foolhardy instead of brave, traitorous rather than patriotic.

(b) We can not in the same breath cling to the Monroe doctrine and insist on interfering in the affairs of Europe and Asia. To claim that we can do both is too contradictory to require more than a bare statement to refute it. We may stick to the Monroe doctrine if we wish, but the other is absurd, and if we hold to it we will have to fight the world without a cause.

(c) The seas are highways for the world. In times of war there is disturbance. Common sense dictates a policy that would

steer us clear of the war, for there is opportunity to use the seas without. It is natural for warring nations to use every means to destroy each other. When merchant ships, armed or unarmed, are employed in carrying materials to prosecute war it is natural for the nation against which they would be used to destroy or capture such ships if it can. For Americans to travel on such ships is wrong. Surely the warring nations will resort to any means to exhaust each other. If citizens of neutral nations can protect them the owners will see to it that such travelers are aboard. A proclamation should issue that Americans on such ships travel at their own risk, except that negotiations would be entered into to determine their rights. Then patriotic citizens would be more willing to travel, because they would know it was at their own risk, whereas now none but moral cowards, thoughtless persons, or scheming speculators willing to take the risk for big profits, will travel on these ships. No American worthy of the name will, by any unnecessary act, jeopardize the welfare of a hundred million fellow Americans.

(d) Citizens living in foreign countries for profit making, speculation, or other purely private enterprise not coupled with a national necessity should take their own chances with the countries in which they live and not involve our country in controversy that might be cause for war. We should not follow false ideals, however old they may be. See what false ideals are doing for Europe. If citizens were discriminated against, negotiations should be entered into with a view to adjusting their rights; but no reason exists why the rank and file of Americans who develop and support America should support adventurers in foreign lands to the extent of making war to

protect their dealings.

(e) The manufacture for export of war material and death-(e) The manufacture for export of war material and death-dealing instruments is a crime not only against humanity but in contradiction of conservation. It furnishes other nations with material that may be used against us. It is a poor way to "preparedness" to manufacture war material for other nations. Special privilege wants that kind of "preparedness" because it gets pay for arming other nations, and then claims that we must arm to defend ourselves against those nations, so it can get pay for that, too. An embargo is a step to honest

and true preparedness.

(f) Loans to float foreign credits and bonds is the broker's kind of "preparedness." The war lords borrowed money to be used for destructive foreign war cheaper than our farmers, merchants, and manufacturers were able to borrow for constructive work at home. The fact that special privilege in America is leagued with special privilege in Europe is the only danger of drawing America into the war. In an article I published in September, 1915, I stated that, while this dealing in war bonds, credit, and war speculation would never be called cause for our being drawn into war, it still might get us in. The tenacity with which the subsidized press demands Government guarantee of safety to foolhardy or inconsiderate American citizens who travel on armed belligerent merchant ships is for the purpose of involving us in war to protect speculators. For the same reason the same subsidized press strains every point to scare the American people to provide a great Navy and vast Army. SAVING FOR PREPAREDNESS.

The banks loan a large part of the people's deposits to special privilege. By the use of the money speculators scalp from the people of this Nation several billion dollars annually. Here we can make a saving. Instead of letting speculators collect annually this vast sum from the people's earnings it may be retained for the people themselves. The Government can take a part to drill men, fortify and protect our coasts, pay all Federal taxes, besides give us financial service at less cost. Speculators went the high formula taxes are the high formula taxes. lators want the kind of preparedness that sows seeds of war and weakens us. Dealing in war material, loaning the people's deposits at war rates, and other speculation pays special privi-lege enormous profits, but it saps the people's life blood, weakens the morals, and leaves the Nation actually weaker in the end than no preparation at all. Special privilege seeks a dividend preparedness to pay its dividends. It would create dependence instead of independence. The Du Pont, Rockefeller, Morgan, and others, brand of "preparedness" would enormously increase taxes and otherwise burden humanity. Their kind of "preparedness" would give them control of an army to buildoze us—exactly what they want in order to maintain economic injustice and special privilege.

SPECIAL PRIVILEGE OPPOSES CONSTRUCTIVE PREPAREDNESS.

The most effective preparedness to meet every possible emergency is conservation of our economic resources which consist of the material natural resources and human energy applied to the best methods of production of serviceable commodities and of desirable things and in making them available to the people.

Along with that we may without burden provide every facility for successful defense. The world will never be conquered by the military, because that provides for nothing but destruction and invites for itself defeat. Therefore it has been alternate victory and defeat since the world began, with no permanent good established-merely a false herald and boast of the bully.

It can not change its cwn law. When it conquers to-day it creates the conditions for its own defeat to-morrow. Special privilege was born in militarism, maintains itself by militarism. now has its support in militarism, and under the guise of preparedness seeks to perpetuate its power. The first step to permanent preparedness is to oust special privilege.

CONSTRUCTIVE PREPAREDNESS

The people of this country have on deposit in the banks over \$20,000,000,000, on which the banks pay an average of less than 2 per cent interest. A part they loan to plain borrowers and charge them several times that rate of interest. The rest, except reserve, they loan to speculators. The latter get inside information from the big banks and scalp the market and fleece the people out of the difference in the price the producer gets and consumer pays. I have heretofore furnished the Record proof that we are losing in the purely speculative process, independent of any necessity of legitimate commerce, several billions of dollars annually.

I suggest that with several billion dollars annual saving that

could be made out of what we have heretofore been fleeced we would have the means to employ all the military service we need at as high pay to our men as is paid in the civil occupations. The same men could give a part of their time to civil occupations and be paid for it. We would save enough to provide the means to protect our coasts, build submarines, aircraft, and so forth, solely as a means for defense and not to save speculators in their foreign-market exploits. Part of the saving could also be used to buy up and store our surplus grain

products for use when we might be short.

When we rid ourselves of the scalpers there will be less military parade and little likelihood of war. The war is exhausting the nations involved, except, perhaps, Japan. They are all praying to God for an end to war. Once the war is over and they recover their reason, take an inventory of their losses, human and material, no war will be made against us from that source for a long time to come, if ever. We should be ridiculous to provide a great Navy that would be useless almost before we could complete it, when it is certain that we can protect ourselves against attack, which we can do by a well-drilled citizenship soldiery, proper submarine, aircraft, and coast defense. We do not want a professional Army and

In September, 1915, I published an article opposing war loans bein; financed in this country. At the time the city press was teeming with praise for the promoters of these loans and naturally did not want my article published, so I published it my-self, with the aid of the country press. I quote parts of the

article, as follows:

COMMERCIALIZING SENTIMENT AT THE RISK OF WAR.

COMMERCIALIZING SENTIMENT AT THE RISK OF WAR.

Speculation coldly watches. It takes advantage of every opportunity. We all speculate, but most of us are not professional. Only few of us ever seek to commercialize sentiment. These few are the professional speculators. They should be separated from the rest of us, just as certainly as wolves should be separated from the rest of us, just as certainly as wolves should be separated from sheep. "Commercializing sentiment" is the act of cool professional speculators only. I refer to them when I use the term speculator.

There is a heap of trouble on in the world. Europe is ablaze with war, with its consequent destruction and creation of race hatred. National sentiment is at its height. Every country realizes the seriousness of things and wishes to meet these trying days by solving in the best way possible its own problems and to hold its place in the affairs of the world with the least loss to its people and gain, if possible, and, if not already in the war, to keep out of it, if that is possible. The worlds "melting pot" is sizzling, however, and the problem is, What are we Americans going to do?

The public is often punished to the limit before it remedles an existing equil. That the existing capitalistic system has reached the limit of some bad practices seems probable from the result of it in Europe. We may not have fully learned the lesson, but the final settlement of Europe's struggle will teach us, whether we stay out of it or not. That struggle is the result of commercial greed, whatever other excuse may be given. * *

Strange it is that a people intelligent as we are, should permit our-

struggle is the result of commercial greed, whatever other excuse may be given. * * *

Strange it is that a people intelligent as we are, should permit ourselves to be taxed to support that war. We had no need of accepting any material part of that burden. It was the speculators, however, who saw an opportunity to use the same old tricks they have always used to reap profits for themselves and burden the tollers. In order to make the multimillionaires richer, they have not hesitated to mix our financial and business interests with those of the warring nations. They thus have forced our people into a position to bear much of the burden that belonged to Europe only. Unless this commercial greed ends, our part of the burden will be billions.

No one who can think rightly and takes the time to do so believes that the welfare of our people is supported by supplying nations at war with financial and material aid to destroy each other. All our interests are opposed to any such action. It matters not whether international laws permit it or not. It can not be required. Unfortunately, the national administration without protest, permits speculators to use the people's means to finance and supply the warring countries for war

purposes. The farmers, with better security, the wage workers, the industrial and business interests in our own country, all are forced to pay more for money to finance their legitimate constructive needs than the nations at war pay to finance their work of destruction.

* * The Money Trust, which controls the so-called Federal reserve banks, follows the same old practice that it dld before the Federal reserve banks were organized, and now with less risk to itself. Wall Street speculators still borrow on call at from 1 to 2 per cent and use the money to exploit the people. When parties not in the trust wish to borrow for legitimate business or industrial purposes they are forced to pay as high or higher rates than before. They are informed that it is caused by the war. The speculators have tied us to the war by this false financial system. Examples are continually before us that teach us the folly of those responsible for the new Federal reserve bank act, and other fakes of carlier days imposed by boss politicians.

Wall Street speculators often pay as low as 1 per cent and seldom above 2 per cent interest, while, on the other hand, the legitimate industrial and business interests have found it difficult to borrow enough money at any price. Whether we examine the press files for the last year or for 20 or more years, we find practically the same story of contrast between the interest rates the Wall Street speculators pay and what the industrial and business interests pay. A single transaction illustrates the practice, for it goes on the same way practically all the time. Take the press reports of September 16, 1915, as the example, for it is the story of every day. It is as follows:

NEW YORK MONEY.

"NEW YORK, September 16.

"Call money steady; high, 2 per cent; low, 17; last loan, 2 per cent; closing bid 11; offered at 2.
"Time loans casy; 60 days, 21 per cent; 90 days, 27 per cent and 3 per cent; six months, 3 per cent; mercantile paper 31 per cent and 37 per cent."

In the same press the following appeared:

REDISCOUNT RATE OF RESERVE BANK LOWERED.

In the same press the following appeared:

"The Federal Reserve Board in Washington yesterday approved a rediscount rate of 4½ per cent on commercial paper of 60 and 90 days maturity for the Minneapolis reserve bank. The rate heretofore has been 5 per cent for that class of paper."

The Federal reserve banks are the banker's banks, and, conveniently for the speculators, are prohibited from doing business with the plain people. The one in Minneapolis is in the greatest agricultural district in America, and, itke the other 11 reserve banks, is a feeder to the Wall Street operators. If member country banks, which the law forced to John, wish to borrow they must pay 4½ and 5 per cent and naturally charge those who borrow from them several additional per cent. "The nigger in the woodpile" they try to conceal by telling us that the speculators are prohibited from borrowing from the Federal reserve banks on speculative paper. The prohibition was purposely made to fool the public.

The Federal Reserve Board was educated to believe in the Wall Street ways, and compels the member banks, if they borrow from the Federal reserve banks, to pay 4½ and 5 per cent, knowing, of course, that they will not borrow extensively at those rates when they can borrow for less from the Wall Street banks, of which there is one or more in every large city. Consequently when the Wall Street rates are from 1 to 2 and 3 per cent. As the reserve banks will not pay the reserve banks. There it is most of the time unemployed. It is taken from the member banks so they can not loan it to the plain borrowers. That is exactly what Wall Street wants. The Federal reserve Board, the legal reserve of the country banks piles up in the Federal reserve banks. There it is most of the time unemployed. It is taken from the member banks so they can not loan it to the plain borrowers. That is exactly what Wall Street wants. The Federal reserve banks have large surplus the speculators can keep up their scalping. If they should be caught in a trap, their banks will

reduction of even 2 per cent interest on the vast sums owing would be an annual loss to the Money Trust control of ever a billion dollars and a corresponding saving to the plain people. So in order to prevent it and to keep interest rates high, to keep farm products the cheapest when the farmer sells, the highest when the consumer buys, to head off a rapid advance in farm lands, to prevent small business concerns becoming too prosperous, to avoid a reduction in the cost of living—yes; for all these purposes, and to facilitate big speculation, the Money Trust planned the war loans and pretended that it was done to help "the poor rarmer" and "the poor wageworker."

Bethlehem steel advanced over \$500 per share. In a single day it advanced \$70 per share. Did wheat and wageworkers get a raise? Not that anyone knows of.

A poem in October Puck hits the ball exactly on the head. The following are a few lines of it:

THE JOY IN WALL STREET.

THE JOY IN WALL STREET.

This is the war stock soaring high,
That brings all the joy to Wall Street.
This is the gambler, wild of eye,
Who shares with his broker, brisk and spry,
The profit in war stocks, soaring high.
That brings all the joy to Wall Street.
So this is the list of what they buy:
An orphaned infant's feeble cry,
A widowed woman's sob and sigh,
A field of graves where the dead men lic,
A shambles where thousands dally die,
A billion shells that in battle fly.
Gladness glows in the gambler's eye,
And he shares with his broker, brisk and spry,
The profits in war stocks, soaring high,
That brings all the joy to Wall Street.

That brings all the joy to Wall Street.

Wonderfully solicitous the Money Trust is for the "poor farmer" and the "poor wageworker" when it fears losing any part of its control. What an array it has of subsidized newspapers to sophisticate in an effort to mislead the public—that part of the press which has no direct answer to honest statements except to say "demagogue" of those who present them. By the cry of "demagogue" they scare many a timid person from the field of honest discussion. When they can not intimidate with the cry of "demagogue" they become peeved and resort to ridicule, funny stunts, and to petty misrepresentation. But what the subsidized press prints is not what harms the public most. The subsidized portion of the press merely seeks to draw the people into dark corners, where they can not see, in order that the field for profit making may be preempted by the Money Trust. The thing that ordinarily saves the Money Trust from defeat, however, is not the influence of the subsidized press, but factionalism among the people. It succeeds in arraying the interests of different sections of the country eagainst each other, political party against political party, and divides the parties into factions, creates jealousy among individuals and officials, and then barters and compromises them all with each other, until all except the Money Trust are losers. That is the way it wins its battles against the people.

An administration which remains silent when money is loaned at 1 and 2 per cent on call and less than 4 per cent on time to parasite speculators on Wall Street, while the Federal Reserve Board forces the Federal reserve banks to charge 4½ to 5 per cent to member banks, thus forcing the plain borrowers to pay as high as 10 per cent, and even more in some instances, is not entitled to the people's confidence.

No patriotic citizen who has given the matter thought enough to be familiar with the facts will be otherwise than deeply disappointed that huge foreign loans have been made by our people to enable Europe's peoples to murder and destroy, while the legitimate business and industrial interests of our own country are forced to pay much higher rates than these war nations pay. Have we come to a condition where we give greater consideration to nations destroying each other than we do to our own people? Do we not know that these nations will return again and again for additional loans, and that since speculators are now managing the game they will wish to follow it to the end? Do we not know that Europe will never pay?

No independence-loving people will saddle on the future generations so unjust a debt as is now being heaped upon those unfortunate peoples. They are paying now with their lives and their fortunes for the follies of the existing capitalistic system. When the war is over and peace is declared, they will come to their natural senses, for they are mostly thinking peoples. They will repudiate their follies and quite likely cancel their debts in a new way not satisfactory to the creditors. Furthermore, these very loans are not unlikely to be the means of getting us into the war, and are in some instances being pressed with that object in view. These same agencies are at work trying to create a sentiment for an extraordinary preparedness for war, offensive and defensive. Only the defensive is being advertised, for the, believe that they can commit the people to a defensive program on so great a scale that

an offensive to protect their war leans. That game is now being played to a finish.

The war loans, while they are not unlikely to be the means of involving us in war, will never be directly named as such. The subsidized portion of the press will be used in an attempt to trump up collateral incidents out of which to fan a binze of public indignation to the extent of creating a war fever. The pretense that these war loans are to help the "poor farmer" and the "poor wageworker" is the limit. Examine what happened to the produce market, independent of what it would be influenced anyway, by the war, and then examine what happened to the stock market and compare the two. Then you will see what the war loans were for. Both the produce and 'he stock markets will be found in the daily press.

The war bonds are certain to be repudiated within a few years. No one should buy these bonds with the hope of collecting them in full.

Some change in interest rates has occurred since the article was written, but the Money Trust control is supreme, as it will continue to be while the Federal reserve banks are governed as

James J. Hill, one of the ablest men in the world in many respects, urged the foreign loans. Mr. Hill, in addition to being

a great railroad man, is interested in the big banks. Note the following statement which the press attributes to Mr. Hill as baving been made March 1, 1916:

It seems to me that what the United States will need the most will be business courage, enterprise, and ample capital. There will probably be ample capital, provided that we have industrial peace and a reasonable assurance that there will be available foreign markets for our surplus products.

Note particularly, "There will probably be ample capital provided we have industrial peace." Mr. Hill can rest assured that there will be "industrial peace" if we have industrial justice, and not before. The people's deposits are in Mr. Hill's banks. His statement is in effect a threat that the toilers must not ask or demand industrial justice, and if they do, the deposits belonging to the people will be locked up. I do not criticise Mr. Hill for the statement, because under the special privilege plan of the world, to which he is committed, it would naturally be done that way. They propose to handle the people's deposits as they "damn" please. That is the effect of it. Parlor talk does not fit the occasion, but some unusualprofane emphasis is necessary to the extraordinary conditions prevailing. This hoarding of the people's funds for the benefit of the speculators by the Federal reserve banks and the implied threat of Mr. Hill and others as to what will be done with them if the people demand justice, and the fact that they diverted the capital belonging to Americans to Europe in order to squeeze greater rates of interest from borrowers for legitimate purposes at home, and to scalp billions of profits from speculation should "get under the skin" of every American and make him fight to the last "trench" this Money Trust combination.

The present executive administration seems to have given itself entirely over to the side of special privilege. Not only does it encourage aid to certain of the belligerents in material and financial ways, but it looks as if it is trying to force the other belligerents to make war a parlor game, in order that certain citizens who insist on jeopardizing a hundred million Americans by their scalping profits out of foreigners as well as out of us may have full control. I speak not for either side of this great European and Asiatic struggle, but for America.

THE FORD IDEA.

Special privilege received a sudden shock one day. A constructive genius made a fortune and created a precedent by making a very material division with his employees of the profits from a great business. Special privilege everywhere looked upon this act with amazement. It wondered if something was wrong with the man, for was it possible that even one man with so great a fortune could think of dividing with those who helped him produce it? But fact showed that there was nothing wrong with this man, for if there had been Henry Ford could not have come up from the poverty of a day laborer to become a great constructive genius. He had now scared special privilege, for would not the toilers everywhere demand the equal recognition that the Ford idea had voluntarily extended? Mr. Ford was despised by special privilege for this recognition of labor. But there was nothing it could do except to wait and watch for an opportunity to deal a blow from the dark.

AN ADDITIONAL FORD IDEA.

Industrial justice practiced by even one great concern was an example that was being watched from every corner of the world. Special privilege feared this, but suddenly another Ford idea flashed over the world. This time, however, special privilege was organized to oppose it. Its subsidized press had been working overtime to frighten the people with all sorts of false statements about war being forced upon us and getting us ready to expend billions of dollars for armament. So when the Ford idea of securing peace flashed over the world and preparations were made to get results the subsidized press trained its guns upon Mr. Ford in an attempt to make him look ridiculous. Everywhere the press belittled and ridiculed the Ford peace idea, Special privilege believed it had its revenge. But the peace idea grew day by day and has become a power. The man who faces the avalanche of ridicule hurled from thousands of newspapers without side-stepping his purpose is stronger than an army general or an admiral advocating billions for armament with no principle behind it except industrial slavery.

THERE ARE OTHERS.

William Jennings Bryan, too, because he dared to advocate methods to encourage good will, is ridiculed by the jingo press. Everyone of prominence who dares attempt to block rushing headlong into enormous expenditures for armament is the object of ridicule from the press, subsidized from the billions of profits

made by special privilege out of the game of war. Every time an Army or Navy appropriation bill is drafted this same press has found war scares to prepare the public to accept any kind of expense proposed. I have watched it for the last 20 years, and the war scares appear in the press headlines regularly in advance of the presentation of these bills.

We have expended on the maintenance of Army and Navy more in the last 11 years than any other country except England, but the war lords in America say that we are in the most pitiable condition and could not defend ourselves against a second-rate power. For God's sake, with all this expenditure they say we are helpless. If that is so, we had better not spend a dollar, for, without previous preparation, we twice whipped England, a first-rate power. With all her navy and a then considerable army, and an excuse she considered sufficient, England did not dare attack us when our States were at war with each other. If the great expenditure we have made has secured nothing, we had better conserve the people, at least, and not work them to death to pay for additional nothing. Preparedness? Of course we want to be prepared, but in the right way.

The problem of armament is one on which honest people differ as to what course we should pursue—extent and everything connected. No one claims that we should not be provided with means to defend ourselves. Unfortunately not only honest and patriotic people study this problem, but selfish interests do, too, and they do it for selfish reasons, which has confused the consideration.

As I have already stated, it is a practice of the selfish, when they start a campaign for graft, to select a captivating name, for a good name frequently wins even a bad case. Reciprocity was sprung as a name for an act which was a fraud upon the farmers and wageworkers. Federal reserve banks was selected as a name to make the public believe they were United States banks, but they were not. When the recent war loan was made it was pretended that it was made to make better markets for farm products, but it was really made to boom war stocks. Special interests wish to use Uncle Sam to further boom war stocks by armament, and they use the word "preparedness" as best suited to fool us.

Now is the time to exercise judgment instead of following fake sentiment. We must not, however, make the mistake of believing that common sense will prevail. It has not done so in the past and will not do so in all cases in the future. We know that mistakes have occurred and will occur again. We expect mistakes to be made in regard to preparedness. It is better to have enough than too little. We must give it rensonable consideration.

UNDERSTANDING OUR CONDITIONS.

We raise more food than we can eat; we produce more material suitable to be made into wearing apparel than we can wear; we have more of the material than is necessary for buildings to shelter us as well as to shelter whatever stock, goods, and provisions we need; we also have the material required to build factories, the machinery to put in them, and railways for transportation. We have exactly enough people to operate everything and the conditions to make us all prosperous. I say "exactly enough people" advisedly, for whatever our population, the industries may be adjusted to our needs. The resources are here for our use. By any sensible application and fair government, half a billion people could prosper equally as well as any lesser number.

Knowing that we have everything necessary to fulfill a better civilization, we should not despair of the future, as some do, because they claim we shall be compelled to meet the competition of impoverished Europe. If with all the natural advantages we have we do not possess common sense to deal with them and keep ourselves free from the conditions that have produced the existing result in Europe, we acknowledge a weakness which, if we do not overcome it, will lead us to ruin.

It is true that if we continue to let wealth govern by a system to strip the toilers of the profits from the products of toil we have a very ragged future before us, and in that event there is every reason why honest men and women might despair for the future of our country. We are operating practically under the same system that led Europe into its present difficulties. The only thing we lack to make it completely so is an immense navy and large professional standing army. There were honest men and women in Europe who for a long time prior to the war despaired for the future of the nations now in conflict. The people generally over there did not exercise their own power, but let crowned heads and aristocrats rule them, and now they are reaping the cyclone of despair, the result of fake economic practice, plus shining armor, conceit, and preda-

tory plotting. We have been equally lacking in dealing with economic facts; and if now, with the example of Europe before us, we fall into the same trap, when our troubles come, as they surely will, if we build a great navy and raise a large professional army, we will be more to blame for our fall when it comes than Europe is for its fall; for now that we know what has come to pass over there, we should not be blind to a similar if not a worse fate here from going on with and enlarging upon what has ruined Europe.

WE HOLD THE KEY TO OUR OWN SUCCESS.

Knowing that within our own continental domain we possess every material resource to supply actual necessities as well as desirable luxuries, why should we worry about foreign commerce? I do not claim that we should neglect it, but it is absurd to fight for it merely as a means of scalping profit for speculators. We should appreciate that the more we export the less we have remaining for ourselves, and that the only economic and true reason for exporting any of our products is to make a few exchanges for those things produced in foreign countries that we need and the likes of which we can not economically

The thing that has prevented our success and likewise the success of other nations is a lack of fight on the part of the average individual for the enforcement of public rights as against individual graft. The reward for the faithful to special privilege, and the rocky road forced by special privilege upon those who are faithful to the public, makes it difficult to secure men to fight for true reform, a reform that would substantially protect the workers of the world. Everywhere the man who stands for special privilege is rewarded. If he has been elected to act for the people, but instead joins secret cau-cuses, secret committee sessions, dark-corner agreements, and acts for special privilege, the stand-pat press will support him for reelection, and if, perchance, his traitorous acts have been discovered by the people and they defeat him, then he is provided an appointment to high office by the President or by some appointing power. He gets a high salary, paid for by the same people who defeat him. The special interest supports, through its press, and an assurance that if it fails to put him across, a good salaried public office from the appointive power higher up will be provided, is the graft not only to the one defeated, but an implied promise, always kept, that the appointing official will in any event also be taken care of. Though they are not all such, we too often find these traitors filling high-salaried office as a reward for special-favor support. That is why this Congress and this administration, as well as some that have been, stand discredited.

Too many think they must keep a pull with the appointing powers.

No graver problems ever faced the Nation and the world than those now presented. For this Congress and individual Members to fear presidential disfavor when Congress believes it should act seems to prevent Congress doing its duty. God forbid that party politics should control; but to the shame of Congress it does, and its failure to act and take responsibility is more than grave. If its failure should be the cause of this Nation getting into a war which could properly be avoided, every Member who has been instrumental in delay deserves the execration of his fellow men.

The secret and underground dark-corner work that is being done to maintain special privilege in the absolute control of the political organization is being brought to a climax through certain civic bodies, to which I referred in the first part of my remarks. I now submit the letter of Mr. H. L. Day, to which I referred. It is as follows:

MINNEAPOLIS, MINN., November 29, 1915.

Hon. CHARLES A. LINDBERGH, Washington, D. C.

Washington, D. C.

Dear Mr. Lindbergh: It was a resolution of yours that resulted in the Money-Trust investigation.

You also have alleged that the new Federal reserve banking system is now controlled by the said Money Trust.

It is to you, therefore, that I come with the evidence I herewith submit, because it has an important relation to the alleged control of the Federal banking system as well as to many other important national questions some of which are to be considered by Congress in the com-

Federal banking system as well as to many other important national questions some of which are to be considered by Congress in the coming session

You have said: "The Money Trust was and still is the invisible government, possessing greater and greater power as the years succeed each other." The following evidence will confirm that fact also:

My purpose at this time is to show how the Money Trust with the allied interests has been devising a new method to influence legislation and to perpetuate their control in government in this country since their old methods have been exposed and discredited.

This new method of influence and control is by means of so-called business associations. In our larger cities they are either the reorganization and centralization of business associations already in existence or new associations established with an effort made to absorb or elimi-

nate other like organizations in each city, in order that this reorganized or new association may be the large central organization in each city. In Minnesota they are now endeavoring, through the Minnesota Commercial and Civie Federation, to reorganize or establish so-called civie and commercial organizations in the smaller cities of the State.

They have established as a national organization the Chamber of Commerce of the United States of America, which is a delegate body from the local associations with headquarters in Washington, D. C., through which they can coordinate in the control of national legislation affecting privileged interests. In order that you may understand the motives and the methods of control through these various associations you must understand the way they are organized, the way they are controlled, and the way they are interlocked together.

In explaining the methods used and analyzing these associations, you must understand the way they have the power to accomplish their purpose until such time as that system is exposed and understood by the people and their Government. In the evidence herewith submitted, where names of individuals are given. It is with no intention of dealing with personalities, for we know that many persons are used by privilege to accomplish its purposes, without said persons knowing the purpose for which they are used.

By the evidence I will herewith submit, I shall show—

1. That privilege has organized a system of so-called civic and commercial organizations in various cities of our country;

2. That privilege has endeavored to eliminate all other important civic and commercial organizations in each city in order that its association may be the central and prominent organization;

3. That privilege control;

5. That these associations are organized on lines of special privilege and centralized control;

6. That these associations are being organized in the smaller cities of Minnesota by the Minnesota Commercial and Civic Federation, which is organized on lines

MINNEAPOLIS CIVIC AND COMMERCE ASSOCIATION.

The Civic and Commerce Association of Minneapolis, Minn., is an illustration of a local association organized and operated as described

The Civic and Commerce Association of Minneapolls, Minn., is an illustration of a local association organized and operated as described hereinbefore.

Assertion No. 1: "That privilege has organized a system of so-called civic and commercial organizations in various cities of our country."

This association was incorporated in December, 1911, by 52 citizens of Minneapolis, 35 of whom were connected as officers and directors of banks, trust companies, and transportation companies, as the diagram designated as "Diagram A" herewith shows. (See page 502.)

Assertion No. 2: "That privilege has endeavored to eliminate all other important civic and commercial organizations in each city in order that its association may be the central and prominent organization."

In the first annual report of the board of directors, in referring to the organization of the association, they say:

"A committee consisting of A. R. Rogers and E. P. Wells was then appointed to make a study of the work of similar organizations in other cities. This committee visited the Chicago Association of Commerce, the Cleveland Chamber of Commerce, and the New York Merchants' Association, which were recognized as leaders in the commercial and civic field, and made a minute study of the work of these organizations. Their report urged particularly an amalgamation into one organization of the various prominent civic and commercial bodies of Minneapolis. Negotiations with the Publicity Club, with the public affairs committee of the Commercial Club, and with the Minneapolis Traffic Association looking to an amalgamation were then entered upon, with the result that these associations were finally combined and the Minneapolis Civic and Commerce Association became the central civic and commercial body of the city."

As further evidence that this statement is true I quote from the directors' report of 1914, as follows:

"And there was no other agency in the city equipped to give such a variety of service."

Assertion No. 4: "That these associations are organized

Assertion No. 4: "That these associations are organized on lines of special privilege and centralized control."

Assertion No. 5: "That the by-laws are so constructed that the powers that organized can continue to perpetuate their control."

The incorporators appointed the first board of directors, and the names and periods of service are given in the articles of incorporation. The directorate to consist of 39 members, 13 for one, 13 for two, and 13 for three years.

The by-laws are drawn on lines of special privilege, in that they give to the sustaining membership, consisting of persons, copartnerships, and corporations who contribute not less than \$500 per annum (and some are said to contribute as high as \$5,000 or more per annum) the special privilege "apart from all other members, to elect five of the directors annually." privilege "apart from all other members, to elect five of the directors annually."

The by-laws divide the active membership into three classes:

1. Individual members who pay not less than \$10 annual dues.

2. Copartnership and corporation members who pay not less than \$50 annual dues.

copartnerships, and

3. Sustaining members, consisting of persons, copartnerships, an corporations who pay not less than \$500 annual dues.

Because of the special privilege granted to the said sustaining members in the election of directors I will refer to them as "special-privilege members". special-privi-

lege members"

The diagram herewith (Diagram B) illustrates how the by-laws provide for the nomination and election of the 13 directors annually. (See page 503.)

That you may clearly understand this diagram you will remember three things:

1. The directors were originally appointed by privilege.

2. Many individual members are officers or employees of privilege, and many other individual members are in sympathy with privilege.

3. "Special-privilege members" are organized; they know what they want; and the general membership are unorganized and unaware of

want; and the general membership are unorganised and the scheme.

The directors nominate the regular ticket (the five nominees by a committee of three "special-privilege members" and the eight nominees by a committee of five individual members). The directors, however, appoint these committees (let me appoint the nominating committees and I will let you do the voting).

There is provision for an independent ticket of 5 that may be nomi-

There is provision for an independent ticket of 5 that may be nominated by a committee of not less than 15 of these "special-privilege members" and for an independent ticket of 8 by a committee of not less than 50 of the general members (note the large size of these com-

If the independent tickets are not nominated, then it has been possible for the directors to dictate the nominations.

If the independent tickets are nominated, then of the 26 nominees "special privilege" and the directors have dictated 18, general members

"Special privilege," exclusively, elects five directors and can concentrate all of their votes (except a complimentary vote on the five) on

such of the other eight they may want because of a provision in the by-laws for cumulative voting, as follows:

"Any members so desiring may cast as many votes for one or more candidates at the annual election as shall not in the aggregate exceed the number of directors for whom he is entitled to vote at such election." (By-laws, art. 2, sec. 13.)

DIRECTORS REVISÉ ARTICLES OF INCORPORATION AND BY-LAWS.

After one annual election the plan of election was changed through a revision of the articles of incorporation and by-laws.

The second annual report says, in part:

"The experience of the organization during its year and a half of existence clearly indicates to the directors the advisability of certain fundamental changes in the charter and by-laws.

"The number of the board of directors has been reduced from 35 to 18.

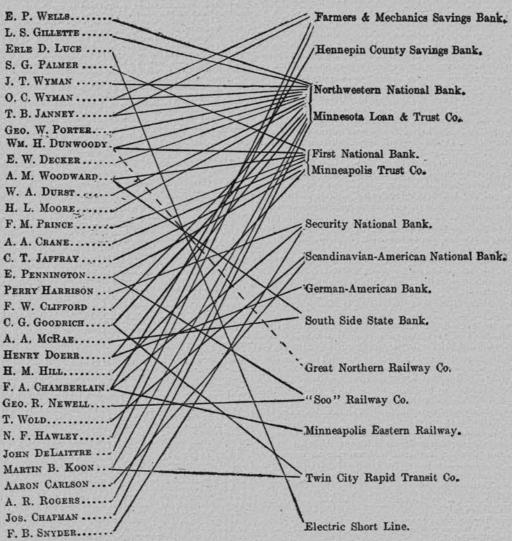

"Experience in other cities has shown that the members of a smaller board of directors feel more directly their responsibility and that they are more responsive to the influence of the membership.

"The directors are confident that these changes will greatly strengthen the organization in the minds of the community and will simplify its operations."

operations."

The outstanding characteristics in the changes in the directorate and the mode of electing directors are a directorate smaller in number

DIAGRAM "A."

W. H. Dunwoody was a stockholder in the Great Northern Railway Company at this time and soon after became a director.

The First National and Security National banks have consolidated since this time.

(easier to control), simplified method of nominating and electing (more sure of results in behalf of "special privilege" in perpetuating control).

Under the revised charter and by-aws the classification of membership remains as before, except "special privilege" has been enlarged and additionally provided for as follows: The individual members who pay not less than \$10 have one vote in electing directors; members who pay not less than \$500 have three votes; members who pay not less than \$500 and up have five votes. (Revised by-laws, art. 2, sec. 17.)

You will notice that "special privilege" in this association always has to do with the election of directors. You will also note, as said before, that the directors represent privilege, many individual members are allied with privilege, and privilege is organized and the general members are not.

Diagram C herewith illustrates how directors are nominated and elected under the revised by-laws. There is one regular ticket containing 12 names—6 to be elected. (See page 503.)

The directors nominate the ticket by a committee of five appointed by them—two "special privilege" members and three individual members (as stated before, let me appoint the nominating committee and you can do the voting).

The by-laws provide that an independent ticket may be nominated in that "not less than 25 members may nominate 1 or more persons." If there be such a ticket, it shall be headed "Independent ticket." (Revised by-laws, art. 3, secs. 5 and 6.)

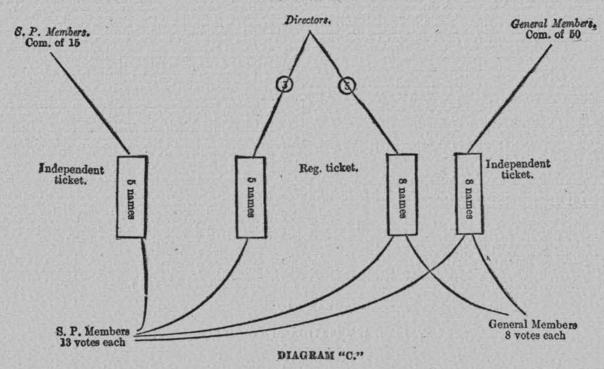

The provision for cumulative voting is also contained in the revised by-laws.

by-laws.
You can see that the directors are able to dictate the nominations on the regular ticket; that organized "special privilege," with cumulative

NOMINATIONS.

1 vote

voting, can get what they want; that an independent ticket would only strengthen "special privilege" and weaken any opposition by dividing the opposition.

So much for the control by "special privilege" as provided in the bylaws. Now let us consider what additional advantage they have in practical operation.

practical operation.

The directors are elected at the annual meeting of the association held in October. This annual meeting has customarily been held in the main dining room of one of the hotels of Minneapolis that will seat probably not over 500 people, and when you note that the membership of this association at this time in 1915 is said to be about thirty-three hundred in number and that those who are absent from the annual meeting do not vote, you can readily see how the general membership is unprovided for and "special privilege" has an additional advantage.

THE BY-LAWS ARE DRAWN ON LINES OF CENTRALIZED CONTROL.

unprovided for and "special privilege" has an additional advantage.

THE BY-LAWS ARE DRAWN ON LINES OF CENTRALIZED CONTROL.

The directors absolutely control and run the association.

The directors fill the vacancies in the board of directors; they elect all officers, agents, or managers of the association; they create divisions and departments, appoint standing and special committees, make rules and regulations in addition to those contained in the by-laws, and change such rules and regulations at pleasure; they pass upon committee reports; and they determine what reports shall be published.

The revised by-laws, article 8, section 10, say;

"No standing or special committee shall make any report or represent the association in the advocacy of any project without the specific confirmation of the board of directors or executive committee."

The first articles of incorporation say;

"The board of directors shall act as a clearing house for the discussion and adjulication of such matters as may be brought before it."

(This last paragraph is not in the revised articles of incorporation, but I have found no evidence in the revised articles that changes the spirit of this paragraph or reduces its power of control.)

Assertion No. 6:

"That these associations pretend to represent the community in which they are located, and because of such alleged representation they go before city councils and State legislatures to secure what they want from these representatives of the people."

The first articles of incorporation of this association say:

"The purpose of the corporation and the nature of its business shall be to advance the civic and commercial interests of the city of Minneapolis and to promote the general welfare and prosperity of the city and tributary territory, and to that end and for that purpose."

The revised articles say:
"The purpose of this association shall be the advancement of the civic, municipal, and commercial interests of the city of Minneapolis, the promotion of the general welfare and prosperity of the city and its tributary territory, and the stimulation of public sentiment to these

tributary territory, and the stimulation of public sentiment to these ends."

The directors, in their first annual report, say:

"A complete account of the service rendered to the community by this association can not be given. Its influence in many directions, intangible though it may be, is none the less effective. The sum total of this influence is important in the progress of the city."

The third annual report of the directors says:

"The good influence of the association upon the civic life, the business life, and every activity that has for its purpose the betterment and enlargement of Minneapolis can not be questioned."

The retiring president, in 1914, said:

"The organization is a dominant factor in the life of the city. It has, through its freedom from prejudice, its unselfishness, and its accomplishments, intrenched itself in the affections and esteem of the people of Minneapolis."

The president of the association, in his annual address in 1913, said:

"Our work this year has covered a wide range and has brought us in close relationship with the Congress of the United States, our State legislature, our city council and county commissioners, and in almost every instance we have been successful in securing from these governing bodies the action and legislation our association desired, and we have been recognized in all cases as voicing the public opinion of Minneapolis."

You may ask me to give some specific instances of their work and their action an questions where ageingt the action and legislation their cation are general the

You may ask me to give some specific instances of their work and their action on questions where privilege is affected as against the people.

My purpose, as I have before stated, is to show a system and a power of control. I will, therefore, not enter into details in regard to the work or action of this association during its existence, because—First. It is unnecessary to do this to prove the power of control; and, Second. It would only divert from the main issue; that is, the power of control by privilege through these associations.

THE ST. PAUL ASSOCIATION OF COMMERCE.

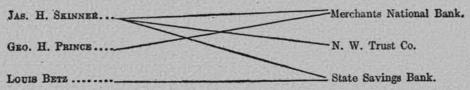

The St. Paul Association of Commerce, St. Paul, Minn., is a second illustration of such a local association organized as described.

This association was incorporated by three citizens of St. Paul and the articles of incorporation filed December 5, 1911.

DIAGRAM "D."

ST. PAUL ASSOCIATION OF COMMERCE.

INCORPORATORS.

The diagram "D" gives the names of the incorporators and their alignment as officers and directors with banks and trust companies in

The diagram "D" gives the names of the incorporators and their alignment as officers and directors with banks and trust companies in St. Paul.

The articles of incorporation name the 32 citizens who composed the first board of directors, and specifies that the said board of directors shall adopt by-laws for the government of the association.

Under the by-laws for the government of the association.

Under the by-laws the active membership consists of individuals, firms, and corporations.

Article 4, relating to membership, says:

"Candidates thus proposed shall be voted upon by the board of directors; a majority vote of the directors in attendance shall elect.

* Any person or any firm or corporation, through its representatives, may hold as many memberships as may be applied for and approved by the board of directors." (Memberships cost \$50 cach. Only a matter of buying enough memberships for privilege to control in elections.)

Article 8, sections 3, 4, and 5, says:

"The board of directors shall conduct the affairs of the association, shall make such appointments as shall seem to it necessary for the welfare of the association, and "shall for the second annual election and each annual election thereafter, at least 40 days prior to said election, create a committee of five whose duty it shall be to nominate officers and directors to be voted on at the succeeding annual election."

You will agree with me it is unnecessary to go into further detail as to the government of the association to show centralized control and ability to perpetuate that control by privilege

MINNESOTA COMMERCIAL AND CIVIC FEDERATION.

MINNESOTA COMMERCIAL AND CIVIC FEDERATION.

Assertion No. 7: "That associations are being organized in the smaller cities of Minnesota by the Minnesota Commercial and Civic Federation, which is organized on lines of special privilege and centralized control."

This association was incorporated February 23, 1915, by four citizens of Minnesota, and the articles of incorporation name the first board of directors, consisting of 15 members from various cities and towns of the State.

INTERLOCKING DIRECTORATES.

This directorate interlocks with the Minneapolis Civic and Commerce association, in that A. R. Rogers is a director in both, and with the St. 'aul Association of Commerce, in that E. S. Warner is a director in

The articles of incorporation say:
"Its general purpose shall be to effect cooperation between civic and commercial clubs in town and country for the general welfare and prosperity of the State and its municipalities."

The management and control of the corporation is vested in the board of directors. They appoint the officers and committees and they also determine who shall b come members of the association.

The membership consists of two kinds—organization and individual. The representation of these members in the federation is undemocratic and on lines where it is possible for privilege to perpetuate control. (I have not yet succeeded in getting the by-laws of this federation, and therefore am not at this time able to go into further detail in regard to its operation.)

Assertion No. 8: "That these associations are members of the Chamber of Commerce of the United States of America."

The board of directors of the Minneapolis Civic and Commerce Association, in their first annual report, say:

"Representatives of the Minneapolis Civic and Commerce Association were present and took part in the organization meeting of the Chamber of Commerce of the United States of America. This association has been honored by the appointment of E. P. Wells, its vice president, as a member of the board of directors of the national organization. This national body already includes in its membership several hundred of the prominent commercial and civic organizations of the country and it promises to prove of large value, through its centralizing and correlating functions, to these organizations."

In the third annual report they say:

"National legislative matters have been acted upon by the board of directors and its support has been lent to the national chamber of commerce in behalf of measures whose objects were approved."

In order to fully comprehend the meaning of these local associations and their relations to the national association, the Chamber of Commerce of the United States of America, you must know the following facts:

When the Civic and Commerce Association of Minneapolis was in-

Men the Civic and Commerce Association of Minneapolis was incorporated in December, 1911, the Association of Commerce in St. Paul, Minn., was also incorporated in December, 1911. The acknowledgment of incorporation of these two associations before notaries public, the one in St. Paul and the other in Minneapolis, were made on the same day—December 5, 1911. There was a concerted movement throughout the country at this time to reorganize old commercia! associations or to establish new ones and absorb or eliminate other organizations in order to have only the one large central body in each city. You will see, then, the source of this movement was not a local one in each community, and the only logical conclusion from the nature of the organizations and the relations of the incorporators is that this movement was centered in the headquarters of privilege.

Having organized many associations in cities on proper lines, the next step was to organize the national association and centralize the

various local associations in the one national organization, which was done in April, 1912. This, I believe, proves logically that the Chamber of Commerce of the United States of America was organized by privi-

THE CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA

My purpose in considering this organization and its by-laws, since we can logically conclude that privilege has organized, is to show that privilege can control the organization, but before doing this I shall quote from their publications, as follows:

"The Chamber of Commerce of the United States of America is a federation of the commercial organizations of the country. At the same time it is an organization of business men.

"Its organization membership consists of nearly 700 commercial and trade organizations, representing about 350,000 arms, corporations, and business men.

"Its organization membership consists of nearly 700 commercial and trade organizations, representing about 350,000 nrms, corporations, and business men.

"Its individual membership—limited to 5,000—now consists of over 2,500 individuals firms, or corporations representing merchants, manufacturers, lawyers, bankers, engineers, ratiroad officials, and other business men of established position.

"The keynote of the national chamber is service to American business. Its function is not to establish a lobby or exert special influence, but by practical application of its democratic constitution, its representative character, and its public methods of operation, to ascertain and express the needs of the Nation's business. Its power rests aitogether with its constituent elements for whom and by whom it exists.

"Meetings of the officers and directors and the executive committee were held in different sections of the country, and these commercial patriots carried the gospel of business by word of mouth to many thousands of people in scattered sections of the United States. They told of this great national body, nonpolitical and nonpartisan in character, that was establishing a new spirit in business, that was forming a basis of relationship between every community and the Nation at large, that was converting a tremendons divergency of individual interests into a unity of action, and that was carrying the voice of business into the Halls of Congress and demanding impartially and legitimately that this voice be heard. They fold of establishing the executive heads of governmental departments in the work of the national chamber. These speaking tours partook of the character of a crusade and evoked great enthusiasm. They achieved national interest in the national cooperation with the Chamber of Commerce of the United States. They created in the minds of business men the thought of service to the State.

"The national chamber is creating a greater democracy and is educating the business men of the United States to a finer con

We will now consider whether process will be advised by the management of this association is centered in the board of directors.

"It shall be the judge of the qualifications of all applicants for membership and no applicant shall be admitted to membership except by vote of the said board of directors." (Art. 9, sec. 3, by-laws.) It appoints all officers and committees; it may adopt such rules and regulations for the conduct of its business as shall be advisable, etc. It privilege organized this chamber of commerce, then privilege controls the directorate and the directors control the organization in management.

ORGANIZATION MEMBERSHIP.

Now, as to its membership. If the organization membership consists of organizations controlled by privilege (which we have good reason to believe from evidence submitted), then the delegates from these organizations to the national association represent privilege.

INDIVIDUAL MEMBERSHIP.

INDIVIDUAL MEMBERSHIP.

I quote from sections 1 and 2, article 5, of the by-laws:

"Persons, firms, or corporations who are members in good standing in any organization admitted to the chamber shall be eligible for election to this body by the board of directors and shall be known as individual members. * * Individual members shall be eligible to membership on all standing or special committees, shall have the privilege of the floor, but they shall not be entitled to vote." You will note the assurance that these individual members are "sate and sane in that, first, they must be members in good standing in an affinited organization; and, second, they must be approved by the board of directors of this chamber of commerce.

If the individual members are officers or otherwise affiliated with or in sympathy with privilege, to that extent this membership represents privilege, and they are eligible to membership on all standing and special committees and when we come to consider the referendum on important questions as used by this organization we will realize the impurance that attaches hereto.

The Efferendum.

THE REFERENDUM.

THE REFERENDUM.

The national questions which are considered by this organization, such as changes in tariff, revision of currency and banking laws, development of ocean transportation, inland waterways, railway and other means of transportation and communication, are all questions vitally affecting privilege, and when this organization comes to consider any legislation pertaining to any of these questions and takes a reterendum vote upon such questions, what can we expect as a result?

The legislation under consideration will be submitted to either a standing or special committee having in hand that particular department, for example: Legislation affecting the merchant marine would be submitted to a standing or special committee on merchant marine. That committee may be made up of a membership interested in or whose interests are closely affiliated with the merchant marine. This committee is supposed to make a report presenting in an unbiased way both sides of this question, and said report is sent out as a basis for such reterendum to the membership of this chamber of commerce. Is it logical to suppose that such a report would be unbiased and that a referendum made upon that report would be an intelligent vote?

Since individual members in this association include persons, firms, and corporations, and these members are eligible to appointment on standing or special committees, and since large corporations as a rule are intimately related to privilege, you can see how important to privilege these individuals members may be.

Assertion No. 9: "That privilege, through these associations, local and national, pretends to represent the general business element of

the country, but they represent primarily the powers that organized and control them—privilege."

In the analysis of these various associations the fact has been demonstrated that they pretend to represent the general business element and sentiment of the country, both locally and nationally.

It has also been shown as logical the conclusion that privilege has organized these associations; that privilege has the power to control, and that privilege does control them. If privilege does control them, or has the power to control, it is logical to conclude that it will control them in behalf of the interests of privilege.

HAVE THEY ABANDONED THE LOBBY?

I quote from one of their publications, as follows: "One of the earliest achievements of the national chamber was the dealing of a severe blow to the lobby system. It is told that the lobby method of seeking, to influence business legislation has practically ceased to exist at Washington as a result of the opposition to it by the national chamber;" which is to be interpreted that, finding their old method discredited and believing they have a new method that promises to be more effective, they have abandoned the old.

The foregoing is a brief outline of the organization of these associations and the methods of their government and control.

The simultaneous organization and reorganization of associations during the years 1911 and early 1912, before the Chamber of Commerce of the United States of America was organized, indicates a deliberately and centrally planned work coordinating in the various cities throughout the country. This fact, together with the source in each city of the local organizations, leads us to the conclusion that the whole movement originates in the headquarters of privileye.

And for what purpose? Evidently, through them, to control so far as possible government—municipal, State, and National.

If this evidence submitted in this outline and analysis is sufficiently conclusive to warrant a belief that the conclusions are correct, then it would seem that not only publicity should be given to the facts but a further and exhaustive investigation should be made.

Yours, very truly,

H. L. Day.

Anyone who has observed the press on this will recall seeing frequent reports of the activity of the United States Chamber of Commerce. By the way, it will be observed that they followed the usual practice of those seeking special privilege to adopt a name to deceive the people in political matters to make them believe it is a branch of the Government. While it may do some good work, the "invisible organizers" who are responsible for its creation do not trouble themselves with that. If this body had been in full swing when the Federal reserve act was conceived, the "invisible organizers" would never have found it necessary to form the so-called "citizen's league" to fool the people to get that act passed. This United States Chamber of Commerce is a permanent organization, intended by the "inner circle" to hereafter serve all such purposes. All that will be necessary is for the "inner circle" to give the hint to its officers. It is intended to make this a government by the United States Chamber of Commerce for the "inner circle" instead of as the Constitution provides, a Government by the people and for the people. Perhaps I can illustrate the purpose of the United States Chamber of Commerce better by a letter which all Congressmen have recently received. It is as follows:

RE LEGISLATIVE, EXECUTIVE, AND JUDICIAL APPROPRIATION BILL.

CHAMBER OF COMMERCE OF THE United States of America, Washington, D. O., March 4, 1916.

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA, Washington, D. U. March 4, 1916.

Hon. Charles A. Lindbergh, Washington, D. U.

Dear Sir: The legislative, executive, and judicial appropriation bill which, among its other functions, makes appropriations for the work of the Bureau of Foreign and Domestic Commerce in the Department of Commerce, is now before the House of Representatives. As reported from the Committee on Appropriations, it makes but slight provision for the extension of the work of the bureau in ascertaining the markets for American goods in foreign countries and the promotion of American commerce.

The work of the Dureau in these fields has had the constant attention of the committee on the department of commerce of the Chamber of Commerce of the United States. In 1913 a report of this committee was issued to referendam advocating large extensions of the work for the promotion of the commerce of the United States. These recommendations were almost unanimously indorsed by the commercial bodies throughout the country, and Congress went far toward carrying them out in the appropriation bili of that year.

This was before the European war and had reference to the normal situation which then existed. The war has entirely changed that situation which then existed. The war has entirely changed that situation and has made a necessity for the development of American commerce with foreign countries on a scale wholly without precedent. This necessity expires with the war, and American business can hold only such markets as it has become firmly established in during this period of uncertain duration. American export trade has developed very greatly, and the volume of American export trade has developed an integral part of our internal prosperity.

The development of foreign markets is not in this country or in other countries a matter of individual initiative alone. Only the largest American firms are equipped to enter foreign markets on their own initiative. Even these are dependent in large part on th

This situation in all its phases has been carefully considered by our committee on the department of commerce, which issued a report with recommendations that were sent to referendum under date of November 15. The voting closed on December 31. In the main, the plans of the department for the development of the commercial service of the Bureau of Foreign and Domestic Commerce were indorsed, but not in any sense plindly Some were rejected; in some cases proposals initiated by our committee were accepted by the department, and in other cases recommendations were made by the committee independent of the department of the department

in any sense blindly Some were rejected; in some cases proposals initiated by our committee were accepted by the department, and in other cases recommendations were made by the committee independent of the department.

The voting by the commercial organizations of the United States closed on December 31, 1915, and the nine separate recommendations of the committee were indorsed, with but a small number of votes in the negative in any case. The organizations that took part in the ballotting were 307 in number and were situated in 42 States, the District of Columbia, Hawaii, Paris, France, and Milan, Italy.

The results of this referendum were con municated to Congress through the medium of letters to the Vice President and the Speaker of the House of Representatives. A copy of the letter to the Speaker of the House is attached hereto. In turn, the referendum was sent to the chairmen of the House Committees on Appropriations and on Foreign Affairs (for the report dears in part with development of the Consular Service of the United States). The builetin containing an analysis of the vote and showing how each organization cast its ballot is inclosed herewith, while a copy of the pamphiet containing the report, which was sent out to the members to be voted on, wit be forwarded to you under separate cover.

This referendum places beyond question or doubt the overwheiming sentiment of the commercial bodies of the United States that the Government shound grant adequate support to American business in exploiting to the full the opportunity for the development of American commerce turnished by the European war. We are not in any way responsible for this war. We are not engaged in endeavoring to advance our interest at the expense of others, but we are engaged in a most legitimate enterprise, in accordance with the recognized rules of business and competition, to benefit both American business on the one side and the countries with which we deal in foreign trade on the other.

While it is obvious that the House Committee

The following is the letter referred to as having been written to the Speaker:

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA, Washington, D. C., January 24, 1916. The honorable the Speaker of the House of Representatives, Washington, D. C.

The houorable the Speaker of the House of Representatives, Washington, D. C.

Dear Sir: In pursuance of its function of ascertaining the business opinion of the country upon matters of national concern affecting commerce, the Chamber of Commerce of the United States issued to its 700 constituent commercial organizations, located in every State, a referendum upon a report of its special committee on the Department of Commerce, in which was advocated a marked increase in the development of the foreign commercial service of the Bureau of Foreign and Domestic Commerce in the Department of Commerce and the Consular Service on the Department of State. This referendum was issued on November 15, 45 days were allowed for voting, and the balloting closed on December 31. The ballots were immediately canvassed and the result of the count by totals was given publicity through the press.

We now have the honor to transmit herewith a builtin dealing with the results of this referendum, which not only gives the total of the votes cast on each question submitted, but also the vote of each commercial organization that fook part in the balloting. We would respectfully ask that this may have the attention of the House of Representatives and of its Committees on Appropriations and Foreign Affairs. We would further request that these committees should grant an opportunity to representatives of the national chamber, not to argue the matter in a formal hearing (for the results as printed in this buildin carry their own argument), but to present these results orally and explain the method and the significance of the referendum.

Very respectfully,

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA, ELLICT H. GOODWIN, General Secretary.

A copy of the referendum pamphiet in the form in which it was transmitted to the constituent organizations has been forwarded to you under separate cover

So far as the facts in this letter go, I have no comment to make now. It is merely the fact that here is a power that seeks to take the place the people themselves should occupy. The people should govern this Congress, though all may present

their claims to be considered.

This same "inner circle" which controls the United States Chamber of Commerce has been the busiest in the war armament propaganda. It is their European speculation they wish to be in shape to enforce by force of arms if necessary to their purpose. That is why they so "patriotically" (?) insist on

the right of a few Americans to travel on armed merchant ships, while a hundred million Americans who have not the means to travel, even if they wished, must take a chance to toil still more and secure less pay and drag out their existence on earth to support this claim in case we get into war over it. gress shirks its duty-hides behind technical rules provided on purpose to keep the people from finding out how Members vote.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. CYRUS CLINE, OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. CLINE. Mr. Speaker, under a square presentation of the question of warning American citizens to refuse to take passage on an armed merchantman of a belligerent, unmixed with any problem of diplomacy, I would vote to request them to stay off. The doctrine that a neutral has a right to take passage to any port at any time and upon any vessel is not questioned as an abstract proposition under international law. All rights are relative, and no man in a moral sense is justified in the exercise of a purely abstract individual right when such enforcement endangers the peace and safety of others. I have no concern but that the sane, level-headed man will not only pursue sucl. a course as will insure his own safety and that of his fellow man; I am concerned about the unwise, foolbardy man that does not propose to surrender his right that he seeks to exercise for the good of his fellow citizens. One man has no moral right to involve a hundred millions of men in war when the right he seeks to enjoy is not a substantial one.

But, Mr. Speaker, the McLemore resolution does not present the question, Shall we request American citizens to avoid passage on an armed merchantman of belligerent nations or not, alone. In its numerous "whereases" it seeks to intervene in the exercise of the constitutional powers of the Executive, assumes to abridge his prerogatives, and asks Congress to do those

things diplomatically that it has no authority to do.

The press of this country has precipitated the issue. abroad have forced the question upon the House to decide whether the people of this kepublic shall stand by the President in the exercise of his administrative duty or whether it shall abandon him and assume the responsibility of negotiating with foreign countries on diplomatic problems ourselves. Every Member of this House is anxious to do his sworn duty as he conscientiously sees it in this crucial hour, the greatest and most momentous since Fort Sumter was fired upon. I am anxious to do what I can to assist the Chief Executive in his effort to continue a condition of peace that he has for 18 months been so successful in maintaining. The Committee on Foreign Affairs of the House has been criticized for its action on the McLemore resolution. This is the report of the committee:

That House resolution No. 147, known as the McLemore resolution, be reported to the House with the recommendation that it lie on the table. Under the practices and precedents of this country the conduct of diplomatic relations has been left to the President, and with this practice the committee does not feel it proper for the Representatives of the House to interfere with that authority. If the President reaches a point in any negotiation with a foreign nation with which he believes he has exhausted his power in the premises, he will, in the usual way, report all the facts and circumstances to Congress for their consideration.

The Committee on Foreign Affairs has concretely expressed its position on this resolution. It recognizes that under the precedents and practices the President of the United States is clothed with complete authority to negotiate with other Gov-ernments on diplomatic problems. It also informed the President that in its opinion it did not feel it proper to interfere until the President had exhausted that authority, and then it was proper for him to refer the entire matter to Congress for consideration. We sought in this resolution to preserve the coordinate authority of the House of Representatives with all its rights and constitutional powers. We recognized that the right to declare war was the right to prevent it if possible. September 3, 1914, when the European war broke out, it has proceeded in scope until now two-thirds of the civilized world is engulfed in its coils. As this involution proceeded the President of the United States has continuously been confronted with new and most complex diplomatic problems. The magnitude, intricacy, and far-reaching character of the correct solution of those problems is beyond calculation. Every phase of international precedent and practice has invited his attention. The intensity and magnitude of this European struggle has been titanic. Eleven millions of men have been taken from the peaceful pursuit of production and enlisted to burn and destroy cities and drive peaceful people from their historic abodes. Murder and rapine have been the rule of this immense force. Every force of destruction that the human mind can conceive has enlisted to engage the masses of the people engaged directly in this contest.

Under these conditions, the United States being the only nation at peace with the great nations of the world, it became the conservator of international law; it became its duty to maintain those principles, well settled for centuries, not only regarding the rights of legitimate warfare but the rights of neutrals that lie at the foundations of government and the construction of civilized society. These precedents and principles, if swept away, would result in anarchy, in the reign of martial law, in the cessation of commercial intercourse and the ruin of civilization. The President of the United States has stood as a conservator of these principles; he has not only engaged in protecting them from violation by the belligerent powers but, through their protection, securing the peace, comfort, and happiness of the people of the United States.

A new condition arose by virtue of the invention of the submarine—an effective but fragile weapon of undersea warfare. It was charged that the allies had armed their merchantmen for offensive as well as defensive purposes; had detailed men from its navy to these merchantmen with instructions to destroy all submarines at sight, without waiting for warning. Concurrent with that charge came the declaration that the central powers would, after March 1, destroy all merchantmen of the belligerents by torpedoing them, without notice, whether armed or unarmed. Our position as a neutral nation is that no merchantman has the right under international law to arm for offensive purposes, and if it does so it becomes an armed cruiser, an adjunct of the navy of the power to which it be-

longs, and is subject to be destroyed without notice.

The American Government asserted as a rule of international law that the invention of the submarine as a new element of warfare could not change an international principle that affected the rights of neutrals without the consent of all the powers that might be affected by the change. Both the allied and the central powers refused to submit to any change of their purposes. The President of the United States, through diplomatic agencies, was proceeding not only to secure an agreement on the part of the allies not to arm their merchantmen for offensive purposes, but he was likewise proceeding to secure from the central powers an agreement to abandon its purpose of torpedoing all merchantmen without regard to armament. Through some source it was asserted in the capitals of Europe that the President of the United States was not supported in his efforts to maintain the international principle by the Congress of the United States; that he had not the moral support of the Congress in his efforts to maintain what he believed to be the international principle governing. In both of those purposes he was therefore hampered and weakened in his efforts because foreign Governments believed that he was not supported by the sentiment of the Congress. The President therefore expressed his wish that the McLemore resolution be voted upon, so as to give the capitals of Europe the exact status of the position of the United States: that we were not divided, but the country stood as one man for the support of every phase of international law. That important problem, mixed with the question of warning, was thus presented. I can not compound my vote on the problem of warning with the one expressing the attitude of the country on the maintenance of international principle.

We have heretofore planted ourselves squarely on international rights as outlined in the various codes. We have protested to the central powers upon every occasion of their violation. We have done likewise with the allies. The moment we ourselves ignore the practices and customs of international law, that moment the sheet anchor of neutral rights is pierced. Then all guaranties are gone.

The country at large is opposed to war, and justly so. The United States has never gone to war except in defense of a great principle or for a great cause. The people of this country will not consent to the Congress involving the United States in a war in which its sons are transported 3,000 miles from home and enlisted under the banner and under the control of some other Government to fight its battles, and fight them against people with whom we have no quarrel but, on the contrary, people with whom we are friends. Why should the United States involve itself in war with any nation? We have treaties of peace, amity, and commerce with every nation, except one, involved in this controversy. Why should we join with Germany in a war against England, our parent country with whom we have main-

tained friendly relations for more than a century of our national life? Why should we join in the war with England against Germany, whose sons and daughters are among our best citizens, and who have intermarried with our sons and daughters and given stability and confidence to this great Government; who during all of our troubles, both domestic and foreign, gave no aid or sympathy to any of our contestants but, on the contrary, preserved an absolute and unqualified neutrality?

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. BURNETT. Mr. Speaker, I shall vote to table the Mc-Lemore resolution. I reached this conclusion after much deliberation and with some misgivings. At first blush I believed it might be wise to adopt a resolution to at least advise Ameri-

cans to stay off armed belligerent ships.

I recognize the fact that the diplomatic end of the controversy is with the President. But Congress alone, under our Constitution, can declare war, and Congress alone can provide the ways and means of carrying on war. Hence by reason of the dual responsibility placed upon the President and Congress I felt that it would not be amiss for Congress to advise our people to stay off armed belligerent ships. I spent many restless hours debating with myself whether we should not at least go as far as the suggestion to pass a resolution along the line that I have just indicated. Then I remembered that for 18 long months the President has battled nobly, loyally, heroically to steer the ship of state away from the maelstrom of war, toward which it so often seemed to be tending.

When the *Lusitania* was sunk, it looked as if it would be impossible to keep out of the vortex; but at the helm sat that wonderful pilot, Woodrow Wilson, patient, imperturbable,

courageous, and loyal.

Both allies and Germans would have welcomed the hour when America would become embroiled with the other. To pursue a middle way between the two required a keen eye and a steady hand. But our President has done it. Then shall we of his own household refuse him a vote of confidence?

He has said that to pass the McLemore resolution would embarrass him in his international negotiations. Can Democrats afford to do it? Have we lost confidence in that loyal heart and level head that has so often said to the troubled waters, "Peace, be still?" I for one have not. Then, can I vote to paralyze the hands of the pilot at the wheel? If I believed as some do, that to table the resolution would mean war, I would not hesitate to cast my vote against it. If I believed the foul rumors that have been set afloat that the President desired war with Germany, I would not hesitate to vote to the his hands hard and fast to prevent it. But, Mr. Speaker, I do not believe one word of any such slanders, and those who are the purveyors of such falsehoods are enemies to our Republic. Such a thought never entered the loyal heart of Woodrow Wilson. Had he ever entertained such a wish, he could long since have had us in the throes of this titanic world war.

The report of the Committee on Foreign Relations ought to set at rest all such vile slanders. One sentence in the report, no doubt authorized by the President, is enough to satisfy me.

It is this:

We know that if the President reaches a point in any negotiations with foreign Governments at which he has exhausted his power in the premises, he will in the usual way report all facts and circumstances to Congress for its consideration.

With this assurance, Mr. Speaker, would it be wise for us to take a step which even has the appearance of usurping the prerogatives of the President or placing ourselves even in apparent conflict with his purposes? Such a system of crosspurposes between Congress and the President might tend to bring about the very clash of arms that we all pray to avert. Mr. Speaker, I have seen war in its worst phases. I was a boy 7 years of age when the Stars and Stripes went down and the Stars and Bars went up in my native State. I saw the first company leave from my native county to follow the fortunes of the "storm-cradled Nation."

I saw the young man in his gray jeans uniform, made by the deft fingers of a loyal mother, wife, or sister, as he went away in the Maytime of 1861, buoyant, hopeful, and happy. I saw him as he returned in the Maytime of 1865, perhaps maimed or halt, despondent, crushed in spirits, with nothing left him at home except the loyal ones whose hearts had never deserted or betrayed him during the four long, dreary years he had spent battling for a cause that he believed to be right and following a flag that he knew to be stainless and pure.

While I was not on the tented fields nor in the battle line, I was where I could see the falling tears and hear the saddening moans of Rachel weeping for her children and refusing to be

comforted because they were not.

I was where I could see the red flames leaping high above the heads of women and children made homeless by an invading army. I was where I could see lone chimneys, silent evidences of the fact that war, indeed, is hell. I was where I could see the only son of widowed mothers brought home to find a last resting place in the graveyard behind the little country church, with the stars and bars as his winding sheet. I was where I could see orphan children led by a weeping mother to the rude coffin of their soldier father, the little ones wondering, What does it all mean.

I was where I could see the pale, wan faces of those whose last morsel of bread had been taken from them and in whose homes the gaunt fingers of famine were laid upon his helpless

I was where I could see the horrible effects of war after the flag we loved so well had been furled forever at Appomattox.

I was where I could see a struggling people trying to rehabilitate their country from the besom of destruction and rebuilding their little homes upon the very ashes of those which the fire flend had recently laid low.

Mr. Speaker, I have seen war in all its horrors, and I want no

more of it.

I thank God for a Woodrow Wilson, who has kept us out of war for 18 months, and I still trust him.

The Late Representative Samuel A. Witherspoon, of Mississippi.

MEMORIAL ADDRESS

HON. FRANK BUCHANAN.

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 5, 1916.

The House had under consideration the following resolutions (H.

The House had under consideration the following resolutions (H. Res. 157):

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. Samuel. A. Witherspoon, late a Member of this House from the State of Mississippi.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of these exercises, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.

Senate.
"Resolved, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. BUCHANAN of Illinois. Mr. Speaker, the cold, grim hand of death struck this House and the people of our country a serious blow when my colleague and friend. Samuel A. With-ERSPOON, was suddenly taken from our midst, just as we were about to begin a new and what no doubt will be a memorable Congress. After the eloquent eulogies that have been paid to the memory of Mr. WITHERSPOON, it is not for me to add anything to what has already been well said. My only desire is very plainly and in simple words to pay some tribute to the memory of a personal friend, a patriotic citizen, and an able and upright public official.

My acquaintance with Mr. WITHERSPOON dated only from my entrance into this House in the Sixty-second Congress, yet in that time I learned to love him for his gracious manner and kindly spirit and admire him for his firm adherence to those principles of Democracy that were nearest his heart. Being associated with him as a member of the Naval Affairs Committee, and sharing in common with him many principles and ideals, it was often my privilege to work side by side with him in the business of this House. His impulses were always genquestions which he deemed of vital interest to the people of our

country.

Mr. Speaker, our departed friend gave his best to the service of the people. Who can do more? The State of Mississippi has to the service of the Nation, but none of the people. Who can do more? The State of Mississippi has given many of her sons to the service of the Nation, but none more able, none more sincere, none more courageous than Samuel A. Witherspoon. I share keenly and deeply in the general grief caused by the premature closing of a career which only a short time before was so rich in achievement and so full of promise for the future. However, in our grief there is grati-fication in the knowledge that he contributed his full share in the furtherance of that principle of humanity proclaimed by the Founder of Christianity, who said that "He came that the children of earth might have a more abundant life"; and we can feel that if we respond to the call of duty as he did, when the end comes there will be little to regret. That our Creator may comfort and protect his loved ones is my sincere wish.

McLemore Resolution.

EXTENSION OF REMARKS

HON. JAMES H. DAVIS. OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 9, 1916.

Mr. DAVIS of Texas. Mr. Speaker, the heaviest responsibilities of my life have been passing over my head the last few The strenuous times and war-mad rage of Europe seems to be reaching America. War and rumors of wars are raging everywhere. No country on earth seems free from the blight of its contagion and agony. The whole of Europe is practically one battle field while the contending forces are drawing on the balance of the world for support.

Some mysterious influence has made this Republic a maeistrom of excitement and dread lest we, too, become involved in the conflict. War clouds, dark and gloomy, seem to have been gathering around this glorious Capitol for the past few weeks. It is natural for racial ties and friendships to manifest them-selves and take sides in almost any contest. Would to God that our country could be free and immune from the calamities that are now baptizing the European countries in blood. But no man who is sane can refuse to understand the manifestations that make for war in this country. We are no longer a neutral, nonpartisan, onlooker to the contest. We are practically separated into two great contending classes, and are centralizing our thoughts, conscience, and conduct in sympathy with the two contending sides in Europe.

Our business and banking world, our great daily papers, our immense manufactures, together with many of our leading professors, magazines, and teachers are openly and avowedly supporting, aiding, and abeting England and the allies. They are literally coining the bloody battle fields of Europe into multiplied millions of dollars that flow to many of our large banking and business concerns. On the other hand, we hear and see a potent and provoking evidence of the sympathy of a large element of our citizenship for Germany and her allies. We hear and see in the daily press a great deal of scorn and insinuating acrimony against the German-American and the hyphenated American in general. If I know myself in the presence of my God and this body of statesmen, I have no sympathy with either of these conditions. I am an American—300 years of ancestral parentage in this country makes me to the manor born.

Standing here under my oath, feeling the grave responsibility that rests upon me, I am trying with all my power and incessant application to steer clear of any entangling alliance or partisanship that would involve this Republic in that dreadful war. But, do what I will, say what I may, I am driven irresistibly by all the manifest environments to the conclusion that we are rapidly approaching the crisis which may plunge us into a cruelty and calamity-direful indeed.

More than a year ago England and her allies made an alliance with the greatest business concerns of this Republic. It is known, sir, unquestionably, that the Morgan syndientes, so called in the United States, represent the greatest aggregations of the money power known to the world. This money power for years has carried on an invisible government in this country that has been able to control our destiny as it saw proper. It has erous, his sympathy broad, and his intellect keen. He was a concentrated our wealth, impoverished our labor, formed unlaw-zealous and untiring worker, oft working far into the night on

their judgments, made mockery of our prosecutions, made our laws impotent and ineffectual, and run riot over the hope and happiness of our country many times. Having been constrained, curbed, and laid under legal restrictions at home by a militant democracy, enthroned in the last campaign with Woodrow Wilson at its head, the war in Europe furnished this money devil with an opportunity to recoup its lost prestige by preying upon the distress of that war-cursed country and at the same time enlist the support and assistance of a large element of resourceful and high-class people in our country. In the early stages of the conflict mysterious meetings, conclaves, and cabals were formed and held between England and these American magicians of our money devil.

Becoming the sponsor, indorser, and general supply agent for England and her allies, they set about to make this country a business annex, if not a war annex. England in her arrogance and assumptive bigotry drew a dead line across the oceans, made a continent-wide war zone and put the whole of the German and Austriau Empires under slege, making the law of might her only right, with a total disregard for neutrals and with a flagrant disregard for Americans and their rights, feeling that the Morgan syndicates could be relied on to keep down resentment and rage against England's infamous conduct in this country. She defied us and the world to cross her dead line and trade with Germany and her enemies.

Sir, strange indeed, wonderfully, mysteriously, remarkably strange, is the fact that she still insolently—yes; I may say villainously-defies us and the world to cross her dead lines. And stranger still, more mysterious than all else, is the lamentable fact that many of our daily papers, magazines, and many prominent people openly, boldly, and without hesitancy, not only condone her conduct, but absolutely acquiesce in all her nefarious actions, and go still further and demand that this Government shall join her and help crush Germany and her allies.

That Germany has sinned in a criminal way we must all admit. It is not my province to pass upon the whys and where-fores that brought about this cruel war. But one thing I do know, that it was not of our making and we ought to keep out of it. In a public speech in Texas last August I stated that Germany's conduct had manifested a total disregard for all the laws of honor, mercy, and justice that was supposed to govern the conduct of a civilized people. But I said also that England's conduct had been equally as unscrupulous, unmitigated, and outrageous, except that England had not destroyed the lives of Americans by her criminal acts. Sir, we must realize that both of these countries are in a dreadful, woeful, destructive war, whose modern methods and improved machines make the conflict the most dreadful cataclysm and holocaust ever known.

A noted American general, educated as a warrior and having gone through four years of the dreadful war in our own country, in a sentence of stoic philosophy that is now recognized by all thinking people said, "War is hell." And when a nation and its armies are in hell it is sheer nonsense to expect them to be governed by and be respectful to the laws of Heaven, honor, or justice. England took America by the throat, dragged her off the seas, crammed a million bales of southern cotton into her block-ade, and held up nearly a billion dollars of our commerce on its way to nations with whom we had a perfect right to trade, killed the cotton market of the South; then her agents, Morgan and his syndicates, bought up that cotton at bankrupt prices. She showed with contempt she had absolutely no regard for the rights of America and for the American people. She cared nothing for the heartaches, heartburns, for the poverty and distress, for the woe and want, the misery and misfortune she was sending into at least a million southern farmers' homes. She expected Morgan and his influence to make the American people stand and deliver.

Little did she care and little did Morgan and his syndicate care for the fact that a hundred thousand sweet, innocent farmers' girls had pumped cotton hoes diving in cotton rows. dragged cotton sacks to gather that crop, and then saw it hawked off on the market at half price, while they stood through the coming winter half clad, half shod, and with heartaches in the penury of their distress. All, sir, that she cared for was to get that cotton to feed to her factories and to make giant cartridges for her massive cannon and serve her as munitions of war. But oh how strange that not even a Republican paper, nor the Dallas News, that is so wont to boast about national honor and na-tional dignity and our natural rights to traverse the seas and

some mysterious way Mr. Morgan and his crowd were soon able to hush and stifle all these complaints and give to England an additional support of \$500,000,000 and underwrite and guarantee the perpetuity of her Government. I grant you, sir, that Germany's conduct in the Lusitania has no parallel in calam-

But why is it that we can read in all the daily papers of the infamy, the brutality, the savage ferocity of Germany, and yet in the same columns often find laudation, praise, sympathy, open and bold support, and justification for England's conduct. Going so far as to demand that we, a great Republic, must ignore all the obligations of an honorable neutrality and all the religious and moral obligations that ought to bind us to peace in the name of humanity and demand that we become a military ally of England, loan her our Army and Navy to help crush the Germans?

This spirit, in what I shall denominate the tory of our country, finding its way into the news service of all our metropolitan dailies and swaying into war, is met by a German-American alliance, whose threats and imprecations portend a resentment that means race riots and strife in the future should we become England's partner in war. And between these contending forces I stand undaunted and immovable as an American, pure and simple.

When the war spirit ran a flame of frenzy through our country a few weeks ago, I began to feel nervous and anxious over impending consequences. I said in a public speech last year that when the overpowering, dominating, unscrupulous wealth represented by the Morgan syndicate, that money devil, that octopus, that we have all inveighed against so long, went security for and underwrote the English Government to the amount of \$500,000,000, that the clutch of this octopus fastened upon so many avenues of our industrial institutions, holding in its grip our highways, our telegraph, cable, and telephone systems, with the insidious and invidious control over all the news sources and information, they would raise some clamor, some cause, some excuse to make this country sustain England and force us to make their millions secure. I said then, and I have said before, and I say now with all the earnestness of my life, that I will not allow my vote and my actions as a Congressman to contribute to such a damnable termination.

We are told now-and told with loud acclamation from headlines of a hundred papers and from thrilling tones of a thousand -that if Germany submarines another armed English ship while one of our passengers is on it that in the name of national honor and to protect our national dignity we ought to forthwith join in and help crush Germany. But, sir, however much I might be willing, however much joy I might feel over crushing the dominating power of the Kaiser or stopping the bewhiskered tyramy of the Austrian Emperor, I resent the demand that we should violate the laws of God, the laws of humanity, and the laws of neutrality, and join another coldblooded king and make good Morgan's millions while we perpetrated the deeds. I have a nobler, a more inspiring, a more God-given mission for this glorious Republic of ours to render. I tell those who make the demands that to me their talk about national honor, national dignity, and American rights comes too late. They should have begun their talk nearly two years ago, when England trampled upon every known principle of international law, spurned and contempted our rights, and impoverished and outraged nearly a million homes in the South.

Much has been said about the right of Americans to travel on armed belligerent ships without molestation. I am not going to controvert that right, but there are many questions involved in this war problem besides the right of travel.

I affirm as a matter of constitutional right that Congress has entire jurisdiction over this whole problem and might to-day pass a law prohibiting any American traveling on armed ships such as are now under discussion.

The Constitution gives to Congress full and absolute power over all our seafaring business. The following passages make that matter entirely clear, and the position can be supported by numerous court decisions. Congress has power to

Define and punish piracies and felonies committed on the high seas and offenses against the law of nations To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

The whole power of the President is expressed in our organic law as follows:

tional dignity and our natural rights to traverse the seas and transact business anywhere, ever raised one complaint against the deprayed and damnable conduct of this English Empire.

Millions of our property taken from the industrious poor, practically confiscated, taken by the force that pirates use, because she said it was on the way to feed her enemies. But in

Not one sentence gives any President power over travel on the seas. Congress represents the people, and the President is bound to execute their laws and rules. Where is any power given a President to form a policy of travel on the high seas and thus force Congress into war to carry out his instructions?

When Congress is not in session the governing power is in the President and his Cabinet, but when Congress convenes his board of directors are in session and it his embounden duty to

abide by their laws and their rules.

Months before England declared cotton contraband of war she, with a total disregard of all law, transgressed and tram-pled on the rights of America by throwing millions of dollars worth of our commerce behind her blockades, compelling us to await the verdict of prize courts and action at her pleasure.

Before our bank law had taken effect and when a money famine was imminent she was impounding, impressing, and obstructing by force of arms the transportation of our southern cotton, and through the manipulation of the Morgan syndicate, who are her business agents and, to all intents, resident envoys in this country, they practically robbed the South of her cotton crop, deprived the southern farmer of more than \$400,000,000 by her flagrant, willful, and malicious violations of the codes of war. There was no ultimatum issued regarding outrages by England. I grant you that Germany's conduct has been unscrupulous, willfully cruel, and cold-blooded, but no more so than England's, except that Germany destroyed human life. But for pragmatic and wanton disregard of American rights England has been equally as vulnerable as Germany, and the only reason we have not heard vociferous and unceasing complaint of England's conduct is because of the overwhelming influence of American sympathy and the multiplied millions of money that Americans are making by furnishing munitions and money to England and her allies.

We have seen the Morgan syndicate, representing untold millions of American wealth, openly advertised as the business agents of England and her allies, yet no great daily paper advertised them as hyphenated Americans carrying on a propaganda in the interest of England. We have seen them with brazen bigotry openly underwrite and guarantee the Government of England and the allies to the amount of \$500,000,000. This meant that the Morgan syndicate was betting \$500,000,000 that England and the allies would vanquish Germany; and it is well known that Morgan and his crowd have been the gen-eral managers of these United States for 20 years. This, to my mind, is so far-reaching and involves this country to such a vast extent that it is impossible for us under the vast invisible powers of government that Morgan's firm has over the affairs of our country to be impartial and neutral. But they tell us that England is fighting for liberty and civilization and it is our duty to help. That means we are her ally now.

It seems that when Germany broke through the French lines at Verdun, cleared 9 miles of her trenches, and battered down her forts the market quotations on Morgan's bonds took a tumble the next day and continued to fall as German aggression continued, in which papers began to discuss the probability of France again moving her capital. In a few days these bonds had fallen on the market several millions of dollars. Immediately war talk began to run rife and tory papers began to howl. "Our patriotic duty to help whip Germany" was asked for in the name of civilization in scores of papers, and the Anglophobists in their frantic appeals for "patriotic assist-ance" found vent in such uncalled-for and unjust expression ance found vent in such uncaried-for and unjust expression as an interview given out by Mr. Glass, chairman of the Committee on Banking and Currency, in which he charged that the whole call for a warning against travel on armed belligerent ships was a mere cloakroom flare-up, made by Members who had This statement did the President's cause German constituents. no good; it did much harm. Speaking for myself, I resent it as an imputation foul in its conception and false in its expression. If I possessed the willful disregard for the honor of my fellow Members that the gentleman from Virginia does, I would say that he, as one of the Morgan satraps, proposed to plunge us into war to make Morgan's English and French bonds good.

The truth is that my record is clear on this whole matter. said in a public speech and letter in Texas last August that I favored adopting the better custom of all nations by warning all Americans to keep off of armed ships of belligerents. I called attention to the fact that two or three standard neutral steamship first-class steamers leaving all our leading ports two or three times a week. And if another Vanderbilt refused to take passage on these and insisted on "strutting" across the ocean on an armed ship of some belligerent nation to inspect his "pedigreed horses" in Europe and got killed, I would count mytake passage on these and insisted on "strutting" across the ocean on an armed ship of some belligerent nation to inspect his "pedigreed horses" in Europe and got killed, I would count myself a villain if I voted to make war on that nation to avenge for the avowed purpose of forcing this country into war to help

his death. And when Morgan's banks bought half a billion of England's and France's bonds and announced openly that his firm had been made the business agents for the allies, I said, "Good-by, Germany"; that the invisible power that exists in the Morgan firm, with all their billions of money permenting every avenue of our national life, they would find some excuse to make this Government join the conflict and help crush Germany to save that vast sum of money.

God tells us that where a man's treasure is there his heart is. Morgan and his friends have their hearts tied to the destiny of the allies with half a billion golden cords. To drive our country into war and murder many thousands of our people would not only make his English bonds good, but would feed fifty or sixty more millions into the greedy may of his Steel Trust, transportation, telegraph, telephone, and the Powder Trust. Backed by all the massive sympathy the tory hyphenate English propa-ganda can exert and the Navy League's big war and navy crowd, they also hope to stampede the country into a great Army and

Navy, pending war.

We stand in front of an impending crisis in which I pray to God for deliverance. Scores of leading newspapers, magazines, and public men are openly advocating and defending alliance with England to help suppress and vanquish Germany. Speaking for myself, I have no defense to offer for Germany's nefarious and abominable conduct. But to join in this conflict, involve our country in war, baptize it in blood for such vile purposes, would be an unpardonable and an unmitigated crime to which I can never subscribe. My contention is that Germany has as much right to create a war zone as England. Neither of them, in fact, have any right to monopolize God's highways and oceans. When you leave the 3-mile border of any Government the oceans become a public highway for the earth and upon its waves all nations and all people are supposed to have equal rights.

But these countries are in war; their war zones have been declared, and I have as much respect for one of their decrees as that of the other. Among many of the organizations and "war traffickers" who deal in war supplies that are so clamorous against Germany and so defensive for the allies, I have before me an address delivered on January 30, 1916, by Josiah Royce, a professor in Harvard University, entitled "The Duties of Americans in the Present War." Among other things he says:

We owe to the allies whatever moral support and financial assistance it is in the power of this Nation to give; it is not merely the so-called American right that our munition makers should be free to sell to the enemies of Germany—it is our duty to encourage them to do so. Let us enthusiastically approve the supplying the enemies of Germany with financial aid and munitions of war and resist with all our moral strength those who would place an embargo on munitions.

But, Mr. Speaker, the treasonable venom of this professor and the forty and odd members of his league whose names are attached to his address is brought to a climax when he says:

Let us do what we can to bring about at least a rupture of diplomatic relations between our own Republic and those foes of mankind (Germany) and fearlessly await whatever dangers this may entail upon us, our land, and posterity.

These words are portentous. They show to us men in Congress that the invisible influence of Morgan's millions and the subtle sentiment it is creating seeks to embroil us in a govern-

mental conflict with Germany and provoke war.

These sentences and sentiments herein expressed are echoed in different language in scores of our metropolitan journals. decline to be led into a partisan defense of either side of this European war. First of all, I am an American—believe in American ideals, and the transcendent traditions of our Republic; and while I am willing to brand Germany's conduct on the high seas as venal and villainous; I want to brand the conduct of this professor, this high-collared, high-browed, hightoned tory and Anglofobiest, as reprehensible, direful, and damnable, and when they openly announce that they are leagued for the purpose of bringing about a rupture and row with Germany by this Government, they have reached the point where they should be dealt with as conspirators and treasonable

This professor, voicing the sentiment of his coconspirators, closes his lecture by stating:

This league is formed to use all lawful means to put this Nation in a position of definite sympathy with the allies.

Germany's friends are secretly dynamiting munition plants, we are told, and in many ways manifesting a sympathy for the fatherland. But when the leading bankers of our country are England whip Germany, we might reasonably expect such conduct by German sympathizers.

The deepest evil of war is not only suffering, death, ruin of cities, wasting of homes; not only plagues, famine, or fire, but war also deprayes as it destroys; it is the moral damage as well as the physical, causing divorce between ethics and religion. The murderous desires and frenzy of noncombatants at home are nearly as bad as the stabs of the soldiers, the brutality of the man in the street, the bloodthirst fostered by teachers, inculcated in schools, preached in churches, and exhorted in the name of the Lord; this saturation of the people at home with murder and hatred can be moral shrapnel. The journalist with his flamboyant headlines encouraging hate, the speculator telegraphing hate for sake of greed, the mob thirsting for blood, a raging hell of diseased patriotism, permeating a whole nation, filling the minds of everyone from the youngest child to the oldest citizenthese are some of the moral evils of war.

SINCE THE ENEMY SHOULD NOT EXIST, ANYTHING CAN BE SAID AGAINST

The leader of a hostile people may be a great patriot and impartial judgment may make him a hero, but those who war against him will ridicule him and the press will influence the

popular mind against him as a scoundrel. In war calumny of the enemy is a local virtue. It has been said that "the journalistic ink slinger is as necessary as the scout, the platform libeler as important as the sentry, the parliamentary mud lark as essential as the general on the field, the pulpit bearer of false witness not less needful than the

chaplain of the regiment."

Often a nation's character must be destroyed in order to get the people to fight; if they seem to be softening a little, then atrocities should be exaggerated. The origin of the war must be justified, right or wrong; it must be labeled self-defense. If it be difficult to get the people in the proper warlike spirit, the enemy must be represented as savages, monsters, and not fit to The foe must be accused of murder, rape, assassination, and-if necessary to stir up the people more-of every imaginable abomination; this seems to be the duty of the patriot scandal-monger, being, as Benjamin Franklin said, "To render the enemy odious and contemptible."

Just as a nation blackguards its enemy, so it must exalt itself. that force of contrast between saint and sinner, as it were, will make the people feel justified in treating the enemy as bad as possible. "To see ourselves as others see us," would be treason

to suggest in time of war.

The longing for distinction is one of the main impulses in military feeling, while scorn increases with conceit and hatred The country is saturated with egomania, with military egotism. continually extolling its own virtues and exaggerating the smallest success over the enemy. If victorious over ignorant natives or untrained soldiers, it calls the result a great triumph of military skill and heroism; the world is thunderstruck. even defeat does not quiet the egomania, which praises the extreme valor and most exceptional strategy of the enemy, skill and fortitude.

In a scientific study of war it goes without saying that im-

partiality has no place.

In war the enemy is a savage, a barbarian, a butcher, a monster, atrocious, kills and rapes women, slaughters children; to exterminate the enemy is the duty of humanity. This is the usual feeling in war and it makes no matter who the enemy is, This is the whether right or wrong he must be killed, and this feeling is called patriotism.

Herbert Spencer mentions how cruel the English considered the French for lighting fires at the mouth of Arab caves, because they refused to submit; but it was no such barbarity in India for the English to execute groups of rebel Sepoys by fusillade and then setting fire to the heap because they were not Thus war bias prevents the sense of justice and sentiall dead. ment. What we do is virtuous and heroic, but if the enemy do it under the same conditions, it is contemptible and barbaric.

To risk life on battlefields is not the only kind of patriotism, for it may be only love of adventure, excitement, and pugilism; it can be more difficult to live nobly for one's country than die for it, more sacrificial to keep it from war than to plunge it into conflict. The martyr is nobler than the soldier. War demands that dissent and free speech be suppressed, that the Government, right or wrong, must be supported; that is, the citizen must rely on passion rather than justice if circumstances make it necessary, as it is said so often "everything goes in war and love," thus the country's interest is greater than personal honor and conscience; glory is higher than righteousness; thus a "nagging" patriotism is pitted against the highest

sense of honor; a peacemaker is called a traitor; such is the inherent injustice of so-called patriotism.

To insist that because a certain country has borne and nourished you, you must indorse all its quarrels is the same as saying you must stand by your parents, even when they commit murder. This is the doctrine worthy of criminals and pirates,

not patriots.

A diplomat picks a quarrel in order to attack and steal a bordering country; a preacher who uses religion to develop hate and justify murder, an editor who supports the country, right or wrong, a mob which breaks windows and stones citizens are all patriots in time of war; but those who stand tor international justice and peace are called traitors. This is moral insanity. This kind of patriotism poisoned Socrates and crucified Jesus. It invokes military necessity, under which every imaginable abomination has been committed.

True patriotism and domestic faithfulness regard the sanctity of other homes. Bigoted pride, not patriotism, trampies

upon the sense of nationality in other people.

Militarism throttles freedom of speech, turns citizens into soldiers, democracy into plutocracy, officialism, dictatorship, and absolutism. Imperialism becomes a school for tyrants. Ministries and cabinets hold almost limitless power, putting a country into such a position as to force its legislature to declare war, leaving it no choice in the matter; a practical absolutism, not the purpose of representative government. Cheap literature causes an outpouring of newspapers, magazines, and books written under the spell and glamor of militarism, making the soldier and war the national ideal, glorifying heroic murder, which practically is the zenith of patriotism. Thus citizens become despots, and love of country is changed to lust for conquest.

Militarism, imperialism, and Cæsarism are of the same family, and mutual friends and enemies of democracy. Militarism, sometimes called "preparedness," means preparedness for war rather than peace, if the history of the world is of any value.

War feeling is often a form of hysteria. If an army conquers a small body of untrained fighters, it is reported as a triumph of heroism and military sugacity. "Every private is a Leonidas and every scuffle a Waterloo." The least victory sets the whole Nation affame. "The whole staff of the governing power assembles * * * to sing the national anthem;" many drunk with whisky bellow forth their patriotism; profanity, insolence, and vice march with the mobs, manifesting uncontrollable emotions, shricking, hallooing, blaspheming, followed by dances and delirium; the bishop gives thanks unto the Lord, and the people rejoice in the ruin of an enemy's country.

We can not teach the golden rule and retaliation; this would tend to make hypocrites and liars. We must choose between the Old and the New Testaments, between Joshua and Jesus; the fundamental spirit of the two are contradictory. To teach our youth the right to kill, lie, steal, boast of slaughter, and rejoice at suffering humanity in war and how to burn down homes, is

to loosen away the foundations of humanity.

A school inspector of England (New Age, Dec. 20, 1900) gave to a class "Paul Kruger" as a subject for composition. One girl, 13 years of age, wrote "Paul Kruger is a scoundrel, and at the same time an earnest man of prayer, because he thinks he can deceive the Almighty as he can a natural man,

Mr. Speaker, before I vote to drag this country into the European war, all honorable methods to preserve peace must have

failed.

The following masterly address against war was delivered by the Hon. Lee J. Rountree, of Texas, president of the National Editorial Association, before its recent gathering in Chicago.

It is so grand, eloquent, and noble of concept that I desire to insert it with my unqualified indorsement:

insert it with my unqualified indorsement:

Nations that have lived by the sword have perished by the sword. Men who have gained wealth and glory as desperadoes and robbers have all met death. Commensurate with their crimes, Ninevch. Babylon, Bome, Memphis, Sodom, and Gomorrah perished because they defled God's immutable law and lived by the sword and in the cesspools of human depravity. Through all the ages men on horseback, with the sword, have gained temporary victories; builded passing empires and have marked their alleged successes with human blood and have attempted to glorify and perpetuate their memories. Kings, rulers, emperors, czars, tyrants, and other murderers have stolen nations and impoverished people. Feasts have been spread and the king and a thousand of his lords have gathered to make merry and canonize the alleged victor. Peoples have been plundered and robbed and taken into slavery to satisfy the insatiate greed and avarice of the wicked. Crowns and scepters have been at stake—they have been won and lost and kingdoms torn down and destroyed. On a fateful night in July, 1914, all Europe went to bed drunken. For many years a crisis had been coming and now: "To arms!" Millions of troops were on the march in a few hours. Preparedness had been the cry and now war was the inevitable result. The European war was on before men and women had sobered from the previous day and night's debauch. From the crowned heads to the serfs there was drink suitable for all purposes. For years before the great conflagration there had been a ceaseless dis-

turbance and out of the macistrom would be heard: "We can whip the world." The European nations had been faught in their cardis, gardens, theaters, schools, and churches that all other nations were their cannels and must perish or their kingdom would be finished. It was a Belshanzar feast every night. But no European nation believed the "Modes and Persians" were coming to them—they themselves were to imbeciles, venal and corrupt or conceited and bigoted and degenerate criminals, and should have long ago forfeited the respect of every man claiming to be civilized. The men with the sword, on horseback, assembled at Gibraira, at Buckinghan, at Potsdam, at Versalities, at Conditional Control of the Control

When I introduced my bill H. R. 10771, to make money fight for its country the same as men, I requested the Librarian of Congress, through its Legislative Reference Bureau, to report the consequences of the bill, which the following report shows would maintain a million soldiers in time of peace and two million in time of war, without affecting corporations of less than \$1,000,000 capital.

I would like to amend and pass the bill after lessening the tax to maintain an army of about 250,000 men at a living salary of \$40 per month and board, and so forth.

You will note that under the provisions of my bill the Army automatically doubles in time of war, likewise the tax.

Under such a plan we will have no more wars and Morgan's

plunderbund will not rave and rant for war.

ASSESSMENT OF CORPORATIONS FOR MILITARY PURPOSES.

Out of 305,336 corporations which had made returns for the calendar year 1912—
Two hundred and ninety-six thousand six hundred and seventy corporations had capital of less than \$1,000,000.

Four thousand six hundred and eighty-eight corporations had capital of \$1,000,000 and over and less than \$2,000,000.

One thousand three hundred and ninety-nine corporations had capital of \$2,000,000 and over and less than \$3,000,000.

Six hundred and seventy-seven corporations had capital of \$3,000,000 and over and less than \$4,000,000.

Two hundred and ninety-two corporations had capital of \$4,000,000 and over and less than \$5,000,000.

Eight hundred and sixty-one corporations had capital of \$5,000,000 and over and less than \$10,000,000.

Six hundred and fifty-two corporations had capital of \$10,000,000 and over and less than \$50,000,000.

Sixty-two corporations had capital of \$50,000,000 and over and less than \$100,000,000.

Thirty-five corporations had capital of \$100,000,000 and over.

The above data, the only data found on the capital of corporations, are taken from the report of the House Committee on the Judiciary, Sixty-third Congress, second session, volume 3, serial 7, parts 21 to 30, pages 1317 and 1318.

On the basis of these data the following calculation may be made:

The 296,670 corporations, the capital of which is stated to be less than one million for each, without any given lower limit, must be left out.

The last 35 corporations may be taken as each having only \$100,000,000 of capital, for it is not stated how much they have over that

To find out an average capital for each group of the corporations between the first and the last groups, it is necessary to divide the difference between the lower and the upper limits of capital into two halves and to add one half to the lower limit. This is a somewhat arbitrary action; still its results may, to a certain degree, approximate the actuality.

Number of corporations.	Capital in thousands of dollars.	
	Each on an average.	In aggregate.
4,688 1,399 677 292 861 652 62 35	1,500 2,500 3,500 4,500 7,500 30,000 75,000 100,000	7,032,000 3,497,593 2,469,503 1,314,003 6,457,503 21,060,003 4,650,003 3,500,000
8,665		49, 960, 500

In the time of peace \$250,000 of the capital of each corporation are exempted from military assessment, which exemption aggregates \$2,166,-250,000, leaving \$47,794,250,000 for assessment. As each \$50,000 of the capital in excess of \$250,000 is assessed by a sum equal to the average annual cost of one soldier or sailor, the income from such assessment would provide for 955,885—approximately 1,000,000—men in military service.

In the time of war only \$75,000 of the capital of each corporation are exempted, which exemption aggregates \$649.875,000, leaving \$49.310,885,000 for military assessment. As each \$25,000 of the capital will be assessed by a sum equal to the average cost of one soldier or sailor, the income from such assessment would provide for 1,972,435, or approximately 2,000,000, men in military service.

According to the Report of the Chief of Staff, United States Army, 1912, page 9, the cost of maintenance of a man in the United States Army was \$913.23—approximately \$1,000—for the year of 1912. This cost includes all cost and al' men of all grades.

Consequently, in the time of peace the corporations have to pay about \$1,000,000,000 and in the time of war about \$2,000,000,000 annually for the maintenance of the Army.

If one climinates the average capital of each corporation and takes into consideration only the given lower limit, the statistical table then is as follows:

Number of corporations.	Capital of each cor- poration.	In aggregate.
4 688 1, 399 677 292 861 662 62 35	\$1,000,000 2,000,000 3,000,000 4,000,000 5,000,000 10,000,000 50,000,000 100,000,000	\$4, 688, 000, 003 2, 798, 000, 003 2, 031, 000, 003 1, 168, 000, 003 4, 305, 000, 003 6, 520, 003, 003 3, 100, 030, 033 3, 500, 000, 003
8, 665		28, 110, 000, 001

In the time of peace the aggregate sum exempted is \$2,166,250,000. This leaves for military assessment \$25,943,750,000, which would support 518,875 men in military service.

In the time of war the aggregate sum exempted is \$649,875,000. This leaves for assessment \$27,460,125,000, which would support 1,098,405 men in military service.

If a "soldier" in military service is meant to be only a private, the cost of his maintenance, according to the information given by the office of the War College, is only \$304 annually per man.

Calculating on this basis, the 8,665 corporations have to pay \$188,870,500 annually for the maintenance of 518,875 men in Army service in time of peace.

In the time of war this sum would be \$399,819,420 for the maintenance of 1,098,405 men.

This was written to explain the contentions of my bill which made the money changers rave so.

House of Representatives, Washington, D. C., February 24, 1916.

Washington, D. C., February 24, 1916.

H. B. Braucham, Esq.,
Editor Public Ledger, Philadelphia.

My Dear Sir: I thank you for your kind letter of February 17, requesting my views, motives, and purposes on the introduction of my national defense bill, H. R. 10771

I believe every Member of Congress is for adequate defense. I am, and the democracy has ever been, but I want to take the profits out of war and a large part of the profits out of preparedness for war.

One hundred and twenty-six counties in Texas of two hundred and forty-two holding Democratic primaries, nominated me for one of the two places for Congress at large, with nine able and honorable opponents, with a plank in my platform for a law to make money tight for its country the same as men, relative to which I said before Congress February 5:

"They call us who stand for Americanism against imperialism and

nents, with a plank in my platform for a law to make money ignt for its country the same as men, relative to which I said before Congress February 5:

"They call us who stand for Americanism against imperialism and conscription mollycoddling, flabby-sided pacifists. These are pet names, and I return the compliment by stating that if we are mollycoddling, flabby-sided pacifists now, the President, Secretary Garrison, Admiral Fietcher, and the noted gentleman from Illinois, Mr. James R. Mann, were all mollycoddling, flabby-sided pacifists last year, for the record shows they stood then just where Gen. Miles, Mr. KITCHIN, and most leading Democratis stand now as regards the size of our Army and Navy. I want it understood that as long as I have sense enough to obstruct the proceedings I will fight every method of conscription unless we can conscript money the same as men. I would consider it a piece of crowning villainy to support a law to go among the soot and cinders and sweat-soaked tenements, amidst the common walks of life, to drag out the poor, homeless workers of our country in handcuffs, compelling them to stand up and be fed to cannons to save the millions and mansions of the Carnegies, Astors, Rockefellers, and a few thousand trust masters and tariff barons, who have been allowed, through special privilege and protection, to rake in the labor of millions of people and call it theirs, who disdain America and are now building castles among England's nobility."

I felt that one of the first measures of "national defense" was to enlist the great corporations of the country in an effort to preserve peace, which could be done by declaring a corporation a "man in war" the same as they are reckoned a "man in law," viz: Tax every \$50.000 unit of a corporation's capital and surplus in excess of \$250.000 (such corporations being made a full-grown man subject to military duty in time of war, by a taxation sufficient to maintain the average cost of one soldier.

I feel that such a plan to make money fight for its coun

time of war, by a taxation sufficient to maintain the average cost of one soldier.

I feel that such a plan to make money fight for its country the same as men is but right and just to mankind, for it will forbid corporate power the privilege it now enjoys of usurping billions of money from labor's toil in time of war; it would have a tendency to restrain large filegal combinations in restraint of proper commerce, thus tending to solve the trust problem.

Then in the provision of my bill to impress large annulties and estates flowing from this to foreign countries, I hope to reach that set of business buccaneers and political popinjays, who dance, prance, and luxuriate round gorgeous health and wealth resorts of Europe, who, with millions of ill-gotten gains, feast each day amidst jasper walls in banquet halls; who relish their magnificent repast each day, set to the mellifluent strains of a splendid orchestra.

I feel a heart throb for the millions of helpless poor among the great common herd with whom I live and have my being. I want to reach that element of purse-proud plutocrats who have loaded this country's industrial progress with billions of corporation debts, a large part of which is fraudulent, fictitiously forged by chartered monopolies which hold sway ever nearly all our natural, God-given blessings, to the exclusion of the great masses who are being impoverished and enslaved.

After such conduct they flaunt their fabulous wealth in ruter disdain of American ilfe and democracy, by fawning and cringing around the royalty of the Old World, abasing themselves like supercilious syophants, and often pay some royal snob a million dollars to take their daughter to wife or to concubinage as a "morganatic" wife—female bedfellow—then make the two an assignment of from five thousand to five million a year, extorted from American industry, to uphold them in royal ribaldry and voluptuousness.

I want to reach men like Astor, who, out of contempt for America and her glorious ideals, with a sordid sinister craving

This letter was written by me to a fine old patriarch and patriot of Texas:

Mr. A. P. MENDIES, Dallas, Tex.

Mr. A. P. Mendies, Dallas, Tex.

My Dear Mr. Mendies: Your letter is indeed full of thought and splendid spirit. I agree with you that we ought to have the freedom of the seas, and we, not being at war with any nation, under the codes of international law have a perfect right to ship our goods, wares, and chattels to Germany and Austria the same as England and France. But England insulted civilization, outraged and trampled on American rights, stretched a dead line across God's oceans, and forbid us to go with any of our commerce to her enemies; and months before Germany sank the Lustiania England had, with unscrupulous and venal disregard for our rights, put nearly a billion dollars' worth of our commerce behind her blockade. Through Morgan, her agent and resident envoy in this country before our new banking law went into effect to afford us relief, she created a money famine in the South and took by force nearly a million bales of cotton from the high seas and refused it passage, in this way killing the cotton market for the southern farmer. By methods common to pirates and highbinders, she held us up on the high seas, while Morgan and her agents robbed the South of \$400,000,000. This glorious Government of ours said not a word about vindicating our national honor, and we now stand complacent and suave while she "rifles our mails," tramples on our rights, and spurns with utter con-

tompt all our neutral and natural rights, and forbids us to trade with Germany or any country except by her consent. In her deprayity she has now gone so far as to forbid us the sacred right of helping feed the starving ewes in Poland. Their brethren in America, in a heart throb of sorrow for their race, which has been outlawed, plundered, and persecuted in time of peace, and now robbed and ransacked by war, are pleading to take them food but England says no. England tells grand America that these Americans, God-trusting Jews, shall not go there to feed starving brothers; and while millions of Polanders hold out the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here, we have the withered hand of starving hunger to their brethren here. We have the winder had been declared to the starving here to the starving brothers had been declared to the starving here and the starving here are to the starving here are to the starving here are to the starving here are the starving here are to the starving here professors, and leading men openly advocating and demanding that we join in and help whip. Morgan's war bonds that he bought from England have fallen on the market about \$10,000,000 since Germany broke through the French lines at Verdum last week. I think he has already sent out his decree to all his papers, political sarraps, and henchmen everywhere that our Government must help whip Germany—to save his bonds. Of course, he does not say to save his bonds. He says we have the save the starving her save his bonds. The save his bonds. Of course, he does not say to save his bonds. He says we have the save the sa

Very respectfully and with much anxiety,

J. H. DAVIS.

MARCH 10, 1916.

Hon. A. S. BURLESON, Washington, D. C.

Hon. A. S. Burleson, Washington, D. C.

My Dear Friend Burleson: Several northern newspapers are inquiring of me, as Representative at Large from the State of Texas bordering on Mexico, as to what I think of the Mexican situation. As one having been opposed to war, they want to know what I think now. I answer that I think America should catch and exterminate those Mexican cutthroats, bandits, and robbers. It is not a question of traveling on some belligerent ship, it is not a question of protecting somebody's travel in Mexico, but it is a question of protecting our people at bome in their own country around their own firesides and in their own private pursuits. We can not longer dally with and delay settlement of the Mexican problem. We have aided Carranza in many ways, hoping and expecting that he could afford our people the necessary rellef. We transported his armies through our territory in order that he might overtake and vanquish Villa and his guerillas. This he has been unable to do, but these very acts of kindness to Carranza and his army, representing the de facto government or Mexico, gave us the vengeful enmity of Villa and his clans, and he is now carrying out his threat to make us pay for our generosity by burning our homes and murdering our people in a villainous manner.

I think the necessary courtesy should be extended to Gen. Carranza's greenyment by giving him potics that we appected to take ears of our

In a viliatnous manner.

I think the necessary courtesy should be extended to Gen. Carranza's government by giving him notice that we expected to take care of ourselves by entering his territory and doing for him and ourselves what he has been unable to do; that is, literally vanquish and exterminate these incendiaries, murderers, and robbers that are marauding his country and ours under Villa.

I feel quite sure that Congress will be ready and anxious to support the President in whatever method he may pursue to accomplish this nurnose.

With 2,000 miles of border exposed we can not afford to tall chances on another raid by Villa and his clans.

With much respect,

J. H. DAVIS.

The McLemere Resolution.

EXTENSION OF REMARKS

HON. BENIGNO C. HERNANDEZ.

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. HERNANDEZ. Mr. Speaker, I voted on this momentous question as I thought best for the interest of the people at

First. I voted against the previous question, because I thought that the subject should be discussed and the measure amended so that it would be acceptable to all the Members of the House.

Second. I voted against the rule which brought the resolution into the House, and under consideration, because I thought that it should have a wider discussion than it did have.

Third, I voted against tabling the resolution itself, because I, for one, believe that the people should be given ample notice and warning, that taking passage on armed merchant ships belonging to the belligerent nations of Europe is placing our country in a precarious position, while a warning, such as the resolution provided, would have the effect of avoiding trouble with other Lations now engaged in war. The right of our citizens to travel on any armed merchant ship has not been disputed, and international law as has been interpreted so de-clares, but the people who furnish the sinews of war and the men, the fathers, and sons of this great country say that if by these means we can keep out of war it is most certainly a most sensible thing to do.

I do not doubt but that the mere fact that this measure has brought out lengthy and able discussions will answer the purpose of a warning to our people, and that no sensible person will be so unpatriotic as to by his action in this regard be liable to involve his country in war simply because he desires to exer-

cise a doubtful right to travel on armed merchant ships.

On these grounds, therefore, I feel impelled to express my honest convictions in favor of warning American citizens from traveling on armed merchant ships.

We have seen and heard of war on this side of the continent. very close to my own State, where many of our own citizens have been cruelly tortured, murdered, robbed, and assaulted, and little or nothing has been done to either relieve the situation or to give a material warning to our people to keep out of the war-ridden, revolutionized Mexico, where women have been raped, murdered, and subjected to the most vile treatment, where property of many American citizens has been destroyed and appropriated by those who were supposed to be at the head of a government, and where our flag has been insulted and trailed in the dust, and we stand for it all, because it is said that we are "too proud to fight." If the reckless man in search of adventure in the theater of war or the man for selfish gain would travel under the present state of affairs in these warridden countries, knowing, as they must, the condition and danger that surrounds them on such a voyage, if they place themselves beyond the pale of law protection, then, I say, let their blood be upon their own heads, but the warning should come first; then we have done our duty to them and to ourselves.

I represent a State whose citizens are most patriotic. Long before we came into the sisterhood of States they had shown and demonstrated to the world their patriotism by offering their services and enlisting with the men from the North, from the South, and from the East in the defense of their flag and

In the Civil War New Mexico furnished six regiments of In the War with Spain, notwithstanding the ties of blood and religion which bind many to their once mother country, nearly half of Col. Roosevelt's regiment of Volunteers, known as the Rough Riders, were citizens of New Mexico, and some of them descendants of the well-known "Conquistadores." Many of them were killed, many more were wounded; we offered them up at the altar of our country with mourning and with tears, but with the true patriotic spirit which impelled them to serve their country for its honor and defense.

I know that should the supreme moment for action come again, and—God forbid—our country should have to resort to war, New Mexico will be in line with her quota, and more, too, of her sons for the defense of our flag; we are a pence-loving and liberty-loving people, but we are filled with the patriotism of our forefathers, and, as their Representative in the Halls of Congress to-day, say to you that should the occasion arise I but men. For their sakes, and for the good of those who would

voice the sentiments of my patriotic Commonwealth when I say that the men of the State of New Mexico and myself personally will glory in offering our services to our country against

any foreign enemy, be it where it may.

In the meantime, however, we should first exhaust our diplomacy and warn our people to avoid danger, and when we have done all in our power toward preventing war, and having failed and our diplomacies are exhausted, we will then be unflinching in our solemn duty.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JAMES L. SLAYDEN.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, March 8, 1916.

Mr. SLAYDEN. Mr. Speaker, when it was first suggested that Americans who proposed to cross the ocean on an armed merchant ship of any one of the nations of Europe now at war should be warned of the danger of such a voyage and asked not to put themselves in peril or to do a thing that might involve the United States in war I resented the idea. At once I said to myself, "Americans have a right to travel on such ships, and I am not willing to have any American right sur-rendered." Then I did a little more thinking, got a little more information, and finally decided definitely and firmly that my first opinion was wrong. I was moved to this change of view by what is happening in Europe in the greatest, most expensive, and most disastrous war in all history. I also came to suspect the existence of a conspiracy to force our country into a war with Germany and was influenced by that suspicion.

When more than 13.000,000 men are actually on the battle line, divided into contending camps of nearly equal size, engaged in the devil's work of trying to destroy each other, it is time for peace-loving men to do all they can to end the horror and save civilization. Every neutral country ought to thank God that it is neutral, and every good citizen should do what he can to keep it so. Until this time we have kept out of war in spite of the efforts of some foolish, partisan and interested people in the United States who have wanted us to get into the

European horror.

Many of our citizens have not been neutral in speech or act, but the attitude of the Government has so far been officially correct. If it were not to continue neutral and if our excited and unreasonable fellow citizens were to drive us into war with one or the other groups of nations, what would be the consequence?

The first thing to be done would be to collect an indefinite number of hundreds, possibly thousands, of millions of dollars from the people to engage in a war that we did not make and should not have anything to do with. Then with an enlarged Army and Navy, enlisted from the fields and workshops, we would plunge into war—into a war that has been called "the greatest crime of all the ages." Some of our ships would probably be sunk, and our young men would be killed in the quarrels of kings and emperors whose language they do not understand, and whose reasons for going to war are equally strange to them.

Finally, when peace came, the remnant of our Army and Navy would limp back home and we would begin granting pensions, the end of which would not come in eighty years. Our experience with Civil and Spanish War pensions shows that here in the United States, great as is the actual first cost of the war itself, the bills that come afterwards are still greater. The Civil War of 1861-1865 cost about \$3,000,000,000. Pensions paid since amount to nearly \$5,000,000,000, every cent of which has come from the earnings of people who labor. It will cost more billions yet, even if we do not have another war for a hundred years.

The war in Europe has increased the debts of those nations to more than \$50,000,000,000, which is equal to about one-fourth the value of all property in the United States. It has cost the lives of millions of young men, sent home more millions of them without eyesight, with the loss of a leg or an arm, or otherwise crippled, and will populate the poorhouses and asylums with vast numbers who will not be able to make a living for themselves and who will have to be supported by those who can

These things might, they probably would, happen to our young

have to work harder to earn all these vast sums, I want to keep out of a quarrel that does not concern us. I do not want some fool, some idle rich person, to sail on one of these armed merchant ships which might be lost and thus plunge the country into ruin.

People who must cross the ocean at this time can find ships that sail under the American or some other neutral flag and incur no other risk than accidents or other ordinary sea dan-

gers. Some of them recklessly court the danger that they are sure to find on the ships of Germany, England, or France.

Last week a man sailed from New York to the Mediterranean on an armed merchant ship under the flag of one of the allied Governments. Interviewed before he sailed he said that he had already made three voyages through the danger zone and that he rather "liked the thrill." Mr. Speaker, it is such fools as that Brooklyn man, with his love of thrill, that are imperiling the peace and happiness of a hundred million people. Such a creature as this is a greater menace than yellow fever, smallpox, or bubonic plague, yet we quarantine against the diseases while granting him full liberty to work his mischief. It is absurd that such persons should not be restrained from doing things that may mean war and misery. The devastations of these diseases are unimportant compared to a battle like that at Verdun.

The McLemore resolution, reduced to a simple phrase, merely meant that if foolish and reckless Americans insist on their right to travel on armed merchant ships of warring countries they shall do so at their own risk. Is it not a great deal better that they should take the risk than to have a hundred million people thrown into a horrible war in Europe? I think so, and that is why I shall vote for the resolution to warn American travelers to keep off the armed ships of England, Germany, France, and Italy,

A great and influential lobby operating about the Halls of Congress and through the press is urging two things. First, they demand that we shall reverse our traditional, nonmilitary policy and shall build up an army and a navy to the size of those of the European kingdoms; and, second, that we shall

employ our enlarged military forces in Europe.

Have our people forgotten the sound advice of George Washington that we should not meddle in the affairs of other countries; that, above all things, we should avoid entangling foreign alliances? It seems so, and unless the American voter interposes his veto it will be done.

Soon after the great war in Europe began the President of the United States, addressing the whole people, said that it was our duty to be neutral—to be neutral in speech and act. In assuming that attitude-the President was right and his advice

No one believed, no reasonable man expected, that the American public, which reads and makes up its own mind, would not incline in sympathy more to one side than to the other. The President certainly did not expect such an unreasonable thing when he requested neutrality. All he asked was that the speech and deeds of the people of our country should conform to the rules of neutrality. But how has that reasonable request been answered?

In an address delivered in Tremont Temple, Boston, Sunday, January 30, 1916, Prof. Josiah Royce, of Harvard University, said some remarkable things. He said things which, if unneutral speech were penalized by law, would surely bring him punishment. The speech was made to an association which calls itself the Citizens' League for America and the Allies, and de-clares its purpose to be "to use all lawful means to put this Nation in a position of definite sympathy with the allies. Here are some of the things Prof. Royce said:

As to munitions of war, it is not merely a so-called American right that our munition makers should be free to sell their wares to the enemies of Germany. It is our duty to encourage them to do so, since we are not at the moment in a position to serve mankind by a more direct and effective means.

Clearly Prof. Royce meant that until we were ready to plunge into war in support of the allies we must go on shipping war material to them.

Later in the same speech the warlike professor said:

Later in the same speech the warlike professor said:

Let us enthusiastically approve of supplying the enemies of Germany with financial aid and with munitions of war; let us resist with all our moral strength and influence those who would place an embargo upon munitions; let us bear patiently and uncomplainingly the transient restrictions of our commerce which war entails; let us be ashamed of ourselves that we can not even now stand beside Belgium and suffer with her for our duty and for mankind; let us do what we can to bring about, at least, a rupture of all diplomatic relations between our own Republic and those foes of mankind; and let us fearlessly await whatever dangers this our duty as Americans may entail upon us, upon our land, and upon our posterity.

Prof. Dovee asks the cotton forwards whose product is shut

Prof. Royce asks the cotton farmers, whose product is shut out from four or five countries in Europe and whose comfort

and prosperity are seriously interfered with by war condi-tions and blockades, to bear the "transient restrictions uncom-plainingly." That is an easy philosophy for the Boston professor. That is an easy philosophy for the Boston professor, whose comfortable salary is not lessened or its receipt delayed by war conditions, but it does not make a strong appeal to the farmer whose cotton is sold at a loss when he can find any market at all.

A few days ago the Washington newspapers carried this item of news:

SECURITY HOLDERS BEGGING FRANTICALLY FOR LIGHT ON THE DIPLOMATIC SITUATION.

[United Press.]

Heavy holders on the Chicago and New York markets, becoming nervous over the international situation, are wiring to officials here in Washington daily pleading for some light on the negotiations. In spite of the fact that they assure all replies will be held "in strictest confidence," their prayers are going unanswered.

That statement is full of meaning. I will try to explain. Not many months have gone by since two of the great nations of Europe came, by their agents, to this country to borrow money. Wars are the most expensive things Governments ever buy. They require vast sums of money. I recently saw an estimate made by some statistician in which it was claimed that the European war was costing \$75,000,000 a day. That may be an overestimate, but it is certainly costing more than \$50,000,000 a day. That would mean 1,000,000 bales of cotton a day, at \$50 a bale. Everybody can see that war is tremendously expensive, and it is no wonder that the European countries have to borrow money, and lots of it.

England and France did borrow \$500,000,000, through New York bankers, or rather they did sell these New York bankers \$500,000,000 of their bonds. A part of those bonds were unloaded on investors throughout our country. It is the prudent practice of these bankers to unload such investments on the general public as quickly as possible. Some, but by no means all, were sold to Tom, Dick, and Harry from San Francisco to New York, and from New Orleans to Boston.

The market reports show that the value of these bonds is less from day to day. The holders have become alarmed. They fear a still greater fall in price and want the United States to go into war on the side of their bonds. The profits on their deal must be secured no matter what it costs the people in blood and money. Of what importance to them are the misery, suffering, death, and high taxes that war breeds? They will not do the fighting, for they will be too busy collecting the interest on their bonds and making profit in their gun and munitions plants to go into a war created by their greed.

In this connection it may be said that no bank in Texas acted as agent for the sale of these bonds, which indicated a spirit of real neutrality and good judgment.

We are urged not to surrender our right to travel on armed ships. What does that "right" amount to? We all know that civilians are not permitted to travel on battleships, cruisers;

or other type of war vessels.

What is a warship? Presumably, and in fact, it is any vessel so armed or equipped that it may do serious injury to an enemy. If a merchant ship is so armed that it can sink a submarine, it is a dangerous enemy. The biggest battleship afloat can do

Submarines are the newest weapon for war on the ocean and, I may say in passing, the most effective. But their steel sides are not thick enough to resist a shot from a cannon of the smallest bore. A modern, high power, shoulder rifle could send a steel-jacketed bullet through the flimsy armor of the undersea boat. Remember that.

Heretofore merchant ships have been permitted to carry cannon for defense. This right to be armed for defense is a tradition. It comes down from the days of piracy. A hundred years or more ago sea rovers, or pirates, intercepted merchant ships and robbed them of valuable cargoes and usually killed the officers and crew. This country fought a war just 100 years ago to stamp out piracy. Since the victory over the Barbary States piracy, except along the coast of China in an unimportant way, has not existed.

Yet merchant ships have gone on carrying cannon for defense against pirates.

Now comes the new naval weapon, the submarine. Under the water it is safe and effective. On the surface it is in danger of being sunk by any merchant ship carrying even a small-bore gun. Is it not reasonable to assume that any ship that can destroy a formidable war vessel like the submarine has been itself lifted by circumstances into the class of offensively armed ships of war? It is a question of fact and common sense.

The Secretary of State, Robert Lansing, who in all foreign correspondence is the mouthpiece of the President, thought so on the 18th of January, when he addressed the following note

to the belligerent powers of Europe:

on the 18th of January, when he addressed the following note to the belligerent powers of Europe:

It is a matter of deepest interest to my Government to bring to an end, if possible, the dangers of life which attend the use of submarines as at present employed in destroying enemy commerce on the high seas, since on any merchant vessel of belligerent nationality there may be citizens of the United States who have taken passage or members of the crew in the exercise of their recognized rights as neutrals. I assume your Government is equally solicitous to protect their nationals from the exceptional hazards which are presented by their passage on merchant vessels through these portions of the high seas in which undersea craft of the enemy are operating.

While I am fully alive to the appalling loss of life among noncombatants, regardless of their sex, which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control belligerents in the conduct of their naval operations, I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

In order to bring submarine warfare within the general rules of international law and the principles of humanity without destroying their efficiency in the dostruction of commerce, I believe that a formula may be found which, though it may require slight modification of the precedent generally followed by nations prior to the employment of the submarine, will appeal to the sense of justice and fairness of all the beligerents in the present war.

Your Government will understand that in seeking the formula or rule of this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally effications in preserving the lives of n

in this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally efficacious in preserving the lives of noncombatants on merchant vessels of belligerent nationalities. My comments on this subject are predicated on the following propositions:

An noncombatant has a right to traverse the high seas in a merchant vessel entitled to fly a belligerent fing, to rely upon the observance of the rules of international law and principles of humanity, and if the vessel is approached by the naval vessel of another belligerent the merchant vessel of enemy nationality should not be attacked without being ordered to stop.

Second. An enemy merchant vessel, when ordered to do so by a bellification of the control of the control

This suggestion of Secretary Lansing is in harmony with the facts and common sense. The objection to it is that it proposes a change of international law while a war is on. But the

change has already been made and no amount of writing and talking will restore the old conditions. In the interest of belligerents armed merchant ships will be attacked, and in the interest of humanity noncombatants should be kept off them.

If we are ever called on to defend the American coasts against an invader we will largely rely upon submarines, and we shall want them to be free from the restraints of outworn traditions. The submarine is the greatest weapon ever devised for naval warfare and specially strong for defense. It is an American invention. With an adequate supply we can hold off any navy that might be sent against us, and we can not afford to weaken our defense by adhering to a rule the reason for which passed a hundred years ago. Of course, a proper and adequate defense ought to be prepared, but beyond that we should not go.

The munitions millionaires and the Prof. Royces, for reasons that appeal to them, want to push us into war. It is the duty of Congressmen to remember the people who will have to do the

paying, fighting, and dying.

The enemies of peace are active and alert and apparently have exhaustless resources. Against them we can only array earnest, conscientious, peace-loving people. These stand for the right, as they see it, against the majority of the newspapers and great commercial interests. They have not wavered in the face of threats and ridicule, weapons which have been invoked in vain against Henry Ford.

I repeat, sir, that I shall vote to advise Americans not to sail on armed belligerent ships because I believe it is my duty to the

country to do so.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. EUGENE BLACK.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 13, 1916.

Mr. BLACK. Mr. Speaker, under the unanimous consent which was granted by the House of Representatives on March 8 to Members of this House to state their views on the McLemore resolution of warning, I now wish to state in a perfectly frank way why I voted against tabling this resolution.

As a Member of Congress, I am perfectly willing at all times to give an account of my stewardship to my people.

In casting my vote on Tuesday, March 7, against tabling a resolution warning American travelers to not take passage on armed merchant ships belonging to belligerent nations, I knew very well that my action would be misinterpreted by some of my very best friends and supporters and would, in not a few in-stances, be severely criticized. This, however, is sometimes one of the penalties of holding public office, and no man who respects his constitutional oath and his honest convictions can allow himself for one moment to be swerved from his duty by considerations of that kind.

Since casting this vote I have received many letters from my friends in my congressional district, some approving and some criticizing my vote in the matter. I have counted the letters which I have received on the subject, and I find that the ratio is exactly 5 to 1 in approval of my stand on the resolution. I am not optimistic enough, however, to say that this ratio actually exists among the people of my district, because I realize that those who approve my course are most likely to write, while those who disagreed will in a less ratio communicate their views to me.

HISTORY OF THE RESOLUTION AND HOW IT CAME BEFORE THE HOUSE.

The McLemore resolution was introduced in the House of Representatives on February 21, and in the regular way was referred to the Committee on Foreign Relations by the Speaker of the House. On February 27 Mr. McLemore, the author of the resolution, issued a written statement, in which he said:

Acting on the advice of friends of the resolution, I shall not press the committee to give the resolution consideration, at least until the President has had ample opportunity to try out his policy and arrive, if possible, at a defirite conclusion of the matter. (See Washington Post, Feb. 27, 1916.)

On February 29, two days after Mr. McLemore had issued this statement that he would not press his resolution until the President had had full opportunity to settle the matter through diplomatic channels, President Wilson wrote a letter to Acting Chairman Pou, of the Rules Committee, in which he demanded an early vote upon the-

resolution with regard to travel on armed merchantmen. (See to Acting Chairman Pou from President Wilson, Feb. 29, 1916.)

On March 4 the Committee on Foreign Relations, acting on this demand of the President, reported into the House of Representatives the McLeniore resolution, with a recommendation that it be laid on the table.

On March 7 the question came to a vote and I was confronted with the alternative to either vote my sentiments or make a cowardly surrender of my honest convictions. And whenever I come to a situation of that kind there is never but one course for me to pursue, office or no office. That course is to stand by what I believe to be right, regardless of the consequences. I do have a very poor opinion of the value of any Congressman who will, from a point of political expediency, sacrifice his views on a nonpartisan question like this, involving a peace policy of the Nation, and dodges because he believes in the maxim, "Safety first." I have no quarrel with the man who voted his honest convictions.

A BRIEF EXPRESSION ON THE MERITS OF A WARNING RESOLUTION.

Now, I not only say that I believe that I voted right on this question, but I believe in it so strongly that I am willing to defend the rectitude of my position at any time or place and against any opponent. I would really like to know, stripped of all its technicalities and legal phraseology, how many people in this country believe that the peace and safety of these United States should be imperiled by a few adventurous Americans and globe-trotters who persist in being allowed to travel on these armed merchantmen. In these troublesome times, when the United States is the only great neutral in the world and civilization is hanging in the balance, how many are there among us who want to flash the saber to defend this abstract right? The White Star liner Canopic sailed from New York March 3, with orders from the British Admiralty to mount guns at Gibraltar, and on board this ship sailed Mr. and Mrs. Charles Bellows, of Brooklyn, N. Y.; and Mr. Bellows, when asked if he did not fear to sail on this ship in view of the captain's announcement of the orders from the British Admiralty, said:

By no means. I have run blockades before this, and so has my wife, and I really enjoy the thrills that come with it. (See speeches of Senator Clapp and Senator Jones quoting this interview, Congressional Record March 4, 1916.)

Now, suppose this White Star liner Canopic, after it mounts its guns at Gibraltar, is sunk by a German submarine and Mr. and Mrs. Bellows go down with the ship. Are we to hold Germany to a strict accountability as indicated by President Wilson in his letter to Senator STONE, February 25, 1916, and plunge this Nation into the awful vortex of the European war because of the loss of these Americans "who enjoy the thrills that come with running a blockade"? I for one, am not willing to do it. I believe that this Nation should warn its citizens of the dangers that attend such travel on these armed merchantmen, and officially request them to take no further passage on such ships until the disputed points are settled and agreed upon by the nations involved.

More than a month ago, when the President was being severely criticized by some Republicans and Democrats in Congress for his policy of warning Americans to stay out of warring Mexico, during a speech on the floor of the House of Representatives, I took occasion to express my unqualified support of the President's policy in this respect and condemned those who were clamoring for intervention on that ground. Of course I deeply regretted the deaths of our citizens which had occurred in Mexico, but still, at the same time, I did not believe that this country ought to be plunged into war with that nation because of the unfortunate death of these American citizens who refused to heed the warning that had been given them. But the Mexican situation has changed now since the outlaw Villa has invaded the United States itself and murdered some of our citizens on our own soil, and I approve unreservedly the determination of President Wilson to hunt him and his band of outlaws down and bring them to justice, if it takes the whole United States Army to do it.

Just so are my views in respect to the German situation. Just as I have regretted to see American citizens killed in the war zone in Mexico, after they were amply warned to leave, so I would regret to see American citizens killed on board an armed merchantman of one of the European belligerents. But just as I opposed intervention in Mexico on that ground, so would I oppose war with Germany for the doubtful right above referred to. But, on the other hand, just as I unhesitatingly approve the President's course in pursuing Villa and his band of outlaws with the purpose of exterminating them for invading American soil and murdering our people, just so would I be in favor of

fighting Germany if she sinks a single American ship flying our flag; and I would be willing to go into the trenches myself to protect our national honor against such an outrage, if, unhappily, it were to occur. But I am not willing to join the French and English in the trenches in Europe to protect the doubtful" right of an American traveler or globe-trotter to take passage on an armed merchantman loaded down with munitions of war bound for the war zone. And I might as well say here and now that I will never, as long as I am a Member of the American Congress, cast my vote to feed some other mother's son or wife's husband into the mouth of the cannon unless I am willing to respond myself to my country's call for volunteers and feed my own frame to the Molochs of war. Any man who would do it is a time-serving coward and unfit to hold any public office.

A "DOUBTFUE" LEGAL RIGHT.

"Yes," but some one may say, "it would be a breach of national honor and legal right to warn American travelers to not take passage on these armed merchantmen." And to this, I reply, if Americans have any such right at all, it is a very doubtful right. On January 18, 1916, Secretary of State Lansing addressed a letter on this subject to the foreign powers engaged in the war. In this letter he was asking these powers to disarm their merchantmen, and in the concluding part of his letter said:

In proposing this formula as a basis of conditional declarations by the belilgerent Governments, I do so in the full conviction that each Government will consider, primarily, the humane purposes of saving the lives of innocent people rather than the insistence upon a doubtful legal right, which may be denied on account of new conditions. I will be pleased to be informed whether your Government will be willing to make such a declaration conditioned upon your enemies making a similar declaration. I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government and is seriously considering instructing its officials accordingly.

Germany readily acceded to these views, but England and her allies have refused to agree.

Anyone who desires to read this letter of January 18, 1916, written by Secretary of State Lansing to the foreign powers, in which he calls this question-so loudly heralded by the metropolitan press of the country as a question of national honor—a doubtful" legal right, may do so by reading the Congressional RECORD of February 29, 1916.

STAND BY THE PRESIDENT.

Most of the metropolitan press of the country have carried in glaring and sensational headlines the artful slogan: "Stand by the President." I can easily understand how the people, under the excitement of the moment, may be for a time swept off their feet by a ruse of that kind; and some of them may be willing to politically crucify their Congressman because he dared to stand up for his convictions. But that a condition of this kind will remain after there is time for cool reflection I will not believe.

It is universally conceded that President Wilson will be re-nominated at St Louis in June, and I hope triumphantly reelected next November, but suppose that Democrats throughout the United States who believe that a warning to those American travelers and globe-trotters should be given were to exercise the same spirit of intolerance toward the President as has been shown by some toward the Democratic Congressmen who dared to vote their convictions on this subject, what would be the result? With such a loss of Democratic votes throughout the country, the nomination would be an empty honor, and the President could not hope for reelection. But we will not be so narrow as that and turn against the President because we happen to differ from him on this one question.

Is this a one-man government, anyway? If so, we have departed from the teachings of our fathers. Mr. Rawle, in his great work on the Constitution, in discussing the respective prerogatives of the President and Congress, says:

It would not be justifiable in the President to involve the country in difficulties merely in support of an abstract principle if there was not a reasonable prospect of perseverance and success on the part of those who have embarked in the enterprise. * * The power of Congress on this subject can not be controlled; they may, if they think proper, acknowledge a small and helpless community, though with a certainty of drawing a war upon our country; but greater circumspection is required from the President, who, not having the constitutional power to declare war, ought ever to abstain from a measure likely to produce it.

And this same author further says in his great work:

In case of war breaking out between two or more foreign nations in which the United States are not bound by treaty to bear a part it is the duty of the Executive to take every precaution for the preservation of their neutrality, and it is a marter of justice, both to those nations and to our own citizens, to manifest such intention in the most public and solem manner. The disquietude of the belligerent parties is thus obviated, our own citizens are warned of the course it becomes their

duty to pursue, and the United States avoid all responsibility for acts committed by the citizens in contravention of the principles of neutrality. It is the office of the Legislature to declare war; the duty of the Executive, so long as it is practicable, to preserve peace.

But a large part of the metropolitan press of this country have lost sight of this distinction and openly advocate a policy that would give the Congress of the United States no more freedom of legislation than the Russian Duma or the German Reichstag. And they would say to Members of Congress, when the President speaks his will, that nothing remains to be done but for the wavering servitor of an imperial will to "crook the pregnant hinges of the knee where thrift may follow fawning. for one, will never do it.

CONCLUSION.

I hold no brief for Germany. Those who have talked with me know that my personal sympathies are strongly with the allies, especially with France and Belgium. But I am for America first, and believe in a policy of rigid neutrality and that it is the solemn duty of every American citizen who is going to Europe to either take passage on a ship flying the American flag or an unarmed merchant vessel or stay at home.

Notwithstanding I voted emphatically against the views of the President, I have not the slightest pique toward him. In the future I will zealously support him in every policy where I think he is right and render him every assistance that is within my humble power to give. Thus far I have supported every administration measure that has come before Congress, among which I will mention the administration conservation measures relating to public lands having valuable coal, oil, gas, and water-power rights; the Shackleford good-roads bill; and the Post Office appropriation bill, with its railway mail pay and other important postal legislation attached.

other important postal legislation attached.

However, when a great nonpartisan question like this warning resolution, involving a vital peace policy of the United States, is thrust upon Congress I will discharge, without swerving, my duty to the people, for whom I entertain an affectionate regard and whose interests I have at heart more than the political fortunes of myself or any other man. In this way only can I preserve my self-respect, which is worth a good deal more to me than any public office within the gift of the people.

Mr. Speaker, I wish to insert in further explanation of my position a letter which I have received from a friend and constituent of mine and my reply thereto, as follows:

stituent of mine and my reply thereto, as follows:

FIDELITY-PHENIX FIRE INSURANCE CO. OF NEW YORK, Klondike, Tex., March 8, 1916.

Hon. EUGENE BLACK, Washington, D. C.

DEAR MR. BLACK: It is with regret that I notice your attitude against the administration, as was evidenced by your vote on the McLemore reso-

Of course one can't vote to please everyone, but am surprised at your turning against the administration at this time.

I am frank to say that I do not indorse your act, and hope to have the privilege of showing my disapproval by supporting some one in harmony with the administration.

Yours, very truly,

House of Representatives United States, Washington, D. C., March 13, 1916.

Mr. J. R. LEEMAN, Klondike, Tex.

Mr. J. R. Leeman,

Klondike, Tex.

Dear Sir and priedite, our writing me, notwithstanding you are strongly opposed to my vote on the warning resolution.

It is one of the penalties of public office that you sometimes must cast a vote in the discharge of your official duty that will be contrary to the views of some of your very best friends. But no man who respects the oath of his office can be swerved from his duty by considerations of that kind. I note that you say that you hope to have the privilege of showing your disapproval by supporting some one in harmony with the administration. Now, I think that it is entirely proper that I remind you that I have voted for every administration measure thus far brought into this Congress, among which I might mention the conservation measures relating to public lands having coal, oll, gas, and other mineral deposits; also the conservation measure relating to water-power sites in the West; also the Shackleford good-roads bill; and the Post Office appropriation bill, which has just passed the House of Representatives, with its very important legislation for the good of the Postal Service. This last-named bill was introduced by the Committee on Post Offices and Post Roads, of which I am a member, and I helped frame the bill and was one of the committee having charge of the bill on the floor of the House. So far as I know, the only vote which I have cast contrary to the views of the President was on this warning resolution.

Has it become political treason for a Representative of the people to vote his honest convictions on a nonpartisan question like that?

Now, what would an attitude like yours logically lead to if followed by all Democrats? It would lead to a split in the Democratic ranks that would make President Wilson's defeat inevitable next fall. The Republicans and the Progressives are getting together all over the country and Democratic Congressmen from many of the Western States to win next fall. It is universally conceded that President Wilson will again be nomin

toward President Wilson as you say you are anxious to exercise against me, and vote against him. If such a thing as that were to happen, President Wilson's nomination would be an empty honor and he could only hope to carry the solid South. But no such thing will happen, We Democrats all over the country who believe that such a warning resolution should be given will not allow our differences with the President on this one question to drive us from his support. No; not a bit of it. We will maintain our loyalty to him and help to fight his battles.

I hope you will excuse this blunt way of answering your letter, but I am sure that on reflection you will reconsider your attitude expressed toward me in your letter.

Assuring you of my continued high personal regard and that I will as long as I stay in Congress try and obey with absolute fidelity the oath of office which I have taken, I am,

Your friend,

EUGENE BLACK.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM A. RODENBERG, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, March 7, 1916.

Mr. RODENBERG. Mr. Speaker, all Europe is to-day in conflagation. Great and enlightened nations, the exemplars of centuries of civilization, are engaged in a life-and-death strugcenturies of civilization, are engaged in a life-and-death struggle. The flower of the manhood of the Old World is being sacrificed to the god of war. Grim-visaged death has entered the homes of countless millions, and the cries of the widow and the orphan have been lost in the cannon's roar. Judgment has "fled to brutish beasts and men have lost their reason." We, on this side of the Atlantic, far removed from the scene of blood and carnage and death, have until now been successful in preventing our country from being drawn into this awful vortex of war. To-day, however, the President has forced upon Congress a To-day, however, the President has forced upon Congress a situation full of grave portents, and which, if not met in a resolute spirit and without attempt at evasion, will prove a most serious menace to the future peace and tranquillity of the sentiments. United States. In utter disregard of the sentiments expressed in the note of his Secretary of State, Mr. Lansing, under date of January 18, 1916, and which, of course, had the President's full approval before it was sent to the warring nations of Europe, the President now insists that belligerent merchant ships carrying contraband war material should have the absolute with the course the defensive way the entire that the contrabance was the contrabance. lute right to arm themselves for defensive purposes. In the note of January 18, addressed to all foreign powers, Secretary Lansing set forth the position of our Government on the question of submarines and armed merchant vessels as follows:

* * * I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

POWERLESS IN DEFENSE.

POWERLESS IN DEFENSE.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

INNOCENT LIVES AT STAKE.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declarations by the belilgerent Government I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

STAND ON OURSTION SOUGHT.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon their enemies making a similar declaration.

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government and is seriously considering instructing its officials accordingly.

The attitude of the Government of the United States as

The attitude of the Government of the United States, as enunciated in the note of Secretary Lansing, was promptly acquiesced in by the German Government and quite as promptly rejected by the British Government. Upon receipt of Great Britain's protest the President, true to the chameleonlike record of his administration upon every important question, both forcign and domestic, lost no time in completely reversing himself. Not only does he flatly repudiate the doctrine announced in the Secretary's note and accept the contention of Great Britain in toto, but with the zeal that characterizes a new-born convert he now announces with an air of bravado which savors much of mock heroics his uncompromising and unalterable opposition even to the passage of a resolution by Congress warning Americans to keep off armed merchant ships,

On March 2, 1916, the distinguished Democratic Senator from Missouri, William J. Stone, who is chairman of the Senate Committee on Foreign Relations and who has long been recognized as the official spokesman of the administration, made the following statement on the floor of the Senate:

nized as the official spokesman of the administration, made the following statement on the floor of the Senate:

* * * As I understand it, the President's attitude is this: That he has concluded to support the contention that belligerent merchant ships have a right under international law to bear arms for defensive purposes. What he may regard as a defensive armament I do not know; in fact, I doubt that any man would venture authoritatively to define that kind of armament. Furthermore, if a German war vessel should, without warning, fire upon and sink an armed merchantman of the enemy he would hold the attack to be a lawless act, and if American citizens should suffer therefrom he would hold the German Government to the strictest account. If, notwithstanding, the German Government should persist in their policy he would sever diplomatic relations and submit the matter to Congress, which under the Constitution is the war-making power.

I must here state with equal frankness my own position, as I have stated it to the President. In this emergency there should be nothing of evasion or finesse, much less of partisanship. Distressing as it is to me to be obliged to disagree with the President, as well as with many of my colleagues, my opinions have been matured after great deliberation and my sense of duty is imperative. I can not but believe that a belligerent merchant ship, heavily armed—no matter whether it be called defensive or offensive armament—engaged in transporting contraband war material to the army or navy of her sovereign, is in all essential respects the equivalent of a duly commissioned war vessel. To say the least. I think there can be no manner of doubt that the law now covering that question is involved in doubt and may well be considered as debatable. I shall not discuss that question at this time; I am merely stating my position, and what I know to be the position of numerous others. I shall feel obliged as a duty to myself, my constituency, and the country to discuss this question at length in t

If this is to be the President's position in the future and Congress should sustain the Executive by tabling a resolution of warning, it will follow, then, as surely as the night follows the day, that if an armed merchant vessel of the allies is sunk by a German submarine and an American life should be lost diplomatic relations with Germany will be severed and war will be declared by the United States against Germany. alternative, no escape. It does not even matter whether the American citizen was legitimately on board the armed merchant vessel or whether he was hired at a good price to make the trip for the express purpose of giving the vessel and its cargo of munitions the protection of the American Government. I contend that such a doctrine is monstrous and outrageous in the extreme. It is illogical and untenable. It contravenes every consideration of justice and fairness and makes a miserable mockery of our much-vaunted neutrality.

On the same day that Senator STONE gave expression to his views the distinguished Democratic Senator from Oklahoma, Mr. Gore, who, in the preconvention contest for delegates to Baltimore, strongly supported the candidacy of Woodrow Wilson, in advocating the adoption of his resolution of warning used the following language:

Mr. President, I introduced this resolution because I was apprehen-ve that we were speeding headlong upon war. Perhaps I ought to

go further and say what I have hitherto avoided saying, that my action was based on a report, which seemed to come from the highest and most responsible authority, that certain Senators and certain Members of the House in a conference with the President of the United States received from the President the Intimation, if not the declaration, that if Germany insisted upon her position the United States would insist upon her position; that it would result probably in a breach of diplomatic relations; that a breach of diplomatic relations would probably be followed by a state of war; and that a state of war might not be of itself and of necessity an evil, but that the United States by entering the war now might be able to bring it to a conclusion by midsummer and thus render a great service to civilization.

I do not accuse President Wilson of deliberately planning to

I do not accuse President Wilson of deliberately planning to get us into war with Germany. I do not even go as far in impugning his motives as does his former political friend and adviser, Senator Gore; but I make the statement, and measure my words in doing so, that if the President persists in the autocratic and arbitrary course that he is now pursuing the irresistible and inevitable result will be that the United States

will become involved in war with Germany.

If we were at war with Japan to-morrow and a Japanese armed merchant vessel was engaged in transporting a cargo of munitions to her shores, to be later used to kill and mangle American soldiers and sailors, does any sane and sensible human being believe for a moment that an American submarine would hesitate to attack such Japanese vessel because, forsooth, there were Chinese citizens aboard? An American administration that would stand sponsor for such an absurd and spineless policy in time of war would be execrated and denounced by every red-blooded citizen and would be instantly swept into deserved oblivion. I maintain that we have no moral right to take advantage of an unprecedented situation and by the adoption of bullying methods attempt to coerce a nation with which we have always maintained the most friendly relations into doing that which we ourselves would refuse to do under similar circumstances

Sweden has issued a warning to her subjects not to take passage on belligerent merchant ships, and if the President of the United States were still animated by the same lofty considerations of humanity that caused him in the beginning of the great European conflict to set apart Sunday, October 4, 1914, as a day of prayer for peace, he would welcome similar action by the American Congress. In fact, he would have carried out the plain purport of Secretary Lansing's note, and instead of now insisting on the recognition of a "doubtful legal right" which may plunge us into war, he would have issued a warning notice on his own volition, without waiting for congressional action; and in doing so he would have earned the plaudits of the vast majority of his fellow citizens who are unalterably opposed to war. But a change seems to have "come over the spirit of his dreams." Suddenly and without warning he has seen fit to assume a bellicose attitude. He is willing now to run the risk of involving us in war with a friendly power in defense of a principle which, as late as January 18 of this year, he himself regarded as a "doubtful legal right." Is it possible that the continued vitriolic attacks of a certain warlike ex-President are responsible for the change in the attitude of Mr. Wilson, or has he, perhaps, permitted himself to be influenced by a partisan press, under the mistaken impression that they properly reflect public sentiment?

The President and his friends in this House insist that the McLemore resolution be tabled. They do not want the resolution to be stripped of its verbiage so that a fair and square vote may be had on a simple question of issuing a warning to American citizens not to embark on armed belligerent vessels, as provided in the Campbell substitute. They know that if the parliamentary situation were such that a vote could be had on this plain and simple proposition the prediction recently made by Speaker Champ Clark would be fulfilled and a resolution of warning would pass this House by a majority of more than 2 to 1. They know that the McLemore resolution in its present form will not pass and, taking advantage of the parliamentary situation, they prefer to have the false impression go out that the House is not in favor of the resolution of warning but is content to permit the President to follow his own course and to shape the policy of the Government in one of the most vital matters that has confronted the United States since the Civil War.

I have a most profound respect for the dignity and the prestige of the office of President of the United States. I do not belong to that class of men, however, who affect to believe that when an American citizen is elevated to the Presidency he immediately becomes endowed with superior knowledge and at once secures a monopoly of the wisdom of all the ages, I regard

even a President as being properly subject to mortal limitations.

The theory that the Chief Executive is alone capable of conducting our foreign affairs is a relic of despotism which we seem to have inherited from the Europe of 100 years ago.

When this Republic was founded the framers of the Constitution liberalized every part of the system of government in vogue in the Old World at that time with the single exception of this: We still adhere to the monarchial tradition that our foreign relations should be dealt with by the Executive alone, to the exclusion of the representatives of the people. Such unlimited power placed in the hands of one individual may easily prove a serious menace to the peace of a nation. Under our Constitution the power to declare war is reserved to Con-It is quite reasonable to assume that this power carries with it the unquestioned right to discuss foreign affairs and to assist in shaping foreign policies. If Congress has the sole power to declare war, it is plainly our right to be fully advised of every development in a controversy with a foreign power, and it is our duty, as representatives of the people, to take cognizance of every move that is made and every step that is taken by our Government, so that we may be in a position to protect the interests of the country. The tendency in all civilized countries to-day is in the direction of a larger share of cooperation on the part of the people in the management of for-eign relations, and this tendency unquestionably makes for peace, because as a rule the great masses of the people are not in favor of war when it can be honorably avoided.

I have long been opposed to secret diplomacy. I do not believe in enveloping our diplomatic negotiations in a cloak of mystery. I believe that the President owes it to the people to take them into his confidence. The people of this country are called upon to decide all questions of domestic policy. Why should they not have a voice in determining the most vital question of all, namely, the question of life or death, of peace or war

I believe that the American people are practically a unit in their opposition to war. I believe, also, that fully 90 per cent of the people living west of the Alleghanies, where there are few munition factories and little or no financial connection with London, are in favor of issuing a warning to our citizens against taking passage on armed merchant ships because of the very manifest danger involved to the Nation's peace. No American worthy of the name has a moral right to so conduct himself as to endanger the peace of his own country. If he should persist in willfully disregarding the duty that he owes to his fellow man by following a foolhardy course which, under a logical interpretation of the present attitude of the President, will result in war with a nation which has given us every evidence of loyal friendship in the past, then I regard it as high time for Congress to act and to notify such an individual that he can no longer claim the protection of the Government of the United

The question that confronts us to-day is not a question of insisting upon a "doubtful legal right." It is not even a question of the recognition of our established rights at sea. It is a question of the duty that every American owes to his own country, and Congress should not hesitate to point out that duty in clear and unmistakable terms, so that peace may continue to dwell within our borders.

Warning at Home and Abroad.

EXTENSION OF REMARKS

HON. J. M. C. SMITH. OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. SMITH of Michigan. Mr. Speaker, if the question was squarely submitted to the House and I was required to vote upon the separate proposition of warning Americans bound for Europe not to take passage or sail on armed passenger or merchant ships belonging to one of the belligerent nations now engaged in that greatest of all wars, I certainly would vote to In fact, I think sufficient notice has already give such warning. been given to all fair-minded and considerate persons that it is the desire of the people of this country that Americans wishing to travel abroad should not sail on armed ships of the warring People must all know by this time that in taking passage on such armed merchantmen they not only imperil their own lives, but jeopardize the peace and tranquillity of our Nation.

Mr. Speaker, we take no chances in warning people against this danger. And it would seem to me that a person considerate of the welfare of himself and his country would abstain from taking passage on such a ship. It is thought by some

that even after the notice already given and after knowing the desire of the Government to have them refrain from traveling on armed belligerent ships that those committing such indiscretion should take their own chances, and if they lose their lives it ought not to be a cause of war. But I am not now discussing the question as to whether or not an American should be permitted to travel on a ship which does not carry an armament. I would be slow not to allow them that privilege, as a matter of abstract right. Neither am I saying that a merchantman that carries a gun for defensive purposes only is an armed cruiser. If in effect such notice would deny an American citizen the right to travel on the high sea, in a neutral or unarmed ship, I would not want to consent to that.

In the second place, if we classed a merchant vessel carrying a gun for only defensive purposes as an armed cruiser, and there seems to be some authority for so holding, then it is our duty to intern and not give clearance papers to such a ship. This might destroy our foreign commerce and deny us the rights on the high seas which we have always had and are now entitled to. If a merchant ship has the right to carry a gun for defensive purposes and has had that right for centuries, and if a citizen of a neutral nation has likewise had the right to travel and carry on commerce on the high seas in time of war and our forefathers fought for these principles, and this right is implanted firmly in international law and agreed to by these very warring nations, then I would not contend that we should relinquish these rights, much as I believe Americans should respect the wishes of the people of the Nation not to travel at this time on armed ships belonging to the belligerents. The right of a citizen of a neutral nation and the right of a ship of a neutral nation to sail the high seas were established long before the submarine was invented. And while I recognize the right of a nation to use any implement of legitimate warfare it can to win, I think as long as the rights of neutral citizens and neutral ships were firmly fixed and agreed to prior to the war, then that all implements and methods of warfare subsequently invented should respect those rights. Laws .f warfare can not be changed during the progress of the war without the consent of nations. No question is raised over the fact that a submarine is a warship. They can carry, and some do carry, a mounted gun. No question but what a warship must give notice before it can sink a merchantman. Why, then, not a submarine? Must we have one law for a warship fighting on top of the water and another law for a warship fighting under the water?

After the sinking of the Lusitania the British proclaimed a blockade of all Germany. A proclamation was then made by Germany to agree not to sink any merchantmen belonging to England without notice, providing England would permit the shipment of foodstuffs into Germany and not try to starve noncombatant men, women, and children. This England refused to do, and has since refused to do. We need not consider whether it would have been better for England to have come to an agreement with Germany on the policy of submarine warfare further than to say that, if she had so agreed, the question of warning Americans to keep off armed merchantmen of belligerent nations would not be confronting us to-day.

GIVING WARNING.

Mr. Speaker, the public press very recently was in favor of giving notice to Americans not to travel on armed belligerent merchant vessels. The people as well as Congress became anxious concerning such warning. Vessels were being sunk without warning and American lives were being lost, and the question of warning has become very acute. We are solicitous about Germany giving warning to merchantmen before sinking them, and I think justly so. Neutral nations have rights which must be respected by other nations when at war as well as when at peace. But while we are contending for the right and duty of giving warning on the part of the belligerent nations why do we not take heed of the warning at home and keep off belligerent armed vessels? I am for heeding the warning at home, and think it should be heeded abroad.

Senator Stone, of Missouri, the chairman of the Committee on Foreign Relations, became alarmed over the situation and on February 21 had a conversation with the President about it. This conversation led Senator Stone to write the following let-

ter, February 24, to the President:

ter, February 24, to the Fresident:

DEAR MR. PRESIDENT: Since Senator Kern, Mr. Flood, and I talked with you on Monday evening, I am more troubled than I have been for many a day. I have not felt authorized to repeat our conversation, but I have attempted, in response to numerous inquiries from my colleagues, to state to them, within the confidence that they should observe, my general understanding of your attitude. I have stated my understanding of your attitude to be substantially as follows:

That while you would deeply regret the rejection by Great Britain of Mr. Lansing's proposal for the disarmament of merchant vessels of the allies with the understanding that Germany and her allies would not fire upon a merchant ship if she hauled to when summoned, not

attempting to escape, and that the German warships would only exercise the admitted right of visitation and capture, and would not destroy the captured ship except in circumstances that reasonably assured the safety of passengers and crew, you were of the opinion that if Great Britain and her allies rejected the proposal and insisted upon arming her merchant ships she would be within her right under international law. Also that you would feel disposed to allow armed vessels to be cleared from our ports; also that you are not favorably disposed to be cleared from our ports; also that you are not favorably disposed to be cleared from our ports; also that you are not favorably disposed to the idea of this Government taking any definite steps toward preventing American citizens from embarking upon armed merchant vessels.

Furthermore, that you would consider it your duty, if a German warship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers, to hold Germany to strict account.

Numerous Members of the Senate and the House have called to discuss this subject with me. I have felt that the Members of the two Houses who are to deal with this grave question were entitled to know the situation we are confronting as I understand it to be.

I think I should say to you that the Members of both Houses feel deeply concerned and disturbed by what they read and hear. I have heard of some talk to the effect that some are saying that, after all, it may be possible that the program of preparedness, so called, has some relation to such a situation as we are now called upon to meet.

I have counseled all who have talked with me to keep col; that this whole business is still the subject of diplomacy and that you are striving to the utmost to bring about some penceable adjustment, and that in the meantime Congress should be careful not to "hell up" a diplomatic situation by any kind of hasty and all-considered action. However, the situation by any kind of hasty and il-considered nection

In this letter the Senator states the attitude of the President to be that England was within her rights if she refused to disarm her merchant ships. And that armed belligerent ships would be allowed clearance papers, and that if Germany should fire on an armed merchantman and American lives were lost, to hold Germany to strict account. This is what Senator Stone states is what he understood the President's position to be, and the letter speaks for itself. The President replies by letter on the same day, stating that the right to change or alter the laws of belligerent nations during the progress of the war does not obtain, and that the right of American citizens must not be abridged, but respected and maintained. The President talks His letter is not uncertain, and that if we acquiesced in a change of the law and custom of nations in denying the right of travel to our citizens we would violate the rights of mankind everywhere, of every nation and allegiance. That it would make everything this Government has achieved during the war meaningless and futile. That he is contending for American sovereignty. The letter of the President follows:

FEBRUARY 24, 1916.

Feruany 24, 1916.

My Dear Senator: I very warmly appreciate your kind and frank letter of to-day, and feel that it calls for an equally frank reply.

You are right in assuming that I shall do everything in my power to keep the United States out of war. I think the country will feel no uneasiness about my course in that respect. Through many anxious months I have striven for that object, amid difficulties more manifold than can have been apparent upon the surface, and so far I have succeeded. I do not doubt that I shall continue to succeed. The course which the central European powers have announced their intention of following in the future with regard to undersea warfare seems for the moment to threaten insuperable obstacles, but its apparent meaning is so manifestly inconsistent with explicit assurances recently given us by those powers with regard to their treatment of merchant vessels on the high seas that I must believe that explanations will presently ensue which will put a different aspect upon it. We have had no reason to question their good faith or their fidelity to their promises in the past, and I for one feel confident that we shall have none in the future.

But in any event our duty is clear. No nation, no group of nations, has the right, while war is in progress, to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should very unhapply be abridged or denied by any such action, we should, it seems to me, have in honor no choice as to what our own course should be.

For my own part I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation is involved. We covet peace, and shall preserve it at any cost but the loss of honor. To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation, indeed. It would be an implicit, all but an explicit, acquiessence in

of our hitherto proud position as spokesmen, even amid the turmoil of war, for the law and the right. It would make everything this Government has attempted and everything that it has accomplished during this terrible struggle of nations meaningless and futile.

It is important to reflect that if in this instance we allowed expediency to take the place of principle the door would inevitably be opened to still further concessions. Once accept a single abatement of right and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands piece by piece. What we are contending for in this matter is of the very essence of the things that have made America a sovereign Nation. She can not yield them without conceding her own impotency as a Nation and making virtual surrender of her independent position among the nations of the world.

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office, and as your sincere and devoted friend. If we should unhapply differ, we shall differ as friends, but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation.

Faithfully, yours,

Woodrow Wilson.

The President's letter is a strong plea for the right to arm

The President's letter is a strong plea for the right to arm a merchant vessel and of the right to travel thereon. The right to arm a vessel for defensive purposes seems to be well established in law of long standing.

The right of a German ship to defend herself and to be armed for that purpose has not, so far as I am aware, been doubted for two centuries, until it has again become one of prime importance. The historical evidence down to the year 1815 is overwhelming. (8, Doc. No. 332 on armed merchantmen, p. 32; A. Pearce Higgings in Am. Journal of International Law, vol. 8.)

A merchant vessel of belligerent nationality may carry an armament and ammunition for its sole purpose of defense without acquiring the character of a warship. (From circular issued by the State Department Sept. 19, 1914.)

A leading newspaper of my own State, in an editorial, says the following designation of a warship was consented to by the Kaiser himself at The Hague tribunal October 18, 1907.

I quote from the editorial:

A nation at war has a right to attack and sink, without warning only a vessel of war.

What is a vessel of war? International law explicitly defines and describes it. Fortunately, Kaiser William himself, with his own hand, wrote that explicit definition and description. Here it is, the exact txet as unanimously agreed to by The Hague Tribunal on October 18, 1907. 1907:
"Convention relative to the conversion of merchant ships into war-

"Convention relative to the conversion of merchant ships into warships.

"By His Majesty the German Emperor, King of Prussia, etc.

"A merchant ship converted into a warship can not have the rights and duties accruing to such vessel unless it is placed under the direct authority, immediate control, and responsibility of the power whose flag it flies.

"The crew must be subject to military discipline.

"Every merchant ship converted into a warship must observe in its operations the laws and customs of war."

Thus international law describes exactly how a merchantman must be converted to make it a warship. It must be directly under the authority of the navy department, commanded by naval officers, operated by a crew under naval discipline, and it can not be operated as a merchandise and passenger ship because its business is war and not trade. Unless it is all these it can not be treated as a warship and blown up without warning.

For the purpose of showing just what the question was which

For the purpose of showing just what the question was which the President had in mind when we were called upon to vote on the McLemore resolution, I call attention to the President's letter to Mr. Pou, member of the Rules Committee:

THE WHITE HOUSE, Washington, February 29, 1916.

The White House, Washington, February 29, 1916.

My Dear Mr. Pou: Inasmuch as I learn that Mr. Henry, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country, which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very earnestly commend it to their immediate attention.

Cordially and sincerely, yours,

Woodrow Wilson.

This letter written to Mr. Pou, who was to report out the resolution to be voted upon, shows just what the President had in mind. It was not only respecting a warning to people not to travel on belligerent ships, but also to counteract a report that was being circulated in the capitals of foreign powers that the Congress of the United States was not in sympathy or behind the President in his foreign policy. I think the people of my district would not want me to be hasty in voting for war if some overzealous citizen of ours should persist and insist on his right to go abroad and travel on an armed belligerent merchant vessel and lose his life. But in so declaring I know there

are no more patriotic people in our Republic than those of my district and State. It the War of the Rebellion Michigan sent 90,000 of her citizens to the front out of a population of only 750,000. And should the occasion ever require our country to make the sacrifice Michigan will do her patriotic duty to maintain the dignity and uphold the honor of the Nation.

The text of the McLemore resolution is as follows:

The text of the McLemore resolution is as follows:

Resolved, That the House of Representatives of the United States do, and it hereby solemnly does, request the President to warn all American citizens within the borders of the United States or its possessions or elsewhere to refrain from traveling on any and all ships of any and all of the powers now or in future at war which ship or ships shall mount guns, whether such ship be frankly avowed a part of the naval forces of the power whose fag it flies, or shall be called a merchant ship or otherwise, and whether such gun or guns or other armament be called "offensive" or "defensive"; and in case American citizens do travel on such armed belligerent ships that they do so at their own risk.

That the House expresses the determination of the people and Government of the United States both to uphold all American rights and to exercise care, consideration, and wisdom in avoiding actions which tend to bring American citizens and American interests into the zone of conflict, where the passions of war are raging.

The action taken by Congress not only shows that in great

The action taken by Congress not only shows that in great international questions it stands by the President, who has these questions to solve, but it also serves to notify all the people that the United States does not want them to travel on armed ships. And I hope the wishes of the people will be respected by them.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. FREDERICK H. GILLETT.

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. GILLETT. Mr. Speaker, I appreciate the force and the logic of the arguments against both the adoption of the rule and the laying of the resolution on the table. But despite logic I believe that the issue before us is generally looked upon by the people of this country and of the world as whether we shall vote confidence or lack of confidence in the President in the present crisis of his negotiations with Germany. pretend to have much confidence in either the foreign or the domestic policy of this administration. It has often been suggested to me from that side of the House that my participation in debate here is not always from a purely nonpartisan standpoint. But since the outbreak of this war I have not uttered a word of criticism of our foreign policy. I have felt that as long as it was tolerable it was more important in such serious times that Americans should show a united front toward the world than that deserved criticism should be expressed.

In the present juncture I am thoroughly in accord with the President's position that neutrals have the right to travel in safety on the ships of belligerents, though armed for defense. That is a well-established doctrine of international law, sanctioned by the decisions of our Supreme Court. And that is the practical issue before us now. I do not think good judgment has been shown in the method of bringing it before us. woeful weakness of tactics was illustrated by the fiasco in the Senate, and I regret that the exact issue is not placed before us more explicitly to-day. Whether it is accidental or intentional, whether the administration leaders have bungled or are disingenuous and do not dare to face a clear issue, I can

This is not, as is generally believed, a mere resolution of warning and caution. A resolution which meant only that would have little opposition. I certainly think no American ought to sail on an armed merchantman and risk involving his country in serious complications except in case of stringent necessity. But the McLemore resolution does not mean simply that Congress disapproves such sailing. It says explicitly that he sails at his own risk. Our protection is withdrawn from him. A citizen of the United States fleeing for his life from Turkey, for instance, and taking passage wherever he can find a ship, will not be protected in the right which the law of the world and of his country assures to him. To such a resolution I am unalterably opposed. The fault I have found with this administration has not been that it was too bold in the assertion of the rights of neutrals but that it has been too timid and irresolute and vacillating toward both sides in the war. conduct has brought upon us the reproach that we have been

concerned over property and profits and dollars and not for principles or ideals. We are recognized as the one great neutral nation. If the rights of neutrals, which all the warring nations are constantly trying to infringe, diminish, and break down, are to be maintained anywhere, it must be by us. And so there rests on us a grave responsibility not only for the rights of American citizens and commerce but that all the rights of neutrals established by the growth of centuries should be respected.

I think our course has been based too exclusively on the injury to our citizens and not enough on the injury to internalaw which establishes the rights of our citizens and whose intraction is a menace against all rights. Both sides to this conflict have shown a disposition to ignore these rights, and against both sides we ought to resolutely assert them. If the case were reversed and we were at war and England and France and Germany at peace, do you think we would be allowed to set up the claim that international law should be changed for our convenience? We do not need to speculate; we have the record to convince us. In 1861, when Mason and Slidell were taken from the *Trent*, you remember the peremptory and threatening manner in which Great Britain showed her resentment. France and Prussia were not concerned, except as disinterested neutrals, yet both of them protested to our Government. Prussia was not a sea power or a maritime nation—our conduct could little affect her—yet Count Bernstorff-I presume an ancestor of the present distinguished German ambassador-sent on behalf of Prussia a formal notice to our Government that, if the action of Capt. Wilkes was authorized by the United States Government, "we should find our-selves constrained to see in it not an isolated fact but a public menace offered to the existing rights of neutrals.'

We to-day owe it not only to our citizens but we owe it to humanity and the world that some one shall uphold the rights of all neutrals, and that they shall not be overwhelmed and submerged under this universal deluge of brute force.

It is argued that the invention of the submarine has brought new conditions and that international law must be changed to meet them. To that there are two answers: One is that we, a neutral, have a right to insist upon the old rules until new ones are agreed upon and not simply asserted by one side in the conflict; the other is that we may well hope that when the new rules of international law are agreed upon they will declare that, while the lurking and deadly submarine is a justifiable instrument against men-of-war, it is not a fit weapon against merchantmen, whose passengers and crews it has no means of saving.

I hope the administration will resolutely uphold the rights of all neutrals to travel on merchantmen armed for defense, as established by general international law and our Supreme Court, and, to support the administration in that policy, I shall vote to table this resolution.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM R. GREEN.

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES, Tuesday, March 7, 1916.

Mr. GREEN of Iowa. Mr. Speaker, the question before us is very simple: The President, through the State Department, on January 18, in a note to foreign powers, said that the placing of guns on merchantmen at the present date could only be explained on the ground of a purpose of being used against submarines, that any armament on a merchant vessel would seem to have the character of an offensive armament, and that the reasonable rule was that a merchant vessel carrying an armament of any sort should be held to be an auxiliary cruiser. The allied powers rejected this contention; thereupon the President not only reversed his position, but called upon Congress to sustain him in such action, on the ground that the course which he himself had advocated was an abandonment of American rights and subversive of American honor. The statement which I have made is for the most part a literal quotation from the note sent out by Secretary Lansing. Where it differs at all it is merely in abbreviation and not the slightest in meaning.

This position taken by the President in the middle of January was far stronger than any ever taken so far by any

Member of this House, for it would have made necessary the detention as auxiliary cruisers all armed merchantmen belonging to belligerents. There is no necessity that I should determine whether I would have followed him to that extent, but I am lost in astonishment that he should expect this House to follow him in the astounding change which he has made in

his reasoning and in his policy.

It is idle and useless to say that the rights of merchantmen to arm has never been questioned, when it was abandoned by our own State Department, disputed by lawyers, and denied by publicists. The most favorable claim that could be made for this rule would be that, although doubted and denied, it had existed in the past and ought to be continued in the future. The President, however, has said that the honor and self-respect of the Nation are involved. If so, no man more firmly than I would insist upon their preservation; but when, Mr. Speaker, did our honor become involved in hazy, doubtful, and self-abandoned principles? When did it become a patriotic act to encourage our citizens to recklessly and needlessly expose themselves on foreign territory—the deck of a foreign ship—to the perils of warfare, either legitimate or illegitimate? These are new definitions of honor and patriotism, adopted, I fear, by some who have failed to see that they have been invented to build up the waning political fortunes of their originators. I can understand how Members on the other side, shackled by party ties and driven by the party lash, may vote against their judgment on this matter, but I have yet to comprehend how Members of my own party can be so misled by hollow phrases which neither express the fact nor appeal to the reason.

The President says that if we fail to adopt his conclusion it would be an "abdication of our hitherto proud position as spokesman." Mr. Speaker, how tired we have become of the use of this word "proud" since we learned last year that we were too proud to fight for anything, and now find that we are so proud that we are to create some fancied issue in order

that we may fight.

The cry has been raised "Support the President in International difficulties." Mr. Speaker, under this administration we have heard this cry before and this House has harkened to it too often. It supported the President by furnishing him with the means to perpetrate the colossal blunder of assaulting Vera Cruz whereby nothing was gained except to promote the interest of Villa, one of the most bloodthirsty villains that ever cursed God's footstool, and to sow the seeds of hatred which this generation will never live to see uprooted. How many Members are there in this House who then gave the President their vote that do not regret it? We have been compelled to follow the President through the alternate retreats and advances of his Mexican policy and its tortuous and devious course until at last it has become so inextricably involved that neither he nor Congress can tell what the future has in store for us except that it is sure to bring further trouble and probably will result in war. Shall we permit the European situation to fall into the same condition?

What if we grant, as you may, that in fact this right exists? How does it abridge or deny it if we tell those who claim the right that it is not well at this time to exercise it? Our citizens went into Mexico when it was a peaceable country. there with rights that were unquestioned and unchallenged, but they were warned to leave and abandon their property. Shall we now listen to the same voice which issued this command

when we are told that to warn our citizens off all armed ships would be a dishonorable abandonment of our rights?

The State Department for some time has been advising our citizens not to go abroad, and refusing passports even to persons who desired to go abroad for business purposes. I know of one case where a passport was refused to a party who wished to go to London on urgent business; and only newspaper correspondents are given passports to visit the scenes of the conflict. The resolutions warning our citizens to keep off of armed vessels, and resolutions that were introduced refusing passports to citizens who took passage on such vessels, are merely in line with what was the policy of the administration until very recently. If the authors of these resolutions are to be censured as being disposed to give up some right of this Nation or in some way infringe upon its honor, then not only Secretary Lansing but the President himself was subject six weeks ago to the same censure for the same reasons. Those whose argument consists mostly of epithets directed at those who favor a warning resoseem to forget that their denunciations apply more strongly to the administration than to anyone else.

I have always been ready to go further than the administration in maintaining our honor and self-respect. Our citizens have been cruelly murdered in their own homes and in their own land. I would strike hard, fast, and far until a swift and

terrible retribution overtook those who were responsible for this, and would first try to make secure and safe American homes which are being devastated by a refinement of cruelty of which only a monster in human form is capable, administration will do this it will have my fullest and heartiest support. When we think of the insults, degradation, and cruelty that have been heaped upon us by organized bands, both in Mexico and on our Mexican border, the question now raised shrinks into absolute insignificance.

Mr. Speaker, I have no patience with that short-sighted folly which does not look into the future. The rule which the President first announced is absolutely necessary for our own safety; that which he now proposes, suicidal. If we should ever become involved in war with a first-class naval power-and no other would dare attack us-our chief defense would be in our submarines. To establish a rule under which an auxiliary cruiser could not be distinguished from an armed merchant vessel, or the latter from one that is unarmed, would deprive us of our most valuable weapon. If we get into a naval war some of the Members of this House representing districts along the coast, who have been shouting most loudly about a right being given up, will be the first to ask the President to again reverse him-

It has often been said, and truly said, that if the people of Europe had had an opportunity to express themselves the terrible war, which already surpasses in horror all of the calamities which this old world has so far endured, would never have taken place. When I support, as I will support, a resolution in proper form warning Americans to keep off the armed ships of the belligerents, I am not abridging their rights. I am expressing the right of the people at large to have something to say as to whether foolhardy persons who have neither the good sense to look out for their own safety nor the patriotism to care for the interest of their country shall be permitted to needlessly and recklessly put this country in a position so that either war or an ignominious retreat will result. When war comes, if it must come, I want it to be based, and I believe the people want it to be based, upon a real and substantial issue, and not upon one manufactured for political purposes.

American Neutrality.

EXTENSION OF REMARKS

HON. EBENEZER J. HILL,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 13, 1916.

Mr. HILL. Mr. Speaker, under the general leave to print, I desire to insert in the RECORD an appeal by the President of the United States to the citizens of the Republic, requesting their assistance in maintaining a state of neutrality during the present European war, originally presented to the United States Senate August 20, 1914:

"AMERICAN NEUTRALITY.

"AN APPEAL BY THE PRESIDENT OF THE UNITED STATES TO THE CITIZENS OF THE PEPUBLIC, REQUESTING THEIR ASSISTANCE IN MAINTAINING A STATE OF NEUTRALITY DURING THE PRESENT EUROPEAN WAR.

"My fellow countrymen, I suppose that every thoughtful man in America has asked himself, during these last troubled weeks, what influence the European war may exert upon the United States, and I take the liberty of addressing a few words to you in order to point out that it is entirely within our own choice what its effects upon us will be and to urge very earnestly upon you the sort of speech and conduct which will best safeguard the Nation against distress and disaster.

"The effect of the war upon the United States will depend upon what American citizens say and do. Every man who really loves America will act and speak in the true spirit of neutrality, which is the spirit of impartiality and fairness and friendliness to all concerned. The sprit of the Nation in this critical matter will be determined largely by what individuals and society and those gathered in public meetings do and say, upon what newspapers and magazines contain, upon what ministers utter in their pulpits, and men proclaim as their opinions on the street.

"The people of the United States are drawn from many nations, and chiefly from the nations now at war. It is natural and inevitable that there should be the utmost variety of sympathy and desire among them with regard to the issues and circumstances of the conflict. Some will wish one nation, others

another, to succeed in the momentous struggle. It will be easy to excite passion and difficult to allay it. Those responsible for exciting it will assume a heavy responsibility-responsibility for no less a thing than that the people of the United States, whose love of their country and whose loyalty to its Government should unite them as Americans all, bound in honor and affection to think first of her and her interests, may be divided in camps of hostile opinion, hot against each other, involved in the war itself in impulse and opinion if not in action.

"Such divisions among us would be fatal to our peace of mind and might seriously stand in the way of the proper performance of our duty as the one great Nation at peace, the one people holding itself ready to play a part of impartial mediation and speak the counsels of peace and accommodation, not as a par-

tisan but as a friend.

"I venture, therefore, my fellow countrymen, to speak a solemn word of warning to you against that deepest, most subtle, most essential breach of neutrality which may spring out of partisanship, out of passionately taking sides. The United States must be neutral in fact as well as in name during these days that are to try men's souls. We must be impartial in thought as well as in action, must put a curb upon our sentiments as well as upon every transaction that might be construed

as a preference of one party to the struggle before another.

"My thought is of America. I am speaking, I feel sure, the earnest wish and purpose of every thoughtful American that this great country of ours, which is, of course, the first in our thoughts and in our hearts, should show herself in this time of peculiar trial a Nation fit beyond others to exhibit the fine poise of undisturbed judgment, the dignity of self-control, the efficiency of dispassionate action; a Nation that neither sits in judgment upon others nor is disturbed in her own counsels and which keeps herself fit and free to do what is honest and disinterested and truly serviceable for the peace of the world.

"Shall we not resolve to put upon ourselves the restraints which will bring to our people the happiness and the great and

lasting influence for peace we covet for them?"

Since this appeal was first made, the situation has become far more acute, and I desire its reprint in the hope that every citizen of the Republic may read it now.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. L. C. DYER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. DYER. Mr. Speaker, the rule under which we are operating in the consideration of this resolution gives to but few of the Members an opportunity to present their views upon this important question. Therefore I take advantage of the opportunity to extend my remarks for the purpose of making of record the substance of what the greater part of my constituency believe with reference thereto. I have received many communi-cations advising me how I should vote upon the question of whether or not Congress should pass a resolution warning Americans to stay off of merchant vessels that are armed and belonging to belligerent nations. The majority of this House, however, has refused us an opportunity to vote directly upon this question, but are compelling us, under this special rule, to vote yes or no upon tabling the McLemore resolution. Many Members state that they can vote to table this resolution and yet not vote against warning Americans to stay off these fighting ships. It appears that the party in power has finally declined to face the real issue and are giving themselves to quibbling, as is their custom.

I can not take the space in the RECORD to present the views of all those who have written or telegraphed me. However, since I am against tabling the McLemore resolution, I will do my constituents, who are opposed to my action, the honor of printing all of their communications to me upon the subject, which are as follows:

Sr. Louis, Mo., March 1, 1916.

Hon, L. C. DYER, Washington, D. C.:

Speaking for six other Republicans—voters in your district—we desire you to stand with the President, and oppose those other cowardly

Congressmen who are opposing him in his stand against German aggression. S. L. GILBERT.

ST. Louis, Mo., February 26, 1916.

Hon. L. C. DYER, Washington, D. C.

Washington, D. C.

My Dear Mr. Dyer: I do most sincerely hope you will be able to see your way clear to support President Wilson in the position he has taken, regarding our relations with Germany.

I also earnestly hope that every effort will be put forth to place this country in a condition of preparedness. The United States should now have a Navy which would command the respect of the world, and it seems to me we should have a well-trained and well-equipped Army of sufficient size which would also command the respect of other nations.

of same and on the first state of the same and prosperity which Congress can give to the American people.

Most sincerely,

C. H. BARTLETT.

ST. Louis, Mo., February 24, 1916.

Hon. L. C. Dver, United States House of Representatives, Washington, D. C.

Do you wish our country to be held in contempt by those archmurderers, the Teutons and their Mohammedan allies?

These are a few things for you, as Representative of the people of the twelfth Missouri district, to think about.

I believe in you to the extent that when the hour to vote comes, I believe you will be found supporting our President.

Respectfully,

L. JOHN WERER.

St. Louis, Mo., February 28, 1916.

Hon. L. C. DYER, Washington, D. C.

Washington, D. C.

Dear Sir: I wish to acknowledge receipt of your esteemed letters of February 5 and other dates, and to thank you for the Government publications I asked for, which have all arrived.

I heartily approve of President Wilson's letter of February 25 in answer to Senator Stone's milk-and-water letter. If this country is to be any further Bryanized and Kitchinized, every red-blooded American must hang his head in shame. I trust you will not Meekerize. A manly upholding of American ideals and American honor without reference to German votes is imperative at this time. There are many spies and traitors now abroad in this country. I am greatly in favor of a tariff commission and taking the tariff out of politics, if it can be done. I earnestly ask you to stand for humanity and the honor of America and the rights of American citizens wherever they may be. I approve the stand taken by Senator Lodge and hope every Republican Senator and Representative will stand with him.

Yours, very truly,

JOHN A. GILLIAM,

JOHN A. GILLIAM.

THE SHERWIN-WILLIAMS Co., St. Louis, Mo., February 26, 1916.

Hon. L. C. DYER, Washington, D. C.

DEAR SIR: I hope that you will see your way clear to give thorough and absolute support to the President in his position affecting the attitude of this Government toward submarine warfare. While the great majority of true Americans desire peace, we do not want peace

without honor.
Yours, very truly, B. B. CAMERON, District Manager.

Those who have written and wired me urging me to vote against tabling the McLemore resolution are more than 2,000. I can not make mention of the protests of but a few of these, which are as follows:

ST. Louis, Mo., February 29, 1916.

which are as follows:

Hon. L. C. Dyen,

House of Representatives, Washington, D. C.:

May I venture to suggest for your consideration a certain aspect of the armed-ship question which President Wilson seems to ignore:

The position of Germany is this: It has a right, fully recognized by international law, to capture and, if necessary, to destroy enemy merchant ships whenever it has the power to do so, provided it protects passengers and crew. It may accomplish such capture and destruction by any appropriate means. The submarine is not only a proper instrument of war, but the only one available to Germany at the present time. Germany undertakes in the use of this weapon to refrain from unnecessary violence and to guard the safety of passengers and crew whenever the merchant ship is not armed. It can not undertake to warn an armed merchant ship, because it can not do so without inviting the destruction of its own boat. For these reasons it requests the United States to prevent its citizens from traveling on armed merchant ships belonging to England in order that they may not incur the dangers necessarily incident to the voyage.

Mr. Wilson refuses to comply with this request, insisting that Americans have, by immemorial custom and established international law, the right to travel by see on merchant ships of beligerents, and that Germany shall not imperil their safety by the use of any engine of war, however useful it may be against an enemy's power.

Who is right? The following facts are incontrovertible: The merchant ships of England are engaged in carrying immense quantities of multitons, which will be employed for the destruction of German armies. It has caused these ships to be armed, not for the protection

of the lives of passengers, since Germany offers protection if they be not armed, but for the protection of the ships and cargoes. Germany possesses a weapon which can destroy there ships, provided warning be not required, but can not destroy them if warning be required. Should america demand that Germany shall not employ the only weapon it possesses in the only manner possible against armed enemy ships engaged in carrying munitions of war, in order that our citizens may travel on such ships, where the effect of their presence is to shield an enemy's munitions and protect them from destruction? Is there room for the insinuation, however unjust, that while we pretend the safety of our citizens we are in reality bent upon protecting a traffic in arms which is profitable to vs? Our citizens are not bound to travel upon armed ships carrying munitions. They have no natural right to do so. What principle of policy or duty requires us to protect them if they will run into an unnecessary peril, where the result of their presence is so injurious to a belligerent? We pretend to neutrality. Is it neutral to not only permit but to insist that our citizens shall be used as a shield for the protection of munitions of war destined for England?

Yours, very truly,

I. H. Lionberger.

St. Louis, March 2, 1916.

Mr. L. C. Dyer, M. C., Washington, D. C.

Mr. L. C. Dyer, M. C.,

Washington, D. C.

Sir: Your letter of February 5, 1916, duly reached me, and I desire to take advantage of the invitation extended to give you my opinion on a question of the gravest importance which is now before Congress, the attitude of our country toward the warring European nations.

Submarine warfare is a new invention being tried out for the first time, and such rules and regulations as have been in effect between warring countries in the past have not been formulated with a view to dealing with submarine warfare, and are, therefore, not to be relied upon. It would seem that Germany has had much the better of this method of warfare up to the present time and that the allied powers have not been able to successfully contend with that country and are therefore arming their merchant vessels, and such arming of itself implies either attack or defense, and they can be used as armed auxiliary vessels if occasion should require. I therefore believe our stand on this question should be that such armed merchant vessels entering our ports should be interned or, if not, notice should be given to the world that the necessities of submarine warfare have brought about this arming of merchant vessels, and until such time as the nations of the world agree upon laws governing this method of warfare the citizens of our country should be warned that such vessels are liable to come into combat with other vessels, and that as American citizens with the welfare of the country at heart, they should avoid taking passage on such vessels, thus avoiding any occasion for entangling our country in any controversies with the warring powers as to the loss of their lives or property. The infinitesimally small proportion of our people desiring to travel on the high seas at this time should not be allowed to endanger the tranquillity of our relations with the several powers. There are vessels sailing under our flag which can and should be used.

Our country. by maintaining its present neutral position, will, by t

should be used.

Our country, by maintaining its present neutral position, will, by the force of events, become the first nation in the world in every respect, and I can conceive of no possible excuse for us to become embroiled in this warfare, and I believe I express the feelings of my friends and acquaintances when I say that we should avoid entering into this controversy by reason of present conditions.

Six generations back on both sides of my family are born American citizens, which entities me to speak from a neutral point of view, and I trust you will feel the same way and record your vote accordingly.

With best wishes,

Yours, truly,

C. A. VINNEDGE,

4611 Maryland Arcanec.

C. A. VINNEDGE, 4611 Maryland Avenue.

ST. Louis, February 21, 1916.

Hon. L. C. Dyer, House of Representatives, Washington, D. C.

Hon. L. C. Dyer,

House of Representatives, Washington, D. C.

Dear Mr. Dyer: According to the Paris convention of 1856, armed merchant vessels have no legal status. Their right to carry arms for defense is only the right of usage. In former times nearly all merchantmen carried guns for defense against pirates. As piracy has disappeared over a century ago, this custom disappeared by and by. As a matter of fact, none of the large liners of the world carried guns for decades. You may inquire at the port of New York when the last armed merchantman left the harbor before this war. The question would be different if the merchant steamers had been carrying arms before and would be asked now to give them up. As a matter of fact, they have been armed only after the outbreak of the war. They have therefore changed their international status. This is the correct interpretation not, as the Globe stated some days ago, that by forbidding arming of merchant vessels the international law would be changed during the war.

Even if the right of merchantmen to carry guns for purposes of defense only should be acknowledged, this right can not be insisted upon any longer by a nation that has instructed all its armed vessels to attack ships of the enemy at sight. This order of council makes of every armed vessel a warship, and Germany has not only the right but the duty to consider and treat it as such. We, under the same circumstances, would certainly act the same. Just let us suppose that we had war with Japan, and that Japan would arm all its merchantmen and instruct them to open fire as soon as they see a submarine carrying the American fag. Would then the American people be willing that our submarines be instructed to continue to consider such merchantmen as peaceable vessels and wait until attacked?

As precedence three instances may be mentioned. In the beginning of the Russo-Japanese War England issued a proclamation warning its citizens not to take passage on vessels belonging to a belligerent nation. This warning pertained

But where is the guaranty that they will be used for this purpose only? If ever used otherwise the ship is liable to be torpedoed according to law. Therefore the life of passengers on such a vessel depends entirely upon the action of the captain of the ship.

Our yielding of our rights in reference to the Panama Canal; the closing of the "open door" in China; the loss of our merchant marine in the Pacific; the steadily increasing supremacy of Japan in that ocean; the humiliating and disastrous policy in Mexico; and last, but not least, our submission to England. This latter is the most humiliating of all. We suffer silently what the small Sweden does not permit. When our flag is misused by English warships we do not even protest. To mention all the points where we have yielded our rights to England would fill pages. And in order to cover up the British insults a controversy with the central powers is artificially prolonged.

I beg to remain, with kind personal regards,

Yours, very truly,

Dr. C. Barck.

ST. LOUIS. March 1, 1916.

Hon. L. C. Dyen,
House of Representatives, Washington, D. C.

Hone of Representatives, Washington, D. C.

Dear Sir: I received a letter from you some time since in which you suggested that as one of your constituents I should feel free to write to you in regard to any matters which were coming up in Congress. I take the liberty, therefore, of writing to you in regard to the President's attitude respecting armed merchant ships.

I entertain very positive views in regard to the matter, and think the President is clearly wrong. I very much fear that his course, if persisted in, will result in serious and utterly unnecessary trouble for the United States.

I am not a "pacifist," and am more than willing for the United States to go to war for the preservation of "the rights of its citizens," but I do not believe that the citizens of a neutral country, who travel on armed ships of one belligerent, have any just ground to complain of injuries sustained in a contest between such armed ship and the armed ship of another belligerent. A cannon is not like armor, which can be used for purposes of defense only. On the contrary, it can not be used for defense at all, except through action which is essentially aggressive.

armed ship of another belligerent. A cannon is not like armor, which can be used for purposes of defense only. On the contrary, it can not be used for defense at all, except through action which is essentially aggressive.

In view of this situation and in view of the facts that these merchant ships have been equipped with cannon only since the beginning of this war, and in view of the further fact that there is no possible chance of these ships being called upon to use their cannon against any attack except that of the other belligerents, it seems absurd to talk about any distinction between these ships when armed for defensive purposes only, for, whether the purpose of the cannon be for defense or offense, it is to be used to destroy the other belligerents and for no other possible purpose. Since this is the case, it seems clear that the right of the other belligerents to fire upon the armed merchant ship is the same as that they have to fire upon any other armed ship which will destroy them if it can. And since a belligerent would not be called upon to await a shot from an enemy warship armed with cannon, neither is it called upon to await an attack from an enemy merchant ship armed with cannon merchant ship armed with cannon curtailment of their rights, if they keep off merchantmen armed to destroy an enemy.

If anyone is looking for cases where America's rights have been invaded, he can find more than any real American will like to contemplate without taking any such unreasonable position as that taken by the President. A ship flying our own flag—l. e., the Hocking—was seized just outside New York Harbor, on a voyage from one port in our own country; noncontraband cargoes in our own ships, flying our own flag, as well as noncontraband cargoes in other neutral ships, are seized on voyages between our ports and neutral ports. There are many other similar cases. We have indeed tamely submitted to have our entire commerce on the oceans subjected to the supervision of Great Britain. In fact, we do not make a mov

St. Louis, Mo., February 26, 1916.

St. Louis, Mo., February 26, 1816.

Hone of Representatives, Washington, D. C.

Dear Sir: The Catholic Union of Missouri wishes to inform you of its emphatic commendation and indorsement of the step taken by the senior Senator from this State in the present crisis in our international affairs. The effort to concentrate the dispensation of this Nation's policies in the executive department of the Government to the exclusion of the advice and aid of the Congress involves the very essentials of American democratic government. The placing of absolute power of decision in foreign relations in the hands of any one individual, no matter how exalted or responsible his position, is fraught with the gravest of dangers, and we are gratified to know that there have been those courageous enough to protest and take action against such procedure. Not alone do we believe that the judgment of the Chief Executive in the present matter is eminently incorrect, but the disastrous and unsatisfactory results of the policy pursued in our Mexican relations has led us to fear what might ensue from a continuance of this method of procedure in our European affairs.

We trust that in this crisis, of such deep significance to the future well-being of this Republic you will find it possible to support in every legitimate way the senior Senator from Missouri in the position which he has taken, in order that he may be able to successfully maintain the principles which he is championing.

Catholic Union of Missouri.

M. Deck, President.

CATHOLIC UNION OF MISSOURI. M. DECK, President.

Mr. Speaker, on yesterday the distinguished gentleman from North Carolina, the Hon. ROBERT NEWTON PAGE, a Deinocrat and a Representative in this House from the seventh district of that State for going on 14 years, said, in a public statement,

Jesus Christ never uttered a more profound truth than when he declared, "Where your treasure is there will your heart be also." The loan of \$500,000,000 to England by the American capitalists, to say nothing of the profits of munition manufacturers, has destroyed the semblance even of neutrality in the United States and will probably lead

Another distinguished Democrat, the Hon. Thomas P. Gore, United States Senator from Oklahoma, said in the Senate a few days ago that he understood the President to have said that it would be a good thing for humanity if the United States could get into this war. By doing so the war would be ended in a few months.

I do not know whether the President ever made such a statement, but I do truly believe that he is not maintaining a neutral policy as regards the present war. I also believe that he would not regret this country becoming involved in a war with Germany. This is going a good ways to say that of the President of the United States, but, all things considered, I have no doubt of it in my own mind, and I shall not have upon my head the blood of my fellow Americans by refusing to do that which, in common justice, honor, and right, I feel deeply my duty to do.

To me the important question here is, Should a neutral Government place itself in a position whereby, through the consequences of an act of an alien over which it has no control and which may result in injury or death of its citizens, it is to be made a cause of war, or permit its citizens to assume such risks under the idea that their safety is provided for by interna-tional law through the backing of their Government? Common sense would seem to indicate that the policy of a neutral, where questions of war are involved, should be based on the broad grounds of intentional and direct invasion of its rights and not the incidental consequences of an intentional act of a belligerent against an enemy.

I do not regard a vote against tabling this resolution an unneutral act or a hindrance to this country keeping out of the great European conflict with honor. I believe the opposite, and I am for my country and my people in preference to any other nation. I do not have to, for political reasons or otherwise, feel called upon to vote against tabling this resolution. There are not many people in my district of German birth or of Ger-They are few in number as compared with man nationality. the great majority. My opinion is based entirely upon what I conceive to be my sworn duty under all the circumstances as a Member of the American Congress.

The Washington Post, an independent and genuine American newspaper, under date of February 29, has the following editorial, which fairly states my position with reference to this question of warning armed merchant ships of belligerent nations,

The United States Government now has in its possession evidence tending to show that British merchant vessels are armed with effective gans, manned by trained gan crews instructed to fire upon enemy submarines. Basing its action upon this evidence, the German Government has advised the United States that after midnight to-night it will sink armed enemy merchantmen.

If a merchantman attacks a war vessel, the latter certainly has the right to sink the merchantman if it can.

The attempt by Great Britain to make war vessels of its merchantmen and at the same time to claim immunity for them because they are "peaceful vessels" is a fatal error which will lead to the sacrifice of many innocent lives.

Why should there be any sacrifice of American lives in such a situation? Why should not American travelers be warned of the facts? Why should they not be told to beware of taking passage on a vessel which may turn out to be a fighting ship instead of a peaceful one?

The situation that will develop to-morrow is a condition and not a theory. An American has a right to travel on any merchant vessel. In theory he is safe. If he exercises this right by taking passage on a British armed merchantman, he is in deadly danger.

It is the fact and not the theory which disturbs the American people and causes them to urge their Representatives in Congress to warn American citizens to keep out of danger.

Many British vessels are being destroyed by floating mines in the harbors and channels. Innocent lives are being sacrificed. Is it not the part of common sense to avoid these mines and to warn passengers of the danger? In theory there should be no floating mines, as it is a crime against humanity for any belligerent to sow such mines in the path of commerce. But since the theory is set aside by the fact that the mines are there, surely there should be recognition of the fact.

that the mines are there, surely tact.

The American people see with a practical eye: They see that they can not hope to make European nations conform to international law. All the nations at war have violated the law. Americans are concerned with the saving of life and the avoidance of war. If they can save life and avoid war by keeping citizens out of the war zone, away from floating mines, submarines, and bogus merchantmen, they are in favor of that course.

Correct has reiterated its assurance that unarmed belligerent mer-

Germany has reiterated its assurance that unarmed belligerent mer-nantment will not be sunk without providing for the safety of passen-ers and crews. Neutral vessels will not be sunk in any case. Any chantment will n

prudent American, therefore, will be careful to avoid armed belligerent merchantmen if he is advised of the situation.

On certain kinds of ships Americans are safe. On others they are in danger. Certainly the Government can safeguard the lives of its citizens by pointing out which ships are safe and which are dangerous without any surrender of national rights or any besmirching of national boxes.

Commerce on the Missouri River.

EXTENSION OF REMARKS

HON. OSCAR CALLAWAY.

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 13, 1916.

Mr. CALLAWAY. Mr. Speaker, under leave granted me to extend my remarks in the Record, I will insert the following House resolution and letters:

House resolution 161.

House resolution 161.

Whereas on April 22, 1915, Lieut. Col. Herbert Deakyne, of the Corps of Army Engineers, pursuant to a law for reexamination, reported to the Chief of Engineers that "the present and reasonably prospective commerce on the Missouri River between Kansas City and the mouth is not sufficient to warrant the continuance of the present project." and apart from snagging "that all other work be stopped"; and Whereas said report was forwarded by Col. C. McD. Townsend, division engineer, chairman of the Mississippi River Commission, who concurred in the opinion of the district officer, that the existing commerce is not sufficient to justify the permanent improvement of the Missouri River from Kansas City to its mouth, but recommended a comparatively small appropriation for snagging and maintenance; and

comparatively small appropriation for snagging and maintenance; and Whereas said report was lased upon the fact that, notwithstanding \$20,000,000 heretofore spent on the entire river, navigation had practically disappeared; that the proposed project involved a further appropriation and expenditure of \$14,000,000 more; that the average cost to the Government from interest charges and maintenance will be \$1,100,000 annually; that the total saving in freight charges on the insignificant commerce of 1913 was about \$10,000 (p. 11), or a prospective direct annual loss to the Government of \$1,000,000 annually for the 400-mile stretch of the Missouri River from Kansas City to the mouth; and Whereas Col. Deakyne and Col. Townsend by such reports emphatically protested against paying over \$1,000,000 annually, in addition to an original investment of over \$25,000,000, in order to save \$10,000 annually for Kansas City chippers; and Whereas, confirming the opinion of Col. Deakyne and Col. Townsend, Senator Burton declared, March 2, 1915, "You may spend \$20,000,000—yes, \$30,000,000—on this project, and in spite of that enormous amount the traffic will diminish, because you are facing a condition that no policy of river improvement can reverse—the loss of that class of river traffic and the utilization of other agencies for the carrying of freight. I wish it were not so; " " but I am tired of rainbow chasing," and that is what this is, It is much worse than 'rainbow chasing'; it is pure, bald, unmitigated waste'; and

whereas on December 8, 1915, Col. W. M. Black, senior member of the Board of Engineers, now Chief of Engineers, reversed the action of the district and division engineers because "a review of the entire situation indicates that the present grounds for continuance of this project are stronger than those which led to its adoption"; and Whereas pursuant to such report of such Chief of Engineers, overruling the district and division engineers, \$1.500,000 has been recommended in the 1916 bill for the lower Missouri River; and Whereas no copy of said Missouri River report made by the several officers is available for the use of Congress, due to the negligence or intentional withholding of such report by the present Chief of Engineers; and

intentional withholding of such report by the present Chief of Engineers; and Whereas Col. Deakyne has been removed from further service upon the Missouri River and, according to press report, has been detailed for duty at Fort Leavenworth, Kans., without fault or blame on his pari save in the fact that he told the truth and tried to stop waste of Government funds on a uscless waterway project: Now therefore Resolved, That the Chief of Engineers be directed forthwigh to present to Congress the reasons for removing Col. Deakyne from his work on the Missouri River and further to explain fully whether the statement of a self-evident truth by Col. Deakyne is subject to punishment by his superiors; further, that said Chief of Engineers be required forthwith to give full and definite reasons for overruling the report of Cols. Deakyne and Townsend, and for the continuance of a project that has been condemned by Army engineers and by Senator Burton, the ablest waterway expert in the country, as pure, bald, unmitigated waste.

MARCH 9, 1916.

Hon. OSCAR CALLAWAY,

House of Representatives.

House of Representatives.

Sin: 1. I notice in the Congressional Record of yesterday that you have submitted a resolution directing that the Chief of Engineers present to Congress the reasons for removing Col. Deakyne from his work on the Missouri River. I have not seen a copy of the resolution which you submitted, and therefore do not know what particular details you desire information on, nor did I know before that you were specially interested in this matter. Had you made application to this office I should have been pleased to have answered you fully, and I trust that the following information will serve your purpose.

2. The relief of Col. Deakyne from the Missouri River is a result of his approaching detail to the War College in August, 1916.

3. As you are, of course, aware, the War College is located in this city, and is an institution for the study and investigation of military matters and policies. There are detailed each year to the War College

a number of officers selected from the grades of colonel, lieutenant colonel, and major. Of this number two is the quota of the Corps of Engineers, and at least one of these two is usually selected from the grade of lieutenant colonel in the corps.

4. This War College course is considered of great importance, not only to the officer but to the Army itself, and a detail to this college is considered an honor, as only those are selected who are considered to have special qualifications for the character of work required.

5. In order to give officers who are to be detailed to the War College an opportunity to prepare for the work which will be expected of them, it is customary to make the selections a long time abead, and, in addition, if the officer has not within recent years attended the service schools at Fort Leavenworth, it is customary to order him to take a special three-months' course there, beginning in January of each year, preparatory to the regular work of the War College, which begins in the August following.

6. Arrangements for the details to the War College, as I have stated, are usually made a considerable time in advance, and in order that this detail may interfere as little as possible with the regular routine duties pertaining to the corps, it is customary to send an officer to the War College at about the time he is completing at some station a tour of the customary length, which is four years.

7. Col. Deakyne started his four in Kansas City in the year 1912, and knowing that in the ordinary course of events his tour would be completed in 1916, and having in view Col. Deakyne's special qualifications for the War College course, the personnel officer of the Office of the Chief of Engineers, as early as October, 1914, placed Col. Deakyne's name on the tentative slate for the War College. In April, 1915, therefore, his name was definitely placed dopon the War College slate for the detail in August, 1916.

8. Col. Deakyne was communicated with on this subject, and in March, 1915—that is, about

lly, H. TAYLOR,
Colonel, Corps of Engineers,
Acting Chief of Engineers, United States Army.

his judgment, then why was he suddenly removed to meet local demands, according to press reports, or in order to receive special honors in an entirely different line of work?

Your letter indicating the routine course of such appointments is carefully noted, and possibly life at Washington for Col. Deakyne would be more conducive to comfort under existing circumstances than at Kansas City; but in view of the peculiar aptitude shown by Col. Deakyne for placing in a few sentences an unanswerable argument against the \$20,000,000 Missouri River waste, do you not believe his removal will be a distinct loss to the Engineer Corps of waterway examiners and to Congress and to the country?

Pursuant to the resolution I further respectfully ask you to please advise Congress when will the Deakyne report made against the Missouri River project over 10 months ago be available for the use of Members? Can it be had before we are required to vote upon the \$1,500,000 item for the Missouri River, and will the Chief of Engineers give any better or more convincing reasons for proposing such a large sum of money for a useless project in this year of financial stringency than the brief *statement that it would be difficult to find economic justification for the expenditure?

Do you advise Congresse to spend \$14,000,000 more on the Missouri River, and, if so, what reasons do you offer for this expenditure? Do you advise Congresses to spend \$14,000,000 more on the Missouri River, and, if so, what reasons do you offer for this expenditure? Do you believe the Missouri River project is a wasteful proposition, as stated in substance by such eminent gentlemen suggested for honorable distinction as Col. Deakyne, elected to the War College, and Col. Townsend, chairman of the Missourip River Commission?

This is an important question for Congress to determine, and it is entitled to the best information which can be had on the subject. The brevity of your report, absence of definite reasons for withholding that report from use of Congress, the

The McLemore Resolution.

EXTENSION OF REMARKS

HON. HENRY W. WATSON, OF PENNSYLVANIA.

The CHIEF OF ENGINEERS, UNITED STATES ARMY,

The CHIEF OF ENGINEERS, UNITED STATES ARMY,

MARCH 11, 1916.

tariff, schedule by schedule. I can still hear his stentorian tones as he depicted the deplorable condition of the people who were groaning under the enormous annual burden of \$115,-000,000 because of a Republican import duty on sugar. Mr. Underwood not only claimed that the consumers were paying the fifty to sixty million dollars of annual duty collected on imported sugar, but that this protective duty levied increased the price of domestic-produced sugar to the amount of the tax collected on the imported article, and that the American peo-ple thereby were paying \$115,000,000 a year more for the sugar they consumed than they would have paid if sugars were admitted duty free. As he raved and grieved over the tax-ridden condition of the sugar consumers, you could hear the sorrow-ful Democratic acclaim from nearly all quarters on the other side of this Chamber. I then decided that the free-sugar propaganda was simply a demagogic appeal to deceive and mislead the electorate in the political campaign soon to follow. Subsequent events have confirmed that decision.

When Democracy came into power, and had elected not only the President but a Democratic House and Senate, one would naturally suppose from the performance in the Sixty-second Congress that sugar would be placed on the free list of any proposed revision of the tariff. I can not understand from the deep sympathy manifested by Mr. Underwood for the sugar consumer at that time how he could be so hard-hearted as to deliberately have continued this burdensome sugar tax on the people. But it seems as if the President, in a desperate attempt to square himself with his Democratic friends in the State of Louisiana, because of certain preconvention and preelection promises made to them, decreed that we would not have free sugar until May 1, 1916. So the free-sugar agitation by our Democratic friends in the Sixty-second Congress, and which was used as a persuasive argument for the election of President Wilson and a Democratic Congress in 1912, suddenly became a sacrifice to a mere political expediency; and now you are witnessing the spectacular performance of the President driven forward by the povertystricken hand of necessity, in the shape of an empty Treasury, compelled to redeem his preelection promises to his turbulent Louisiana constituents. Under a Republican administration a Democratic House could afford to make a bluff of throwing fifty to sixty million dollars of annual revenue to the winds in an effort to lead the people to believe that they could thereby obtain sugar without money and without price; but a Democratic Congress, under a Democratic President, with practically an empty Treasury, is now anxious to continue what they once denounced as the "robber sugar tax."

But the Underwood tariff law is not only a failure as a revenue producer and a cost-of-living reducer, but it has so exposed the American manufacturer and producers to the cut-throat competition of his foreign competitors that the Secretary of Commerce, Mr. Redfield, has on numerous occasions during the past year and during the last few months through newspaper interviews and public statements proclaimed the absolute necessity for legislation which will protect American producers against the dumping upon our markets of foreign-made goods purchased at prices below the general selling price or cost of production in the country from which they are exported.

This demand for direct protective legislation coming from a member of the Cabinet of the President elected upon a platform the chief plank of which for years and years has denounced the hothousing of American industries and has bom-bastically invelghed against all forms of protection is a political and economical somersault more remarkable than facing about on the proposition of free tolls for the Panama Canal, the ignoring of the presidential one-term plank of the now dis-carded Baltimore platform, or even the failure to carry out its mandate by reducing the cost of living or effecting economy and efficiency by decreasing the number of public officials and reducing salaries and governmental expenditures. through the public press is to the effect that the Secretary of Commerce fears that high and even confiscatory duties will not be a sufficient safeguard against the dumping evil, and he suggests the enactment of a law making the dumping of foreign goods upon our markets a crime and that offenders be punished by fine and imprisonment. If my recollection serves me right, Mr. Redfield was a Member of the Sixty-second Congress and voted for Mr. Underwood's popgun free-sugar bill, which made no provision against the dumping of foreign-made goods upon our domestic markets, a matter of which the gentleman now so bitterly complains. Mr. Redfield, as a Member of the Sixty-second Congress, was conspicuous as an ardent advocate of the free-trade policy of his party, and he told our manufacturers that tariff revision was needed for certain definite and specific purposes, namely:

To enlarge the mental and moral vision, to increase efficiency, and to teach them the gospel of self-belp, and, fourthly, get rid of the ghosts. goods upon our markets a crime and that offenders be pun-

He said the two chief ghosts were "rate of wages" and "cost of production" and flippantly minimized their importance with the statement that "the labor cost is but a minor part of total

As a manufacturing expert he announced that "the reduc-tion of the tariff would increase the efficiency of the American manufacturer and therefore add to the profits of his business," and "that the Democratic Party would substitute industrial self-help for tariff protection." Since then the substitute has been made and to Mr. Redfield has been assigned the task of enlarging the mental and moral vision of our manufacturers and teaching them the gospel of self-help. How well he has succeeded is history, but when he undertook to shoo away the ghosts "rate of wages" and "cost of production" these obdurate creatures flapped their destructive wings so violently as to cause Mr. Redfield to see phantoms, and he observed rising above the horizon of his mental, economical vision the red demon "unrestricted foreign competition," which threatens to deluge us with large quantities of foreign-made products and thereby demoralize our domestic commerce and ultimately destroy the numerous American industries left defenseless by the Underwood tariff law, and in terror he cries out, "Raise the protective barriers lest these industries perish." We commend his change of heart and welcome him into the ranks of the protectionists. From time to time during the past year statements purporting to emanate from Mr. Redfield have appeared in the public press warning the people and Congress of the necessity of enacting antidumping laws, and for the purpose of preparing the minds of the free traders to withstand the shock of this protective proposal he cites as a precedent that the Underwood tariff law containing a dumping clause when it was first introduced into the House, and that it was cut out in the Senate. But he failed to inform the public why and by whom it was cut out in the Senate, and he also failed to state that the dumping clause of the Underwood tariff bill only afforded additional protection to articles upon the dutiable list of the bill, and that it gave no protection whatever to articles upon the free list. While the bill was under consideration in the Committee of the Whole House on the state of the Union, on a While the bill was under consideration in the number of occasions I undertook to have its application, or scope, extended so as to afford the same protection to articles upon the free list produced in this country as it gave to those upon the dutiable list, but every amendment I proposed was promptly rejected by the majority side of the committee. After the Underwood bill went to the Senate the dumping clause was stricken out by the Democratic members of the Senate Committee on Finance, because in their opinion it was inequitable and unfair, and smacked too much of Republican protection. In their own words they gave in part the following reasons:

First, because it applied only to dutiable articles, and if to be applied to any articles at all it seemed to us it ought to apply to all; secondly, if it did apply to all, it was apable under an unfriendly administration of being used as a means of increasing the duty upon dutiable articles 15 per cent, and of putting articles upon the free list under a duty of 15 per cent.

I then believed and still believe that it was an excellent protective proposition, if sufficiently broadened so as to apply to all articles produced in this country regardless of whether the same are upon the dutiable or free lists of our tariff law. I can see no valid reason why articles upon the dutiable list of the tariff law should be protected from the indiscriminate dumping of foreign-made articles of like kind, while articles upon the free list have no protection whatever. So, on the 6th day of May, 1913, while the free list of the Underwood bill was under consideration, I offered an amendment to the raw-wool paragraph, which if it had been adopted would have extended to raw wool the full protection accorded to articles upon the dutiable list under the Underwood dumping clause; the effect of which would have been that a 15 per cent duty could have been levied upon all raw wool dumped upon our markets which had been purchased at a price lower than the usual selling price or cost of production in the country from which it had been exported. In support of my amendment I then made the following statement:

country. The argument that there will not be any great importations of wool will not down. We consume something like 500,000,000 pounds of wool yearly. We produce only in the neighborhood of 300,000,000, and necessarily our yearly importations will be in the neighborhood of 200,000,000 pounds. There have been excessive importations in the past, and removing the protective duty that is now on raw wool will certainly increase these importations enormously. The product of the American woolgrower, from something like 57,000,000,000 sheep, of the American woolgrower, from something like 57,000,000,000 sheep of Australia, the 100,000,000 sheep of South America, and the 50,000,000 of South Africa, and New Zealand and other islands. In other words, the wool product of 57,000,000 of sheep in the United States will be in direct competition with the product of the remainder of the world's herd of some 250,000,000. The cost of keeping and clipping the American sheep is \$2,11 a head. In Ohio it is as high as \$2.46 a head. The cost in Australia is 93 cents a head, in South America \$1.15 a head. Anyone can see that the competition will be strenuous.

My Democratic friends say that they are not in favor of protection by resorting to a scheme of indirect taxation. They say they are in favor of legislation that will directly protect by providing a law that under certain conditions articles on the dutiable list will be prohibited from coming into the United States unless they pay an extra duty. Every reason that can be named for asking for such a law as this in behalf of articles upon the dutiable list certainly will apply to raw wool, which by this bill is placed on the free list. The woolgrower of this country, the American farmer, certainly will be asking soon why he is not given a square deal.

A rising vote was taken in the committee on this amendment, resulting in 53 for and 145 against it. My recollection is that not a single Democrat voted to give the same protection to raw wool that they proposed to give to tobacco, rice, peanuts, cotton fabrics, and so forth, under the Underwood dumping clause and upon which his bill had already established considerable rates of duty. At the close of the consideration of the free list of the Underwood bill I offered an amendment to extend to all articles produced in this country the protection afforded articles upon the dutiable list by the Underwood dumping clause. In support of this amendment I made the following statement:

of this amendment I made the following statement:

Mr. Chairman, this amendment I have just proposed is of a more general character than the amendments I have previously offered. The dumping clause provided in the bill in section 4 applies only to articles upon the dutiable list and to articles produced in this country. Now, I see no reason why, in order to treat everybody fairly, to be just to those whose products are upon the free list produced in this country, they should not have the same protection by the same sort of a law as the individual whose products are upon the dutiable list. I rather think there is more reason why a person should be protected whose products are upon the free list, for many of the industries the products of which are upon the dutiable list are carried in this bill under a protective duty. They all have recourse to this dumping clause. I can see very readily why it does not matter whether we have a dumping clause which applies to many articles on the free list, such as coffee, rubber, spices, tea, and a good many things of that kind we do not produce in this country, but take the matter of corn, potatees, wool, sugar in three years from now, shingles, lumber, coal, iron ore, boots and shoes, and a good many of the products of the forest, and a majority of the products of the farms of this country placed by this bill upon the free list I can not for the life of me figure out any valid reason why the producer of those articles should not have the same protection afforded by this dumping clause that has been inserted here for the proposed amendment. This follows along the same line of argument I have here suggested on the leather paragraph and on the free wool paragraph, except that it will apply to all articles produced in this country that are on the free list. My amendment will give the producers of such articles the same protection which the pending measure proposes to give to the producers of commodities carried on the dutiable list.

Justice certainly demands that the potato rais

list.

Justice certainly demands that the potato raiser, the boot and shoe manufacturer, the coal operator, the miller, the woolgrower, and the farmer should enjoy as full protection against excessive importations of like articles produced by them which are procured by the importer at a lower price than the articles usually sell for in the country from which they are exported as our Democratic friends are giving the rice grower and other special interests favored by this bill by placing their products on the dutiable list.

Again, when the dumping clause in the administrative sections of the bill was reached, I offered an amendment to cut out the language limiting its application to articles upon the dutiable list, and if my amendment had been adopted it would have extended equal protection to all articles produced in this country. proposal suffered the same fate as my previous ones. Mr. Underwood's persistence in refusing to allow the dumping clause to be amended so as to extend its application to domestic-produced articles on its free list can only be accounted for or explained on the theory that he desired to expose the farm and food products, which are practically all on the free list of his law, to the cutthroat competition of the foreigner, and thereby depress the price of these products in the hope of reducing the cost of living at the expense of the American farmer.

The halting, wavering, and vacillating policy of the Democratic administration in attempting to meet the dumping evil stamps it as absolutely unfit to cope with the situation. The free-trade heresy which prevails among the majority of the membership of the Democratic Party prevents cohesive action and makes futile the efforts of those members of the party who are impressed with the necessity of having enacted some antidumping law. To illustrate this vacillating attitude, it will be noted that

a quasi dumping clause was written in the Underwood tariff bill by Mr. Underwood, and it was reported by the Democratic members of the Ways and Means Committee of the House at the special session of Congress called by President Wilson in 1913, and the report was signed by every Democrat on the Ways and Means Committee. In the Committee of the Whole House on the state of the Union the Democratic majority guarded this proposed legislation so carefully that it was impossible to have it amended so that it would apply to articles on the free list as well as to articles upon the dutiable list and thereby be fair to all our producers. Mr. Palmer of Pennsylvania, a Democratic member of the Ways and Means Committee, said in support of the dumping clause that

Many large operators in the textile trade and nearly all in the iron and steel industries admit no fear of the foreigners' normal output, but profess to see fear in the marketing of his surplus stock. It is a perfectly justifiable fear and one well calculated to give pause to radical tariff reduction. * * * To meet this just complaint we have inserted in this bill what is known as the dumping clause, * * and under a real competitive tariff it is simply justice.

It seems that Mr. Palmer was very solicitous as to the future welfare of the textile and iron and steel industries, the products of which were carried on the dutiable list of the Underwood bill and in many instances protective, but that he had no concern for the farmers and other producers whose products were carried on the free list of the bill. What is simply justice to the iron and steel industries would still be simply justice if extended to those whose products are upon the free list and without any protection whatever.

When the Underwood bill passed the House every Democrat voting for the bill thereby indorsed the dumping clause. When it went over to the Senate the Democratic members of the Senate Committee on Finance promptly cut it out of the bill, because its protective tendency ran counter to the time-honored

Democratic policy of free trade.

Subsequently Mr. Redfield, a member of President Wilson's Cabinet, revives the dumping discussion by issuing a statement to the effect that American industries would be fully protected from this nefarious evil. Then follows a newspaper interview purporting to be from the White House that Mr. Redfield was not authorized to speak for the President and this administra-tion upon this important but much-haggled subject; but to cap the climax of the disposition of the Democratic administration to back and fill upon this question, Representative RAINEY, who is heralded as representing the President, in an attempt to secure a tariff commission, introduced a bill on the 1st day of February for such purpose. Section 5 of this bill provides, among other things, that the commission shall have power to investigate-

* * * all conditions, causes, and effects relating to unfair competi-tion of foreign industries with those of the United States, including

dumping.

Proclaiming that Mr. Redfield did not represent him, the President has a bill introduced in Congress which would start on foot an investigation of the dumping evil, ostensibly for the purpose of developing some legislative remedy to curb it. But owing to his disposition to back and fill on the proposition, no one can tell just where he is headed. In closing, I wish to state that while I believe antidumping legislation is necessary to adequately protect American industries, I do not believe that you can fully and effectually protect them until there is enacted into law a tariff bill that has been thoroughly baptized with the protective religion of William McKinley.

The Warning or McLemore Resolution.

EXTENSION OF REMARKS

HON. M. E. BURKE, OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BURKE. Mr. Speaker, the House of Representatives is to-day required by special rule to consider and act upon a most important and serious resolution. It is one of the most unique resolutions ever presented to this body for action. It is known as the "McLemore resolution," introduced on February 22 last by Hon. JEFF: McLemore, a Representative at Large from the State of Texas. It was referred by due authority to the Committee on Foreign Affairs, where it has remained under consideration by that committee until reported to the House to-day by reason of the adoption of a special rule. This special rule provided for only an hour and one-half debate upon the question of its adoption, and when adopted for but four hours' debate upon the resolution itself. After the debate upon this special rule the previous question was moved and carried by 256 votes in favor and 160 votes against. Immediately thereafter a vote of the House was taken upon the adoption of the special rule, which was carried by a vote of 270 votes in favor and 137 votes against.

The result of the majority vote on the previous question was to cut off and prevent the offering and consideration of any amendment whatsoever to the resolution. Upon the previous question I voted "no," and I did this for two reasons. Since I became a Member of this honorable body I have invariably favored special rules where the rule permitted or provided for the offering and consideration of an amendment or amendments.

The purpose of a special rule is to expedite public business in this body. The expedition of public business after a reasonable consideration has been given is a public virtue, and at no time has such a virtue been so necessary as at the present session of Congress. In my humble judgment, during my membership of this House there has not been an occasion when it was so necessary to offer an amendment to a resolution as in this case, but the majority of the Rules Committee and the majority of this body, in order to accomplish their purposes and to prevent a fair, square, and honest expression of opinion upon the question of issuing an official warning to Americans to refrain from exercising their rights to travel upon the armed merchant ships of belligerent nations, denied to those of us who are in favor of a direct vote upon that question the high privilege of recording our sentiments as our judgment and conscience dictated and as our constituents demand. Such a pernicious practice is permissible under our rules, although, in my humble

opinion, it never ought to be tolerated.

Upon the question of the adoption of the rule providing for four hours' debate, amendments having by the adoption of the previous question been cut off and prevented from being of-fered and considered, I voted "aye." To some this may seem inconsistent with my vote on the previous question, but to me it is consistent and justifiable. Nearly three-fourths of my constituents have demanded since shortly after the commencement of the present European war, and especially since the subma-rines of the Teutonic nations began their campaign of sinking the armed merchant vessels of belligerent nations in the ocean war zones, that Americans refrain from traveling on such vessels. This demand of my constituents has always, and does now, meet with my most cordial approval. It is in accordance with my best judgment and conscience. Therefore, after the adoption of the previous question I voted for the rule, because I was desirous of going upon record in some form on behalf of my constituents and myself on such a warning resolu-If the rule had been defeated a vote upon the original resolution even in its present form or in any form could not have been taken, and the Foreign Affairs Committee had it in their power to refuse thereafter to report a warning resolution in any form whatsoever, and to have prevented both a direct or indirect vote upon the same. I desired to place upon record the sentiments and demands of my constituents in this impor-tant matter designed to prevent international controversies whereby we may be led into war, arising from submarines sink-ing such armed merchant vessels of belligerent nations with American citizens aboard.

The bravery, patriotism, and loyalty of my constituents is not excelled by those of any other district, but they love peace and the welfare of their country far more than they regard or value the right to travel upon armed merchant ships of belliger-

ent nations of a handful of foolhardy Americans.

It is a very regrettable fact that the majority of this body has been so unfair as to refuse to permit a direct vote to be taken upon a simple, domestic, plain, and patriotic proposition of issuing such an official warning. It is easy for me to see from the debate upon this question this afternoon why the majority here refused to grant such a direct vote. A majority of the speakers who have spoken here this afternoon in favor of the motion to lay the resolution upon the table, have voluntarily said that if they were confronted with a vote upon a simple warning resolution that they would vote for the same, but their excuse for not doing so is that they wish to sustain the President.

The President has objected to the McLemore resolution because it contains unnecessary verbiage, consisting of nine long whereases and preambles, and two paragraphs that do un-necessarily call for action and discussion upon international diplomatic matters. But it lay in the power of the Foreign Relations Committee and of the Committee on Rules to have presented a simple warning resolution and to have given us an

opportunity to record our honest sentiments. This would not have been hindering the President. This would have been clearing the field of submarine controversies. This would have been removing, if such a resolution prevailed and was en-forced, all possibility of war arising over the loss of American lives by sinking of armed merchant ships of belligerent nations upon which American citizens were traveling.

To show the unfairness of the majority of the Committee on Foreign Relations in presenting this subject in the form that they have to us to-day to go upon record, let us take a full and fair view of the bewhiskered and bedraggled shape of the now famous McLemore resolution. It is in words as follows:

Resolution 147.

they have to us to-day to go upon record, let us take a full and fair view of the bewiskered and bedraggied shape of the now famous McLemore resolution. It is in words as follows:

Resolution 147.

Whereas the Governments of two of the powers at present in war in Europe and on the highest of the powers at present in war in Europe and on the highest of their submarine navail wessels or carry their armaments under the name and guise of their intention to instruct the commanders of their submarine navail wessels or carry their armaments under the name and guise of their enemies, whether such armed vessels are admittedly navail wessels or carry their armaments under the name and guise of their enemies, whether such armed vessels are admittedly navail wessels or carry their armament for the powers which have so informed the neutral powers, has submitted to the Government of the United States photographic facsimiles of alleged secret orders as called "defensive armament for merchant ships" and such naval officers and men of the navy of Great Britain, and that such so-called "defensive armament for merchant ships" and such naval officers and men of the navy of Great Britain, and that such so-called "defensive armament for merchant ships" and such naval officers and whereas the only possible use for a "defensive gun." is the same as the use of an "offensive gun," manely, to shoot and, if possible, the possible of the submarine of the United States has neither the desire nor the right to dictate to any of the powers whether they shall arm their merchant ships with guns or other armament or other naval vessels; and whereas the Government of the United States has no interest in the success or failure of the submarines or other naval vessels of any power in escaping or destroying such merchant ships so armed, and has no desire or right to dictate to any of the powers what steps they shall take to protect their vital interests and pursue their works of the submarines or other naval vessels of any powers. In many submarines

I am informed that there were several warning resolutions before the Foreign Relations Committee for consideration, some of which stated the essential points of a warning resolution

very briefly and in plain, concise, and unmistakable terms. I refer in particular to the warning resolution introduced by Representative Fuller, of Illinois, on the same day that the McLemore resolution was introduced, and it was also referred to the Committee on Foreign Affairs. It is as follows:

House concurrent resolution 17.

Whereas it is manifestly unsafe, owing to the unusual conditions pre-vailing throughout the world, for American citizens to take passage on belligerent ships that are armed or that carry war munitions; and Whereas the taking of such chances at this time may involve this Whereas the taking of such chances at this time may involve this country in serious trouble in its efforts to protect American lives and

interests; and
Whereas it is the earnest desire of all our people that this country
shall remain absolutely neutral as between the warring nations of
Europe: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That the President of the United States be authorized and requested to issue a proclamation warning all American citizens of the great danger of taking passage on any belligerent ship that is armed or that carries munitions of war, and requesting them, for their own safety and in the interest of this country's neutrality, to refrain from so doing.

If the Foreign Affairs Committee had any desire to have this House record its honest opinion on the direct warning proposition of warning Americans off of the armed merchant ships of belligerent nations, it would have been easier, fairer, and more just for that committee to have reported the Fuller resolution, or to have framed a substitute warning resolution in few, simple, plain, and direct words, and if many of those who are advocating the defeat of the McLemore resolution have spoken their true sentiments, with reference to a plain warning resolution, in my humble judgment, the same would be adopted by this House by about a 2-to-1 vote. By passing such a plain, simple warning resolution we would be recording the true sentiments of this House, and we would not thereby be hampering, but would be aiding, the President in maintaining the peace of the Nation by removing the principal. Yes; and according to the history of past diplomatic controversies, the sole cause of war-threatening and war-provoking diplomatic controversies.

I call the attention of the House to the well-established fact that all of the serious controversies which the administration has had with Germany and Austria have, almost without exception, arisen from the sinking of the Lusitania, Arabic, and Ancona, resulting in the loss of life of American citizens while traveling upon the armed vessels of belligerent nations in the ocean war zones when sunk by submarines and resulting in the death of some of such foolhardy American citizens. I believe I am within the bounds of truth when I say that if our citizens had refrained from traveling upon such vessels not a single one of these serious and war-threatening controversies would have arisen between our Government and the central powers excepting over the sinking of the ship Frye in the Pacific by a German war cruiser. I defy any Representative in this House to point out a single serious controversy that this Nation has had with the central powers since the commencement of the present European war which did not arise out of the loss of American lives while such Americans were traveling upon armed merchant ships in the war zones. There were times while the controversies over the *Lusitania*, *Arabic*, and *Ancona* were pending when the people of this country held their breath in fear of a probable war; and great was the relief of our people every time when it was announced finally the administration had won a great diplomatic victory.

All of my constituents of every nationality and every racial descent always rejoiced and breathed freer when those serious and war-threatening controversies were finally determined in a victory for America, and loud and sincere were the praises from all of my constituents in behalf of the President and his administration. We still take pride in the glorious victories for peace which the President and his administration have won; but realizing and knowing that all of those serious and war-threatening controversies were brought about by the folly of foolhardy Americans exercising their international rights to travel on armed merchant ships my constituents have demanded that those great risks of war shall cease, and as their true Representative I am here to-day to record my vote for the elimination of such risks. My admiration and my support for the President will continue as sincerely and as vigorously as ever, notwithstanding the result of the vote here to-day.

It can not be denied that for a few days before the President demanded action on the part of Congress on these warning resolutions there were ugly rumors afloat concerning inter-national complications. The answer of the Teutonic powers to the Lansing inquiry of January 18 last, addressed to all the belligerent powers, to ascertain if an understanding could be reached as to what shall constitute armed merchant vessels, brought forth from the Teutonic powers a declaration that those powers would after the 29th of last February regard all such armed merchant vessels of the allies as war vessels

and treat them as such. This was in substance an acceptance of Secretary Lansing's suggestions with an emphasis. It was then pointed out by the central powers in their answer to the Secretary of State's said inquiry that secret orders had been issued by the British Government to the commanders of armed merchant vessels of that nation to attack all submarines upon sight, thus converting what before were considered "nonwar" vessels into war vessels.

It is not for us to go to war to compel either side to live up to international law where it is violated so far as it affects us when we can prevent the same by exercising a reasonable precaution. With the issue thus drawn it became apparent to the press, to public men, and to the rank and file of the people who keep posted on such matters that as every other controversy had arisen out of submarines of the central powers sinking the armed merchant vessels of the allies with American citizens on board, that in the natural course of events this would necessarily lead us to war. My constituents have announced in a mighty voice that war for such a technical violation is not justifiable, and I believe with them sincerely and shall so record my vote here to-day. In doing so I wish to assure all within the sound of my voice or who may read my utterances that I do so because I honestly and sincerely believe that in such an official warning we will remove the chances of being drawn into this terrible war that is devastating all Europe to a minimum.

During the present administration, every vote that I have cast has been cast with the administration, not because I am a follower of the President but because all of the great problems which he has advocated were, before his becoming President, open and avowed convictions of my own. I admire him personally and I admire and point with pride to his great administration, and I hope and believe that greater triumphs will be won for the people by this administration before the President's term expires, under the proper leadership of the President, and in all of the great national problems advocated by the President which are soon to come before him for consideration I am in hearty accord with him.

It has been urged that the issuing of a simple official warning to our citizens to refrain from traveling upon the armed mer-chant ships of belligerent nations in the ocean war zones is a surrender and a waiver of American rights and not to be tol-erated. This I emphatically deny. Such a warning is not directed to any other nation. It will be directed, if adopted, solely to our own citizens. We can, if thought necessary or best, in such a resolution give notice that we reserve all of our international rights, including the right to travel upon such vessels. It is, in my humble opinion, simply and solely a plain and exclusively domestic question into which there does not enter an iota of international law or diplomacy. It is simply a measure of precaution and protection. Governments are instituted and operated by the consent of the majority of the governed. The rights that the minorities may have, under certain circumstances, necessarily may at any time, for the welfare of the country, be suspended, abridged, or abrogated by the majority. In this case, were an official warning adopted, given, and enforced, it would simply suspend the rights of a handful of American fools during the present war, and if any of these sustained actual loss the Government could well afford to reimburse them. There is no question but what after this war is over the question of what constitutes armed merchant ships will be settled by international law; and if in the future like problems arise it will be found that the new international law has provided a way in which such questions will be easily settled.

But it is argued that if we suspend and fail to protect a few American citizens who wish to enjoy such joy rides and thrills we are discriminating against them. This I also deny. At the best, the right of our citizens to travel upon such vessels is a doubtful right under international law as it exists at present. Even Secretary Lansing, in his letter of inquiry to the different powers at war, dated January 18, expressly referred to this right as a "doubtful legal right."

No greater, no abler, no more statesmanlike document has ever been written by an American Secretary of State than was that written by Secretary Lansing on January 18 last to the various belligerent powers. It is destined to become a historical document of the greatest importance and value. It is well worth our while at this time to read and consider the same. Omitting the formal parts, it is as follows:

It is a matter of deepest interest to my Government to bring to an end, if possible, the dangers of life which attend the use of submarines as at present employed in destroying enemy commerce on the high seas, since on any merchant vessel of belligerent nationality there may be citizens of the United States who have taken passage or members of the crew in the exercise of their recognized rights as neutrals. I assume your Government is equally solicitous to protect their nationals from

the exceptional hazards which are presented by their passage on merchant vessels through these portions of the high seas in which undersea craft of the enemy are operating.

While I am fully alive to the appalling loss of life among noncombatants, regardless of their sex, which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control beligerents in the conduct of their naval operations, I do not feel that a beligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

In order to bring submarine warfare within the general rules of international law and the principles of humanity without destroying their efficiency in the destruction of commerce, I believe that a formula may be found which, though it may require slight modification of the precedent generally followed by nations prior to the employment of the submarine, will appeal to the sense of justice and fairness of all the beligerents in the present war.

Your Government will understand that in seeking the formula or rule of this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally efficacious in preserving the lives of noncombatants on merchant vessels of beligerent nationalities.

My comments on this subject are predicated on the following propositions:

First, A noncombatant has a right to traverse the high seas in a mer-

My comments on this subject are predicated on the following propositions:

Pirst. A noncombatant has a right to traverse the high seas in a merchant vessel entitled to fly a belilgerent flag, to rely upon the observance of the rules of international law and principles of humanity, and if the vessel is approached by the naval vessel of another belilgerent the merchant vessel of enemy nationality should not be attacked without being ordered to stop.

Second. An enemy merchant vessel, when ordered to do so by a belilgerent submarine, should immediately stop.

Third. Such vessel should not be attacked after being ordered to stop unless it attempts to flee or to resist. In case it ceases to flee or to resist the attack should be discontinued.

Fourth. In the event that it is impossible to place a prize crew on board of an enemy merchant vessel or to convoy her into port the vessel may be sunk, provided the crew and passengers have been removed to a place of safety.

may be sunk, provided the crew and passengers have been removed to a place of safety.

In complying with the foregoing principles, which, in my opinion, embody the principal rule, the strict observance of which will insure the life of a noncombatant on a merchant vessel which is intercepted by a submarine, I am not unmindful of the obstacles which would be met by undersea craft as commerce destroyers.

Prior to the year 1915 bellig-rent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantman against the generally inferior armament of privatical ships and privateers.

The use of the submarine, however, has changed these relations, Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submarine, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently, the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on

a merchant vessel would seem to have the character of an offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement, if it could be agreed by the opposing belligerents, that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declarations by the belligerent Government, I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon your enemies making a similar declaration.

I should say that my Government is impressed with the reasonable-ness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

This suggestion of Secretary Lansing is in harmony with the

This suggestion of Secretary Lansing is in harmony with the facts and common sense. The objection to it is that it proposes a change of international law while a war is on. But the change has already been made, and no amount of writing and talking will restore the old conditions. In the interest of belligerents armed merchant ships will be attacked, and in the interest of humanity noncombantants should be kept off them.

But granting, for the sake of argument, that there is no doubt about the rights of such fool Americans to travel upon such vessels, there are other Americans whose rights conflict with the rights of such foolhardy Americans. Of what value are the rights of a handful of American fools to travel upon the armed merchant ships of belligerent nations compared with the rights of 100,000,000 Americans to have the peace of our beloved Nation preserved and the welfare of the whole Nation promoted? Shall the majority rule or shall a handful of foels in exercising their doubtful rights plunge this Nation into the most terrible and hellish war ever recorded on the pages of human history?

An official warning to our citizens to depart from Mexico, owing to the hazard, risks, and danger of their longer remaining in that turbulent country, was proclaimed by the President three years ago, and this warning was to a large extent heeded

by our citizens then in Mexico.

It is only the other day that the papers reported that the administration had warned American citizens to remain away from the Isthmus of Tehuantepee, down in Mexico. were there not for pleasure, curiosity, or joy riding, but for actual business. If this report is true it shows wisdom, discretion, and precaution on the part of the administration and

meets with the approval of all right-thinking people.

Then, again, contrast the course pursued by the administration in issuing passports to American citizens desiring to visit the Teutonic nations during the last few months. I am not aware that the same strict restrictions for the securing and issuing of passports to our citizens intending to visit Canada or the allied countries are maintained. This is well illustrated by a simple experience I had in seeking a passport for a lady constituent of mine residing at Watertown, Wis., whose doctor had advised her that it was necessary in order to protect her health and prolong her life that she should visit Saxony, in the Empire of Germany, for the purpose of taking the celebrated radium baths of that country.

A year ago this time I secured a passport for a citizen of my home city to visit Germany for the sole purpose of viewing the war scenes, and all that was necessary for me to do was to present his verified application in compliance with the rules of the Bureau of Citizenship and the passport was issued, sent to me,

and I mailed it to my constituent.

When I took the matter up a month ago for my Watertown constituent I found that they had rejected her application for a passport to Germany, although in her letter and in her application she had recited that she had engaged passage on a neutral steamer from New York to Rotterdam. It was turned down by the Bureau of Citizenship. When I received a letter from a lawyer explaining these results I felt indignant. I went to the bureau in person, and I was met with the positive assertion that no passport could be issued to my constituent or anyone else unless verified imperative reasons were given, and the bureau suggested that it would be necessary to have the affidavits of her consulting physician and herself to the effect that it was necessary for her to visit Saxony for the purpose of taking the famous health baths at that place, and that she was not going for any other purpose.

Instead of the passport being handed to me to mail to her instructions were mailed her that on the day that she was to leave the port of New York she could secure her passport at a branch office of the bureau in New York City, two blocks from the office of the German consulate, where she could have the same viséed. At first I thought this a lot of unnecessary and provoking red tape, but upon a brief reflection my disappointment over the same vanished, and I took and do still take pride in the precaution that the administration was taking in guarding against our citizens getting into trouble in the Teutonic nations by visiting there when it was unnecessary. Here we have the difference: A year ago a passport I obtained from the same bureau for a constituent to visit Germany, he not having to give any reason at all, and making the trip expressly to see the battles and battle fields, and now no passport is issued excepting upon the proof of the necessity of going to those countries.

I am glad to learn that the administration is exercising such precaution. I hope it will be continued; and the administration is entitled to the praise of all peace-loving Americans in carrying out and executing these precautions in issuing these passports to Americans.

But why not be consistent? The placing of all these restrictions upon the issuing of a simple passport causes more trouble and places a greater restriction upon the rights of American citizens to visit such countries than would be an official warning to Americans to prevent them from traveling on the armed ships of belligerent nations and to enforce the same.

Our American citizens, excepting the "jingoes" and the jingo press, are praying that God may give the President light and strength to keep our Nation out of this terrible war. He has been condemned and denounced outrageously by certain of the proallied metropolitan press for being too easy with Germany. He has been accused of actually favoring Germany in the Lusitania, Arabic, and other submarine controversies. He has actually been called a coward and a traitor to his country by some of the jingo press. Even ex-Senator Root, in his speech before the New York Republican State convention a month ago, denounced his management of the diplomatic relations over the sinking of the *Lusitania* as unbecoming an American. They have said that his actions failed to reflect the dignity that properly belonged to American action in such

important matters.

Lo and behold, however, when the proposition to issue an official warning to a handful of our American citizens to refrain from traveling upon the armed ships of belligerent nations, in order that such dangerous controversies as have in the past arisen over the sinking of such vessels by such submarine boats may not promote future controversies of a similar nature that may lead to war with Germany, what do we find? find every jingo newspaper that denounced the President for being too easy with Germany in the Lusitania, Arabic, and Ancona affairs and every leading jingo in the country joining in denouncing the idea of issuing such a warning. They are standing behind the President now for the first time in the history of his administration. Why are they doing it? Is it love and admiration for the administration? Is it love for our 100,000,000 American people? Oh, no. It is the greedy desire, promoted by British gold, that war may come between America and Germany, thus placing America in the rôle of an ally to John Bull.

Even during the last three or four months the papers report that societies have been organized in New York and New England States the very purpose of which are to advocate and create a public sentiment in favor of this Nation plunging into

this war as an ally of England.

We who are the supporters and friends of this warning measure view this support of the jingo press and of the jingo leaders of this country with the greatest of suspicion. We know full well that the President does not welcome their advice or their support, for the very object of their support is because of the belief that without issuing such a warning submarine controversies will arise that will finally draw us over the chasm and plunge us into the terrible boiling conflagration that is sweeping over Europe. If I had no other reason for favoring such a resolution I would support such a resolution from the fact that I see the jingo proally press of this country opposing this simple precautionary warning resolution.

It is charged by some of the jingo press which so freely denounced the President and his administration for the victories which he won in diplomacy over Germany and Austria that we Members of Congress who are in favor of such a warning resolution are the tools and servants of Germany and are afraid of our German constituents. This I denounce on behalf of myself and constituents and on behalf of my colleagues whose attitude upon this question is the same as my own as an absolute and

abominable lie.

It is true that three-fourths of the people of the district I have the honor to represent are of German birth or descent. But the American citizens of German descent in my district and in every other district in the country are among the most loyal, patriotic, and unswerving Americans. Their loyalty for America is not exceeded by the loyalty and patriotism of any other race or by the descendants of any other race. Their patriotism has been shown upon a hundred battle fields of the South. Men of their race became famous as leaders of the Union Armies. The pension rolls of to-day bear proud and positive evidence of the thousands of our citizens of German birth and descent who fought and bled to save the Union, and their names by the thousands are now carried upon the pension roll of honor with those of other patriotic Americans.

The love and sympathy of our citizens of German birth and descent for the fatherland is great, but their hostility and anger is only against the foreign enemies of the fatherland. Their sympathy for the fatherland is so strong that every movement in this country that has the least bearings of being unneutral meets with their disfavor. If their love for the fatherland were less many of the things of the administration would pass unnoticed. But great as is their love for the fatherland, their love for America is one hundredfold greater. Let war come—God forbid—and the first call for defenders by the President will be answered in overflowing numbers by our citizens of German birth and descent, and their love in upholding the flag of our country will not be excelled by any other class of Americ

cans, even against the beloved fatherland.

I have a vivid recollection of the loyalty and patriotism exhibited by American citizens of German birth, and especially by those German veterans who served in the Franco-Prussian War, about 1878, at the time of our international controversy with Germany over the Samoan Islands. Bismarck was then in his prime and chancellor of the newly founded German Empire.

The King of the Samoan Islands had died, or the Government was in some way overthrown. Great Britain, Germany, and America seized certain of the Samoan Islands, and a bitter, hostile controversy arose between Germany and the States over certain of those islands. The newspapers at the time carried in large headlines daily predictions of open war between the two Nations. When it looked most like the breaking out of war between them, I read in our papers of volunteer regiments being formed composed exclusively of Germans in the large German cities, such as Cincinnati, Buffalo, Chicago, Louisville, and other large cities, for the purpose of aiding the United States if war broke out with Germany. The papers at the time stated that a large portion of these volunteers were composed even of the veterans of the Franco-Prussian War of 1870. Ever since then and now I have always had full faith and confidence in the patriotism and loyalty of our citizens of German birth and descent in protecting the flag and honor of our country. They at all times live, act, think, and conduct themselves as loyal, patriotic, and genuine Americans.

I was born and lived all my life in one of the most densely populated German sections of the country. Though born of a Tipperary father and a Corkonian mother, I know the German and his descendants as if I were one of their own. I have been associated with them all of my life. As a boy of 12 and 13, attending the country schools in the winters, I wore, with their children, wooden shoes to school. I have observed them in all the paths of life. For industry, for honesty, for thrift, for energy, for respect for law and religion and the rights of their fellow men they are not to be excelled. As citizens, in exercising their citizenship, they are the most worthy to be found among the many races who form our Nation. Much as they have been accused because of their strong sympathy for Germany in the present European war, yet they are the most unclannish, unbigoted class of citizens to be found in this country. This I know personally, by experience. Living in a district where nearly three-quarters of the voters are of German birth or descent, I, the son of Irish parents, have thrice been nominated and elected in that district by splendid majorities. In each of my three different campaigns the Republicans nominated a German Lutheran opponent against me. In three different campaigns unscrupulous Republican politicians tried to prejudice the German vote against me by appealing to their nationality and their religion, but the appeals of such unscrupulous politicans fell on deaf ears. The German carries into his politics no clannishness or bigotry. In exercising his right of suffrage he has always With them proven himself a genuine and intelligent American. in politics there is no racial prejudice or religious bigotry.

In closing, permit me to observe that if this Nation is to be plunged into war because of the failure of the Government to issue such an official warning to our Americans to prevent them from traveling on the armed ships of belligerent nations in the ocean war zones and a war arises from it with Germany that will make this Nation the ally of England-God forbid that such a thing should happen-how shameful the rank and file of the American citizens would feel to find this Nation an ally of England, the nation whose only victories in this terrible war have been in starving German babies, in refusing to permit relief by the millions to be transported by charitable Americans to the destitute and starving millions of people in Poland. God forbid that this country should ever become the ally in war of England, whose Government levied revenue taxes upon the charitable contributions in foodstuffs and clothing sent by charitable Americans to the people of Ireland in 1847 and 1848 when 3,000,000 Irish men, women, and children were dying of starvation.

If we must go to war, let it not be as an ally of the nation that robs the mails of neutral nations upon God's free high seas; let it not be as an ally of the nation that has in this war committed so many, almost innumerable, violations against our commerce, and let it not be as an ally of the nation which even compels our business men when buying raw material from neutral countries and shipped in British ships to bind themselves down to pay a penalty if when the same is manufactured any of the same should be shipped to the enemies of England.

Let us issue a warning to our foolhardy Americans and let us enforce it, and if we must go to war let it be for something more important than the loss of a handful of foolish Americans engaged in enjoying "thrills," pleasure, and curiosity in danger-

ous war zones.

Therefore, Mr. Speaker, for these and other reasons that I might enumerate, I shall take pride in voting against laying the resolution before the House on the table, and by so voting I mean to cast no reflection upon the President or upon his administration, but I cast my vote in the hope that by so doing I am doing what little there is in my power to help keep this country out of the hell of war.

The Borland Amendment.

EXTENSION OF REMARKS

OF

HON. EVERIS A. HAYES,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1916.

Mr. HAYES. Mr. Speaker, I shall vote against this amend-There may be clerks employed in the departments in Washington who are not rendering the best that is in them for the remuneration which they receive. If so, they should be eliminated from the service at the earliest possible date. am satisfied that the vast majority of them are rendering to the Government the best service of which they are capable. of them are working under unfavorable conditions, owing to poor air, crowded conditions, and lack of light, and the work that they are doing is in many cases exacting and calculated to exhaust their nervous energy. A man or woman working seven hours under these conditions will experience more exhaustion than one working under better conditions and more in the open or where there is a combination of mental and physical exertion would experience in eight, nine, or even ten hours. tain that a conscientious clerk can render as efficient work in seven hours of continuous service as he can in eight or more.

I shall vote against this amendment not because the money to pay these clerks comes out of the pockets of Uncle Sam, for when the money came from my own pocket I adopted this same policy in my own business. I shall vote against it because I believe it is just to the clerk and right in principle. For many years I have been a half owner in a daily newspaper. After studying this question of hours of labor for the men and women employed in the composing and press rooms I became satisfied that they could accomplish the same amount of labor in shorter hours than they were working, and that it would be much better for them. As an experiment at first my brother and myself, without request or suggestion from the men, voluntarily reduced their hours of labor to seven and one-half hours. As a result of this experiment we never employed a single extra haxd and received better and more efficient service than we had been receiving under the longer hours, and this has been the working hour for each day for 14 years. I am therefore speaking from experience when I say that I do not believe that Uncle Sam will lose anything by continuing the present working hours of the clerks of the departments. Short hours of labor, vigorous and efficient men and women and the best results from their labor should be the aim of Uncle Sam, the richest employer of labor in the world.

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 13, 1916.

Mr. RANDALL. Mr. Speaker, I voted to table the McLemore resolution, which purported to warn Americans off armed merchant vessels of belligerent nations. I agree with the sentiment. Foolhardy Americans who involve the peace of their country by riding on these vessels will never find this Congress coming to their rescue or declaring war to sustain their doubtful rights.

It is not necessary to vote a resolution of warning and thereby discredit the diplomatic efforts of President Wilson before the world, for all the world is warned. The delicate intricacies of diplomatic negotiation would have been wrecked beyond repair if the President had been rebuked.

We thank God for Wilson. One hundred million people thank God for Wilson. During 18 months he has steered the Ship of State in peaceful paths. Shall we repudiate all of his efforts in the past just because we can not solve the present riddle of diplomatic maneuver?

The report of the Committee on Foreign Relations ought to set at rest all doubts as to the purpose of the President. One sentence in that report, unquestionably approved by the President, is enough to satisfy me. It is this:

We know that if the President reaches a point in any negotiations with a foreign Government at which he has exhausted his power in the premises, he will in the usual way report all the facts and circumstances to Congress for its consideration.

And the President has just appointed to the post of Secretary of War a man who belongs to all the peace societies in the country. No; no; I can not believe the President has forsaken the paths of peace.

As the days go by the fresh horrors of war freeze the heart's blood. Recently a few of my constituents have asked me to support certain measures before this Congress establishing extensive military training in public schools. I have replied that under the present world civilization we must maintain a few institutions like West Point and Annapolis, where trained military and naval officers can be supplied. But I hope that our Nation will not follow in the footsteps of militaristic Europe. Let us not teach the youth in our public schools the horrible science of war, but, rather, train their minds in the direction of peace as the ruling spirit of the world.

WHISKY WORSE THAN WAR,

I know of no evil in the world which visits such ravages upon humanity as war except it be the evil of liquor drinking. A few months ago we were startled by the statement of Lloyd George to the employees of the munition plants of Europe, begging them to refrain from drink during the war, when he said his nation might not be able to whip both of its enemies—Germany and whisky. A few days ago he announced the success of his appeal, and that drinking has diminished something like 40 per cent. And then, amazing statement, he said:

However successful in war the country might be, I am convinced that the victory in this matter [liquor drinking] would be the greatest triumph of all!

And then he says:

I am doing my best to provide whisky for the Germans, and if whisky will do haif as much harm to the Germans as the alcohol would have done to the people of England I will be satisfied.

Thus, with the greatest navy on the seas, and with munitions going in an endless but shameful stream from our shores, England finds it necessary to fall back on whisky as the surest instrument of destruction.

Rivers and Harbors Appropriation.

EXTENSION OF REMARKS

HON. JAMES A. FREAR,

IN THE HOUSE OF REPRESENTATIVES,

Tucsday, March 14, 1916.

Mr. FREAR. Mr. Speaker, I desire to place in the Record a remarkable resolution received by Members of Congress this morning from The Bronx Board of Trade, New York City.

In order to secure the passage of one item in the 1916 wasteful river and harbor bill, which totals \$39,608,410, this board of trade asks "all Representatives of Congress, and especially those from New York State, to vote favorably for this bill"—in order to save a \$200,000 item for East River.

That is to say, the Representatives in Congress from New York State are generally upped to compact the \$20,000 to the limits of the same conceptable upped to compact the \$20,000 to the limits of the limits of the same conceptable upped to compact the \$20,000 to the limits of the

That is to say, the Representatives in Congress from New York State are especially urged to support the \$39,608,410 bill, presumably one-half of which will be wasted, as shown by the minority report, and their vote is to be cast in favor of the bill in order to secure one-half of 1 per cent of the total appropriation which covers an item in which The Bronx Board of Trade is specifically interested.

I do not care to comment on the resolution further than to submit my reply thereto, and to say that notwithstanding the extravagance and waste set forth by the minority report, which report is specifically mentioned in the resolution, The Bronx Board of Trade insists the bill should pass in order to save this \$200,000 item. The resolution and letter are as follows:

THE BRONX BOARD OF TRADE,
Borough of The Bronx, N. Y., March 13, 1916.

Hon. James A. Frear, Congressman, House of Representatives, Washington, D. C.

My DEAR Sir: The following resolution has been adopted by our board of trade, and the secretary requested to send you a copy of same and to request that you aid in every way possible to bring around

a favorable vote on the present river and harbor bill, which includes an item covering the East River:

"Whereas the Rivers and Harbors Committee of Congress has presented a report, including a recommendation for an appropriation for the improvement of the East River; and

"Whereas certain members of the Rivers and Harbors Committee of Congress have made a minority report concerning this recommendation: Therefore be it

"Resolved, That this board of trade call upon all Representatives of Congress, and especially those from New York State, to vote favorably for this bill and the item covering the East River."

Very truly, yours,

Chas. E. Reid. Secretary

CHAS. E. REID, Secretary.

MARCH 14, 1916.

The Bronx Board of Trade,

Third Avenue, 137th Street, and Lincoln Avenue,

New York City, N. Y.

Gentlemen: I am in receipt of your favor of March 13, in which is inclosed a resolution asking all Representatives in Congress to "aid in every way possible to bring around a favorable vote on the present river and harbor bill, which includes an item covering the East River." This item amounts to \$200,000, out of a \$39,600,000 bill.

I thank you very much for this expression of your board. It emphasizes more strongly than anything I have yet found, the willingness of high-class men to vote away millions of dollars in money on wasteful projects in order to get a \$200,000 appropriation for Diamond Reef in New York Harbor.

This resolution asks me to vote for a bill that includes \$1,750,000 for the Missouri River, which project, when completed, is to cost the Government over a million dollars a year for maintenance, without any substantial return.

You ask me to vote for a bill which contains \$5,500,000 for the Ohio River, although the commerce of that river does not reach 2 per cent of the commerce carried by New York Harbor.

You ask me to vote for a bill that contains \$9,500,000 for the Tennessee River, although the actual commerce, apart from floatable timber, on that river reaches only 200,000 tons, of which 78,000 tons was coal hauled 16 miles.

You ask me to vote for a bill containing \$1,000,000 for the Norfolk-Beaufort Canal, which is one of the most scandalous projects ever financed by the Government Treasury

You ask me to vote for a bill which contains over \$200,000 for the Arkansas River, which Army Engineers have, within the past year, recommended for abandonment.

You ask me to vote for a bill containing \$8,000 for the Red River, on which the actual commerce costs the Government from \$80 to \$100 per ton.

You ask me to vote for a bill containing \$80,000 for the Red River, on which the actual commerce costs the Government from \$80 to \$100 per ton.

This statement of wasteful projects could be continued to scores of items contained in a bill aggregating many million dollars of waste. Army Engineers of as high standing as Col. C. McD. Townsend, chairman of the Mississippi River Commission, urge us to pause in the wild waste of money to which we have been committed by such resolutions as emanate from The Bronx Board of Trade.

If your board desires any real improvement in legitimate navigation needs you will endeavor to defeat the 1916 bill even though it temporarily delays the \$200,000 item for Diamond Reef in New York Harbor. There may be some excuse for such resolutions from irresponsible waterway organizations that are boosting local expenditures irrespective of returns to the Government, but there can be no possible excuse for any New York organization, however high its standing, to urge upon Congress support for the 1916 wasteful river and harbor bill in order to save a comparatively insignificant appropriation reluctantly granted for Diamond Reef.

Your resolution is intended to induence sentiment in favor of that bill in order to get support for this one item. It is the method pursued by every pork barrel supporter in the country, and no change in present methods can be reached until your organization and others of equally high standing realize to what base uses resolutions can be put.

I thank you sincerely for your letter because I believe you would

be put.

I thank you sincerely for your letter because I believe you would not knowingly seek to put through Congress a vicious wasteful proposition. Am inclosing copy of a minority report No. 254, part 2, Sixty-fourth Congress. Therein you will find noted many other wasteful items which are included in the 1916 bill.

Very truly, yours,

JAMES A. FREAR.

Water-Power Legislation.

EXTENSION OF REMARKS

HON. WILLIAM KENT, OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1916.

Mr. KENT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I insert the following letter to the President and his reply thereto:

MARCH 7, 1916.

The PRESIDENT, The White House.

The White House.

My Dear Ma. President: I have not the privilege of personal acquaintance with Mr. Baker, but from what I can hear about him I believe he stands with us on the great questions of public rights, as found in policies that represent control and use of our natural resources in the public interest.

This water-power development is something that under any proposed legislation will run for at least 50 years, and under the Shields bill, as it is being fought out in the Senate, will run for an indefinite time, unless upset by revolution or cured by the sovereign power of taxation. The bill as it is being passed in the Senate will be extremely viclous and what amendments we can secure by conference with the House

committee are unkrown. Unless some one in the administration takes strong ground, there is every chance that nothing at all will be done and that the waters will go to waste simply because some of us feel that a waste for a year or two is better than to sacrifice all public rights in perpetuity.

I know of no greater service that can be immediately rendered by the Secretary of War than the consideration of the control of water power on navigable streams, which comes immediately under his jurisdiction, and it will be my pleasure to put him in touch with the best authorities in this country on this subject.

We are making a fight against people who thoroughly realize the immense fortunes to be made out of control of these our common assets. Without fear of contradiction. I again state, as I have often stated before, that for influence and lobbying work the water-power crowd are the shrewdest and most dangerous people that we have to fight in the country to-day.

I do not wish to bore you with any long disquisition on this subject, but I wish to express my hope that the new Secretary of War can immediately take up and study this question.

It is inherently necessary that there should be no doubt about what will happen if a bill goes before you that does not duly protect the public interest, a bill of such a nature that the injustice may be continued through an indefinite term, practically in perpetuity.

Yours, truly,

THE WHITE HOUSE, Washington, March 9, 1916.

Hon. William Kent,

House of Representatives.

My Dear Mr. Kent: Thank you for your letter of March 7. You may be sure that I will call the attention of the new Secretary of War to the water-power question at the earliest possible moment, for you know, I am sure. my deep and genuine interest in it. I agree with you that it is better to let the water power run to waste than to settle the question of the use of it in the wrong way. I am watching the progress of legislation with a great deal of anxiety.

Cordially and sincerely, yours,

Woodbook Wilson.

WOODROW WILSON.

The McLemore Resolution.

EXTENSION OF REMARKS OF

HON. WM. ELZA WILLIAMS. OF ILLINOIS.

> IN THE HOUSE OF REPRESENTATIVES. Tuesday, March 7, 1916.

Mr. WM. ELZA WILLIAMS. Mr. Speaker, It seems to me that the duty of every Member of Congress on this important question is clear and unmistakable. For my part I intend to vote to table the McLemore resolution. The King would have us do one thing and the Kalser would have us do another. Neither France nor Russia nor Italy nor Turkey, in fact none of the warring powers, is satisfied with our course. If we would be neutral and guide our course by the strict letter of international law, we can not hope to please or satisfy any of the contending nations. I am neither Anglo-American nor German-American, but wholly American. When the President said to this Congress that the McLemore resolution and others of like tenor were being misconstrued abroad, and had resulted in tieing the hands of the President and paralyzing our diplomatic relations with the world, I did not hesitate in de-termining my duty to stand by the President and follow his advice against the advice of any European ruler. I have no patience with that class of American citizens who

under present conditions travel for pleasure or adventure and who for the sake of a thrill would hazard their own lives and endanger the peace of their country, but we must not forget that there are thousands of American citizens with interests in all parts of the globe who are engaged in promoting the trade and commerce of the United States and who are impelled by business necessity to take passage on ocean liners for European ports, and who oftentimes have no choice as to the boat on which they will travel. These men are entitled, under international law as it is written, to sail on any passenger steamer and are entitled to protection and safe passage to their destination. Shall the President of the United States humble himself and humiliate his country by warning its citizens against the exercise of their rights upon the world's highway merely at the instance and demand of some foreign power with whose military and naval operations it may interfere? I for one do not intend to vote for such a warning, but will stand by the President in his efforts to maintain the rights of American citizens on the high seas and protect them in the exercise of those rights as against the world. I entirely approve the course of the administration in denying passports to all except those whose business compels them to travel abroad and in limiting passports to the fewest possible number, thereby reducing and minimizing the canger; but beyond this we can not go and preserve the dignity and honor of our Nation.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. GARDNER. Mr. Speaker, on February 10, 1915, President Wilson promised to hold Germany to "strict accountability" if in her submarine campaign she took the life of Americans on the high seas. The whole country applauded the President's words. No voice was raised in protest.

Germany's answer was the torpedo which sunk the Lusitania.

At once the President demanded a complete disavowal of the act. Again the country applauded. If President Wilson was wrong in demanding the safety of our citizens traveling on foreign merchantmen armed for their own defense, then was the time to say so, not now, when the skies are lowering and muttered threatenings are heard on every side.

The question of armed merchantmen was nothing new last February when President Wilson spoke. Five months before that time, on September 19, 1914, the United States had announced its decision that a merchantman had the right to arm for its own defense

After the *Lusitania* was sunk, months of negotiations passed and the United States adhered steadily to its demands.

Finally Germany agreed that her submarines should warn "liners" before sinking them, provided they did not resist nor try to escape. Now that Germany is ready to inaugurate a new submarine warfare, we are suddenly told that this agreement holds only if we exclude from its terms all "liners" armed for their own defense.

Of course, I know that those who take Germany's view of this matter believe that a merchantman which fires on a submarine before that submarine can discharge its torpedo is in fact acting offensively and not defensively. To persons who fact acting offensively and not defensively. take this view, I commend the reading of President Jefferson's message in December, 1801. In the previous summer the Pasha of Tripoli had hewed down the flagstaff of the American consul, had pillaged our ships, and had made slaves of all the American sailors who fell into his hands. However, inasmuch as Congress had not declared war, the United States was officially at peace. According to President Jefferson's view of the case, the most that he could do was to provide for a spirited defense. Mc-Master in his History of the United States tells us how Jefferson sent Commodore Dale to the Mediterranean, and then the historian proceeds to describe the battle between the American warship Enterprise and the Tripolitan warship commanded by Raiz. When the Tripolitan vessel was thoroughly battered to pieces, Raiz surrendered to the Enterprise. Says McMaster:

To bring in the wreck would have been an act of war. But to cut down the masts, fling guns and ammunition overboard, strip the vessel, in short, of everything save one old sall or a single spar, and leave the crew to make port as best they could, was a defensive act, and no violation of the orders the President had a right to give.

That was Jefferson's idea of a "defensive" fight.

It is in order to force President Wilson to yield this vital principle, involving the right of merchantmen to arm in their own defense, that the McLemore resolution was introduced. Not only does that resolution warn our citizens to forego their undoubted right to travel on merchantmen belonging to belligerents, but it promises Germany immunity in case this warning is disregarded. It notifies all Americans that if they travel on belligerent merchantmen we shall do nothing to protect them and that they travel at their own risk. Yet many of our citizens will have no choice but to disregard that warning. Men are not traveling for pleasure on the high seas to-day.

The poor hostler who brings his string of mules from Missouri to Norfolk has no choice of steamers on which to embark, The steward who earns his living on the high seas must accept employment where he can find it. The salesman or the buyer journeying to the Mediterranean or to Russia or to India must travel on the merchantmen of belligerent nations or throw up

If we pass this resolution we give Germany full permission to perpetrate such horrors as she sees fit against "liners" armed for their own defense, regardless of how many Americans may be slaughtered.

With our right cheek still tingling from the buffet of Germany's hand, we are to promise her complete immunity if she smites the other cheek as well. To calm Germany's wrath we

are to warn our own citizens to abandon their own rights lest

we be called upon to help them to maintain them.

That is not the way Americans have met the threatenings of the past. We went to war with England in 1812 because she took our sailors off our merchantmen and impressed them into the British Navy and made them fight against Napoleon. Ought President Madison to have cautioned our sailors to stay on dry resident Madison to have cautioned our sailors to stay on dry land lest their impressment into the British service might involve their country in war? Certainly not; but Madison issued no such caution to our sailors. Instead, he solemnly warned England. England disregarded that warning, and the battleflags at Annapolis, captured from vanquished British frigates, mark the price she paid for her folly.

There was a Dey of Algiers, master of the pirates of the Mediterranean, and he commanded one of the strongest fleets of his time, carrying, all told, 360 guns. For 17 years we paid him

time, carrying, all told, 360 guns. For 17 years we paid him tribute and in return he spared our merchantmen in the Mediterranean. But in 1815 we fell out with the Dey on the terms of payment, so he preyed on our commerce and sold our crews into slavery. Did this young Republic warn our merchantmen to keep away from the Mediterranean lest we should be drawn into war's vortex? By no means. Promptly we sent two fine squadrons to the Mediterranean with Decatur and Bainbridge in command, and on the deck of Decatur's flagship the haughty Dey was forced to sign a treaty renouncing all future tribute and paying full compensation for his misdeeds.

Nations which perceive that by threats they can gain inches will not be slow to demand ells. Nations like individuals will trample on all who will not defend their rights. Whether you adopt this resolution or not, I do not believe that this country is on the brink of war; but even if such were the case, worse calamities than war can befall a nation. It is more important that the United States shall make history which shall serve as an inspiration to our fellow countrymen for ages to come than it is that this particular generation should be spared from the

crucible of war.

Great deeds, not great bank balances, make great nations, and this country of ours will fall even as Babylon fell should its people ever look upon it as a rich pasture for greed to fatten in.

Once to every man and nation comes the moment to decide, In the strife of truth with falsehood for the good or evil side; Some great cause, God's new Messiah, offering each the bloom or blight, Parts the goats upon 'he left hand and the sheep upon the right;' And the choice goes by forever 'twixt that darkness and that light,"

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM R. SMITH, OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. SMITH of Texas. Mr. Speaker, having been unable to secure any time during the debate on the McLemore resolution to express my views thereon, I am availing myself of the permission which has been granted to extend my remarks in the

I am opposed to Americans taking passage on armed merchant ships flying the flag of a belligerent nation, although under international law they undoubtedly have the right to do so. believe an American should refrain from doing anything that might result in involving this country in serious trouble. it does not follow from my position upon this question that I favor the passage of the McLemore resolution, for I do not. I do not think any good could be accomplished by its passage; but, on the contrary, much harm might result from it.

In the first place, this resolution, if passed, would have no

legal effect. It is a simple resolution merely expressing the advice of this Government that Americans should not take passage on an armed merchant ship of a nation at war. It is not a bill nor a joint resolution which, if passed, could have the force of law. It expresses only the sentiment of the House upon this question and could bind nobody. It could not compel Americans to stay off belligerent armed merchant ships. Again, if this resolution were passed, it would add nothing to the warning which Americans have already received. Germany has already proclaimed to the world that she would blow up such ships without warning. All Americans know the danger of rid-ing on such ships, and if consideration for their own preservation and safety will not deter them from taking passage, cer-

tainly a simple warning from us would not do so. It is really absurd to say that a friendly warning from us would be more effective than an unfriendly warning from Germany, which has already been given. Therefore the passage of the McLemore resolution would not help the situation in the least. It would amount to nothing toward accomplishing any good. But in the present circumstances even its consideration might result in much harm, entangled as it is with questions now in process of adjustment through diplomatic negotiations of a most delicate character. Such action would be certain to be misunderstood in Germany: the impression would go abroad that we were divided and not backing our Government; that we were willing to surrender our rights upon the sea; that we were willing that the barbarities of submarine warfare against all principles of humanity and international law should go unrestrained upon the high seas, all of which would embarrass and handicap the President, who, under the Constitution, is charged with the sole power of handling diplomatic matters.

Mr. Speaker, we should do nothing to lead Germany to believe that we consider her right to sink armed merchant ships without warning. This would be certain sooner or later to involve us in serious trouble. Germany treats them as warships, and has notified us that she expects us to intern them as we intern German warships when they come into our ports. Now, what would this lead to? That the arming of a merchant ship for defensive purposes does not change its character into that of a warship has been a universally accepted principle of international law for 200 years or more. So, if Congress should take action admitting that Germany is right in her contention, then how could we refuse to intern those ships which Germany claims are warships? If we should refuse to intern them, then there would arise another serious dispute with Germany, and we would be entirely without international law to support us. If, on the other hand, we do intern them, what answer could we make to the objection of the allied powers? Absolutely none, because the well-settled rules of international law would be against us; and most serious trouble would very probably ensue between us and the allied powers.

Therefore there is but one sane, sensible thing for us to do, and that is to stand squarely upon international law and insist that all other nations shall do the same thing. There is no other safe course. To yield to Germany now in this matter would be more apt to lead into war in the long run than to refuse to yield to her, for thrice armed is he who is right.

Once give up the freedom of the seas and chaos and crime would cover the face of the deep; the commerce of the world would ultimately be destroyed.

The American people have already suffered greatly because of interference with our commerce upon the seas. In 1914 the cotton farmers in the South suffered the loss of hundreds of millions of dollars because of the high cost and unsafety of ocean transportation. Last year they suffered another loss. Now, if you accede the right to Germany to submarine merchant ships only because they carry defensive armor, the loss which would result to the cotton farmer would be greater than ever. It must not be forgotten that we export more than 60 per cent of our cotton crop to foreign markets, and if we are cut off from these markets entirely, as we probably would be, the loss to the American people would be incalculable.

Therefore, let us demand what is ours—that which belongs to all nations—the right to travel and carry on our commerce unmolested upon the high seas, whether that right is interfered with by Germany, Great Britain, or any other nation.

Sugar.

EXTENSION OF REMARKS

HON. WILLIAM S. VARE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. VARE. Mr. Speaker, although I do not believe that the present bill repealing the free-sugar clause of the Underwood tariff law will furnish the needed amount of protection to encourage the industry and protect wages, I will vote for this measure on the ground that it is better than the free trade that was threatened.

It is offered here as a revenue measure pure and simple. Nevertheless, it is a confession by the party that sponsored the

Underwood law that the tariff for revenue only does not provide revenue. The Democratic Party might just as well admit that the whole tariff law is a failure. Designed as a tariff for revenue only it admitted in one recent month 74 per cent of all imports free of duty. In other words, it is three-quarters free trade.

The European war saved the Democratic tariff law, because of its interference with the normal currents of trade. But even these interferences are not saving the country from the free-trade policy now. Imports under this free-trade policy are steadily increasing. An evidence of this is shown in the most recent statement of the Department of Commerce, which gives the imports for the month of December, 1914, as valued at \$114,656,545, whereas the imports for the month of December, 1915, were \$171,832,505.

I voted against the Democratic tariff law, but I am willing to vote for even a partial remedy for one of the many mistakes of that law when it is offered by the party that made the blunder. I have no desire to aid in putting the Democratic Party "in a hole." When the Democrats offered to Congress a bill strengthening the antitrust laws, I voted for the Clayton law. When a humane advance in child-labor laws was proposed by the Democrats, although it was not as far as I wanted to go—not as far as my own State, under the able leadership of our governor, had gone—nevertheless I considered it a step forward and voted for it.

No partisanship shall ever stand as an obstacle to my voting for anything which I honestly believe will benefit the people whom I represent. If I can not get as much as I would like for the people I represent, I will vote for as-much as I can obtain in their behalf.

I can not be accused of partisanship when I say that the entire tariff law has been a failure. There is no denial of the fact that it brought an industrial depression to the Nation. If it had benefited the consumers there would have been some compensation for the immeasurable loss of wages and curtailment of industry and business. But there was no such compensation. Prices have gone up instead of down.

The measure that is proposed here to-day does not restore protection to the sugar industry and its vast number of employees. The Democratic Party pledged itself not to harm a single industry. It was a commentary upon the distrust of the people that such a pledge had to be given, but it was given and was not kept.

The legitimate sugar industry was harmed—harmed beyond repair. Even the reduction of the sugar tariff caused many of the sugar factories to close down. The Government lost millions of dollars of revenue. And under the law as framed, in addition to the lowering of the tariff, raw sugar was to go on the free list this month.

The protective tariff system is interdependent. The removal of the tariff on sugar hurt Louisiana and other States, just as the loss of protection on textiles hurt the city of Philadelphia. There was a loss to the people and a loss to the Government. It has been estimated that the loss to the Government from free sugar would reach in the neighborhood of \$50,000,000 per year.

Free wool was as disastrous as free sugar would have been. The whole country is now aroused to the evil that was done. In the case of free wool the damage can not be repaired merely by the writing of a protective tariff law. Realizing the consequences of free wool, many of the American woolgrowers have sent their sheep to slaughter, and the textile interests of my own city are now engaged in an educational campaign seeking to revive the woolgrowing industry. But what will the people think of a Government that refuses to take the simple legislative precautions that are necessary for the preservation of the American market? What will they think of a Government that, as a solution of the dyestuff shortage, simply advises the people to use more white goods and less goods involving the use of dyes?

Shortly after the beginning of the European war the Canadian Government, which had refused to enter into a reciprocity pact with the United States, and shortly afterwards was given, through the Underwood law, everything for which she asked, without being required to make reciprocal concessions, raised her tariffs. The result has been that she has financed all her needs, including the sending of an army to England. There have been no "war" taxes in Canada. The protective tariff solved her problems.

At the present time all of the European nations are preparing for the industrial struggle that will follow the end of the European war. England frankly has abandoned her free-trade policy. It is admitted in the London press that free trade will never again be adopted as the national policy. Is the United States alone to be free trade after the war? Is this country, with the richest market in the world, with the best working conditions and highest wages, all attained under the Republican policy of protection, to surrender all its natural advantages and permit itself to become the dumping ground of the European nations in their anxiety to regain their losses?

Germany has lately appointed an industrial staff to mobilize the financial, business, and industrial resources for the commercial struggle that will follow the signing of peace. It makes no difference how far away peace may be. The fact remains that the nations of Europe are making their preparations for

that time. Can the United States do less?

The remedy for the colossal tariff blunder that is offered here to-day is but a drop in the bucket. It will save millions of dollars of revenue to the Government, but it will not save the American market after the war is over. It does not protect the American market from the free-trade imports that are now coming in, displacing an equal amount of American production, I will vote for it as a revenue measure, but I hope the time is not far distant when the Republican Party will be able to write upon the statute books a protective tariff law that will protect American industry and the millions of working people whose labor is the greatest asset of the Nation.

There is much more to be done for labor than we have yet done; there is a greater advance to be taken in humane legislation than we have yet taken; but without national prosperity, without due regard for the interests of honest business, without protection for the American market, and without amending our laws so that these business men may present a united front in the competition for the world's markets that is to come, we as a Nation will be hampered and hamstrung. There should be a national policy of industrial mobilization, combined with a more enlightened treatment of labor, and an essential part of this program is the enactment of a protective

tariff law. [Applause.]

The McLemore Resolution.

EXTENSION OF REMARKS

HON. JOUETT SHOUSE.

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. SHOUSE. Mr. Speaker, the duty that confronts the membership of Congress to-day is very plain and very grave. It can not be evaded or shifted. It must be faced squarely and fairly by each Member in the light of his own conscience.

What is the situation? On the 22d day of February a resolution was introduced in this House by Mr. McLemore, of Texas. The intent of that resolution was to warn American citizens against taking passage upon armed vessels of any of the nations involved in the European war and denying to any citizen who should disregard such warning the protection of his Government. Unfortunately the warning feature of this resolution was so involved in statements and implications of uncertain truth and in mere expressions of opinion as to make the resolution itself complicated and unwise. On the same day that Mr. McLemore introduced his resolution, and on subsequent occasions, other Members of Congress have presented simpler, clearer, wiser expressions of a warning nature.

The introduction of these several resolutions was due to the declaration by the central powers that after February 29 last past their submarines would sink without warning all armed merchantmen of enemy nations. These resolutions were referred to the Committee on Foreign Affairs. At first it was understood that the President desired they should be kept there and not considered by the House, but later he sent a letter to Mr. Pov. acting chairman of the Rules Committee, in which he

made the following definite request:

I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about, in order that there may be afforded an immediate opportunity for public discussion and action upon them, and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

That request did not mention the McLemore resolution. It did not specify any particular resolution. It referred to all resolutions "with regard to travel on armed merchantmen." In response the Rules Committee brought in a rule which made

possible the consideration of only the McLemore resolution and limited debate on it to four hours. Why, gentlemen of the House, we debated the Post Office appropriation bill for three The executive, legislative, and judicial appropriation, now before the House, will have had two weeks discussion before it is passed. And yet by this rule we are confined to four hours of debate on a question of the most vital concern to this and other nations, a question which may carry with it either pence or war. Clearly such a limitation is a grave mistake. Either the committee should have prohibited all debate on the theory that public discussion in the House at this time might complicate the foreign situation, or it should have allowed ample time for full and free discussion. Believing that the rule as reported should be amended, I voted against the previous question, but when the previous question carried I voted for the The President has asked that we express ourselves on the "resolutions with regard to travel on armed merchantmen." I stand ready to express myself. Expression could not be had without passing the rule. Therefore I voted for the rule.

Let me say very definitely, Mr. Speaker, that I do not favor the McLemore resolution. Upon a straight vote on its passage unamended, I should be compelled to oppose it. But I shall not vote to table it. I believe the dictates of good sense call for a warning resolution. I am certain a large majority of the membership of this House would favor a simple, straight-forward warning resolution. If the McLemore resolution is tabled the House will not have expressed itself. Such an action will mean nothing. But if the McLemore resolution is properly amended, which can be accomplished only by refusing to table it, and if the House votes upon such a carefully considered and amended expression of views, the President will then know where the House stands and what it believes-and that is what the President says he is anxious to learn.

When I say I favor a warning resolution I do not mean to imply that an American citizen has not the right to take passage on an armed belligerent vessel. His right to do so is clear, but his duty not to do so is equally clear. I would not deny him the right, but I would remember my duty to the hundred million of his countrymen whose peace he is jeopardizing, and, unless his necessity be imperative, I would give him to understand that he embarks upon his journey in opposition to the

solemn warning of his Government.

I am not a lawyer. Under no circumstances would I attempt to pose as an authority on international law. But, in pursuance of my duty as a Member of Congress, I have followed diligently the diplomatic correspondence between our Nation and the various belligerents since the outbreak of the European I was deeply impressed by the published note of Secretary Lansing, on January 18 last. In that note he set forth to the world the views of this Government on submarine warfare and the arming of merchantmen, having in mind the splendid purpose of effecting an agreement among belligerents that would lessen the horrors of the present war. He said:

While I am fully affive to the appalling loss of life among noncombatants which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control beligerents in the conduct of their naval operation, I do not feel that belligerents should be deprived of the proper use of submarines, since these instruments of war have proved their effectiveness in this particular branch of warfare on the high seas.

I believe that a formula men before the said:

high seas.

I believe that a formula may be found which, though it may require slight modification of the precedents generally followed by nations prior to the employment of submarines, will appeal to the sense of justice and fairness of all the belligerents.

* * Prior to 1915 belligerent operations against enemy commerce on the high seas were conducted by cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a merchant vessel; * * it could not be used effectively against enemy naval vessels, while it could defend the merchant vessel against the generally, inferior armament of piratical ships and privateers.

teers. The use of submarines, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge. Is almost defenseless in point of construction. A merchant ship carrying even a small-caliber gun would be able to use it effectively for observed a submarine

almost detensives in point volud be able to use it effectively for offense against a submarine

Pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently, the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of offensive armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to places of safety of persons on board, it would not seem just or reasonable that the submarine should be compelled while complying with these requirements to expose itself to almost certain destruction by the guns on board the merchant vessel.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that

submarines should adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declaration by the belligerint Governments, I do so in the full conviction that each Government will consider primarily the humane purpose of saving the lives of innocent people, rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

My Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

Even the last paragraph of Secretary Lansing's note above

From the last paragraph of Secretary Lansing's note above quoted it seems clear that this Government regards the right of a merchantman to arm as a very doubtful right; indeed, it is stated that we, as a Nation, are strongly inclined to the belief that "a merchant vessel carrying an armament of any sort should be held to be an auxiliary cruiser and so treated," and that this Government "is seriously considering instructing its officials accordingly." In this note Secretary Lansing spoke for the Govcordingly." ernment of the United States. He spoke under the direction of the President of the United States, who, properly, has not hesitated to dictate the exact phraseology of important communications that have gone from the State Department during his administration. It is not necessary to point out that if bellig-erent armed merchantmen are held to be auxiliary cruisers any American citizen who embarks on one of them does so at his own peril.

Now, Mr. Speaker, what is the situation that confronts us? Great Britain says she will continue to arm her merchantmen. She places upon those merchantmen guns manned by trained gunners. She says they are armed for defensive purposes. Only the British naval board and the captains of the various vessels know the orders that are issued. Perhaps the defensive armament, in the twinkling of an eye, may be converted to offensive purposes. Germany says she will sink without warning all armed merchantmen of a hostile nation. The President of the United States says that if an American life is lost in the sinking of an armed merchantman without warning he will hold Germany "to strict accountability."

In such a situation what is our duty? "Strict accountability," in plain English, means war. And war for what? Because a foolhardy or venal American citizen takes passage on a merchantman the armament of which, in the published view of our Government, should probably place it outside the pale of peaceful craft and bring it into the class of auxiliary cruisers or wat vessels. Is it not clear, Mr. Speaker, that in such cir-cumstances Congress should protect American homes, American property, American rights, and American lives by issuing a very definite and a very serious warning to American citizens against taking passage on such ships? Why, sir, it is not as if our nationals had no other means of travel. At least four lines other than belligerents have ships regularly plying between this country and Europe. They may not be as large, they may not be as fast, they may not be as luxurious, but, before God, is the peace of a nation to be endangered in order that a few selfish citizens may enjoy the comforts of a certain boat?

We have all heard of the man who sailed from New York last Saturday, declaring that he delighted in the "thrill" of running blockades. Can we defend ourselves for allowing him that "thrill" at the possible cost of the lives of thousands of American youths, at the possible expense of the heartaches and

misery of a hundred thousand American mothers?

I am not afraid of war if war must come on some great issue of national honor. I am not afraid of war in defense of the flag and all the flag stands for. But I want no war, and the people whom I represent want no war, that is brought on through insistence upon a doubtful legal right.

Is not this the time to prevent the danger of war? Is not the opportunity given us now to take a stand that will save endless complications and perhaps serious disaster in the near

future?

Much has been said here to-day, Mr. Speaker, about interference by Congress in an international question. May this be called properly an "international" question? Should a German submarine sink an English armed merchantman which had no American citizen aboard, it would be none of our business. Why, then, have we not the same right to warn our nationals against taking passage upon such a ship that we have to prohibit them from riding on a train that carries dynamite or to prevent them from subjecting themselves to danger by traversing the streets of a city which is under martial law?

Speakers here to-day have called attention to the warning issued by President Taft to American citizens to come out of Mexico and to the repeated injunctions of President Wilson to the same American citizens that they would remain in Mexico at their own peril. The warning in that instance has been likened to the warning now sought. There is one important difference. Depredations upon American property and murder of American citizens in Mexico were the work of robber bandits, with no stable, organized government willing and able to control the situation. The loss of an American life through the attack of a submarine is due to the plan of warfare instituted by a responsible and powerful Government. And yet the rights in Mexico which were violated had been for years fixed and definite rights, with no question as to their status under law, while the right of a merchantman to arm, by the very statement of this Government, is an exceedingly doubtful right and open to serious question.

I have upheld and defended the President's policy in Mexico. I have felt that he is wise not to intervene. I have believed that the lives of American boys who might be called upon to wage for years a guerrilla warfare in that unfortunate country are infinitely more important than the mere property losses of a few citizens or a few corporations. Yet how much more to be dreaded than Mexican intervention is entanglement in the European war! Why, Mr. Speaker, the one is not comparable to the other. And if, without relinquishing our rights in any sense but simply governing ourselves sanely by the conditions which we face, we may avert the grave danger that inevitably

threatens, is it not the part of wisdom so to do?

The gentleman from Kentucky [Mr. Cantrill.], in his eloquent speech in favor of the rule, expressed his deep gratitude that Woodrow Wilson has been our President during the trying times of the past 18 months. I heartily echo that sentiment. I believe it is shared by a large majority of the American people. And the crowning glory of President Wilson's administration is the fact that he has kept us out of war. I know that he is a man of peace. I know that he wants to preserve the peace. I know that he will exert all his splendid qualities of mind and heart to that end. But if Germany and England. of mind and heart to that end. But if Germany and England both adhere to their announced purposes, and if American citizens continue to travel on armed merchantmen without regard to the conditions that prevail, will it be possible to preserve the peace so much desired by our President and by the great

masses of our people?

Moreover, the President has asked for a direct expression from Congress as to whether or not we favor a resolution warning our citizens not to take passage on armed merchantmen. Save for that request we should not have this resolution under consideration to-day. It has not been brought up at the in-stance of the House. Under ordinary procedure it would have been killed in committee, or, if reported favorably to the House would have taken its place at the foot of the calendar. here to be acted on now as a result of the letter of the President to Mr. Pov, of the Rules Committee. That letter asked for a straightforward vote on a simple question. It did not ask for the consideration of the McLemore resolution alone. It requested action on all resolutions upon the subject of warning. There was no suggestion of evasion by tabling. On the contrary, the language was very definitely in favor of such action as would show the sentiment of Congress. And yet the men who appeal to us in the name of the President are urging that the resolution be tabled. Why? Because thereby a lot of the Members of this House may be allowed to "straddle"—may ap-parently vote for one thing when they believe in another.

So far as I am concerned, Mr. Speaker, the easy and the pleasant thing would be to vote to table the resolution. Having so voted I could then explain to my constituents that while I favored a simple warning resolution I could not favor the Mc-Lemore resolution and that I had no opportunity to support the kind of resolution in which I believed. At the same time I should not be subject to the charge of failing to support the President. But, sir, if I should be compelled to stand alone in this House, I would not so vote, for, believing as I do and feeling as I do, such an action would be unparalelled hypocrisy, and in that I will not indulge. I have been cautioned by wellintentioned colleagues that a negative vote will do my political prospects serious harm. I have said to them and I say to the House that it is far more important to me to perform conscientiously the duties which I was elected to assume than to be reelected to an office which is without honor unless honestly administered. And in no vote that I may be called upon to cast in this body will my mind be clearer or my judgment more definite that I am doing what is right than in my refusal to help to table the pending resolution.

That it will be tabled there is no question. That a majority of those who vote to table it are in favor of a warning resolution there is equally no question. Almost every speaker upon the other side has so announced himself, but each has given some reason, more or less indirect, why he will not seek to amend the present resolution and pass it in amended form. The burden of the plea has been that we must stand by the President in his diplomatic negotiations. Aye; but the President has asked for an expression. Let us tell him the truth. Let us not take action that is meaningless, that is spineless, that is cowardly. If we believe in a warning resolution, let us pass it. If we do not believe in it, let us defeat it. But let the issue be clear-cut and definite. Speaking for myself, I want to see the President unhampered in his diplomatic negotiations, but I refuse to believe that his hands are tied and his efforts paralyzed, as some eloquent gentlemen here assert, unless this House does—what? Tables a resolution, refuses to act on it, fails to give an expression of its views as the President has urged.

Mr. Speaker, if definite need arise, if the honor of our Nation is threatened, there can be no doubt concerning the attitude of this House. As one man we shall stand behind our President. But the question to be decided to-day is not one of national honor, not one of diplomatic negotiation. Oh, I know that a lot of newspapers say it is; I know that a big hullabaloo has been raised throughout the country and many good people have been deceived as to the real issue. I know, too, that a large number of the newspapers which are now making the most noise have advocated for months that we should become a party to the European war. The question before us is a domestic question. It is this: Have we the right to advise our citizens so to exercise their privileges as not to risk involving this Nation with its hundred million people in the European war? That is the question. And for my part I believe we have that right. Moreover, I believe we owe that duty. I can not persuade myself that one or one hundred or one thousand of our people should so exercise their rights of citizenship, no matter how clear those rights, as to run the risk of destroying the peace and the happiness of a nation.

The resolution will be tabled. Perhaps, by the grace of God, we shall be spared war. Let us so hope. Let us so pray. In the end it may prove that this day of debate has done some real good, for in one thing we are all agreed. Every speaker here to-day, whether favoring a warning resolution or not, has expressed the belief that American citizens, regardless of their rights and privileges, but actuated by patriotism and common sense, should refrain from passage on armed merchantmen. If such views carry their message to the country and the people of the country respond, we shall have accomplished much.

Cotton Claims—Captured and Abandoned Property—Tillman Bill to Pension Confederate Veterans and Their Widows.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GOODWIN,

OF ARKANSAS.

IN THE HOUSE OF REPRESENTATIVES, Wednesday, March 1, 1916.

Mr. GOODWIN of Arkansas. Mr. Speaker, I shall not address myself as directly to the pending measure, as important as are the war claims that constantly arise for consideration by Congress, as practically every phase and feature of the pending measure has been discussed; but I do desire to speak with reference to another claim that a great section of the country—the great South—should properly have against the Federal Government.

Wars are always fruitful of heavy taxation. Revenues must be provided to support the armies in the field, and all things incident thereto. The moneys that go into the Federai Treasury by taxation from any source under ordinary occasions would last but a few days if great armies were in the field, and therefore Congress in the past has reached its taxing hand and assessed many things under warrant of constitutional authority that it does not dare to do in times of peace. Congress has no greater power than the power to tax. The power to tax carries with it the power to destroy. Certain things can be taxed by the Federal Government, but only those things that either are expressed or implied by the Federal Constitution. Most things within the States can be taxed by the legislatures of those States, such as a tax on land and on personal property,

Seldom has Congress overriden the taxing authority vested in the Federal Constitution, but in the case of the tax imposed upon cotton during and succeeding the late Civil War, an exception was made by Congress that had no precedent before this law was passed and none has since followed. Its enactment, the cotton tax referred to, Mr. Speaker, was an arbitrary and exceedingly unjust one. Why should cotton have been singled out as an object of taxation? Why were not corn and wheat and tobacco and other things, too numerous to mention, taxed? Certainly if Congress had constitutional authority to levy a tax on cotton it likewise had the same authority to levy a tax on the other things mentioned by me; but a war tax was needed at a time when passion ran high, and there was much hatred and animosity between the two sections of the country, and Congress put this heavy burden on the cotton producers of the South.

The bill introduced by my colleague, Mr. TILLMAN, of Arkansas, regarding the \$68,000,000 collected by the Federal Government as a tax imposed upon cotton during the Civil War has attracted no little attention throughout the Southern States,

The bill asks that the amount so collected be used as a pension fund and distributed among the surviving ex-Confederate soldiers and their widows, giving to each \$500, and in addition to such payments, such soldiers and such widows shall be paid quarterly the sum of \$30 per month each during the remainder of their lives, and that the act shall be administered by the United States Pension Office.

This does not include all the bill provides for, as the bill also asks that an appropriation shall be made for captured, abandoned, and confiscated property in addition to the collection of the cotton tax between 1863 and 1868, making a total of \$100,000,000.

I am not asking for alms or that charity be given to this remnant of soldiers who wore the gray. We do not come knocking at the door of Congress for gratuities, but only for justice; that there be restored to that section the money that was wrongfully taken from us; that that little band of surviving patriots and their widows may pass their remaining days in peace and plenty. I here quote from Mr. TILLMAN'S speech showing the amount of taxes paid into the Federal Treasury from this source, as follows:

From 1863 to 1868 there was collected from citizens of the Southern States a cotton tax, amounting in the aggregate to \$68,072,388.99, an itemized statement of which I submit herewith. This statement shows the sums of money realized by the Government under the various acts levying a tax on cotton:

1864	
1007 1, 2	38, 412, 56
1865 1, 7	72, 983, 48
1866 18.40	19, 654, 90
1867 23, 76	9, 078, 80
1868 22, 50	0, 947, 77

Total 68, 072, 388. 99

The collection of this cotton tax was under the control of the Commissioner of Internal Revenue.

The impression prevails in some sections of the South where, unfortunately, there is lacking specific information, that this cotton-tax money of \$68,000,000 is to-day in the Federal Treasury set apart and segregated; and, furthermore, the impression prevails that the Supreme Court of the United States held that this tax was unconstitutional. Certain politicians, Mr. Speaker, who seek to ride into office and endeavor to hoodwink the people make this contention in the face of the facts. No money is segregated in the Treasury, but all moneys collected go into the general fund. While my colleague, Mr. Tillman, of Arkansas, was making his splendid speech on his bill some time ago in the House I arose and propounded this question to Judge Tillman. I had made the investigation years ago, and knew what his answer would be; and, of course, Mr. Tillman very frankly stated the facts as they are, in reply to my inquiry. Here is the question propounded to Mr. Tillman:

"Mr. Goodwin of Arkansas. I am very much interested in my colleague's discussion, as well as in the merits of the bill, and shall vote for his bill. I know he has given much thought and attention to it, because he has been quite industrious along that line. I arise to get some information upon this point. It is thought by some that this cotton tax of \$08.000,000 is segregated and set aside in the Treasury and only awaits the action of Congress to bring about its disbursement. I made some investigation myself and there is some conflict of opinion. I would like to get my colleague to answer that question, if the amount is set aside or if any money is segregated in the

Treasury.

"Mr. Tilman. Oh, no; that is not true. The money was collected and has been expended. It is not segregated in the Treasury. You could not get your finger on the identical

money; but it was collected without constitutional warrant, and should be refunded for that reason.

So that, Mr. Speaker, disposes of the fallacy that this money is set aside in the Treasury and only awaits the action of Congress to bring about its disbursement.

Now, as to the decision of the Supreme Court as touching the constitutionality of this law. I do not believe, and, in fact. I almost know, the Supreme Court of the United States would not hold to-day such an act to be constitutional. No one will challenge the integrity or fair-mindedness of any honest court. All of us are creatures of environment. Those were days when hate rankled in the hearts of the people of the two sections, but I am happy to say that the courts of the country have generally been largely free from that prejudice. No one would accuse the Supreme Court of the United States of being biased or prejudiced. No doubt that great court in holding this law to be constitutional acted from the most patriotic motives; but let us analyze the situation. The court at that time, as it does to-day, consisted of nine members, seven Republicans and two Democrats, and all nine hailed from the northern part of the Republic. Judge TILLMAN in his speech had this to say of the personnel of the court. I quote Mr. TILLMAN, as follows:

My insistence is that this tax was illegally collected.

And in this I concur with Judge TILLMAN. Again, Judge TILLMAN says:

The history of its levy and collection involves some curious history. Continuing, Mr. TILLMAN reviews the personnel of the court and the history of the case, as follows:

Continuing, Mr. Tillman reviews the personnel of the court and the history of the case, as follows:

About four years after the Civil War one William M. Farrington brought suit in the Federal court for the western district of Tennessee against Rolph S. Saunders, collector of internal revenue, alleging in his complain that Saunders had collected without legal right the cotton tax imposed by the Federal Government. The Tennessee court decided against him, and he appealed to the Supreme Court of the United States. A splendid array of counsel appeared in the case. Albert Pike, ex-Confederate soldier, poet, and lawyer, filed a brief that is a classic. Ex-Justice John A. Campbell; former Justice B. R. Curtis; Philip Phillips, who defended Gen. Daniel E. Sickles for killing Philip Barton Key, Phillips at that time being the leader of the Supreme Court bar: ex-Judge Sharkey, of Mississippi; Roberston Topp, of Tennessee; James M. Carlisle, leader of the Washington bar; W. P. Chilton: W. T. Otto: Hughes, Denver & Peck, of Washington; and William M. Evarts, of New York, one of the great Inwyers of the country, all appeared in the case, as well as Attorney General E. R. Hoar, brother of Senator Hoar, of Massachusetts, he appearing on behalf of the Government. This volume which I have In my hand contains copies of the briefs filed by these distinguished lawyers.

The Supreme Court at that time was composed of Chier Justice Chase, a Republican of Ohio, appointed by President Lincoln; Justice Miller, a Republican of Iowa, appointed by President Lincoln; Justice Miller, a Republican of Iowa, appointed by President Lincoln; Justice Strong, of Pennsylvania, a Republican, appointed by President Lincoln; Justice Strong, of Pennsylvania, a Republican from New Jersey, appointed by President Cincoln; Justice Strong, of Pennsylvania, a Republican from New Jersey, appointed by President Grant—a court composed of seven Republicans and two Democrats, and all northern men. Although it was a great case, ably argued by the greatest lawyers

"This case came on to be heard on the transcript of record from the Circuit Court of the United States for the Western District of Tennessee and was argued by counsel. On consideration whereof, the court being equally divided in opinion, it is now here ordered and adjudged by the court that the judgment of the said circuit court in the case be, and the same is hereby, affirmed by a divided court."

So you see, Mr. Speaker, notwithstanding this was a case without precedent, novel in all of its bearings, the court handed down no written opinion, no reasons were assigned for the find-ings of the court, and no opinion published in the reports of that great court. The above half dozen lines, the very short entry of the proceedings, constitute the only findings of the Supreme Court on this case, involving millions of dollars and establishing a precedent that has not since been followed. And this memorandum, so to speak, has been found among the musty records of the court kept by the clerk of the court at that time. Certainly, sir, an opinion of this importance—and I am not criti-cizing the court for its failure to hand down an elaborate opinion-might have been written, as I view it, with the greatest care and in the most punctilious fashion, for it involved many millions of dollars collected from a stricken people upon a statute without precedent in the history of congressional legis-Iation and involving a vital proposition in the law of taxation.

The Supreme Court, Mr. Speaker, by an equal division held

that the tax was legally and constitutionally collected, four members deciding one way and four the other way, the burden rest-ing upon the plaintiff, of course, to prove his case to be unconstitutional. One member of the court did not participate in the

decision. I dare say that that would not be the findings of that high court to-day should a similar proposition be involved. More than half a century has come and gone since this tax was imposed upon cotton, the bitter feeling that subsisted then between the two sections has happily died away, and we stand to-day a reunited people, honoring but one flag.

This case being without precedent and the law upon which it was founded wholly unjust, why can not a great, big, just, and generous Government, through its Representatives in Congress, give back to the people-yes, to the Southern people-this tax of \$68,000,000 in pensions, that it may go to that remnant of veterans, even to those who wore the gray, now with tottering step and stooped shoulders, and their widows, that their few remaining days may be passed in peace and plenty. Could this Government do a more generous thing than that? Could it do a more just thing than that? I believe such an act on the part of Congress, with both sections joining in the consummation of this work of justice, would do more to heal forever the wounds and to bridge over the chasm in every part of the country, if that chasm has not yet been wholly bridged, than any dozen other

things that Congress might do.

There are living in the South to-day but few of that remnant of men, as brave and courageous as Casar's legions. Their ranks are serried. The grim reaper has been abroad in the land, and with his sickle he has moved down all but about 50,000 of those scarred-faced veterans who grimly withstood shot and shell and fought for the right as God gave them the power to see the The widows of those veterans likewise should equally be for. Their brows are also wrinkled, their hands and cared for. fingers are bony, and age is fast hurrying them to the great unknown, and they, too, will soon join the ranks of those patriots who have passed into the beyond. The last call will soon be heard. There will be but few more gatherings of the clans. There will be no more rendezvous. The muster roll will in a few short years become a blank. The last watch will then be over and all tents will be folded in the bivouse of the dead.

Sugar.

EXTENSION OF REMARKS

HON. ROBERT F. HOPWOOD,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. HOPWOOD. Mr. Speaker, this question has been so ably presented by the gentlemen—Mr. FORDNEY, of Michigan, Mr. MAR-TIN, of Louislana, and others—that it seems unnecessary to add a word.

My friend Bailey, who represents an adjoining district to mine in Pennsylvania, has lamented the fact that his party— Democratic—has broken about all the pledges contained in the Baltimore platform. That instead of an economical administration they have been profligate and extravagant. That because of this extravagance they are now compelled to break another plank in order to get money to replenish an empty

My friend Bailey loves that platform because of the fact that it was the child of the man he worships, "Billy Bryan."

What is a platform among friends, anyhow!

The Baltimore convention stultified itself when it robbed the knightliest Democrat of them all of a nomination which he had fairly won from the people of his party by a majority of the instructed delegates to said convention.

The platform was made to get in on, and it served that purpose. It, however, by the astuteness of its maker, contained a self-acting device to throw the occupant overboard at the end of one term, which seems to be thrown out of gear by the man at the wheel. The Republicans have started a little device of their own that will accomplish the same result when the people get a chance to register their will at the ballot box in November.

So Bryan need not worry.

This 25 per cent reduction on sugar duties has in the past two ears cost the country thirty millions in loss of revenue, and if the provision to take off the remaining 75 per cent of this duty on May 1 were put into force, it would cost the Government from forty to fifty millions of dollars per annum in addition. Why do not our Democratic friends restore the 25 per cent they took off in addition to retaining the duty now collected on imported

Why do they not go further and restore the tariff on wool, thus adding about \$50,000,000 annually to our revenues that the country now so badly needs?

Has the loss of these revenues under the Underwood tariff benefited any citizen of the Republic? Do we not pay more for sugar and clothing and all the necessaries of life than ever

The answer will be registered at the polls in November, and the Democratic Party will be again relegated to a state of "innocuous desuetude" for the next 25 or 50 years.

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. JAMES C. McLAUGHLIN,

OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. McLAUGHLIN. Mr. Speaker, during the short time allowed for debate on the McLemore resolution—the resolution of warning, as it is called-I had no opportunity to state my position or the reason for the votes I intended to cast, so shall

with the permission of the House, I shall insert with my remarks in the Record a copy of the resolution and a copy of the special rule under which it was considered.

House resolution 147.

remarks in the Record a copy of the resolution and a copy of the special rule under which it was considered.

House resolution 147.

Whereas the Governments of two of the powers at present in war in Europe and on the high seas have informed all neutral powers of their submarine intention to instruct the commanders of their submarine under the yessels of tatack upon sight after February 29 all armed vessels of their enemies, whether such armed vessels are admittedly naval vessels or carry their armaments under the name and guise of "defensive armament for merchant ships"; and Whereas the Government of Germany, one of the powers which have so informed the neutral powers, has submitted to the Government of the United States photographic facsimiles of alleged secret orders of the British Government, which secret orders direct that such so-called "defensive armament for merchant ships" shall be used of the united States photographic facsimiles of alleged secret orders of the British Government, which secret orders direct that such so-called "defensive armament for merchant ships and such naval officers and men shall be so far as possible, concealed and disguised when in neutral waters and ports, with the evident intention to deceive; and Whereas the only possible use for a "defensive gun" is the same as the use for an "offensive gun," namely, to shoot and, if possible, destroy or damage the enemy ship, whether submarine or other naval vestels and over the right to dictate to any of the powers whether they shall arm their merchant ships with guns or other armament or not and has no interest in the success or failure of such ships so armed in using their armaments in the only way in which they could be effectively used, namely, in destroying or injuring enemy submarines or other naval vessels of any power in escaping or destroying such merchant ships so armed in using their armaments in the only way in which they could be effectively used, in the success or failure of the bunded states on a ships of powers, no matter

German Government containing photographic facsimiles of alleged secret instructions issued by the British Government, which alleged secret instructions direct that so-called "defensive armament for merchant ships" shall be used offensively, and that so-called "defensive armament for merchant ships" shall be used offensively, and that so-called "defensive armament for merchant ships" and such naval officers and men of the Navy of Great Britain, and that such so-called "defensive armament for merchant ships" and such naval officers and men shall be, as far as possible, concealed and disguised when in neutral waters and ports, with the evident intention to deceive, the President of the United States or the Secretary of State shall at the earliest possible moment transmit such actual memorandum of the German Government, with such facsimiles of alleged secret instructions of the British Government, and with all appendixes whatsoever, to the Speaker of the House, that it and they may be laid before the House for its full information and for its assistance in performing its constitutional duty of advising the President of the United States with regard to foreign relations.

That the House expresses the determination of the people and Government of the United States both to uphold all American rights and to exercise care, consideration, and wisdom in avoiding actions which tend to bring American citizens and American interests into the zone of conflict where the passions of war are raging.

SPECIAL RULE

Resolved, That immediately upon the adoption of this rule the llouse shall proceed to consideration of House resolution 147; that there shall be four hours of general debate, one-half to be controlled by the gentleman from Virginia, Mr. Flood, and one-half by the gentleman from Wisconsin, Mr. Cooper; that at the conclusion of said general debate the said resolution shall be considered under the general rules of the House.

After 1 hour and 30 minutes of debate on the rule had been had I voted for the previous question-a motion to close the debate. I voted for the rule, and after four hours of debate on the resolution I voted for the motion to lay the resolution on the table, which motion being carried defeated and finally disposed of the resolution.

My votes on the resolution and on questions connected with its consideration by the House were not an expression of opinion on any feature of the administration's foreign policy; approval or disapproval of that policy, confidence or lack of confidence in the President was in no way involved. The votes meant simply, or I was expressing the feeling, that it is not proper during these troublous times for Congress to interfere with the administration in its negotiations and correspondence with foreign powers. The resolution, objectionable even as a resolution of warning to American citizens, contains other things which, in my judgment, made it impossible of consideration. A simple note of warning looks harmless, but I believe consideration of it at this time is unwise.

There is no doubt of the right of American citizens to ride on armed merchant ships of belligerents if they wish or are determined to do so, but connected with and inseparable from the exercise of that right and the difficulties which may result therefrom are other matters concerning which there is or likely will be serious dispute between our Government and some, perhaps all, of the belligerents. There is the question of the attitude of our Government toward the entire subject of submarine warfare; the attitude of our Government toward armed merchant ships of belligerents and their rights in the harbors of this country; its attitude toward the demand of both Teutons and allies that international law, even when vital interests of neutrals are involved, may be changed or altogether disregarded, as the wishes or interests of belligerents seem to require.

In our Government the President and his immediate advisers are and always have been charged with the duty and responsibility of carrying on diplomatic correspondence and of representing the people of the United States in all matters in dispute between this country and foreign countries. This is no time for Congress to interfere with the exercise of that duty; it is no time for Congress to enter the field of diplomacy. Congressional action would be a step in the direction of usurpation of an executive function and at this time might embarrass the administration, detract from its dignity, lessen its power and influence, and lead to confusion worse confounded.

Is there danger of confusion? Is there danger of embar-

rassing the administration or of encouraging foreign countries in their refusal to accede to its request in behalf of American rights and for the protection of lives and property of American citizens?

A few days ago leading Members of this House, including the Speaker, chairman of the Ways and Means Committee and floor leader of the majority party, and the chairman of the House Committee on Foreign Affairs, told the President that the House was demanding opportunity of considering a "resolution of warning," and if a vote were taken such a resolution would be carried by a vote of 2 or 3 to 1. Newspapers of this country and of foreign countries told of this meeting of Democratic leaders with the President and of the apparent determination of the House to assert itself and to take part in the consideration and settlement of the troublesome "armed merchantmen issue." Notice of this threatened action on the

part of the House reached foreign capitals, and that it attracted serious attention and influenced consideration of the "armed merchantmen issue" appears by an article in a prominent newspaper published in the capital city of one of the belligerents, a significant part of which is as follows:

It (the armed merchantmen issue) is not without risk; but the risk, perhaps, is smaller since the American Congress shows signs of demanding that the decision in international affairs be taken from the President's nands and placed in those of Congress.

Can there be any doubt as to the purpose of the McLemore resolution or any doubt of the effect upon pending negotiations relating to the "armed-merchantmen issue" if the resolution be adopted? Can there be doubt as to which side of the controversy will be aided or encouraged or which side will be embarrassed or hindered?

It is commonplace to say that we stand by our own country. We can better and more properly state our position by saying, "Our country! May she always be in the right; but our country, right or wrong."

The people of the United States, including Members of Congress, exercise the right, sometimes wisely, sometimes unwisely, of criticizing the administration in its course relating to foreign affairs, but such criticism is or ought to be offered only for the purpose of assisting the administration in the choice of the proper course to be pursued. It is entirely different from formal action by Congress which may belittle the administration in the eyes of the world and embarrass it in the consideration of mat-

ters involving the honor and safety of our country.

Some months ago Mr. Bryan, then Secretary of State, delivered to the Austrian ambassador a letter which set forth the view of our administration in the matter of shipment of munitions. The ambassador, reading the letter and noting that it was a refusal to accept the Austrian contention, asked Mr. Bryan if the letter meant what it said, or if it was "to be taken at its face value." Mr. Bryan replied that the letter was "intended for home consumption." That statement by Mr. Bryan was rank treachery to the administration and, besides, was an insult to the American people. We are very well able to believe the President said, as is reported, that "it has taken six months to overcome the influence of Mr. Bryan in foreign

The Congress may, and many of its Members do, differ radi-cally from the President in his management of foreign affairs, but it will not be guilty of treachery, nor will it, on account of political or other differences, take any action which might embarrass the consideration of questions involving the rights and, possibly, the safety of all the people of our country.

Sugar.

EXTENSION OF REMARKS

HON. LUTHER W. MOTT. OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES.

Thursday, March 16, 1916.

Mr. MOTT. Mr. Speaker, this measure to retain the existing duty on sugar that would otherwise be abolished May 1 is one that Republicans can vote for with satisfaction. The only mistake made is that the duty imposed by the last protective tariff measure is not fully restored. The Nation has derived no benefit whatever from the reduced tariff on sugar, but has suffered a Although the Democrats promised reduced prices that would lower the cost of living, prices have been much higher. Sugar cost more to consumers before the European war began than was the case before the passage of the Democratic tariff act, and the price has advanced to 61 cents a pound, wholesale, in New York this month. The Government lost over \$10,000,000 annually in revenue; development of the sugar industry ceased; 13 beet-sugar factories closed, while the cane-sugar industry in Louisiana was severely demoralized. If this bill is not passed, \$40,000,000 more in revenue will be lost.

The cane-sugar refineries profited, and that is why Mr. Spreckels and others of that class worked so hard for the Democratic ticket in 1912 and contributed generously to the election of Mr. Wilson as President. Those refineries are most strongly op-posed to this measure, which the Democrats are forced to urge because of the bankrupt condition of the Treasury, due to their tariff legislation. The refiners propose a consumption tax. The consumers would pay that tax and leave the refiners free to increase their enormous profits.

CANE REFINERS' PROFITS-SOUTHERN PRODUCTS PROTECTED.

Beet sugar does not pass through these big cane refineries and the refiners do not make an average net profit of \$10 a ton on beet sugar as they do on cane. It is estimated that owing to the high price of sugar this year the production of beet sugar will reach 862,000 short tons. If the beet-sugar industry were destroyed the big refiners would receive \$8,628,000 more for refining cane sugar to take its place. That is why they have been so anxious to put the free-trade party in power and to retain it in control of the Government. By raising the price of sugar only one-fourth of a cent per pound the refiners would make \$21,000,000 more, and that added to \$8,628,000 would total nearly \$30,000,000. That is the stake the refiners have in view

in destroying the beet-sugar industry.

Why is the duty on sugar, as now levied, to be retained, along with that on rice, peanuts, and other southern products, while so many northern products are left on the free list? Not one of these is any cheaper under the Democratic tariff than was the case under the protective tariff, while many of them are higher in price. But imports from Argentina have more than doubled in volume, though exports to that country have de-creased, and so on with Canada and other agricultural countries. When the European war ends our farmers will be enormously injured by these foreign products without any gain to consumers. But the southern producers will be protected-in fact it is probable that the outcry of the cane-sugar producers in Louisiana has had much to do with bringing forward this bill to retain the duty on sugar instead of raising the necessary revenue by internal taxation, as suggested by President Wilson.

WHAT THE UNITED STATES WOULD GAIN BY SUGAR PROTECTION.

The United States pays over \$100,000,000 annually to foreign producers of raw sugar, every pound of which could be produced in this country. The United States, according to the Agricul-ture Department, has at least 274,000,000 acres of land on which sugar beets could be grown profitably, but only 500,000 acres were so used in 1912. To produce the sugar now imported would require the use of only 1,671,000 acres. It is a profitable crop. France, Germany, Austria, and other European countries produce all the sugar they consume, and even export it, although their advantages for the growth of sugar beets are not equal to those of the United States; but they protected the industry and its enormous growth was the result. The production of beets for sugar in rotation with other crops greatly increases the productivity of the soil. The average growth of wheat and other crops on soil used a part of the time for beets has more than doubled in Europe. The same result has followed in this country, although comparatively few beets are grown here. The yield of wheat, rye, barley, and oats per acre increased 80 per cent in Germany, while it increased only 6 per cent in the United That was one result of beet-sugar production in Germany. Similar results have followed in other European countries. The cost of developing the beet-sugar industry in Europe has been repaid many times, and the same result would follow here. The per capita consumption of sugar in the United States has increased from 18 pounds in 1860 to 85 pounds in 1914, another strong reason for promoting the production of the sugar we consume.

Free trade is fatal to the farmers as well as other producers. Since the United Kingdom put farm products on the free list, 1,335,000 people have ceased to cultivate the soil in that country, and 4,000,000 acres of land are no longer cultivated but turned over to pasture. But every other European country has increased the number of acres cultivated, though Britain had less acreage than other nations. That is an indication of what is in store for the farmers of the United States under free trade, if the Democrats are retained in power.

SLOW PROGRESS OF LEGISLATION.

There are many important subjects to be considered at this session of Congress, but so far slow progress has been made in the way of legislation. The party in power learned something from the last election, in which they were saved from overwhelming defeat by the European war. Mr. NEWLANDS, of Nevada, one of the old and conservative leaders in the Senate on the Democratic side, intimated in a speech in that body that defeat for his party in 1914 was "only averted by the European war." Perhaps the delay and hesitation in legislating at this session are due to the result of the last congressional election. But it is not easy to see what is to be accomplished by this

The Democratic Party is divided on the most important question which the President has recommended for the consideration of Congress—that is, national defense. The wisdom of prompt action on that subject is self-evident. The bankrupt condition of the Treasury, owing to Democratic tariff legislation, is a detriment to legislation in regard to preparedness or anything else requiring an appropriation. Still, when it comes to what is known as "pork-barrel" legislation the party in control has no hesitation in proceeding promptly without regard to the

The appropriation of \$25,000,000 for the construction of public roads in various States has been pushed through this body, although that is an entirely new field for the Government, and such work is taken up at a particularly bad time because of Treasury conditions. That is practically the only measure of importance, outside of the deficiency appropriations and other routine matters, on which action has been taken in this body.

ENORMOUS DEFICIENCY BILLS-PUBLIC BUILDING SCANDALS.

The deficiency bills will apparently aggregate, before this session closes, as much as \$30,000,000. Not appropriating sufficient money in the annual appropriation bills, and making up the deficiency in separate bills, is an unfortunate way of making it appear that appropriations are smaller than they really are. There were 13 pages of appropriations for public buildings. many of them for the beginning of such buildings and some of them in towns of less than 1,000 inhabitants, in the urgent deficiency bill considered at this session. That is only another way of securing "pork" for the benefit of various Members. The Trensury Department has already held up a good many appropriations of that kind, because they provide for buildings in places of less than 5,000 population or in which the post-office receipts do not amount to \$15,000 annually. One of the items to which I refer provided for the construction of a public building in De Land, Fla., which had a population of only 2.812 according to the census of 1910. That is another illustration of "urgent deficiency." A building in a town of that lies "urgent deficiency." A building in a town of that kind will cost much more for its upkeep than the rental of a building to provide accommodations for needed purposes, to say nothing of deterioration

In large cities—even in the city of Washington, where there is urgent need of public buildings—they are not provided, because it will not help at election time. The Government is paying in this city over \$600,000 annually in rentals, but that goes on, while appropriations are made for public buildings in villages all over the country. Gainesville, Fla., has 6,000 population and a public building that cost \$150,000. Evansville, Wyo., has 2,500 population, and a \$125,000 building where the Federal courts meet about two days in the year. In 1906 there were 503 Government buildings in the country, but in 1915 there were 967. About as many buildings were erected in 9 years as in the previous 130 years. Texarkana, Tex., has a \$110,000 courthouse, used three or four days in the year, and a separate building for a post office, but in New York City the Government leases court rooms on the twenty-seventh floor of a private building. An effort to get an appropriation for a site for a courthouse in New York was defeated, yet one was obtained for a courthouse in Paintsville, Ky., with 942 population. An appropriation for a new and necessary post-office building in Chicago was refused, yet one was made for Vernal, Utah, with only 836 population. The fact is, a great mistake is made in locating public buildings through acts of Congress. In England they have found a better way. If a public building is wanted there, the lord commissioners of the treasury investigate and decide the question. Thus they are saved from the scandals that attach to the "porkbarrel" methods followed in this country.

TREMENDOUS DEFICIT IN THE REVENUE FROM THE TARIFF.

In his Indianapolis speech, a year or more ago, the President boasted of the effectiveness of the Democratic tariff in the production of revenue to meet the expenses of the Government. That was the same speech in which he said that the Republican Party had had no new ideas for 30 years. There was about as much truth in one statement as in the other. He also boasted in that speech of the provision in the bill creating the Trade Commission, giving it all the powers of a tariff commission, which provision, he told his audience, had been sneaked through Congress, without the Republicans becoming aware of the fact. As has been shown repeatedly here in this body, there was no truth about such a provision having been passed surreptitiously. There is also no truth in the statement that the tariff law is effective for the purpose of revenue. In his message to Congress on December 7 the President dealt with the present state of the Treasury, and said that if the laws were not changed there would be on June 30, 1917, a deficit of \$297,000,000. But that figure is far below what the actual deficit would be, though it is a fair illustration of the effectiveness of the Democratic tariff and other laws in producing revenue.

ANTIQUATED METHODS IN THE COMMERCE DEPARTMENT.

\$606,000,000. During the corresponding period under the Democratic law, before the European war began, the balance of trade was reduced to \$345,000,000, a loss of \$260,000,000, or \$26,000,000 a month. That shows again the utter failure of the existing tariff law

The imports for the 10 months under Republican law, which were free of duty, aggregated \$782,005,392, while for the corresponding period in 1915 the free imports reached \$940,798,793. The dutiable imports for 10 months in 1915 were \$167,000,000 less than for the corresponding period at the close of the Taft administration. These are the figures of the Bureau of Foreign and Domestic Commerce, although a special committee of the United States Chamber of Commerce, after investigating the methods followed in that bureau, declared the figures worth-less owing to antiquated methods. That is an illustration of That is an illustration of how the bureau has failed to improve its methods, though it has devoted so much time and public money to advertising the alleged wonderful accomplishments of the Democratic administration Judging by the figures of that bureau for months before the European war began, as compared with the corresponding time under the Taft administration, imports increased at the rate of over \$200,000,000 annually while exports decreased to about the same extent. In other words, American wage earners suffered a loss in the production of goods that sold for \$400,000,000 annually. But that was only a small part of the loss, as our exports of manufactures are only about 3 per cent of the total production. We all know of the millions of men thrown out of employment and of the soup houses and other charitable methods of feeding them that necessarily followed the enactment of the Democratic tariff law.

WAR ORDERS-A WINDFALL FOR THE DEMOCRATS.

The foreign trade during the last year of the Taft administration reached \$4,278,892,383, but during the fiscal year of 1915 the aggregate was only about \$168,000,000 more, notwith-standing the enormous war orders. What these war orders total may be gathered from the exports already made, though the full effect of the orders has not yet been felt. War muni-

tions are only a part of the orders.

The exports of horses and other animals for nine months ending September, 1913, under the Republican tariff were \$5,600,000 in value; for the corresponding period in 1914, under Democratic tariff, they were \$4,600,000, or \$1,000,000 less in that time. But in the corresponding period in 1915, with the war orders, they reached \$92,200,000. Meats, cotton, explosives, breadstuffs, wool manufactures, and so forth, all come in under The exports of breadstuffs in nine months, under war orders. war orders, increased \$256,000,000. That will give a fair idea of what the war has done for our export trade in those particular lines. In other branches exports are less, and were much less under the Democratic law before the war began. Exports to South America and countries not directly affected by the war are less than they were under the protective tariff. The Democratic tariff law is a failure in every way, and instead of producing sufficient revenue it necessitated the imposition of the income tax and the so-called "war-revenue taxes" to make up the deficit created by the tariff law and excessive appropriations.

LOSS OF IMPORTS NOT THE CAUSE OF TREASURY DEFICITS We hear much about the loss of revenue because of the war. Secretary McAdoo has said that the loss of revenue was "due solely to the falling off in importations." That is a misleading statement. The imports for December, 1912, under the Republican tariff, were, in value, \$154,095,444, but for December, 1915, they were \$171,841,665, or \$17,000,000 more than under the Republican tariff. They were greater in November than in the corresponding month under the Republican tariff. In January, 1916, they reached the enormous total of over \$184,000,000, or \$62,000,000 more than in January, 1915, and \$30,000,000 more than in January, 1914, six months before the war began. The imports for 1912 were \$100,000,000 larger than in any previous year. But for 1915, under the Democratic tariff, notwithstanding the war, which shut off imports from Germany and Austria and some other countries, they were only \$39,467,200 less than in the record year of 1912, and 71.7 per cent of the imports in

December came in free of duty.

With the average duty at less than 12 per cent the amount of revenue from that source would have been small, showing how ridiculous is the assertion that the loss of revenue was due to a decline in imports. Had the Republican rates of duty been imposed, there would have been ample revenue. For the entire war period the average imports are over \$140,000,000 a month, or \$5,000,000 a month more than from May, 1913, to August, 1913, under the Republican tariff. The imports for last June During the last 10 months of the Republican tariff there were the largest for any June in our history. For last October was a balance of trade in favor of this country amounting to they were larger than in the same month for 1913 or 1914.

In November the imports were the largest for any corresponding month in our history. That shows how little there is in the talk of the deficit being due to a decline in imports. With about the same imports, under Republican rule the revenue for the month was about \$11,000,000 more. The average ad valorem rate on all imports under the law passed when Cleveland was President was 20 per cent; under the Dingley tariff law they averaged from 22 to 29 per cent; under the Payne law, from 17 to 21 per cent; and for the first fiscal year under the Underwood law, 12.9 per cent. But at the present time they are not in excess of 10 per cent, and have been going lower since June.

LARGE IMPORTS-WHAT IS IN STORE FOR US WHEN THE WAR ENDS-WHAT DEMOCRATS SAY.

For the first 10 months under the Underwood law the increase in the imports of foreign manufactures—that is, of goods similar to those produced in our ccuntry—was very great, amounting, for instance, to 54 per cent in cotton cloths, while of woolen goods they more than trebled. The war checked imports, but they are more now than under the last months of the Republican fariff. From the imports of the last few months it is evident that the total will reach about \$2,000,000,000 per year, or nearly \$200,000,000 more than for any preceding year. We can judge what is ahead of us under the Democratic tariff when the war ends and all of the producing forces of the Old World are at work again.

The exports of foreign nations not engaged in the war are greatly increasing, while England and France begin to show large increases, even Russia showing an increase in recent months. Spain exported 25 per cent more in the latter part of 1915 than she did before the war began. Japan shows a very large increase. The United States is not alone by any means in its increase of exports due to the war. Argentina's exports last year increased \$209,000,000, while imports decreased \$45,000,000.

A distinguished Democrat of Boston, chairman of the directors of that port, pertinently remarks:

The great increase in the value of our exports is due wholly to the demand for supplies and materials used in warfare. We have about \$00,000 wage earners employed who at the close of the war will be innocent victims of the gigantic readjustment which must then take place. There is no doubt that after the war there will be an extreme reaction. * * Our trade balance for the year ending June 30, 1915, in normal legitimate merchandise was smaller than it has been since 1910, and almost \$200,000,000 less than that of the year before the war.

Our exports are less with countries not at war while our imports from them have increased. There will be an avalanche of foreign products sweeping down on this country when the war ends. The Boston Globe, a Democratic newspaper, says that after the war closes "an industrial war, in which we will have the most to lose, and into which we shall be drawn, will follow the present crisis," adding:

the present crisis," adding:

Obviously we must prepare to meet the coming struggle in the best way to safeguard American industry. The European nations will seek ruthlessly to crush their American rivals, since we shall be their principal opponents, in their efforts to recover from the losses by war. Their method will be the most effective one possible. This method is "dumping." Goods produced cheaply will be poured into the United States after the war to undersell American-made goods produced in normal conditions. Our budding dye industry, for instance, will be swamped under a flood of German chemicals sold at prices below the cost of production here. If we do nothing to stop this flood of European goods our country will suffer one of its worst financial panics. Thousands of men will be thrown out of work; the labor market will be drugged by hungry men, and we will have the soup kitchen, the bread line, scared capital, and industral chaos. Our industrial defense is our tariff. We must keep out pauper goods from war-sodden Europe.

Souptor I rwys of Ulinois is another Domeoret who begins to

Senator Lewis, of Illinois, is another Democrat who begins to see a new light. He says:

To allow the manufactured articles of Europe to come without limit to this country as a Democratic theory, the goods to be sold at such price as Europe could take in order to obtain money to build up her wasted places, would be to overcome our own manufactures and slay the possibility of establishing American plants to take the place of those which heretofore in Europe served the uses of America and the world.

Mr. William Randolph Hearst, an eminent Democrat, urges-

The Democratic party to abandon its free-trade policy, a policy which has persistently proved a disastrous failure and which has continually plunged the country into the depths of financial depression during Democratic administrations, and which has invariably resulted in a deficiency of revenue which had to be met by extraordinary taxation or bond issues.

WOMEN EMPLOYED INSTEAD OF MEN IN EUROPE-WAR DEBTS-FALSE
TARIFF PREDICTIONS.

Women are now being employed in Europe instead of men, who have gone to war, which will be a gain in industrial work to the European countries. Those nations will soon be in a bankrupt condition. Great Britain now has a debt of about \$10,000,000,000 and Germany owes about as much more, while France and Italy and Russia have enormous debts of like

nature. About 3,000,000 men have been killed, nearly 10,000,000 wounded and maimed, and over 2,300,000 made prisoners. The money that has been borrowed to carry on the war means twenty-seven times the national debt of the United States incurred in 139 years of history. It means a debt of about \$360 for every family in all belligerent countries. Where is that money coming from? Europe will be bankrupt when the war ends and we will have bankrupt nations to contend with. But nothing is being done in Congress to meet the tremendous influx of foreign goods at the close of the war. Our Democratic opponents, as a rule, admit the danger, but they do nothing.

It is like their predictions as to their tariff. The President

declared that it would produce abundant revenue. Mr. Underwood, in charge of the bill in this House, declared that the law would reduce the cost of living in the United States, and that it would not disturb the business of the country; it would increase our foreign trade and would collect revenue sufficient to run the Government. Mr. Simmons, in charge of the bill in the Senate, said that it would "cut down the cost of living," and would produce a surplus of revenue equal to \$18,000,000 at the close of the fiscal year 1915. Like talk came from other prominent men on that side, but every one of those predictions has proved false. The cost of living has increased instead of decreasing. According to the New York Times, a responsible Democratic newspaper, 25 food commodities which are in daily use upon the table of the average family, and which cost \$1.31 in 1911, under Republican tariff, cost \$1.48 last year under the Democratic tariff, and the cost was only 2 cents less in 1914, before the European war began. In other words, there has been an increase of at least 13 per cent in the cost of living under the Democratic tariff law. We all know that instead of a surplus, as Senator Simmons predicted, there has been an a surplus, as Scinitor Similors predicted, there has been an enormous deficit made up in part by a vast increase in direct taxation. As to disturbing business conditions, there were 18,820 failures during 1914, the worst record in history as to number, while the amount of liabilities were only exceeded by those of the fateful Democratic year of 1893. Bank clearings, a fair massive of the business of the country were 111 pages. a fair measure of the business of the country, were 11.1 per cent less than in 1912, the last year of Republican administration. Capital invested in new enterprises was \$700,000,000 less in 1914 than in 1912. Railroad gross earnings declined 4.4 per cent; iron production decreased 25.3 per cent; steel mills were reduced 40 per cent in production; 30 per cent of the looms of our woolen mills were idle, and so on with other industries, while the imports of these articles enormously increased. Millions of men were out of work, and many are still in that condition. Instead of increasing our foreign trade, it rapidly decreased with a balance against us before the European war began as compared with a large balance in our favor under Republican tariff. The war has been a tremendous aid to the Democrats in obscuring their costly blunders.

DEMOCRATS VIOLATE THEIR PLATFORM.

The Democrats have violated practically every plank in their platform of 1912. They promised to revise the tariff without disturbance to business, whereas the failures and the liabilities were only exceeded in one year under President Cleveland. They promised to reduce the cost of living and succeeded in increasing it 13 per cent. They promised to reduce the alleged "profligate and wasteful expenditures made by the Republicans," but they have appropriated hundreds of millions of dollars more than was ever before appropriated during a corresponding period in the history of the Nation. And so it goes all along the line. They promised to make the Panama Canal free of tolls for coastwise shipping and such a law was passed. President Wilson was pledged to it, but later, on his recommendation and without any assigned reason, that law was repealed. There has been no explanation of that most extraordinary course up to this time. Then there was a plank adopted pledging the President to abide by one term. That plank he has repudiated, although Mr. Bryan has stated that any man who seeks office on a platform which he fails to observe is a man not to be trusted.

ABOLISH AND THEN PROPOSE ANOTHER TARIFF COMMISSION-BAD APPOINTMENTS.

It is not their platform planks alone which have been repudiated, but policies they have followed in Congress. There was a nonpartisan tariff commission at work getting information at the time President Wilson was elected, but the Democrats refused to make any appropriation for it, thus ending the work, stating that no such commission was necessary. Now the President has recommended a tariff commission and a bill for that purpose has been brought into the House. Although Mr. UNDERWOOD and some others are opposed it is probable the bill will pass. A properly constituted tariff commission to gather information only, might be useful.

If such a law is placed on the statute books, its usefulness will all depend upon the men who are appointed as members of the commission; but they may not be the right men, should the President have that authority, as it is unfortunate that he does not always choose well. He removed old and tried diplomats to make room in the foreign service for men without any experience because they had been useful to the Democratic Party and had contributed generously to its funds, one of the men appointed being a brewer. An Excise Commission was created by Congress to lessen the number of saloons in the District, and the President appointed as a member a man who had lobbied against the law and who was opposed to it. The Senate would not confirm him, though the President did not even then seek to choose the best men for those places, apparently looking to political ends. One of the commissioners he has recently nominated is a politician from New Jersey, who is said not to be in sympathy with the excise law, and who the Senate committee says should not be confirmed by the Senate. Mr. Brandeis has been nominated for a member of the Supreme Court, though he has been a violent opponent of many vested interests, and is undergoing investigation. He may be a competent man in point of learning. but he does not appear to possess a judicial temperament. In the same way many like appointments have been made; and if the President appoints a tariff commission, it is not at all improbable that similar misfits will be selected; but the change of view on the part of the Democrats appears to be a scheme to delay tariff legislation.

DEMOCRATS VIOLATE THEIR PLATFORM IN REGARD TO RAILROADS, ETC.

The Democratic platform adopted at the Baltimore convention contains this provision:

We favor such legislation as will effectually prohibit the railroads, express, telegraph, and telephone companies from engaging in business which brings them into competition with their shippers and patrons, and also legislation preventing the overissue of stocks and bonds by interstate railroads.

That is another plank that has been repudiated. To gloss it over for effect at the coming elections the Democrats have passed a bill in the Senate to appoint a commission to investigate interstate commerce. There has been investigation of a very expensive kind along that line, and if more is undertaken, as proposed, it will be years before it is completed. This is a suggestion of the President. In December, 1914, he spoke of "the great harm and injustice that had been done to many, if not all, of the great railway systems by the way they had been financed and their own distinctive interests subordinated to the interexts of the men who financed them." The Interstate Commerce Commission has made a thorough investigation, with recommendations that have not been carried into effect.

In the case of the Frisco system, the commission reported an enormous loss—\$8,844,706 in one item alone—by the manipulation of its finances. The New Haven road is another illustration. In 1903 it operated 2,040 miles of road, with a capitalization of \$93,000,000. On June 30, 1912, the capitalization, excluding stock premiums, was \$416,000,000, an increase of \$324,000,000, while the operative mileage had increased only 50 miles. The commission stated that the financial management of the road had disclosed "one of the most glaring instances of maladministration revealed in all the history of American railroading." The commission also reported on the Chicago & Rock Island road, stating that its territory was one of the richest and most prosperous in the country, and that it had a fine business, and its stock was selling at over \$200 a share. But under glaring mismanagement its shares fell to \$20, and the road is now in receivers' hands, although the earnings have steadily increased. Those are illustrations of what was meant by the declaration of the Democrats in their platform to prevent the overissue of stocks and bonds.

The case is entirely clear, but the Democratic Party has done nothing to stop that great rbuse. It is now trying to conceal its delinquency by another investigation. This will cost, according to the statement of Senators, over \$500,000 and will take years to complete. The telegraph and telephone question has also been included, opening a wide field for work. If legislation is delayed to hear the outcome, any definite result will be defeated. The Industrial Commission had nearly half a million dollars for its investigation, and spent every cent of it. Now it will cost the Nation \$92,000 to print the testimony and report. Nothing is likely to come of that partisan work. The large number of employees the commission appointed, entirely outside of civil-service regulations, have been incorporated in the civil service by order of the President, something he has done in many other cases, to the injury of the civil service and in defiance of his pretended support of civil-service regulations.

THE NEED OF UNIFORM CHILD-LABOR LAWS.

Uniform legislation is a crying need of the Nation. Each of the 48 States legislates for itself on divorce, marriage, inheritance, and other things. Persons seeking to be incorporated as an organization, as a rule, go to the State whose laws are most liberal, or, rather, loose, in granting a charter. The States are at variance in regard to women and child labor. Manufacturers in a State like New York, Pennsylvania, or Massachusetts, with enlightened laws on the subject, can not compete with those in a State which is willing to weave the life blood of its women and children into its products. Imports from foreign countries, made by women and children serving for miserably low wages, are brought into this country to compete with products made here by adult labor, children being excluded. To remedy this unsatisfactory situation in regard to these various States a bill was brought up and passed in this House to prohibit the interstate shipment of goods manufactured in whole or in part by the labor of children under the age of 14 years or under 16 who work more than eight hours a day.

Of course that measure was opposed by Representatives from Southern States which have no laws in regard to child labor or very meager legislation on the subject. These same Representatives were largely responsible for the passage of the Underwood tariff law. They and their party refused to allow a clause to be inserted in the law providing against the importation of the products of child labor and those made by labor employed anywhere from 12 to 18 hours a day. In the same way the Lemocratic Party refused to permit an amendment to the convict-labor bill which would extend protection to the people of the United States against the convict-made goods of Europe and elsewhere. Thus, while foreign goods made by convict labor and by child labor are permitted to come in without restriction, manufacturers in the United States are not permitted to employ such labor except in a few Southern States.

CHILD LABOR IN THE ORIENT.

The Representative from Tennessee [Mr. Austin] made a personal investigation last summer of conditions in China and Japan, where child labor is employed to a very large extent. A cotton mill in Kobe employing 9,000 Japanese boys, and a spinning mill employing 4,500, and a woolen mill at Tokyo employing 1,500, and many other such establishments, were shipping their goods to the United States without restriction. But in this country 45 State and Territorial legislatures have passed laws affecting and protecting children. Even Alaska has forbidden the employment of boys under 16 years of age in mines underground. One mill in China, visited by the gentleman from Tennessee, employed 4.500 boys. In Japan they were paying from 8 to 15 cents a day for 11 hours labor in such mills.

There are 525,000 Japanese women and girls in the textile mills of Japan and 66,000 men and boys. The lowest wages paid in cotton mills in this country—in Tennessee, for Instance—is said to be 50 cents a day, running up to \$1.50 a day. But in China, with longer hours, they pay boys 5 cents a day. That is a situation that accounts for the fact that last year we sold only \$1,200,000 of American-made cotton goods to China, where we formerly sold \$30,000,000 worth. The Japanese have taken most of that trade. In 1913 and 1914 there was imported into the United States and into the Philippine and Hawaiian Islands foreign-made cotton goods to the value of \$105,000,000, or \$25,000,000 worth more than we sold abroad, and we produced 60 per cent of all the raw cotton in the world. That is a humiliating situation that can be corrected only by protective legislation.

SOUTHERN OPPOSITION TO CHILD-LABOR LAWS.

We should have the same protection against this foreign product made by child labor that is proposed to be given to producers in the various States of the Union. Why do southern Representatives oppose such legislation in Congress? That is explained in the hearing before the Committee on Labor. One of the important witnesses from the South, an editor of the Southern Textile Bulletin, said that the "cotton mill owners do not favor this legislation." That explains why so many petitions have come from a few Southern States against this legislation. Statistics prove that tuberculosis has been increasing more rapidly among the people of the South in factories and mills where children and mothers have been compelled to work 12 hours a day than is the case elsewhere. Another reason favoring such legislation is found in school statistics, which show that in States where child-labor laws require attendance at school of children between the ages of 10 and 14 they number 95 per cent of all children between these ages, whereas in States having no child-labor laws the percentage of children between the ages of 10 and 14 years who are in school ranges about 25 per cent less. That is a dan-

gerous situation.

The exploitation of child labor for the sake of financial gain is a species of human slavery, and the sooner it is stopped by Congress, as far as possible, the better for the Nation. The bill of which I have been speaking only proposes to stop the interstate shipment of goods made by such labor. It does not prevent a State from allowing the employment of women and children without restriction in the production of such goods. But the employment of child labor in the South, to a greater extent than in the North, and the long hours for both children and women accounts in part for the rapid growth in the manufacture of cotton in those States, and is one reason why they have made such vigorous opposition to beneficent legislation of this character.

FILCHING THE TREASURY FOR LOCAL PURPOSES.

The construction of roads in various States embarks the Government in a new branch of State work. The committee, in reporting the bill, said:

Primarily roads are local concerns, and jurisdiction over them belongs to the State and local authority, which jurisdiction should not be disturbed by the General Government.

But because States do not always do their duty in the matter, it is proposed to dip into the Federal Treasury to secure aid in this work. And this is proposed at a time when there is a large deficit, when stamp taxes and other such objectionable methods are followed to obtain revenue, and when measures must be adopted in this Congress to increase the revenue. The bill provides for the appointment of a lot of officials outside of the civil-service regulations to inspect and supervise this road work. In that way it provides a new avenue for political appointments,

In defiance of the civil-service plank in their platform, the Democrats created political places to be filled by this administration for the collection of the income tax; then, another set of officials outside of the civil-service regulations were provided under the Federal reserve law, and still another lot under the so-called war revenue act. But notwithstanding these base betrayals of their civil-service professions they go on legislating in the same way. The Government is not only to build roads—that is, it will contribute money for that purpose—but it is also provided in the bill that there shall be no limitation of the size or span of bridges to be constructed under the law by the Federal Government, thus opening the way to use more Government money for local purposes.

DEFTING THE CIVIL-SERVICE REGULATIONS.

To provide political places for the Democratic Party and to make Northern States furnish money for southern roads are to be the principal features of this measure. The States of New Pennsylvania, Connecticut, Massachusetts, New Jersey, and Ohio will pay into the Treasury the larger proportion of the sum appropriated in this measure and will receive in some cases less than one quarter of the amount paid in, while other States will receive relatively twice as much as they contribute to the Federal Treasury. In 1913, Alabama spent for State highways about \$127,000, but under the allotment of this bill that State would receive \$579,000; Georgia spent nothing and would State would receive \$579,000; Georgia spent nothing and would receive \$722,000; while California, which spent \$2,000,000 would get less than Georgia, or \$504,000; Florida spent nothing, and would get \$202,000; but Connecticut, which spent \$3,483,000, would get only \$258,000; New York has expended \$82,638,729 on its roads; Pennsylvania, \$24,250,954; Massachusetts, \$16,365,425; Connecticut, \$14,934,176; and New Jersey, \$7,192,268. Those States, with a few others that have spent their money liberally for good roads, will be taxed for much the greater part of this annual gift of \$25,000,000 to States who tax themselves little or nothing for like purposes. Louisiana, having 0.75 per cent of the total mileage of these so-called post roads, is allotted \$345,064; but West Virginia, with 1.19 per cent of the total mileage, receives only \$340,688, or less than Louisiana, That is a specimen of Democratic legislation, showing the kind of "economy" that is practiced and why the Government is short of revenue, and is in a most unfortunate condition in many

The measure will work something like the income tax, to which New York contributed \$18,000,000 out of \$41,000,000 of personal taxes collected, or nearly one-half. Of the corporation and income tax collected for the last fiscal year. New York contributed several times as much as the entire 13 Southern States, including Arizona and Oklahoma. That is one reason why the southern Democrats propose to raise the additional revenue needed by extending and increasing the income tax.

There are about 6,500,000 farmers in the United States and about 45,000,000 persons to a large extent dependent on them.

It cost 25 cents a ton-mile, according to good authority, to transport farm products to market where the roads are bad in this country. In Continental Europe, with good roads the cost is 8 cents a ton-mile. That means a loss to the farmers of this country of 17 cents a ton-mile. It costs a man living on a dirt road about four times as much as one living on an improved highway, or any good modern road. That shows the advantages of improved roads to farmers, but it is not the business of the Government of the United States to improve the roads, more particularly in States where no appropriations are made for that purpose.

NO SIGN OF ECONOMY.

If we include the deficiency appropriations, which must be made at the next session, there is no apparent purpose to cut down the appropriations at this session of Congress. The estimates of the regular annual appropriations for the fiscal year 1917, as submitted by the departments or the Secretary of the Treasury, are \$195,082,673 larger than last year's estimate, and \$170,920,796 greater than all of last year's appropriations, excluding the deficiencies. When these are included the estimates this year and last year's appropriations will still be far apart. This great total asked for is very discreditable to the party in power, when we consider what it has had to say about appropriations under the Republican Government, which were many millions of dollars less.

The estimate of the total appropriations this year, and the estimated revenues, leave a deficit of \$366,357,808. That is one of the tasks that Democrats should make provision for. But they are not doing so. The \$25,000,000 road bill, the rivers and harbor bill, the public-buildings bill, the one for preparedness, and the numerous bills for armor-plate plants, arsenals, naval stations, aviation stations and schools, munition plants, gunforging plants, and so on, of course, will not all get through, but some of them will and go to swell the total of the appropriations.

FAVORING GOVERNMENT OWNERSHIP.

The administration favors munition and other such plants to be operated by the Government, although Gen. Crozier has stated that it would at least take \$400,000,000 to establish such plants to accommodate the Government. The Postmaster General wants the Government to take over the telegraph and telephone lines, which would cost an enormous sum. The shipping bill now before Congress and supported by the administration will take at least \$50,000,000 to start with. How much will be necessary to prepare the country for naval and military defense has not yet been determined. The treaties with Colombia and Nicaragua, if both are ratified, will take over \$28,000,000, and the administration wants that done. The \$25,000,000 asked for Colombia is nothing except a gift without any sound reason for its existence. It was stated in the Senate that \$140,000,000 has been expended on the Mississippi River without accomplishing any good results. There is a proposition before the Senate now to appropriate \$140,000,000 more. These are illustrations of the Democratic idea of economy. A Member of that party from Ohio, chairman of an important committee, after making an eloquent plea against the President's policy of preparedness, asked for an appropriation of \$5,000,000 to build a munitions plant in his district. The Rivers and Harbors Committee has recommended appropriations only for projects that are already authorized by law, for which some \$44,000,000 will be required. New York Harbor has an appropriation for new projects as an attempt to appease Tammany.

OSWEGO HARBOR SHOULD BE CARED FOR.

In my home city of Oswego a deeper harbor is necessary to accommodate the shipping that will enter that port on the opening of the Barge Canal. The State of New York, at an expense of over \$100,000,000, is completing the Barge Canal for the benefit of a large part of the Nation. A branch of the canal runs to Oswego and Canada is to deepen the Welland Canal. That will make it very important to use larger vessels in reaching Oswego and will be a great measure of economy, but that can not be done without a survey of the harbor and a deepening of it to some extent. The Government engineer of that port will prepare plans and estimates for a harbor adequate to take care of the business which is coming at the completion of the Barge and Welland Canals. The necessary appropriations should be secured without any trouble, as the State alone pays for the cost of the canal. The harbor improvement is not a new enterprise, but merely the extention of a very old one, the first appropriation for which was made available in 1827.

THE POST-OFFICE BILL.

The Post Office appropriation bill as passed by the House exceeded by several million dollars the Post Office estimates, the reason being to provide a large sum for rural free-delivery routes. Some of the reorganizations that the Post Office De-

partment has made have caused an unwarranted reduction in service in many places in the North, a great disturbance in business, and other injury, but new routes have been established in the South. The Postmaster General has said that a large sum can be saved by placing the rural business on a proper basis. The Fourth Assistant Postmaster General stated that \$15,000,000 can be saved in that way, and he has charge of that service. But Congress does not respond to the Postmaster General because of the unnecessary injury he has already done to the service.

A BUDGET SYSTEM ADVISABLE.

The United States Chamber of Commerce has recommended that a budget system be adopted in good faith by Congress which would result in bringing to an end the constant discussion of "pork barrels." That is a wise suggestion. In New York State the legislature has taken up the subject, and it will be fortunate if such a system is adopted there. In Congress committee chairmen are not responsible to any person for their appointment, and the system seems to be to get the largest total appropriation possible. A budget system would make the committees, as well as Congress itself, more responsive to the public will, and would result in a more businesslike system of planning great national improvements. It might reduce the influence of some Members of Congress, but the country would probably be able to stand that change.

TEMPORARY PROTECTION.

The effect of the European war in excluding to a large extent some classes of imports has the effect of a protective tariff, which effect will vanish when the war ends. In my own district, in the village of Theresa, there is a silk mill that has been idle for a considerable time. It has recently changed hands and there is a prospect now of it reopening with an enlargement to 200 looms to start with. There are many industries that would show an expansion if they could be assured of protection from European "dumping" and aggression when the war ends.

THE NEED OF PROTECTION FOR DYES.

The dye industry is an illustration. We have all the material for making dyes that Germany has, but we have never built up the industry here to compete with Germany for lack of sufficient protection, though it was growing rapidly at one time the reduction in tariff rates closed several mills and stopped development. Germany has some very large mills, employing upward of 8,000 men each, and those mills work together in trusts or syndicates, as they call them, so that if an attempt is made in other countries to establish the industry, the Germans sweep down on their competitors and destroy them, and then put up prices again.

Now that Germany can not export to the United States, our manufacturers are in a great plight. Prices of some of these dyes have gone up two or three thousand per cent; some mills have stopped operation, and others will soon have to unless relief is found, of which there does not seem to be any probability. Why should not the people of this country make their own dyes, supply their own wants, and keep at home the vast millions of dollars sent each year to Germany for dyes? The only reason they have not done so heretofore has been for the lack of sufficient protection to prevent a man who enters into the business from being ruined. Dyes are not used alone for cloth, but for leather, paper, bank bills, and many other purposes. It takes a large sum of money to establish the necessary dye works and capitalists do not care to go into the business to any great extent without protection. They know that the German mills, extent without protection. They know that the German mills, organized into trusts, will dump any quantity of goods here at less than cost to break down their American competitors. can only be prevented by sufficient tariff rates and a law such as Canada and other countries have against "dumping." But we look in vain to the party in control in Congress and the administration for any legislation effectually to make this country independent in the case of the dye industry. We have had any amount of talk and may expect a continued flood of it from the same source, but no action is probable that will be of the slightest benefit. As soon as a Republican Congress and a Republican President again come in charge of the Government the dye industry will be established in this country for good. We will no longer allow Germany to hold patents in this country without producing in this country. We will treat her precisely the same way she treats us.

FRITTERING AWAY TIME ON THE PHILIPPINE ISLANDS.

Congress has no willingness to act on these questions, but it has time to fritter away on making the Philippine Islands independent. Altogether we are said to have spent over \$300,000,000 on the Philippine Islands. Only a small percentage of their people can read and write, and thousands of them are ignorant savages. We have done more to civilize and educate them and

teach them modern ways and methods in 17 years than the Spanish Government did in 300 years. But the Filipinos, with their numerous races and dialects, are still wholly unfitted for independence. The Democrats propose that we shall withdraw, but still hold ourselves responsible for their conduct. If we do such an extraordinarily foolish thing, we are liable to be involved in war at almost any time. We either should hold the islands until they are fitted to govern themselves or we should cut adrift entirely, which would be unjustifiable. I do not believe there is any room for doubt that the American people—that is, the great majority of them—would hold the islands until they are qualified to govern themselves. Trade has increased greatly under our rule, though the government of the islands has been demoralized and trade depressed under the shameful Democratic methods followed.

OUR NEGLECTED MERCHANT MARINE.

There is nothing this country needs more to extend its foreign trade than ocean-going vessels. We have not a sufficient number, because we have not enabled such vessels to run under the American flag in competition with the Japanese, Italian, British, French, German, and those of other nations. There is not one of these nations that does not either subsidize its vessels, give them preferential freight rates on the railways, or help them in other ways, in addition to lower rates of wages which their owners pay as compared with American vessels.

Any one of those vessels entering our ports in the foreign trade has precisely the same advantages that an American vessel has, and the Democrats under this administration have sought to allow these foreign vessels to engage in our coastwise trade. Our laws force our vessel owners to provide satisfactory accommodations for American crews, to feed them well, and to care for them in other respects. There are no provisions of that kind in the laws of many foreign countries. We can not hope to build up a merchant marine in the foreign trade without we pass laws that will place vessel owners on an equality with those of other nations. Foreign vessels are excluded from the coastwise trade, and we have the largest coastwise shipping of any nation in the world, and rates have been immensely lowered under this system of protection. The Democratic Party has done nothing except hurt the shipping in our foreign trade since it has been in power. American vessels have practically been driven from the foreign trade on the Pacific Ocean. We have had only one American line crossing the Atlantic. In fact, we have been wholly at the mercy of foreign shipowners, who act in combination and serve their countries at the expense of our own. That in one reason why our foreign trade with South America and other parts of the world has suffered. There will never be much improvement in that situation until conditions are changed. The Government proposition to spend \$50,000,000 in buying ships that can be used in the mercantile trade will not help to build up American shipping in the slightest degree. This bill now brought before Congress has been changed to a slight extent only from its condition in the last Congress, when it was defeated. No matter whether or not it becomes a law, it will be costly to the Government and a complete failure. Our merchant marine and our foreign trade can not be built up in that way.

THE TERRIBLE SITUATION IN MEXICO.

As to Mexico, every person who reads the newspapers realizes the shameful conditions in that country. It has been going from bad to worse ever since the Democratic Party came into power in Washington. A large number of American citizens have been killed, millions of dollars' worth of American property destroyed, and this country has stood by while the President has looked on and done nothing to help the situation. Foreign countries look to us for the protection of their citizens in Mexico, and they had a right to expect such protection, but they have not obtained it. There is nothing more disgraceful in the annals of the United States than its conduct toward Mexico in the last three years. We are now reaping the fruit that follows from such a course in the slaughter of peaceful citizens within our borders by Mexican marauders. The President, without asking the consent of Congress, has ordered our military forces to enter Mexican territory to punish Villa and the men responsible for this flendish work. What this will lead to can not easily be foreseen. It looks as though it might result in intervention and a war that will be costly and long in duration. A proper course on the part of our Government at the start would have averted this danger. The President sent an armed force to take Vera Cruz, and some American lives were sacrificed and considerable money expended, without accomplishing any good There has been one blunder after another in the conduct of this Mexican situation, much the same as in the course followed in regard to the European war. The need of a change in our Government is imperative, and when the voters have opportunity to express themselves they will see that the change

LOOSE EXPENDITURES.

The loose and reckless way in which the Government money is expended by the party in power is well illustrated in the socalled urgent deficiency bill. Less than a year ago Congress made a deficiency appropriation of \$2,500,000 for the eradication of the foot-and-mouth disease.

When the new urgent deficiency bill came in recently the shameful way that money was expended to eradicate the foot-and-mouth disease, under the Secretary of Agriculture, was brought to light, but it did not seem to bother the party in power in the least. A man inspected creameries in connection with the refrigeration, water, and power problems, and that was charged to the foot-and-mouth disease. Another man inspected the financial records of local offices at New York and Boston, and that was charged to the foot-and-mouth disease. Another man investigated the cost of the different operations of city milk plants in Philadelphia and New York, and that was charged to the eradication of the foot-and-mouth disease. Charged to the same fund were sums for inspecting renovated butter factories and creameries at various places; for delivery of an address on the effect of skim milk on the quality of Swiss cheese; to consult with the North Carolina authorities in regard to the establishment of cheese factories in the mountain districts of that State; to attend a meeting of potato growers at Bangor, Me.; to assist in the cooperative community poultry-breeding work in New York and Virginia; to inspect ostrich breeding in Arizona and other points; to consult breeders concerning the turkey and guinea industries; to make a study of the preparation of wools for market; to attend a convention of national canners; to supervise the horse-and-mule investi-gations at the United States experimental stations; to give instructions to officials selected to inspect butter for the Navy Department; and so on. In that way a large sum of money appropriated to eradicate the foot-and-mouth disease was diverted to other uses in utter defiance of law. Perhaps it is no wonder that new taxes have to be levied to carry on the Government under such circumstances.

MR. REDFIELD'S EXUBERANCE.

Secretary Redfield has said that "the United States is now in the most prosperous state in its history." That is a remarkable statement, but coming from the exuberant head of the Department of Commerce will perhaps surprise no one. The foreign situation, according to the President, is in a very delicate condition, and the Nation should have an efficient Army and Navy for self-defense. But one reason why we have not a better Army and Navy has been the persistent opposition of the Democratic Party to appropriations for that purpose. The first thing they did a few years ago when they came into possession of the House was to cut down appropriations for the Army and They made a hard fight to prevent an appropriation for more than one battleship, though that would not increase the Navy at all, owing to the old ships that had to be taken out of service. That is the policy they have pursued, and they had the support of the President in doing so. Now, he discovers that we need a large increase. Of course, we do; but it will not be easy for him to persuade his party to furnish that increase after he has taught them we dld not need it.

If the increase is obtained it will be accomplished only through the aid of Republican votes. It is a case like the tariff commission, which the President now wants, but which heretofore he did not want, nor did his party. If such a commission is obtained, it will be the result of Republican votes. The President is learning. He has reversed himself in numerous cases. and may be expected to do so in the future in case he is allowed to remain in the White House. But I trust that will not be the He was short some 2,000,000 votes of a majority of the voters at the last Presidential election. The Progressives, who voted for Mr. Roosevelt at that election, may be expected to support the regular Republican ticket at the coming election. There are very few of those men who could justify themselves in any other course. That alone would mean the end of Democratic control in Washington. It will be a most fortunate thing for the country when that takes place.

SECTIONAL CONTROL OF THE GOVERNMENT.

The acuteness of our relations with some European governments at the present time is another example of the lack of statemanship on the part of the Democratic Party in dealing with the problems involved. If we had stood up for our rights from the start and not wasted so much time in writing diplomatic notes this trouble would probably never have arisen. As it is, the division between the President and a large section of his party illustrates the hopelessness of any expectation of satis-

factory results from Democratic control. One trouble with the Government is its sectional control. The Southern States, which have not outgrown the teachings of slavery days, and which have only a fraction of the wealth and population of the country, are in control of both Houses of Congress, nearly every executive department, and the Presidency. Practically every important committee in Congress has a chairman from the South. That is why legislation takes on such a sectional character. It is even proposed to put the Confederate or rebel soldiers and their widows and orphans on the pension rolls and treat them the same as Union men. They are now pensioned by Southern States and all northern men owning property in those States are taxed for that purpose. The Member from Arkansas [Mr. Till-MAN] has introduced a bill to pay to each Confederate soldier and the widows of such soldiers, and their orphans, \$500 and a pension of \$30 a month. He has made a speech in support of the bill, which has the approval of other southern Members and The Confederate soldiers are now buried in Arnewspapers. lington Cemetery with the same honors as Union men, and Confederate uniforms make their appearance in the departments and elsewhere, while the rebel soldiers are given the same privileges as to holidays, and so forth, as Union soldiers have. If the Democrats continue in power this proposed appropriation of about \$100,000,000 to pay pensions to Confederates will probably pass. The northern Democrats are, as a rule, mere echoes of the southern leaders. The Arkansas Member said that this proposed Confederate pension payment was "an honest debt." In other words, for bringing on an unjust war, involving enormous loss of life and property, we are asked to pay this sum to the men responsible. Are you ready for that course? If so, keep the Democrats in power.

Some of the southern Members attack the payment of pensions to former Union soldiers and their widows and orphans. Speeches have been made in this House at this session expressing such views. Attacking the payment of pensions to Union soldiers, and advocating their payment to men who served under Lee and Jackson, sounds incredible, but it is an indication of the feeling on the part of some of the southern men in control of the Government. No wonder that such representatives of the Democratic Party as Gen. Sherwood of Ohio and Mr. Page of North Carolina have announced their decision not to seek renomination, though assured of no opposition in their party. The great outpouring of Republicans in the Indiana primaries and elsewhere must be discouraging to Democrats in general.

Three Years.

EXTENSION OF REMARKS

HON. EDWARD L. HAMILTON. OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. HAMILTON of Michigan. Mr. Speaker, nature abhors vacuum and the Democratic Party abhors a surplus. On the 5th day of March, 1913, we had a balance in the Fed-

eral Treasury of \$150,823,096.89.

Now, after three years of Democratic administration, the President tells us that without the extension of the so-called emergency tax and the present duty on sugar "the balance at the close of the present fiscal year will be only \$20,644,605.78," and if from that you deduct \$12,535,275, the price of two battleships sold to Greece, the balance will be \$8,139,230.78, with a deficit just ahead.

The present method of making a Treasury statement may be entirely fair, but it has certain advantages which can not have escaped Mr. McAdoo of concealing the bottom of the Treasury

and making it difficult to institute comparisons.

It was said of Colbert, the administrator of finance under Louis XIV, that he had "the art of drawing up an account and the much more valuable art of complicating it.

This is not to say, however, that Mr. McAdoo in any other way resembles M. Colbert.

1897 TO 1913.

For 16 years down to March 4, 1913, we were collecting revenue from duties levied for the protection of American labor and American industry.

For 16 years all our problems were problems of prosperity.

For 16 years we were proceeding upon the theory that it is better for us to supply our own markets by exchange among ourselves and have a surplus to sell abroad than it is to turn our own markets over to foreign nations which contribute nothing to the maintenance of our institutions and protect their

own markets against us.

Reacting from a condition of profound depression from 1893 to 1897 under the Wilson law, we entered upon a period of phenomenal prosperity extending from 1897 to 1913, in which our national wealth increased from seventy-seven to one hundred and thirty billions; the value of our farms and farm property from sixteen to fifty billions; our foreign commerce, coming and going, from one and one-half to three and one-half billions; our internal commerce from eighteen to thirty-five and our manufacturing conditions were transformed from 3,000,000 men out of work in 1895 to 7,000,000 men employed in 600,000 factories in 1912 at higher wages and shorter hours than ever before.

We were paying our debts then out of normal revenues derived from duties levied for the protection of American labor and American industry instead of discriminating against American labor and American industry and taxing them to pay for the discrimination.

Men combined their capital then and borrowed more to produce commodities to supply the needs of widening trade.

Under the inspiration of public confidence factories were built, railroads extended, farms improved, labor employed, and every energy was strained to make the most of a condition of phenomenal prosperity.

These were our assets; our liabilities were the policies of the Democratic Party.

Times were good and prices were high-high for what we had to sell and high for what we had to buy; high here and high the world over.

The Democratic Party insisted that high prices were due to protection, and we explained that protection in the United States could not possibly be the cause of high prices in foreign free-trade countries, and that protection in the United States could not possibly be the cause of high prices the whole world

We argued that when there was a universal condition of high prices there must be a universal cause, and that the universal condition of high prices was explained by the quantitative theory of money and the law of supply and demand.

But you said the quantitative theory of money was a dream of theorists; that the universal law of supply and demand had been repealed by protection in the United States and that you

were going to reduce prices by reducing duties.

And you went into power with more than a million votes against you on the tariff question declaring that protection was the unconstitutional cause of high prices, which you said you were going to reduce "by legislation that would not injure or destroy any legitimate industry," and prices have kept on going up.

You said high prices of things in general and of farm products in particular were a cause of national solicitude, and finally you framed a tariff bill designed to cheapen farm products for the benefit of the people who live in cities and to reduce the wages of labor by competition with the products of cheap for-eign labor and to "sharpen the wits" of American business men by requiring them to figure on how to pay an income tax out of the profits of business that paid no profits and to "sharpen the wits" of American laboring men by compelling them to figure out how to pay for food and clothes and rent while looking for work when there was no work,

In his inaugural address the President immediately proposed "the repeal of a tariff which," he said, "cuts us off from our proper part in the commerce of the world and violates the just

principles of taxation.'

And yet the only thing that has saved us from utter devastation by reason of the repeal of a protective tariff and the substitution of a so-called competitive tariff is the temporary protection of the war in Europe, and among the things now proposed by the President for the relief of the Federal Treasury is a continuance of the duty on sugar, levied under a protective tariff which he said "violates the just principles of taxation."
Of course the "just principles of taxation" ought not to be

violated under any circumstances and we are therefore compelled to conclude that when the President said a protective tariff "violates the just principles of taxation" he was seduced by what Col. Harvey, of the North American Review, calls his talent for "fascinating articulation."

"Fascinating articulation" has been of great value in times past to some great men and to mountebanks, as we may learn

from the President's historic writings-and I hasten to say that the President is a great man.

THREE PARTS.

This Democratic administration for purposes of historic comment divides itself into three parts:

First, the period of seven months during which it was still deriving sustenance from a protective tariff at the average rate of \$26,000,000 a month.

Second, the period of 11 months from October 4, 1913, the beginning of the new tariff bill, to September 4, 1914, the day when the President came before Congress to tell us that the war, which had then been raging 35 days, had caused a falling off in revenue for 10 months before the war was dreamed of.

It was in the month of May during this period of 11 months that the President informed a deputation of business men and manufacturers who called upon him in relation to the halting and depressed state of business that business depression was merely psychological. Thereupon to cheer and sustain men out of work and fool the empty stomach with delusions of a feast, the poet laureate of the occasion put it in imperishable verse to this effect:

You can let your hopeful bosom give a psychologic throb; Ask your psychologic brother for a psychologic job; If your savings have been scattered in a psychologic crash, Pay the grocer and the butcher with some psychologic cash; And you speedily will find yourself in psychologic health, And possessed of an embarrassment of psychologic wealth. If the interest on your mortgage isn't anywhere in sight, And the sheriff is expected to forcclose it any night, It will cheer you to remember the depression that you feel Is merely psychological—which means it isn't real.

The third period into which this administration divides itself covers the time during which we have been protected by a foreign war from the effects of the Democratic tariff policy and at the same time taxed to cover the bottom of a depleted Treasury.

Meanwhile, in our relations with Mexico, we have been pursuing a policy that declared for neither side and yet took sides; that declared against intervention and kept on intervening; that did not think our flag insulted by the murder of American citizens, the outrage of American women, and the destruction of American property, but took Vera Cruz on account of a controversy as to whether 7 or 21 guns constituted an apology which was never made.

The result is that we are hated in Mexico for what we have done and despised for what we have not done.

The President stated at New York January 27 last that he got his information about Mexico "by hearing liars talk about The President ought to change his advisers.

Some time ago when he was reported as having said that he proposed thereafter to consult only with safe advisers, Puck published a cartoon of the President seated alone at the Cabinet

THE WAR AND REVENUE.

The new tariff went into effect October 4, 1913, and for every month except the month of May down to and including August, the first month of the war, there was a gain of importations and a falling off of revenue derived from importations, as compared with the corresponding months the year before.

On August 1, 1914, the war flames began to redden the sky of Europe and the shifting scenes of a strange and terrible drama began, which now has three continents for a stage.

Armies greater than the world has ever known began to be hurled against each other, equipped with every scientific device for killing, and the harvest fields of peace became the harvest fields of death.

The student assassin, Gavrio Prinzip, lies forgotten somewhere in an Austrian prison, while the tide of war rolls over him, but the shots fired on the 28th of June, 1914, were the sparks that started a blaze that has set the world on fire.

The war was the President's pretext for more taxes. September 4, 1914, 11 months to a day from the time the tariff law went into effect and 35 days after the war commenced, he came before Congress and asked that a tax be laid upon the people to raise \$100,000,000, because he said the falling off of revenue was in "chief part" caused by the falling off of importations caused by the war in Europe.

That is to say, the falling off of revenue was caused by the war in Europe before there was a war in Europe. And the falling off of revenue was caused by the falling off of importations

when there was no falling off of importations.

The total importations under the new tariff for the 11 months from and including October, 1913, down to the time the President delivered his address to Congress had exceeded the total importations for the same months the year before by \$93.715.722.

The falling off of revenue, then, was not due to the war in Europe, and was not due to decreased importations, but was due to decreased duties drawn from increased importations, about 70 per cent of which were free and was the logical result of a system under which the only way to increase revenues is to increase importations, and thereby decrease the wages of American labor.

Messages to Congress ought to import the highest verity. plain statement of the simple truth that the revenues under the new law were proving insufficient would have at least commanded the respect of men of intellectual integrity everywhere.

Again, on the 7th day of last December the President came before Congress to advocate the extension of this same war

tax and the extension of the sugar duty.

But even then, as he explained, we shall still have "a total deficit of some one hundred and twelve millions" on the 30th day of June, 1917, and he admitted that the only way to avoid this deficit is to resort to new methods of taxation or to issue bonds.

Again, the President told us that the falling off of revenue was due to the war in Europe, and yet during the first year of the war our imports were \$621,604,019 more than the average annual imports under the Dingley law and \$20,125,510 more than the average annual imports under the Payne law, but 70 per cent of our imports were free.

APPROPRIATIONS.

But there is another reason why our revenues derived from importations plus internal revenue plus the corporation tax plus the income tax and plus the emergency tax are not sufficient to pay the running expenses of this administration, and that is because Democrats, in the language of the chairman of the Democratic Committee on Appropriations, "have unnecessarily piled up the public expenditures until the Democratic Party has become the laughingstock of the country.

Appropriations for the Sixty-third Congress ran \$177,000,000 beyond those of the last Congress controlled by Republicans and yet were \$83,000,000 below the estimates submitted by an ad-

ministration pledged to economy.

These appropriations were made against the protest of Mr. FITZGERALD, as able a chairman as ever presided over the deliberations of the Appropriations Committee; and finally astonished and discouraged by the onslaught of his party upon the Treasury, he told them that because of their failure "to carry out their pledge of economy he was tempted to quit his place."
What was that pledge? Let me read it, so that it may sink

into the consciousness of the American people:

We denounce the profligate waste of money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican tongresses, which have kept taxes high and reduced the purchasing power of the people's toil.

And yet the appropriations of the Sixty-third Congress were \$177,000,000 more than the appropriations of the last Republican Congress.

SCRAPS OF PAPER.

The world has been made familiar with the doctrine that a treaty is a "scrap of paper," and for three years now the people of the United States have had unrolled before them the moving picture of repudiation one by one of the planks of the platform on which a great political party sought their support

No performance of any party has ever so thoroughly justified the cynicism that a political platform is a thing "to get in on' as the open, flagrant violation of its pledges by the Democratic

This is the school which for three years the Democratic Party has conducted for the moral instruction of the young manhood

of America. Let us be specific: First, a Princeton instructor of youth ran for the office of President of the United States on a platform pledging him to a single term. He is now seeking a second term.

Second. The Democratic Party promised not to "injure or destroy any legitimate industry," but it has deliberately discriminated against farmers to gain the city vote and it has discriminated against labor by inviting foreign competition.

Third. It promised to reduce the high cost of living, but the high cost of living has gone higher and it has levied taxes

grievous to be borne.

Fourth. It denounced "the profigate waste of the money wrung from the people by oppressive taxation through lavish appropriations" and demanded a return "to that simplicity and economy which befits a democratic government," but it has in-

creased appropriations and increased taxes.

Fifth. It promised "a reduction in the number of useless offices, the salaries of which drain the substance of the people," but it has increased offices and hypocritically used the civilservice rules to create vacancies to be filled by "deserving Democrats."

Sixth. It promised "the full protection of this Government" to the persons and property of American citizens "in foreign countries" and "on our borders," and has ignored the murder

and maltreatment of Americans in Mexico and the destruction of their property.

Seventh. It promised free canal tolls to the interests controlling the American coastwise trade to get their influence in the election, and repudiated its promise when it got into power.

Eighth. It promised to maintain the merit system in the civil service for the sake of votes and violated it for the sake of jobs. Ninth. Its final pledge was a padlock pledge to keep the pledges it has broken.

You gentlemen talk about the infallibility of the popular judgment, but the fact that you are here is the strongest evidence of how easily the people can be fooled-once.

AFTER THE WAR.

Events in Europe are so stained with blood, so loaded with tragedy, so crowded with consequence to all the world, that discussion of the relation of political policies to national loss and gain seems almost trivial.

And yet the welfare of a hundred million people will be at stake in the next election when the people must decide whether the policies of the Democratic Party shall be our only safeguard against results which must follow the war in Europe.

The present tariff law neither protects us nor produces revenue, but for a time we have been saved by war from its full effects.

In the language of William Randolph Hearst-

We have still to face the full and final results of Democratic folly and fatuity which will surely be upon us at the end of the European war.

For a year and a half the factories of Europe have been either closed, destroyed, or largely turned to warlike purposes, and the men of Europe who in times of peace would have been employed in peaceable production for home consumption and for export have been busy in the business of mutual extermina-

Meanwhile war has fired the furnaces of our factories to supply food, clothing, and all the things required by armies in the field, while the dangers of transportation by sea have minimized the importation of European products made in spite of war.

And so the normal course of international trade has been suspended and the full tide of invasion of our markets has been stayed.

But there will come a time when the harvest fields of death will be turned back again to the harvest fields of peace.

There will come a time when the forges of Europe on which are being hammered out the tools of war in the red blaze of hate will ring again in the quiet air of peace with the making of the implements of peace.

There will come a time when the weaver's shuttle will weave again the things of peace and not of war.

Then the full effect of all your free-trade fallacy will fall upon

the country.

Then the war-made market for war supplies will be closed. Then our markets will be open for foreign competition and foreign markets will buy less than ever before of what we have to

Germany, the most highly organized industrial nation of Europe, is now isolated. Her \$5,000,000,000 foreign commerce is suspended. In normal times she has protected her own markets and has sanctioned combinations organized to sell cheaper abroad than at home. German thrift, industry, and frugality are ingrained and her matchless industrial mechanism is still intact.

Before the war England and Russia were her largest customers, but trade reprisals will for a time follow war reprisals. Meanwhile her ships will turn their prows toward America loaded with the merchandise of a nation whose genius is to

work as well as think. Great Britain, France, and Russia will prefer to trade with

us rather than with Germany.

Belgium, the workshop of Europe, whether her national entity is restored to her or not, will rise again and go to work.

Burdened with debts and forced to work to pay their debts,

the nations of Europe will seek to swell the arteries of their depleted trade with gold drawn from America.

And how does this administration, confronted with a deficit and realizing the dangers that will come upon us, propose to

MR. GREGORY'S BROOM.

In his annual report the Secretary of Commerce says:

When the war shall close the public control of railways in foreign lands, the semiofficial chambers of commerce, the publicly fostered organizations which control great industries in some countries, will all exist and will all be used in an effort to recover lost commerce.

The growth in the United States of industries which may menace large markets heretofore controlled from abroad will not be permitted, if public and semipublic forces acting together in foreign countries can permit it.

The outreach of American industries—nay, their very existence in our own land in some cases—will be resisted to the full, and every stratagem of industrial war will be exerted against them.

"Expecting this," he says, "we must prepare for it."

And expecting this, he proposes to prepare for it.

And expecting this, he proposes to prepare for it asking Congress to pass a law to make the buying and selling of foreignmade commodities at prices "materially below" prices current in the country of production "unfair competition," to be punished under the antitrust law,

But your declared purpose was to lower duties to invite

foreign competition.

Now you propose to penalize the competition you invite. By one law you invite competition and by another law you propose to punish competition.

The Secretary tells us this tide of importations will threaten the "very existence" of our industries, and the way he proposes to stop it is to send the Attorney General out with his broom.

But in the midst of our emotions over the salvation of our markets by Mr. Gregory's broom the thought obtrudes itself as to whether, after all, the foreign manufacturer, who can not be reached by our statutes, may not sell to the middleman, and whether the middleman may not raise the price to a little lower than the price the law prohibits and pocket the profits, while the foreign manufacturer achieves his purpose, the American manufacturer loses the business, and the American laboring man loses the work.

It is a curious thing, too, that it never occurred to this administration to invoke the aid of the antitrust law to restrain the importation of Argentine corn imported for the benefit of the Corn Products Co., and the importation of Argentine beef imported for the benefit of the Chicago packers, and the im-portation of Canadian barley imported for the benefit of the brewers, and the importation of rye imported for the benefit of the distillers.

CONSISTENCY.

It would not be entirely fair to say the President has not been right part of the time, because he has been on both sides of several public questions.

You advertised him as the pillar of hope and the Gibraltar of reform in a wicked world, and since that time he has kept you

guessing what the next change would be.

He was against preparedness, and ridiculed those who wanted preparedness as "nervous and excited."

Now he is piping shrilly for a strong Army and a "Navy incomparably the greatest in the world."

He was for free tolls, and explained that his party platform was not "molasses to catch flies," and changed his mind after the flies were caught.

He said a "man might be too proud to fight," and the phrase became a byword of scoffing and contempt among foreigners of American citizenship. Now he says he "always accepts an invitation to a fight."

He was opposed to protection, because "it violates the just principles of taxation," and signed "with very peculiar pleasure" a bill that has no just principles of any kind, and he now proposes the extension of the sugar duties.

He said so long as he could prevent it no one should interfere with the spilling of blood in Mexico. Now he says he did

not have soldiers enough to interfere.

He put up a Haman scaffold for business men who objected to bankruptcy. He has taken it down now and is trying to cajole them into forgetfulness.

He was against a tariff commission because his party did not want a standard by which its tariff conduct could be measured. Now he has changed his mind because "the circumstances of the world have changed.'

The President is right, "the circumstances of the world have changed"; but if we need a tariff commission to ascertain and report the difference between the cost of production at home and abroad we need a tariff high enough to protect American labor and American industry and low enough to protect us from domestic monopoly.

PREPAREDNESS.

We need preparedness against commercial warfare as much as we need preparedness against military warfare.

I am for preparedness to protect American labor against the

competition of cheap foreign labor.

I am for preparedness to fight, if necessary—preparedness to

use our strength to promote peace, if possible.

I am for preparedness to maintain the Monroe doctrine, to protect the Panama Canal, to defend the Philippine Islands, to protect Hawaii, to maintain peace along our borders, to protect American citizens always and everywhere, to maintain our national self-respect and to command the respect of other nations in a force-respecting world.

Preparedness to keep our flag "full high advanced" as the symbol of a Nation whose aspirations are for honor with peace, if possible, but for honor always.

Armies are not recruited, trained, and equipped overnight. Navies do not spring into life and rid the seas at a moment's

notice

If we are to have an Army, it should be an efficient Army. If we are to have a Navy, it should be an efficient Navy.

Events for the last 18 months have forced upon the world the realization that what we call civilization is not yet civilized; that what we call international law is a combination of diplomacy, common law, convenience, aggression, concession, and gunpowder, without power to enforce itself; that so-called civilized warfare is the scientific use of all the most effective means of ancient and modern killing.

The world must soon make its choice between the march of iron-footed brute force, which blots out laws in blood, or the march that leads toward the millenium, and in that choice America ought to be most potent in the councils of the nations.

If we remain weak and defenseless, we shall be weak in the councils of the nations and at the mercy of the predatory strong.

This war has demonstrated that courage is more courageous now than ever before, and that, in spite of the brutality of war, human sympathy is more helpful than ever before.

But must mankind hark back to barbarism to prove these things? If empires are extended and kings have wider sway, is it any consolation to the dead or to those who weep above their graves? Not the slightest.

Did these millions who have died have any quarrel?

"Busy as the devil is not the smallest.

"The nation in every country dwe'ls in the cottage."

What will the cottage profit if kings have wider dominion? America will never fight to gain dominion.

But America will fight for the homes, the liberty, the man-

hood, and the womanhood of her people. America will not fight to gain dominion, but it has fought to

wipe out slavery-and would do it again-and it will fight to wipe out oppression and it will fight to maintain itself an undivided Nation on the map of the universe, so that government by the people shall not perish from the earth.

The danger to our institutions and the test of our strength as

a Republic lies before us.

Let us act our part in a world of action.

Let us win back the moral leadership of the world, which we lost when our State Department, headed by a man who talked noble things and did nothing but collect the gate receipts, saw Belgium violated and said no word of disapproval.

Let us win back the respect of the world, which we had before a "slippered pantaloon" administration of the State Department became the target of foreign jokes, which Lansing

arrived too late to save us from.

Whether we shall live and go on, whether we shall permanently endure, depends not primarily on what kind of Presidents we have, not primarily on what kind of Congresses we have, not primarily on what kind of courts we have, but upon what kind of people we are.

Let us arise, then, and stand forth with all our giant power and reawakened patriotism, as the champion of justice and humanity, the advocate and upholder of the moral forces of the

world.

I do not look for war, but I want this Nation, as the final bulwark of popular government, to be big enough and strong enough not only to save itself but to advance the average man throughout the world.

Preparedness.

EXTENSION OF REMARKS

HON. GORDON LEE, OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 17, 1916.

Mr. LEE. Mr. Speaker, the great war now in progress in Europe has put the American people to thinking of the plight this country would be in if called on to defend itself or enforce its rights. Naturally, opinion is widely divergent. No one is opposed to preparedness. Of the 100,000,000 Americans there is probably not one who does not wish to see his country prepared for any emergency it may be called on to face; but there is a

wide difference of opinion as to what measure of preparedness is necessary. There are some who think we are already adequately prepared and others who would have us support an Army and Navy equal to that of any possible enemy. There are very few of these extremists; but 100,000,000 Americans to-day are trying to decide what is adequate preparedness and are looking to Congress to give it. I wish to discuss this question not only from the standpoint of military preparedness but from preparedness in other ways.

Our country grows so rapidly in wealth and population that it is difficult for the conceptions of the people to keep up with its growth. An Army of 150,000 men to-day would be no larger in proportion to population than one of 5,000 when the Government was formed, and not more burdensome in proportion to wealth that one of 1,000 at that time. The other great powers are armed camps, and they have not merely increased their armed strength in proportion to their growth, but they have increased it out of all proportion to their growth.

We have done more for the Navy than for the Army, and for a good reason. If our Navy were absolutely unconquerable we would have no need for an Army larger than might be necessary to deal with Mexico, for Mexico is the only independent Government that touches the borders of the United States.

We should enlarge our Navy and round it cut. If there are any who fear that a large Army would endanger the liberties of our people they could not have the same fear of the Navy. We have too few speedy battle cruisers. We have not enough submarines, though the submarine was first used in American waters. We need both for the Army and Navy a vastly larger number of aeroplanes than we have. For defensive purposes these are necessary, and there is no good reason why the American Navy should not be the equal of the strongest of the world. No nation could invade the United States without first destroying or bottling up the American Navy. No nation would risk the lives of half a million men on transports crossing the Atlantic or Pacific if it was known our fleet might go out to meet and destroy them.

I believe in providing such a number of battleships of the dreadnaught type, fast cruisers, and submarines as will protect our great seacoast. That seacoast, stretching from Maine to Texas and from Washington to southern California, must be protected from attack at every point. In addition to an efficient battle fleet I would have transports to move our forces, should it ever be necessary in a war for defense to take the offensive against the enemy. In times of peace these transports could be used as merchant ships to carry the surplus produce of our farms and factories to the markets of the world.

We should have an adequate number of aeroplanes and hydroplanes to guard against surprise and to launch an attack from the air against an enemy approaching our shores.

Finally, I believe we should abandon our policy of neglect and revolutionize our building program so as to provide a navy and auxiliary craft ample to expel from our shores the strongest force any enemy could dispatch against us.

With an adequate Navy we need an Army for the defense of the continental United States, but we have taken on responsibilities that we should be ready to meet. Our territory is not now confined to the continent. We need soldiers in our insular possessions. The Philippines, Hawaii, the Panama Canal, Porto Rico and Alaska all would have to be defended in case of war, and we should have as many as 75,000 soldiers to defend them. With 75,000 more in the United States we would have an Army of 150,000 men.

We have never yet had to fight for the Monroe doctrine, but if it is to be maintained we should be prepared to maintain it, and we might have to send troops to other American countries in its defense. In this, however, we would always have an ally in the country whose rights we were defending; but the fact remains that the Monroe doctrine imposes on us the necessity of keeping up a greater military preparedness than would be necessary if that doctrine had never been announced.

I confess to a curiosity that I think is shared by all who know of the fact—a curiosity to know why our Army costs five times as much per man as the armies of continental Europe; why our War Department expenditures should amount, in round numbers, to about \$1,000 a year for every officer and enlisted man. I believe that if the facts were known economies could be practiced without detriment to the service that would enable us to keep in the field an Army of 150,000 without paying any more than we now pay for two-thirds of that number.

The Regular Army should be supplemented by an enlarged and improved National Guard. There is no reason why its numbers should not be doubled or quadrupled. If the National Guard is inefficient its defects can and should be pointed out and remedied. There is no reason why it should be inefficient. It is

composed of the very best possible material and there is not a State in the Union that would not-cooperate in any reasonable Federal plans for the improvement of its citizen soldiery, especially since cooperation could be required as a requisite to Federal assistance.

While there is no necessity to keep in this country a large standing Army, we should keep on hand a plentiful supply of ammunition and arms of all kinds for a large Army. We should be ready to arm and equip fully a million men constituting a well-rounded Army. It is the business of the military experts to tell us what arms would be needed by the different branches of the service, and when we know we should have them ready.

In making direct military preparation, I am in favor of development, not revolution. It would be folly to tear down what we have and build anew. We should strengthen what we have to the extent that it needs strengthening and perfect what we have until we are unable to see how we could make it better. Above all, we should not make such preparation as would indicate an intention of abandoning our policy of peace, a policy which for more than a century has kept for us the respect and good will of the world. I would regret very much to see the day when we would fear any nation or when any nation would have reason to fear the United States.

But there are indirect preparations for war that are also preparations for peace, and peace is normal, while war is abnormal. We should pursue a policy that would benefit us all the time, and this policy would give us a strength that would enable us to raise armies quickly when needed and equip and sustain them through any ordeal to which they might be subjected.

Whatever we can do to promote the highest and best balanced prosperity in this country is the very best possible preparation for war. The accumulation of force is only temporary and the cost of it is a permanent incubus. If we armed, equipped, and drilled 2,000,000 men now, we would not by doing so lay any foundation for future strength. We would have to keep these men ready year by year. The fact that we have 2,000,000 men now would not help us 10 years hence. The thing that would matter would be the number we had when they were needed, and the expense of maintaining 2,000,000 men not needed would lessen our ability to sustain the needed number in the time of need. If there could be a guaranty of peace for 10 years the best thing we could do would be to do without an Army for 8 years and save all our strength for 2 years of prepara-tion. Whatever we spend in military preparedness in time of peace is wasted except for the fact that we do not know when war will break out, and we are weakened by waste. If we could know when wars would come the best thing we could do would be to have our Army when needed, and have the money when the men were not needed.

So we see that costly direct preparation for war weakens a nation, but the indirect preparation adds to our strength every day. We can build up an Army in a year or two, but a general prosperity that is the life and strength of a nation must grow, and growth takes time.

We need armor and munition plants, and they should not all be crowded together in one section of the country and that section near the seacoast. Guns and armor are made of iron and steel. The great deposits of iron ore are not near the coast but in the interior, and iron products are so heavy that the transportation adds very much to their cost. Guns could be made in the ore beds of the country at less cost than on the seaboard. The same is true of nearly all materials used in war. In self-defense we ought to be able in the interior of the country to supply our means of defense.

We ought to have industries of this kind in different parts of the country so that an enemy by overrunning one part of our territory would not have possession of the vital part. The country should be vital in all its parts. We should protect all parts from invasion, but our industrial development should be so distributed that as long as any part of the country remained free from invasion that part would be vital and virile.

In time of war the soldiers on the battle field are not the only men who are fighting for their country. They are taking the greatest risks, but the men at home who are furnishing food and clothing and arms and ammunition for the soldiers are as essential to the national defense as the men on the firing line. England hoped to starve Germany and, while she has not succeeded, it is probable that she has caused much distress. The drawback from which the allies suffered for a long time was not a lack of men but a lack of arms and ammunition for them. In this great war the men who have been pursuing the vocations that are useful in peace as well as war have played quite as necessary a part as the soldiers themselves.

We gain in strength when we increase the facilities by which all the parts of the country can cooperate to help defend any part. When we produce food with less effort or less expense, when we get it to the markets in less time or at less cost, when we are able to gain anything in celerity or economy of effort, we increase our ability to do what we wish to do whether that is fighting on the battle field or in the markets of the world. The Germans owe as much to their celerity and to the fact that they have learned how to secure the greatest results with the least effort as to their prowess on the battle field.

So my prescription for preparedness is, build up the country. In this we do not have to strain our efforts to hold our own, but every advance we make furnishes us with a new position from which to make a new advance. Every accomplishment is a foundation for the next and that for the next and the next, and

the progress of improvement goes on forever.

If we will get everything out of the way of the well-rounded development of the Nation, we will not need to give much thought to military preparedness, for we will keep the country always in condition to prepare quickly. When we get the question of food and equipment off our minds and know that our resources can be quickly and economically used, that we are in position to concentrate our force with celerity at any point needed, we have laid such solid foundations for any emergency that other preparations can be speedily made.

First, the country needs food. Do the gentlemen here to-day

First, the country needs food. Do the gentlemen here to-day realize that every day we are getting less able to supply our needs? Our surplus of foodstuffs for export is growing smaller in proportion to the amount we use every year, and if present tendencies continue, before many years, instead of helping to feed the outside world, we will be calling on the outside world

for food.

Our agricultural production is not keeping pace with our growing need, because the movement of population is from the country to the cities. There are a number of reasons for this, and the movement is so threatening that the Government should seek to remove its causes.

Isolation is the one drawback with which the farmers have to contend. That can be removed by the extension of the Rural Mail Service, and the Government which has taken the contract for the diffusion of information through the mails should not be content until every farmer in the land has his daily mail, his daily paper if he wishes it, and at any rate such

daily contact with the world as he desires.

The farmer is hindered by a lack of credit. He can not borrow money as readily or on as good terms as the business man of the city can borrow it, though he has the best security on earth to offer. It is not so much a matter of honesty or of character or of solvency. He may be known as perfectly honest and perfectly solvent and as a man of the highest character, and still a business man of the city who may be his inferior in all these qualities may have better credit. The essential thing is the easy convertibility of property into money on short notice, and in this respect the business man of the city has the advantage over the farmer that gives him better credit.

There is a vast amount of money in this country that seeks investment for a year or a term of years; but if this money is loaned through the banks which lend the money of their depositors and yet hold themselves in readiness to replace it at a moment's notice, it is loaned on such short time that the farmers can not have the advantage of it. I am in favor of passing laws to enable the farmers to borrow money at the lowest rate of interest on long time. By doing this we will render them the greatest service possible at this time. Rural-credits legislation now before Congress will, I hope, do much to remedy these evils and keep us on a plane of agricultural preparedness that is an essential to any solid preparedness for

war.

Then let us remove the waste that is now incurred in marketing our products, whether agricultural or manufactured. Anything that cheapens transportation increases the wealth and prosperity of the country. I am not now referring to the arbitrary reduction of freight rates by the exercise of the direct power of the Government, but to furnishing the people with a cheaper means of transportation than they now have. We should improve our rivers, and in that way we would secure for a great part of the country—even affecting the whole country—the most economical carriers we can have—the carriers that nature provided—if we will only improve them.

Projects for the improvement of our rivers and habors are often sneeringly referred to as "pork-barrel" legislation. This work is as important as any the Nation can engage in. Of course, unimportant work is sometimes proposed, but not one-tenth as much of this gets through Congress as many of the people suppose. The improvement of our rivers and harbors is

an important step toward the highest national prosperity that is essential to military as well as to civic preparedness.

Beyond comparison, the cheapest power for manufacturing is water power, and the hill and mountain streams of the country furnish it in abundance. It is ready for work, and all that remains is for man to take advantage of what nature has done. We should encourage the development of our water power for all purposes, not the least of which is the manufacture of nitrogen, vital to agricultural and military interests of the country. Farmers should not now be facing prohibitive prices. cessive cost of fertilizers threatens to restrict greatly our agricultural production. We should be independent of imports that are liable to be cut off by war and that may be controlled to our disadvantage by foreign Governments. The Coosa River one of the streams partly in the district I have the honor to represent, has 300,000 undeveloped horsepower right in the heart of one of the best farming sections of the country, a country rich in deposits of coal and iron, limestone, bauxite, barites, and many other valuable minerals; a section also richly en-Why not make our laws dowed by nature for manufacturing. for developing our water power more liberal, so that these fertilizer plants and other industries can be built and the farmers be supplied with nitrates and the whole country be benefited by other products that can be manufactured without cost of

To bring the country and the city nearer together in time and cost and convenience I think the Government should spend \$100,000,000 a year and cooperate with the States in building good roads. Whether transportation is by rail or water a good part of it and a very costly part of it is by wagon road. It has been stated that the cost of getting products to and from railroad stations is as great as that of shipping them over the railroads. By building good hard roads we can cut this cost in two or possibly in three, and thereby we can save to the people of the United States a sum half as great as all the earnirgs of the railroads of the country, and this would not be saved for some interests by taking it from others. It would be saved from the mud or the rocks or the sand that makes our roads difficult of passage. This would be a constant gain for 50 years of peace as well as an incalculable saving for one year of war. We are engaged in important work here and hold positions of great responsibility. We should do all that lies within our power to remove all obstructions that hinder the growth of our country, a growth that strengthens for war as well as for peace. We should remember that meat and bread and potatoes are as important in war as cannon, rifles, and

asphyxiating gases.

Our country has made spectacular progress in the forward march of nations. One hundred and forty years ago we were at the rear of the procession, but have since been passing others rapidly by. We have not made our relative gain by retarding others. The whole procession has been moving more rapidly since we have entered the race, and I am glad to believe that we have been to others an inspiration instead of a hindrance, The generation that achieved independence and founded the Government lived to see it defend itself successfully against the strongest power of the earth. The next generation saw it throw a protecting arm around the struggling Republics of Central and South America. The third saw it arm, equip, and maintain more than 3,000,000 soldiers, counting both sides, and fight within its own citizenship the greatest war the world had then ever seen. The fourth generation saw it stand in an unquestioned place among the foremost powers of the world, just to all and afraid of none, and now we, only five generations removed from the beginning, may claim and could maintain supremacy. Our distance from any other powerful nation has saved us the expense of supporting a burdensome military system, and this saving has gone into the upbuilding of the Nation for any emergency.

We are now to the front and the gap is widening between us and our nearest follower. In 50 years more the comparison will not be between the United States and any one nation, but between the United States and all Europe. We have no need to fear and we have never feared. If we conduct ourselves with the justice that has been handed down to us from our forefathers, as well as with the heritage of courage they left us, we will hold a position of moral power that will dwarf even our

material strength.

Mr. Speaker, speaking of my own section of country, we have had our share of war, and we want to build for enduring peace. The great conflict of the sixties laid my district in waste and ruin. Over every foot of the soil fought the armies of Johnston and Sherman. It was a continuous battle of 150 miles from Chattanooga to Atlanta. The battle fields of Chickamauga, Mission Ridge, La Fayette, Ringgold, Rocky Face, Dal-

ton, Snake Creek Gap, Resaca, Cassville, New Hope Church, Kenesaw Mountain, Peachtree Creek, tell the tale. This struggle left death and destruction in its wake. But little was left of that peaceful, happy country except widows and orphans, burned churches, and ruined homes. It has been more than a half century since the sanguinary struggle, yet the people have not recovered from the blasting effects of war. Let us build up the resources of our country along the lines I have discussed, then we will be free from internal dissensions and the world will respect us for our strength.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

FARM AND PERSONAL CREDITS.

Mr. LINDBERGH. Mr. Speaker, in one way all people should become prosperous; that is, to have equal social opportunities and no special privilege. When special privileges are granted to any, all others require special privilege to overcome the advantages created against them.

Special privileges have already been granted to the big national banks and to certain other interests. If we can not get rid of the existing special privileges, special privileges must be granted to all legitimate industries. The practice, however, of granting special privilege to all is much more expensive than it would be to have none.

Some farmers want a special privilege from the Government in the nature of rural credits. They are entitled to it. Unfortunately for them, as well as for all unprivileged people, the big banks framed the Federal reserve act, a special-privilege law created especially for them. It appropriated all existing financial advantages for the benefit of the big banks. The rural credit proposed by the committee bill, called the Moss bill, avoids taking anything that the banks want. Since the banks want all that is of value, the farmers would get nothing of value in this bill. In fact it is sop to the farmer and is meant to indefinitely postpone any substantial rural credit.

Let us keep in mind the fact that the farmer feeds the world, while the big bank owners simply scalp profits from the exchanges between the producers and consumers, exploiting them both. Let us compare a few of the special privileges the Federal reserve act gives to the national banks with the failure of the Moss bill to give any substantial relief to the farmer. Following that, I will present a modified plan which would give an equitable and substantial credit system to all the people.

SPECIAL PRIVILEGE NO. 1 TO BANKS.

Bank corporations hold over twenty billions of the people's credits, paying an average of less than 2 per cent. They loan those deposits and collect about \$1,000,000,000 interest. Certain speculators also, to whom a part of the loans are made, make enormous profits scalping on the market. In the double game, the one by the banks and the other by the speculators who borrow from the banks, the people are forced to pay not only what the banks pay the depositors but in addition enormous profits, besides the billions of dollars the speculators make.

SPECIAL PRIVILEGE REFUSAL NO. 1 TO THE FARMER.

The farm corporations will not be allowed to receive deposits, not even from the farmers themselves. There was a sort of fake pretense for savings deposits in the original bill, but if that had been retained it might have ultimately lead to a system favorable to the people, so it was taken out. The farmers could not, even though they have the best security in the world, directly connect with any of the depositors' money. The banks retain that exclusive monopoly.

SPECIAL PRIVILEGE NO. 2 TO THE BANKS.

The Government established a Postal Savings Bank System for the benefit of the bank corporations. It gathers in the funds of those who prefer to have the Government guarantee their deposits, pays them 2 per cent, and turns the deposits over to the banks for 2½ per cent to speculate with. The Government is put in the capacity of a "capper" for the banks in gathering in the postal savings deposits.

The banks and speculators, who produce nothing, make more profit from the use of the people's deposits than all the toilers in field, shop, and elsewhere combined make for all their labor, and yet the toilers patiently submit to the usury.

SPECIAL PRIVILEGE REFUSAL NO. 2 TO FARMERS.

The Government refuses the use of the postal savings bank deposits to farmers and other toilers. What would happen to the value of the farm in the way of improvements if the Government turned over postal savings bank deposits to farm corporations at 2½ per cent? It would be an economic saving to toilers everywhere and would make them independent.

SPECIAL PRIVILEGE NO. 3 TO THE BANKS.

The bank corporations were given the exclusive privilege to secure emergency currency from "Uncle Sam" when the world war began. The United States Treasury printed, became responsible for, and delivered to the big banks \$387,000,000 and charged 3 per cent interest, while the banks used it to speculate in war credits, and made enormous profits.

SPECIAL PRIVILEGE REFUSAL NO. 3 TO THE FARMER.

As stated, when the war began the Government furnished the big banks \$387,000,000 currency to speculate with. At that time, and as a consequence of the war, the farmers of 12 States were in dire distress, because they could not market their farm products. They could not pay their creditors or buy the necessaries of life. They offered as good security as there is in the world, but they were refused emergency currency or Government aid, and suffered enormous loss. Many of them will never be able to recover.

SPECIAL PRIVILEGE NO. 4 TO THE BANKS.

The taxes collected for the United States Treasury were turned over to the bank corporations for 2 per cent interest. When the war broke out, rather than disturb the banks in the use of these tax funds for speculation, the Government, instead of making the banks pay what they owed the Government, forced the people to pay special war taxes. The big banks, and especially their owners, because of that favor made enormous profits on war stocks and war-trade speculations. It is a war tax for their benefit.

SPECIAL PRIVILEGE REFUSAL NO. 4 TO THE FARMERS.

A fake and ineffective provision, section 7, is inserted in the bill by which the Government could deposit money with farm corporations, but that is a mere sop, for the other provisions of the bill make it absolutely impractical. The folly of believing that the Treasurer would ever use current taxes to float 36-year or long-time mortgages is too apparent to need comment

SPECIAL PRIVILEGE NO. 5 TO BANKS.

Bank corporations loan their depositors money; also use it to buy bills, acceptances, etc., take the paper in their own names, and are given the monopoly of securing from "Uncle Sam" upon this paper money. It is secured by the paper they take for their depositors' money. They not only owe their depositors but they also owe the Government, which has a lien ahead of the depositors. In that way the Government permits the banks to inflate the money when they wish for their own benefit. Note the following language in the Federal reserve act:

SEC. 16. Federal reserve notes, to be issued at the discretion of the Federal Reserve Board for the purpose of making advances to Federal reserve banks through the Federal reserve agents. The said notes shall be obligations of the United States, and shall be receivable by all national banks and member banks and Federal reserve banks, and for all taxes, customs, and other public dues.

There was on February 18, 1916, outstanding of these notes \$206,978,000 of such money. It may be increased to billions. Uncle Sam gets not a cent for this special privilege given exclusively to banks. Even at that, the direct profit to the banks is not so great as the advantages it gives to the big stockholders and speculators who operate the banks or work with them. It serves as an insurance to them in their game of exploiting the people, for in the event of their being caught in financial distress, their banks will pledge paper to get Uncle Sam to print money for the banks. Then the banks will not be forced to collect from the speculators. The speculators have scalped huge fortunes aggregating more than a billion dollars since the world began. The people will hereafter be forced to pay dividends on those fortunes, "vested rights," we understand.

SPECIAL PRIVILEGE REFUSAL NO. 5 TO FARMERS.

The farm corporations are refused the privilege to take notes, paper, or security to the Government, even though they have the best, to get a single dollar from Uncle Sam. The bank corporations may and do that, but the farm corporations are refused a like privilege.

It is unnecessary to list all the special favors the banks enjoy. Those I have named show that the banks already have a complete monopoly of financial affairs. They have accepted what they asked and what Congress gave them. It is not so much their wrong as it is the wrong of Congress in having granted the privilege to the banks.

Every considerable supply of money must, under existing conditions, come through the banks. This fake rural credit bill deprives the banks of nothing; not even the exclusive monopoly they enjoy. The system proposed by the bill would be dependent upon the supply of money which the banks control, and consequently would be dependent upon the banks. The Government has no credit except that supported by the earning capacity of the people. Whatever draft is made upon it the people must pay. That is why the Federal reserve act is bad. It supports the banks with the Government credit. The difference between what is charged by the Government to the banks and what the banks charge borrowers is collected from the people's actual earnings. Not only that, but the Government makes the banks the sole depositaries for the people, and the difference between what the banks pay for deposits and what they charge is also paid out of the actual earnings of the people. I call attention to these facts merely to show what "sop" it is that is offered to the farmer.

RORROWER BORROWING FROM HIMSPLP

By a strange jugglery of proposed law, before a farmer can secure money from the farm department to be created by the bill he must begin by supplying funds for himself, "lift himself by his bootstraps," so to speak. He must become a stockholder in a corporation where none but borrowers can. Stock would in a corporation where none but borrowers can. Stock would be issued to him. He would collect from himself to pay for the stock and a dividend, send it in to the head office where they will take out all the expenses of the corporation and credit the balance. If there should be any, to him, and if there should not be enough to pay the expenses he can pay the difference. Whatever money the farmer is to get on his loan that he does not lend to himself and which his farm mortgage calls for will have to be gotten in the open market by hids, and it must in will have to be gotten in the open market by bids, and it must in nearly all cases come from the banks.

The absurdity of borrowers loaning to themselves should sug-The absurdity of borrowers loaning to themselves should suggest itself to a United States Congress. Will this Congress commit itself to such absurdity? It makes no difference what has happened in other places or in other countries; this Congress should exercise sense in dealing with a concrete proposition simple as 1, 2, 3. The Moss bill takes only the best security for loans, besides each borrower must become responsible for a part of all the other borrowers. Why complicate it all and increase the expense to the borrower by forcing him to take stock

JOINT-STOCK COMPANIES.

The only effective thing in the bill is the adoption by the United States of the existing loaning companies and the exemption of them from taxation. That is a special privilege to them-not to the farmers. They would do the business, not the farm cooperative corporations under the Moss bill. Now and then, some place, a temporary advantage might be had. The effect of passing this bill will be an indefinite postponement of a real honest credit system.

A COUNTER PROPOSAL.

I have not undertaken to draft such a bill as I feel certain would afford complete relief, because conditions here in Wash-ington would prevent its acceptance at this time. The country is engaged too deeply studying world conflicts to divert very much now, but this credit bill, if it was as it should be, would prevent war arising out of commercial schemes. I have offered in sections 3, 4, and 5 an entire new system for securing funds, independent of the banks. The other sections would be changed merely to adjust to the requirement of the three substitute sections;

There will be no satisfactory credit system as long as one industry alone acts. All the legitimate industries must join, and that is the purpose of the sections 3, 4, and 5, which I propose. They are the vital sections, especially section 4, while section 5 would be the guarantee that would give the assurance of impartial Government management. This would provide the funds and start a rural credit system that would give farmers money at 4 per cent to begin with, and still lower rates when it got well under way.

I will quote the three sections in reverse order of their appearance in the bill:

SEC. 5. That every Federal cooperative bank shall have, and is by this act created with, an initial authorized capitalization of \$500,000, which shall be subscribed, owned, and kept by the United States and paid in only as the business requires, to be determined by

the Federal cooperative board. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be required therefor.

Not a dollar of this capital would ever be required, but it forms a guarantee. The expense of organization is provided independent of that, and section 4 would supply the funds in abundance. The following are excerpts from section 4:

abundance. The following are excerpts from section 4:

Sec. 4. That in each Federal cooperative district there shall be a Federal cooperative bank located in the capital city of the State and it shall be named the Federal cooperative bank of whatever State the same may be located in.

That in each Federal cooperative banks as the demands of business justify, to be determined by the Federal cooperative board: Provided, That not more than one branch banks shall be established in any one town or city; that all branch banks shall be a branch of the Federal cooperative bank of whatever State the same is located in and become a part of the same system without additional capital.

Every Federal cooperative bank and all branches thereof shall be banks of deposit where deposits may be made by any person in sums of 10 cents or more. All deposits belonging to the same person equaling \$10 and not in excess of \$10,000, when not subject to be checked out shall draw interest at the rate of 2½ per cent per annum, such interest to begin on the 1st day of the month of lowing the date of deposit and be figured to the 1st day of the month of its withdrawal: Provided, That no interest shall be paid on any sums not having been on deposit for at least three full calendar months; said board shall establish rules for the notice required for withdrawal of time deposits by depositors, which rules may be waived whenever the funds on hand justify.

Checking accounts may be kept in all such banks, but shall draw no interest.

That such banks may make loans from the checking deposits with or without security: Provided, That the maturity for payment of all loans made from deposits subject to check shall not exceed six months, the policy to be for even shorter periods: Provided Jurther, That renewals may be freely allowed when the safety of ultimate payment is not impaired.

The Federal cooperative board shall have a wide discretion, not inconsistent with the express terms hereof, in providing the detail rules.

not impaired.

The Federal cooperative board shall have a wide discretion, not inconsistent with the express terms hereof, in providing the detail rules for the government of the banks to be created under this section. It is the purpose to give the public every convenience that will establish a greater freedom of trade in the exchanges of commerce and at the lowest possible cost, provided that purely speculative enterprises shall be discouraged.

That a reserve shall be weightinged on all deposits subject to check

That a reserve shall be maintained on all deposits subject to check equal to 20 per cent thereof.

That a reserve shall be maintained on all other deposits equal to 5 per cent thereof.

That no new loans shall be made when the reserves fall below the legal

That a reserve shall be maintained on all other deposits equal to 5 per cent thereof.

That no new loans shall be made when the reserves fall below the legal requirement.

That each Federal cooperative district shall stand by itself in respect to profits and losses.

That there shall be kept such exchange accounts between the several Federal cooperative districts as the Federal cooperative board shall deem necessary to facilitate the exchanges required for the business.

That then et profits arising from the business of the respective banks and their branches to be created under this section shall be credited first to undivided profits.

Semiannually there shall be an accounting, and the undivided-profit account shall be disposed of in the following manner:

First. Any poor, uncollectible paper shall be charged to said account, and a poor-paper account created.

Second. The Federal Government shall be credited with 2½ per cent on the paid capitalization: Provided, That no part thereof shall be withdrawn except as hereinafter in this act provided.

Third. There shall be credited to the Federal Government 10 per cent of the balance: Provided, That no part thereof shall be withdrawn except as hereinafter in this act provided.

Fourth. The remaining balance shall be declared as a dividend to borrowers and depositors in the following proportionately to the amount of their deposits, which shall be in addition to the 2½ per cent in this section before provided for.

(a) One-half to the time depositors proportionately to the amount of their deposits, which shall be in addition to the 2½ per cent in this section before provided for.

(b) One-half to the borrowers, to be applied in payment to them for indorsement upon unpaid notes in force during the earning period, in order to equalize and lower the rates of interest by application first upon those bearing the highest rates, bringing in those bearing ower rates when reached, and so on, until the rate of interest shall be reduced to equal the lowest rates, and to reduce

labor required, and shall be as uniform as practicable for all like purposes.

Whenever the Government has a credit in any Federal cooperative bank derived from profits equal to one-half its capital investment in such Federal cooperative bank, and there is no demand upon it for uncharged-off bad notes or paper, thereafter all the profits arising out of the further business shall become a part of the general funds of the Government and be carried into the Treasury of the United States; that at any time it becomes necessary to charge off bad notes or paper, the surplus account created from deposits shall again be made complete by the same rules under which it was originally created.

Wherever practical the different cooperative banks created under the provisions of this act shall aid and cooperate to secure the best results without cither becoming liable for the acts of the other.

Each Federal cooperative bank shall be managed by the member of the Federal cooperative board from that Federal cooperative district, who shall be president and the presiding officer of said board, and three directors appointed by the Federal cooperative board. Said directors shall be citizens of the United States and residents of the district and shall each give a surety bond, the premium on which shall be paid by the banks. They shall choose from their number, by majority vote, a vice president, secretary, and treasurer. They are further authorized to employ such attorneys, experts, assistants, clerks, laborers, and other employees as they may deem necessary, subject to the approval of the Federal cooperative board.

Such directors shall, under their hands, forthwith make an organization certificate, which shall specifically state—

First, The name of the bank.

Second. The district within which its operations are to be carried on, the names of its first directors and officers, and the particular city in which its principal office is located.

Third. The amount of the capital stock.

Fourth, The fact that the certificate is made to enable such persons to put into operation certificate shall be acknowledged before a judge or clerk of some court of record or notary public, and shall be, together with the acknowledgment thereof, transmitted to the Federal cooperative board commissioner, who shall record and carefully preserve the same in his office, and a certified copy thereof shall be filed in the office of each of the members of said board, in all of which it shall at all times be open to public inspection.

The Federal cooperative board is authorized to direct such changes in or additions to any such organization certificate as it deems expedient.

in or additions to any such organization certificate as it deems expedient.

Upon duly making and filing such organization certificate the bank shall become, as from the date of the execution of its organization certificate, a body corporate, and as such, and in the name designated in the organization certificate, it shall have power—

First. To adopt and use a corporate seal.

Second. To have succession until it is dissolved by act of Congress or under the provisions of this act.

Third. To make contracts.

Fourth. To sue and be sued, complain and defend, in any court of law or equity, as fully as natural persons.

Fifth. To elect or appoint a vice president, appoint a secretary and a treasurer and other officers and employees, define their duties, subject to the ratification of the Federal cooperative board, require bonds of them and fix the penalty thereof; by action of its board of directors dismiss such officers and employees, or any of them, at pleasure, and appoint others to fill their places.

Sixth. To prescribe, by its board of directors, subject to the supervision and regulation of the Federal cooperative board, by-laws not inconsistent with law, regulating the manner of conducting its general business and the privileges granted to it by law exercised and enjoyed.

eral business and the privileges granted to it by law exercised and enjoyed.

Seventh. To exercise, by its board of directors or duly authorized officers or agents, subject to .aw, all such incidental powers as shall be necessary to carry on the business herein described.

The Federal cooperative board shall designate one of the district directors to serve for three years. It shall designate one of said directors to serve for a term of two years and one to serve for a term of one year. After the first appointments each director shall be appointed for a term of three years.

Directors of Federal cooperative banks shall have been for at least two years residents of the district for which they are appointed or elected, and at least one district director shall be experienced in practical farming and actually engaged at the time of his appointment in farming operations within the district. No director of a Federal cooperative bank shall act as an officer, director, or employee of any other bank.

operative bank shall act as an omeer, director, or employee of any other bank.

That when not otherwise provided in this act such banks may be governed by the usual methods now practiced by the banks of the country, except that no interest in excess of 5 per cent shall be charged and loans shall be made most freely to borrowers of small amounts where they have outstanding indebtedness with interest charges thereon in excess of 5 per cent, provided the safety of payment is satisfactory

The funds collected into the banks under the provisions of section 4 would create an entire new condition among the people. They would control their own capital, apply the means to run their own industries and business and be independent of the trusts-especially the money trust.

Section 3 is merely the machinery of organization. It is as

SEC. 3. There shall be established a United States cooperative investment and loan board, for brevity to be called the Federal cooperative board, which shall be charged with the execution of this act

years, except when to fill vacancies, in which case the appointment shall be made to fill the unexpired term. Any and all members shall be subject to removal by the President for cause. Each of the said members shall, within 15 days after notice of his appointment, take and subscribe to the oath of office.

The first meeting of the Federal cooperative board shall be held in Washington, D. C., as soon as may be after its appointment, at a date and place to be fixed by the chairman of said board.

No member of the Federal cooperative board shall at the same time be an officer or director of or own any stock in any institution, association, or partnership engaged in banking or the loaning business. Before entering upon his duties as a member of said Federal cooperative board each member shall certify under oath to the President that he is eligible under this section.

Each State shall constitute a Federal cooperative board, shall appoint one farm-loan registrar and one urban-loan registrar in his respective State, he farm registrar or receive applications for issues of urban-loan bonds, and each to perform such other services as prescribed by this act. In the same manner there shall be appointed one or more property appraisers for each district and as many special appraisers as it shall deem necessary. All registrars and special appraisers as a special appraisers as a special appraisers and expenses of the Federal cooperative board and of all registrars and special appraisers and expenses of the Federal cooperative board and of all registrars and special appraisers and expenses of the Federal cooperative board and of all registrars and special appraisers as it shall deem necessary. All registrars and special appraisers appointed under this section shall be public officials and shall have no connection with or interest in any other institution, association, or partnership engaged in the banking or loaning business.

The salaries and expenses of the Federal cooperative board and of all registrars and special apprais

Sections 3, 4, and 5 are fundamentally different than in the Moss bill. To adopt them would require rearrangement in the wording and phrasing of the bill in other parts. If these three sections were placed in the bill, they would give relief, not only to the farm borrower, but to all borrowers.

The other sections of the bill provide for farm and urban loans at the lowest rates of interest. The bill provides forpersonal credits as effectively as any can.

FEDERAL RESERVE ACT.

When the big banks sought special legislation for themselves they adroitly built up and officered their own so-called "citizens' leagues", and had them make a demand upon Congress to make it appear it was a public demand for banking reform. They followed the same stealthy system that the "armament" people are now following. That was not all that the big banks did. They also created a panic in order to excite the people so they would demand immediate banking reform, which, of course, the big banks were prepared to fix for their own special benefit. As a part of the same scheme and to further safeguard themselves in securing exactly what they wanted they trained their own bank experts and adroitly managed to get the Government to employ them to help fix up the bill and administer it after it became a law. By planning the whole scheme along their own lines far in advance the big banks secured exactly what they

restment and loan board, for brevity to be called the Federal cooperative board, which shall be charged with the execution of this act and all acts amendatory thereof.

The Federal cooperative board shall consist of one member from each of the States and, in addition, one member at large, who shall be the Federal cooperative board commissioner, and be appointed for a term of eight years and act as chairman and executive officer thereof, and whose office shall be at Chicago, in the State of Illinois: that each of the other members of said board shall have an office in the Federal cooperative board shall hold meetings in the said city of Chicago annually, and hold special meetings if emergency arises, of the Federal cooperative board shall hold meetings if emergency arises, of the Chited States, by and with the advice and consent of the Senate. It shall be the policy to make said board nonpartisan. The members shall be citizens of the United States and shall hold no other office, State or Federal, and shall each receive an annual salary of \$6,000, payable monthly, together with actual necessary traveling expenses.

One quarter of the members of the Federal cooperative board shall be designated by the President, to serve for two years, one quarter for four years, one quarter for six years, and one quarter for eight years. In the event that any new State shall be created, the first appointment shall be for two years. is entitled to. Because of that condition the farmers as a whole thought they could let it take care of itself. That was exactly what the American Bankers' Association had considered the farmers would do. That is the reason why we have this sofarmers would do. That is the reason why we have this so-called rural credit bill before us. It gives the farmers nothing of value, but if it becomes a law will have the effect of delaying. Thus the bankers will continue in complete control.

Let no one think he is not interested in this credit system simply because he happens to not be a borrower. Not a soul on earth who lives in civilization escapes the burden of interest. There is no congressional district in the United States, agriculcultural or other, and no person except bankers, speculators, and capitalists, who do not in the aggregate pay more interest or its equivalent than they collect. When they buy the necessaries of life, sell their products, earn their salaries, pay their taxes, and so forth, the interest account is assessed against them. It was this levy of excessive profit for the few that drove Europe to war. Let the United States beware lest it meet the same misfortune. Human nature has a limit to the burden it will bear, and will resist when it is reached.

This dogged, persistent war craze is the logical result of the existing capitalistic system. War becomes a matter of course a climax to capital absorbing the profits from the energy of the toilers, leaving the latter industrially in a state of slavery. The struggle of capitalists for high interest, big dividends, and profits from scalping fluctuating markets, domestic and foreign, was bound to lead to war-if not international war, then civil war. It will be both if we do not correct some of the existing evils, for no liberty-loving, self-respecting people will long endure industrial slavery. The Civil War was the climax of human physical slavery. It took as grand an army as the world man physical slavery. It took as grand an army as the world has ever seen to strike out physical slavery, but the sacrifice has come to almost naught by the induction of industrial slavery. It was an agent of the English capitalists who issued the "Hazard Circular" in 1862 and sent it to his clients. It

"Slavery is likely to be abolished by the war power and all chattel slavery abolished. This, I and my European friends are in favor of, for slavery is but the owning of labor and carries with it the care of the laborers, while the European plan, led on by England, is that capital shall control labor by controlling The great debt that capitalists will see to it is made out of the war must be used as a means to control the volume To accomplish this the bonds must be used as a We are now waiting for the Secretary of the banking basis. Treasury to make this recommendation to Congress. It will not do to allow the greenback, as it is called, to circulate as money any length of time, as we can not control that. But we can control the bonds and through them the bank issues."

The prophetic wisdom of President Lincoln was clearly in evidence when he gave utterance to the following:

Yes, we may all congratulate ourselves that this cruel war is nearing its close * * * but I see in the future a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of the war corporations have been enthroned, and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of war.

In the last 20 years it has not required prophetic wisdom to see the way we are headed. All that is necessary is to stop and figure on what we are doing. Then we must come to the conclusion that we are bound up with a capitalism that spells disaster if we continue it. I stated in a speech on the floor of the House in 1908 that the railways would be forced to apply for increase in freight and passenger rates. Last year they secured the President's influence with the Interstate Commerce Commission to do what I had predicted more than four years The freight and passenger rates were increased, and they will be increased again or the roads will fail, if we keep

our present banking and currency system.
On June 13, 1911, and February 24, 1912, I made speeches on this floor, from which I quote as follows:

"Mr. LINDBERGH. It may be noted that the trusts are adjusting to the Supreme Court decisions. The people are paying the expense of the litigation in order that the trusts may know where they stand. Some of them are dissolved by decree, but the decrees are mere form, for the trusts carry on the work regardless of that fact. What is the difference if they accomplish their purpose by a community of interest or under the management of the corporations?

"Mr. MURDOCK. Will the gentleman yield?
"The CHAIRMAN (Mr. RUSSELL). Will the gentleman from

Minnesota yield to the gentleman from Kansas?

"Mr. LINDBERGH. In a moment. Yes; now.

"Mr. MURDOCK. Does the gentleman from Minnesota be-lieve from what he has said that the Standard Oil Co, will not dissolve?

"Mr. LINDBERGH. There will be a community of interest between all the subsidiary companies; that is, all interests that belong to the Standard Oil Co., so there will be little or no benefit come out of the recent decision. The trust operations will continue just the same.

"Mr. MyRDOCK. Does the gentleman also believe that the same thing is true of the Tobacco Trust?

"Mr. LINDBERGH. The people need not look to the Sherman antitrust law nor to any other 'anti' acts for relief, nor to the decisions of the courts. It will do us no good to fight the trusts until we cooperate ourselves and go ahead independently. We have been working on a plan of tearing down the trusts and leaving it to them to build up again. Do we suppose they will build up on a less selfish basis?

"Mr. CULLOP. Will the gentleman from Minnesota yield?

"Mr. LINDBERGH. Yes.
"Mr. CULLOP. What is the trouble with the decisions in the last two cases-those of the Standard Oil and Tobacco Trustin your judgment?

"Mr. LINDBERGH. I do not claim those decisions will not dissolve those trusts so far as their corporate form is concerned, but the community of interest that naturally exists among the owners of the different properties and individuals making up the trusts will continue to control the action of those who have the different properties.

"Mr. CULLOP. Is that the fault of the law or of the attor-

ney who is prosecuting the case?
"Mr. LINDBERGH. I should not say it is the fault of the It is it, the administration of the law. A greater farce than the suit against the Standard Oil Co. is not to be found, unless it is the final wind-up of the Tobacco Trust case. court finds (in the Standard Oil case): 'The distribution of the stock among the various defendants ratably among the shareholders of the Standard Oil Co., and the conveyance of the business and physical property of the defendants to one of their number, to perpetuate the unlawful monopoly must be and is prohibited by the decree herein.' The entry of the judgment relating to that reads: 'But the defendants are not prohibited this decree from distributing ratably to the shareholders of the principal company the shares to which they are equitably entitled in the stocks of the defendant corporations that are parties to the combination.' The decree, in practical effect, is the opposite of the court's findings.

The Government administration was kind enough to legalize the trusts. That is just what was done, and the trust buster attorneys who drew fees equal to the President of the United the trusts. States left the situation exactly as it was before the suits were commenced except that the trusts have become legalized by the suits and their stocks are worth more than before the suits were begnn.

I pointed out in 1911 and 1912 what would happen because of the trust busters' operations. It has been just as I stated it would be. I do not claim any credit for pointing it out in advance, because it was as plain as the nose on a man's face. After paying the trust buster's fees and expenses, approximately \$100,000 of the people's money, to carry on the prosecution, it was a farce. All the Standard Oil Co. and the Tobacco Trust did was to add the costs and expenses they paid their attorneys to the price of oils, so we paid for the defense as well as the prosecution.

These trusts have established in all the large cities certain magazines and newspapers that falsify and misrepresent in every issue of their publications. These have been and now are engaged in a frenzied campaign to commit our people to a war program—a program that would entail billions of dollars of burden upon the tollers and increase the coffers of wealth ac-

cordingly.

Unfortunately, the Government is administered in favor of only that portion of America which constitutes the money kings, the manufacturing lords, merchant princes-in other words, "American dollar plutocracy." It so happens that this "plutocracy" has no opportunity just now to make money off Gertocracy many, because the communication is cut off by the English If Germany had a navy that would have commanded the seas and "American dollar plutocracy" had thereby been prevented from coining its dollars by English trade, our relations with Germany would have been exactly what they are now with England. Germany need not, in a personal sense, be ag-grieved because of any act of our Government supporting dollar diplomacy. As long as the money kings control the administration of our Government it will always do that with perfect impartiality, depending on who can supply the coin.

THE TOILER'S JUBILEE.

Inexhaustible natural resources; organic laws suited to bring an intelligent people into sympathetic cooperation for a fulfillment of their best purposes—true Americanism—unswerving loyalty to the United States; these are the bases for greatness these we have. But it is for us to do and not wait for it to be done, because waiting for others to do ends in their doing what they want and not what is generally needed. Let this Congress act in the interest of all the people. Instead of permitting speculators to control the deposits made by those having money. as well as the Government also pledging the people's credit to these speculators, thus enabling them to exploit all the people; instead of doing that, I urge that Congress adopt the suggestions which I have made with reference to farm and personal credits. If Congress does that and also manufactures its own munitions of war and prepares itself industrially and otherwise, instead of letting war munition lords prepare other nations to fight us and then demand that we let them, these war lords, prepare us to fight the nations which they have armed, we shall all be Then the jingo press would disappear, for no one would pay for their jingo articles. Remove the opportunity for speculators making profit out of war; then you will see war conditions disappear. Let the United States simply be prepared to defend the United States. I will vote for any measure that means defense, but will not vote for a dollar of appropriation for "American dollar plutocracy." The amendment which I offer to farm and personal credits would prepare the Nation industrially for any emergency, because it would make the plain business interests and the toilers independent of "American dollar plutocracy."

RURAL AND PERSONAL CREDITS FOR FARM AND CITY.

Much has been said and published about preserving the national honor. What American would not preserve the na-tional honor? None except a few speculators and their hired agents, who in an exciting period have vociferously paraded the national honor to screen their schemes to exploit America and the world at large. Some of our patriotic citizens, failing to see the designs of these exploiters, have believed their propaganda, but the rank and file of the American people have been patient and calm in the storm. No American rights have been endangered by their patience. On the contrary, their refusal to be stampeded by the frenzy has kept the exploiters from rushing us into war. Our danger, however, is from letting the exploiters shape the industrial conditions in our own country. A few Americans have scalped billions of dollars in profits out of war speculation. This additional capital Congress, legislatures, and courts construe to be so much more on which the toilers must be assessed an annual profit. Wealth of the few has taken another jump upward, so according to the existing practice more interest and dividends must be paid by the toilers. To escape that wrong is why my bill for credit to farm, city, and legitimate plain business borrowers should be passed. would reduce the interest below 4 per cent, and the cost of living would be much reduced.

"The Making of a Representative."

EXTENSION OF REMARKS

HON. THOMAS M. BELL,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 17, 1916.

Mr. BELL. Mr. Speaker, under the leave granted to me to extend my remarks, I include remarks of Hon. Champ Clark at the Washington Press Club reception to "baby Congressmen." Thursday, March 16, 1916.

The remarks are as follows:

"THE MAKING OF A REPRESENTATIVE."

REMARKS OF CHAMP CLARK AT THE WASHINGTON PRESS CLUB RECEPTION TO "BABY CONGRESSMEN," THURSDAY, MARCH 16, 1916.

I most heartily congratulate you gentlemen in being even what are facetiously denominated "baby Congressmen." It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Mem-

ber's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.

"Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

The old Charlotte district in Virginia knew this and kept John Randolph, of Roanoke, in the House till he became a great national figure. Then the Old Dominion sent him to the Senate and Gen. Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possess these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the "topnotchers."

Let us take the present House and see how long the men who hold the high places have served. I can not name all, but

will cite a few as samples.

Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt." for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker eight years, only one man,

Henry Clay, having been Speaker longer.

I am serving my twenty-second year; Minority Leader MANN is serving his twentieth year; Mr. KITCHIN, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Floop, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. SLAYDEN, chairman of the Library, his twentieth; Mr. HENRY, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth; and Mr. Sparkman, chairman of Rivers and Harbors, his There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old timers. The same thing holds good with reference to members of the minority. As an illustration, Messrs. Gillett and Cooper, who are serving their twentyfourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress, they keep him in the harness.

The Member of longest consecutive service is called "the father of the House," Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When Gen. Bingham announced the death of Gen. Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairman-ship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man young enough to learn and to grow, with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House, His wide acquaintance with Members helps him

amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them!

One other thing. I do not know what committee assignments you new Members secured. If they are good, you are to be congratulated. If bad, do not be cast down. No congressional tenderfoot ever had poorer assignments than I had—Claims and Old Pensions—but I never complained or kicked. I went to work as though those committees suited me exactly. Here is an illustration of what may happen and how luck plays an an industration of what may happen and now lick plays an important part. I was next to top Democrat on both Foreign Affairs and Patents for eight years—never advanced a peg so far as committees went. Just when, at the beginning of the ninth year on those two committees, I was about to become top Democrat on Foreign Affairs, Hon. John Sharp Williams, then minority leader, assigned me to the foot of Ways and Means, and at the end of four years through the happenings of politics in five different States I jumped from the foot to the head of the Democratic minority on Ways and Means. So it may be with you. Events over which you have no control may advance you more rapidly than you dream of or hope for. My advice is this: "Whatever your hand finds to do, do it with your might."

An Appeal for Peace.

EXTENSION OF REMARKS

HON. J. HAMPTON MOORE.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 17, 1916.

Mr. MOORE of Pennsylvania. Mr. Speaker, an appeal from the Christian ministers of Philadelphia has been forwarded to me, and it has so direct a bearing upon the problem now under discussion that I ask unanimous consent to extend it in the RECORD.

The SPEAKER. Is there objection? The Chair hears none. Mr. MOORE of Pennsylvania. The clergymen making this appeal are representative of the best thought of a great city and I ask for them a respectful consideration at the hands of Congress.

I append the correspondence:

PHILADELPHIA, March 11, 1916.

PHILADELPHIA, March 11, 1916.

The Hon. J. Hampton Moore,
House of Representatives of the United States,
Washington, D. C.

Dear Sir: I have the honor to transmit to you a memorial prepared by representative ministers of the church in the city of Philadelphia, Pa.

I also inclose the list of the members of the committee appointed to present this matter to the President and to the Senate and House of Representatives.

Very respectfully, yours,

Robert Hunter, Secretary.

At a gathering of ministers held in the Witherspeep Building Phila-

Very respectfully, yours,

At a gathering of ministers held in the Witherspoon Building, Philadelphia, Pa., February 14, 1916, representing several of the Christian churches of the city, action was taken as given below with relation to the situation of noncombatants in the world war.

The undersigned, ministers of the Churches of Christ in Philadelphia, Pa., respectfully submit to the public a statement concerning one feature of the world war, which is now waging, for sympathetic consideration. While we deplore greatly the dreadful loss of the lives of myriads of the combatants in the armies of the several belligerent nations, and also the serious injuries of multitudes who have been maimed for life, we deplore yet more deeply the grievous conditions which surround the noncombatants in these nations. To us it appears that little consideration has been given by certain Governments to the situation of the men, women, and children whose only part in the war has been patient endurance of terrible suffering. Neither old age nor childhood has been a defense against certain forms of military aggression. What is true of the war upon land has been likewise true of war upon the sea. There is safety nowhere, even for little children, from the flerceness of a war which seems to be characterized increasingly by a lust for atrocity.

This situation has led to widespread effort in the United States for the relief of the Armenians, Belgians, Jews. Poles, and other nationalities. These relief measures have been of untold benefit to the sufferers of many peoples, but they do not atone for the cruelties, which have utterly wrecked hundreds of thousands of households and brought death to numberless noncombatants.

There is evidently need for a change of policy on the part of some of the Governments of the belligerent nations, and we ask all our people to unite with us in an appeal to the Government of the United States to seek yet more earnestly from all the nations at war agreements which shall lessen the frightfulness of present conditions concerning or threatening noncombatants, and which shall bring into this terrible struggle something of the justice and kindly spirit of the gospel of Christ, and thus alleviate the horrors which accompany war.

Deeply impressed by the situation, we give form to our convictions through the following resolutions:

"Resolved:

"First. That we solemnly and sincerely protest, in the name of God and humanity, against this horrible and detestable slaughter of innocent men, women, and children, contrary to our standards of religion, morals, and civilization.

"Second. That a committee of one from each of the various religious bodies of this city be appointed by the chairman to present this memorial to their Representatives in Congress; that it may be presented, through them, to the House and Senate of the United States for their consideration; and that similar resolutions be requested from the representatives of religious bodies in other communities; also that any committee appointed be authorized to submit the whole matter to the President of the United States."

The list of the members of the committee appointed to present this subject to the President, the Senate, and the House of Representatives will be found on an additional sheet inclosed.

Very respectfully,

J. Grax Polton, Chairman.

J. GRAY BOLTON, Chairman. ROBERT HUNTER, Secretary.

FULL LIST OF COMMITTEE APPOINTED TO GO TO WASHINGTON.

ROBERT HUNTER, Secretary.

The Borland Amendment.

EXTENSION OF REMARKS

HON. L. C. DYER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 14, 1916.

Mr. DYER. Mr. Speaker, the gentleman from Missouri [Mr. BOBLAND], in his extension of remarks, inserted in the Congressional Record, February 28, 1916, with reference to his amendment of this bill to lengthen the hours of service of certain employees of the Government, included in his remarks, the

following:

There are a number of negroes in the civil service, and almost without exception they are in the purely clerical departments, where the seven-hour day prevalls, and not in the mechanical and technical branches, where the eight-hour day is enforced. I am told that among the young negro couples it is customary for both the husband and wife to take the civil-service examination and secure appointment, if possible, in the same office. As they get to work late in the morning and go home early in the afternoon, it is possible for them to keep house and raise an interesting brood of pickaninnies while drawing two comfortable salaries from the Federal Government. Sometimes the wife only works in the department and the husband rests at home or devotes his talents to preaching the gospel.

Mr. Speaker, I consider this an unjust attack against the

colored people.

I am in receipt of the following letter with reference to it, as follows:

HYATTSVILLE, MD., February 29, 1916.

My Dear Sir: I have the bonor to invite your attention to the inclosed copy of a portion of Representative W. P. Borland's remarks published in the Congressional Record of February 28, 1016, the same constituting, in my judgment, an undeserved, gratuitously insulting thrust at the colored people of this Nation, a comparatively small number of whom are employed in various branches of the Federal Government.

As one of the taxpayers whose interests Mr. Borland seems to cherish so close in his heart, I have the honor to ask if you will ascertain to what extent, if at all, conditions actually existing in the various branches of the Federal Government, or in any of them, were on February 28. 1916, such as warranted the utterance quoted on the accompanying sheet.

Very respectfully,

James C. Waters, Jr.,

Member National Association for the

JAMES C. WATERS, Jr.,
Member National Association for the
Advancement of Colored People.

Mr. Speaker, the colored race numbers 10,000,000 in the inited States. They have done well under all circumstances, United States. and there ought to be credit given them instead of criticism. The development that they have made has been in practically every line of business as well as in education. In farming they have made great progress, and they now occupy an acreage of land of a total of 42,609,117. There are nearly a million colored farmers.

When it comes to the various trades we find that the colored man and the colored woman are making splendid headway; 62.2 per cent of them are engaged in gainful occupations. agricultural pursuits there are 2,143,176; in professional service there are 47,324; in domestic and personal service there are 1,324,160; in trade and transportation there are 29,154; and

in manufacturing and mechanical pursuits there are 275,149.

During the past 50 years the colored people have accumulated a second colored people are accumulated as a second colored people accumulated accumulated as a second colo lated property to the value of over \$600,000,000; they have established banks, and now have in existence 65. They do a banking business amounting to \$20,000,000 a year. No other people, no other race, can point to the progress made by the colored people in the same length of time. When they were freed they had no property and no education, and all that has been accomplished by them has been in a remarkably short time.

. The colored race are a religious people. They have many splendid churches that they have built and own; they are rearing and educating their children with every desire to make them good and useful citizens.

In the last several months some people have been fearing that the United States would be brought into the European war. We are now in trouble with Mexico. Some of the first soldiers to enter Mexico were those of the colored Cavalry. Other colored soldiers will go there. They are serving the Nation in the Philippines, in Hawaii, and elsewhere. If we get into a serious war we will need many soldiers. The colored men have always responded.

I do not believe it is necessary to point out the fact that the colored people of this Nation love the country, its flag, and its institutions as well as any other Americans, but for the benefit of some who perhaps do not know how patriotically the colored man has stood by his country in the hour of danger let me call your attention to some things that have been done by the colored man along that line.

They were found in all branches of the Patriot Army. They generally served in the same regiments with the white soldiers. Connecticut, however, had one complete company of colored soldiers, and Rhode Island a complete regiment. According to an official report there were in the Army, under Gen. Washington's immediate command, on the 24th of August, 1778, 775 colored soldiers. It is estimated that there was an average of 35 colored soldiers in each white regiment. This does not appear to include the colored troops furnished by Connecticut, New York, New Hampshire, and Rhode Island. There were altogether about 3,000 colored soldiers. about 3,000 colored soldiers.

Some of the most heroic deeds of the War of Independence were performed by colored men. The first martyr in the Boston massacre, March 5, 1770, was Crispus Attucks. Samuel Lawwere performed by colored men. The first martyr in the Boston massacre, March 5, 1770, was Crispus Attucks. Samuel Lawrence, a prominent white citizen of Groton, Mass., led a company of colored soldiers to the Battle of Bunker Hill. It was the colored man, Peters Salem, who at the Battle of Bunker Hill. It was the colored man, Peters Salem, who at the Battle of Bunker Hill fired the shot that mortally wounded Maj. Pitcairn. Solom Poor, another one, so distinguished himself at the Battle of Bunker Hill that a petition was drawn up by some of the principal officers to secure him recognition by the Massachusetts Colony. Austin Dabney, another, rendered such conspicuous service in the Revolutionary War that he was freed and the Federal Government granted him a pension. The State of Georgia also granted him a considerable amount of land. The Black Legion, organized in 1779 in St. Domingo by Count D'Estaing, consisted of 800 young freedmen blacks and mulattoes. At the siege of Savannah, on the 9th of October, 1779, this legion, by covering the retreat and repulsing the charge of the British, saved the defeated French Army from annihilation.

A large number of colored sallors were in the Navy during the War of 1812. It is estimated that one-tenth of the crews that manned the vessels on the Great Lakes were colored. They served faithfully in all the battles of the Great Lakes and in LIII—36

the Battle of Lake Eric rendered very effective service. In the celebrated picture of Perry's victory on Lake Erle is seen a colored sailor

Gen. Andrew Jackson, September 21, 1814, issued a call to the free colored men of Louisiana to enlist. As a result, 500 of them were organized into two battalions. These battalions distinguished themselves in the Battle of New Orleans. The legislature of New York, October 24, 1814, authorized the raising of two regiments of men of color. As a result, 2,000 colored men were enlisted and sent forward to the Army at Sacketts Harbor.

One hundred and seventy-eight thousand nine hundred and seventy-five colored soldiers were enlisted in the War of the Rebellion. These made up 161 regiments, of which 141 were infantry, 7 were cavalry, 12 were heavy artillery, and 1 light artillery. The first colored regiments to be organized were the First South Carolina, in which the first enlistments were made May 9, 1862; the First Louisiana Native Guards, September 27, 1862; the Fifty-fourth Massachusetts, February 9, 1863; the Second Carolina Volunteers, February 23, 1863.

July 28, 1866, Congress passed a law that colored regiments should be a part of the Regular Army. Under this act, the Ninth and Tenth Cavalry and the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Regiments of Infantry were organized. March 3, 1869, a consolidation act was passed, and the Thirty-eighth and Forty-first were organized as the Twenty-fourth Regiment of Infantry; the Thirty-ninth and Fortieth we reorganized as the Twenty-fifth Regiment of Infantry. These regiments were stationed on the frontier and rendered valuable service in the military operations against the Indians, extending from Dakota to Mexico. The Ninth and Tenth Cavalry won the reputation of being the best Indian fighters on the frontier.

At the outbreak of the Spanish War in 1898 the four colored regiments were among the first troops ordered to the front. Here, again, they won great distinction by their bravery and Colored soldiers took a more conspicuous part in the Spanish War than in any previous war waged by the United States. At the first battle in Cuba-Las Guasimas-the Tenth Cavalry played an important part by coming to the support of Col. Theodore Roosevelt and the Rough Riders. The Twentyfifth Infantry took a prominent part in the Battle of El Caney. The Ninth and Tenth Cavalry and the Twenty-fourth Infantry rendered heroic service in the famous Battle of San Juan Hill.

Reply to the Washington Post.

EXTENSION OF REMARKS

HON. JOE H. EAGLE.

OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. EAGLE. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a copy of a letter which I wrote to the Washington Post in reply to some observations it made concerning me,

The letter is as follows:

WASHINGTON, March 8, 1916.

To the WASHINGTON POST:

I can not so arrange my personal business affairs as to allow me longer to remain in public life."

Thus it clearly appears that my voluntary retirement from Congress has no connection whatever with any current legislative or diplomatic issue.

As the reporter undertook, doubtless in good faith but evidently purely upon rumor, to state for me my view actuating my vote on the McLemore resolution issue in the House yesterday, I deem it but fair to correct his impression by making my own statement of my reasons, as follows:

In the proceedings in the House vesterday upon the McLemore resolution.

to correct his impression by making my own statement of my reasons, as follows:

In the proceedings in the House yesterday upon the McLemore resolution there were three votes cast. I voted "yes" on the first and second and "no" on the third roll call.

My reasons were:

First, On the first vote the question was whether to order the previous question; that is, whether to "cut out the talk" and "get down to a vote." On that I voted "yes." There is too much talk.

Second. On the second vote the question was whether to adout the rule; that is, to debate for four hours and then vote on the resolution. On that I voted "yes," because I wanted a test vote as soon as possible on the resolution.

Third, On the third vote the question was whether to table the McLemore resolution; that is, kill it without a vote on it. On that I voted "no." because I wanted to have a record vote on the principle of warning Americans to keep off of merchant ships of belligerents armed for defensive purposes. I would have voted to warn them off of such vessels if we could have had a vote on such resolution, although under international law our nationals have the undoubted legal right to travel on such vessels.

Yours, very respectfully,

JOE H. Eagle.

JOE H. EAGLE.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. WILLIAM S. BENNET.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. BENNET. Mr. Speaker, there seems to be a general misapprehension concerning the McLemore resolution vote.

A concise statement is this: On February 22 the gentleman from Texas [Mr. McLemore] introduced a resolution with a long string of "whereases" and a resolution concerning the warning of American citizens against traveling on armed belligerent merchant vessels. As drawn, the resolution had practically no support. But for some reason there was a good deal of excitement about that time on the Democratic side concerning U boats and armed merchant vessels. Certain prominent Democratic Members of the House were reported as saying that there was an overwhelming sentiment in the House for a warning resolution. On February 29 the President sent the following letter to Representative Pou:

THE WHITE HOUSE, Washington, February 29, 1916.

The White House, Washington, February 29, 1916.

My Dear Mr. Pou: Inasmuch as I learn that Mr. Henry, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country, which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very earnestly commend it to their immediate attention.

Cordially and sincerely, yours,

Woodbow Wilson.

This made the McLemore resolution rather famous. The Committee on Foreign Affairs, where it was quietly pending, took it up for consideration and finally reported it adversely, with the recommendation that it lie on the table. This absolutely killed the resolution under the rules of the House, unless the Rules Committee acted. That committee, on March 6, reported a rule making it in order to discuss the resolution for four hours and then to move to put it back on the table. I opposed the form of rule in committee and on the floor, contending that four hours was not "full public discussion," as demanded by the President, and that simply laying the resolution on the table did not give the President any information as to our views. For the same reason I voted against laying the resolution on the table. I believed, and still believe, that

when the President asked our real views on a matter of "grave importance" we should have given them to him instead of indulging in some excellent Fourth of July oratory and then putting a perfectly dead resolution back among the dead from which it came.

As a minority member of the Rules Committee, I spent six days working on the question, and came to a conclusion on

the questions involved.

The foreign situation which now confronts our country is the most serious in our history. We had as difficult questions during the Napoleonic wars. Then our decisions required weeks for transmissal and the ocean was a barrier. Now our decisions are transmitted by wireless and the ocean is a highway,

The contest has embroiled two-thirds of the world and has become ghastly, ruthless, unbelievable slaughter. The nations at war are no longer normal. A slight accident might drag us

into the awful conflict.

Our national safety is dependent upon our remaining strictly neutral and preserving international law as and where it ex-

isted by common consent prior to the war.

What is our present danger? Briefly stated, Germany on the one hand claims the right to sink without warning any merchant vessel of the allies equipped with armament efficient enough to sink a submarine; Great Britain and the allies, on the other hand, claim the right to equip merchant vessels with armament efficient enough to sink a submarine, but to be used for defensive purposes only.

In practice, of course, no submarine will ever trust itself near enough to such an armed vessel to give a warning, and no such armed vessel will ever let a submarine get within range

without shooting at it.

There have already been at least three contests, of which we know, between such armed vessels and submarines, in which the submarines were either driven off or sunk. So long as there are no American citizens on any of these armed vessels we have no concern in the controversy. It is a contention between the central powers and the allies. But the first armed merchant vessel which sinks, carrying with it an American citizen, makes

us a party to the controversy.

The questions to be considered are: (1) Has a merchant vessel of a belligerent the right to arm? (2) What are the rights of neutrals on armed merchant vessels of the belligerents? (3) In the face of our grave situation, what is the duty

of our citizens?

First. A merchant vessel of a belligerent always has had and still has an undoubted right to arm. Armed, it has the right to fight, not only privateers and pirates but war vessels. There are only five decided cases in the highest courts of Great Britain and America, and in two of these (the Fanny, 1 Dodson, 443, and the Nereide, 9 Cranch, 388) the vessels stoutly resisted capture. But the fact of the resistance was not considered as an element in either case. Under the decided cases there is no limitation on the number of guns or their position. The Nercide, with a crew of but 16 men, carried 10 guns, and the Amelia, another of the cases (1 Cranch, 1), carried eight iron and four wooden guns. It is possible to contend, merchant vessels having been chiefly in old days armed against privateers and pirates, that, pirates having practically disappeared and privateers being no longer used, the right to arm disappeared with the necessity to arm; but this overlooks the right of merchantmen to arm as against warships. It is sound reasoning that this right, always exercised, has never ceased to exist.

The first way in which this question came up to our State Department in this war was in connection with the visits of armed vessels to our ports. On September 19, 1914, Acting Secretary Lansing issued an official circular for the guidance of collectors of customs, in which he drew a word picture of a merchant vessel of belligerent nationality armed for the sole pur-

pose of defense.

CIRCULAR OF THE DEPARTMENT OF STATE OF THE UNITED STATES WITH REFERENCE TO THE STATUS OF ARMED MERCHANT VESSELS. [Issued Sept. 19, 1914.]

[Issued Sept. 19, 1914.]

(A) A merchant vessel of belligerent nationality may carry an armament and ammunition for the sole purpose of defense without acquiring the character of a sbip of war.

(B) The presence of an armament and ammunition on board a merchant vessel creates a presumption that the armament is for offensive purposes, but the owners or agents may overcome this presumption by evidence showing that the vessel carries armament solely for defense.

(C) Evidence necessary to establish the fact that the armament is solely for defense and will not be used offensively, whether the armament per mounted or stowed below, must be presented in each case independently at an official investigation. The result of the investigation must show conclusively that the armament is not intended for and will not be used in offensive operations.

Indications that the armament will not be used offensively are:

1. That the caliber of the guns carried does not exceed 6 inches.

2. That the guns and small arms carried are few in number.

3. That no guns are mounted on the forward part of the vessel.

4. That the quantity of ammunition carried is small.

5. That the vessel is manned by its usual crew and the officers are the same as those on board before war was declared.

6. That the vessel intends to and actually does clear for a port lying in its usual trade route or a port indicating its purpose to continue in the same trade in which it was engaged before war was declared.

7. That the vessel takes on board fuel and supplies sufficient only to carry it to its port of destination, or the same quantity substantially which it has been accustomed to take for a voyage before war was declared.

8. That the cargo of the recommendation is small.

6. That the cargo of the recommendation is small.

6. That the cargo of the recommendation is small.

7. That the cargo of the recommendation is small.

8. That the cargo of the recommendation is small.

which it has been accustomed to take for a voyage before war was declared.

8. That the cargo of the vessei consists of articles of commerce unsuited for the use of a ship of war in operations against an enemy.

9. That the vessei carries passengers who are as a whole unfitted to enter the military or naval service of the belligerent whose flag the vessel flies, or of any of its allies, and particularly if the passenger list includes women and children.

10. That the speed of the ship is slow.

(D) Port authorities, on the arrival in a port of the United States of an armed vessel of belligerent nationality claiming to be a merchant vessel, should immediately investigate and report to Washington on the foregoing indications as to the intended use of the armament, in order that it may be determined whether the evidence is sufficient to remove the presumption that the vessel is and should be treated as a ship of war. Clearance will not be granted until authorized from Washington, and the master will be so informed upon arrival.

(E) The conversion of a merchant vessel into a ship of war is a question of fact which is to be established by direct or circumstantial evidence of intention to use the vessel as a ship of war.

He had solid ground for his description:

On May 8, 1871, our Government and Great Britain entered into what is known as the treaty of Washington for the adjustment of the Alabama claims. The commission appointed under that treated decided that the Confederate cruisers Alabama and Florida were war vessels and that Great Britain should have known so. Mr. Lansing into his picture puts a vessel largely the opposite of the Alabama and Florida and is well within international law. Further, Mr. Lansing has held the rights of merchant vessels within for merchant vessels within of merchant vessels within far more restricted rules than I have laid down.

Prior to the circular of September 19 two armed British merchantmen entered our ports. As to both our Government protested. From one, the Marron, the British Government removed the guns and sent them to England on another vessel as freight. The other, the Adriatic, cleared before the British Government received our protest and never returned to any of our ports carrying armament.

As to Germany, Mr. Lansing, on November 7, 1914, sent a dispatch to Ambassador Gerard, which is as follows:

DEPARTMENT OF STATE, Washington, November 7, 1914.

Your 515, October 15. The Government of the United States is obliged to dissent from the views of the German Government, as expressed in your telegram in regard to the treatment to be accorded armed merchant vessels of belligerent nationalities in neutral ports. The practice of a majority of nations, and the consensus of opinion by the leading authorities on international law, including many German writers, support the proposition that merchant vessels may arm for defense without losing their private character, and that they may employ such armament against hostile attack without contravening the principles of international law.

The purpose of an armament on a merchant vessel is to be determined by various circumstances, among which are the number and position of the guns on the vessel, the quantity of ammunition and fuel, the number and sex of the passengers, the nature of the cargo, etc. Tested by evidence of this character, the question as to whether an armament on a merchant vessel is intended solely for defensive purposes may be readily answered, and the neutral Government should regulate its treatment of the vessel in accordance with the intended use of the armament.

ment.

This Government considers that in permitting a private vessel having a general cargo, a customary amount of fuel, an average crew, and passengers of both sexes on board, and carrying a small armament and a small amount of ammunition to enjoy the hospitality of an American port as a merchant vessel, it is in no way violating its duty as a neutral. Nevertheless it is not unmindful of the fact that the circumstances of a particular case may be such as to cause embarrassment and possible controversy as to the character of an armed private vessel visiting its ports. Recognizing, therefore, the desirability of avoiding a ground of complaint, this Government, as soon as a case arose, while frankly admitting the right of a merchant vessel to carry a defensive armament, expressed its disapprobation of a practice which compelled it to pass upon a vessel's intended use, which opinion if proven subsequently to be erroneous might constitute a ground for a charge of unneutral conduct.

As a result of these representations no merchant vessels with armaments have visited the ports of the United States since the 10th of September. In fact, from the beginning of the European war, but two armed private vessels have entered or cleared from ports of this country, and as to these vessels their character as merchant vessels was conclusively estatished.

Please bring the foregoing to the attention of the German Government, and in doing so express the hope that they will also prevent their merchant vessels from entering the ports of the United States carrying armaments, even for defensive purposes, though they may possess the right to do so by the rules of international law. This Government considers that in permitting a private vessel having

The German contention has been against the right of merchantmen to arm. It will be seen from what has been said that our Government has never conceded any but a limited right to armed merchant vessels of belligerents to enter our ports; that in practice it has asked both Great Britain and Germany to refrain from the exercise of that limited right. Upon this question the conduct of our State Department has been wise, conservative, and the one best calculated to keep us out of war,

while at the same time following the decisions of our own Supreme Court

It should be remembered that so far the discussion has dealt merely with the right of belligerent merchantmen, first to arm and second to visit our ports when armed, and both these rights are conceded.

We now come to an entirely different phase of the subject; that is, the right of a neutral on board the armed vessel of a belligerent. There are but five decided cases in the United States and Great Britain which have any bearing on this question. They are the Katherine Elizabeth and Fanny, British, and the Nerlide, Amelia, and Atalanta, American. All of these cases treat of goods, but it is believed, as Chief Justice Marshall said in the Nereide case, that in relation to passengers "the law would operate in the same manner on both.

None of these cases hold in a flat-footed way that a neutral has any absolute right on an armed merchant vessel of a belligerent. The *Nercide*, decided in 1815, was one of those cases where a majority of the judges could not decide on any one principle of law, but where a majority did concur in a particular decision for different reasons. It was decided in the Supreme Court of the United States (9 Cranch, 388).

The facts briefly were that Mr. Pinto, a Spanish subject, chartered the Nereide, a British vessel, to earry cargo to the Argentine, and under a charter party called with the goods. The Nereide had a crew of 16 men, was armed with 10 guns. and sailed under convoy. She became separated from her convoy and falling in with an American privateer, this being during the War of 1812, was captured and taken into New York City to be condemned as a prize. The British vessel was, of course, condemned without contest, but the owner claimed the right to the goods as a neutral. Six judges sat in the appeal. Chief Justice Marshall and two of his associates held squarely that the goods of a neutral friend are safe in the ship of an enemy. Justice Story and another refused to concur, but, it is fair to say, based their decision largely upon the ground that by chartering the whole vessel and by proceeding under convoy, Mr. Pinto forfeited whatever rights a neutral had. This left This left the decision to the sixth judge, who concurred with Chief Justice Marshall and his associates in the result without concurring in their opinion. In a later case, the Atalanta (3 Wheat., 409) this judge described what he had decided in the case of the Nercide as follows:

When the case of the Nereide was before this court, I declined expressing my opinion upon the general question, because the cargo, considered as Spanish property, was exposed to capture by the Carthagenian and other privateers, and, considered as belonging to a revolted colony, was liable to Spanish capture. The neutral shipper, therefore, could not be charged with evading our belligerent rights, or putting off his neutral character, when placing himself under the protection of an armed belligerent, when sailing, as that shipper was, between Seylla and Charybdis, he might accept of the aid or protection of one belligerent, without giving just cause of offense to another.

Therefore, the Nercide is not a clear cut precedent for the present claimed rights of neutrals.

A case decided in England prior to the Nercide, but not brought to the attention of the court, was the case of the

Fanny (1 Dodson, 443).

This case is the most analogous in its reasoning to the presentday question of an armed merchant vessel of a belligerent na-tion of any case in the books. The Fanny, deliberately armed in Brazil defensively as against American warships and privateers, increased its crew, which is analogous to the naval crews being put on British merchantmen by the British Admiralty to-day. She had letters of marque, but was not a pri-Her cargo consisted partly of Portuguese and partly of vateer. British property. She was attacked by the American schooner General Armstrong, defended herself in a severe engagement, but was captured. She was subsequently recaptured by a British warship, taken into a British prize court, where her captor demanded salvage. Sir William Scott, in the British High Court of Admiralty, held that the neutral Portuguese goods must pay salvage as well as the British ship and British cargo. The judge said:

The judge said:

A neutral subject is at liberty to put his goods on board a merchant vessel, though belonging to a belligerent, subject, nevertheless, to the rights of the enemy who may capture the vessel, but who has no right, according to the modern practice of civilized States, to condemn the neutral property. Neither will the goods of the neutral be subject to condemnation although a rescue should be attempted by the crew of the captured vessel, for that is an event which the merchant could not have foreseen. But if he puts his goods on board a ship of force, which he has every reason to presume will be defended against the enemy by that force, the case then becomes very different. He betrays an intention to resist visitation and search, which he could not do by putting them on board a mere merchant vessel, and so far as he does this he adheres to the belligerent; he withdraws himself from his protection of neutrality and resorts to another mode of defense; and I take it to be quite clear that if a party acts in association with a hostile force and relies upon that force for protection he is, pro hac vice, to be considered as an enemy. It is not a sufficient excuse to say that the

Portuguese are not possessed of shipping of their own sufficient for the whole of their commerce, and are therefore under the necessity of making use of those belonging to others. If they choose to take the protection of a hostile force instead of their own neutral character, they must take the inconvenience with the convenience; they must abide by the consequences resulting from the course of conduct which, upon the whole knowledge of the matter, they have thought proper to pursue, it could not in this case have been a secret that force was to be used for the protection of the property. It must have been known to the laders of the cargo that this ship was to sall as a single ship and to fight her way home, since a large number of men were openly and publicly collected for the purpose of enabling her to resist a hostile force.

In 1818 there came up in our Supreme Court the case of the Atalanta heretofore referred to. The Atalanta was a British armed vessel, captured by an American sloop of war. The cargo was claimed by a French citizen, who contested condemnation in the prize court and was upheld in that court, but the proceedings in the prize court were extremely irregular, and the Supreme Court sent the case back for further proof. On the question of the rights of a neutral, Chief Justice Marshall said that the case of the Atalanta did not essentially differ from that of the Nereide, and that the three judges in the Nereide case retained their opinion, but he said:

The principle of the law of nations, that the goods of a friend are safe in the bottom of any enemy, may be, and probably will be, changed or so impaired as to leave no object to which it is applicable; but so long as the principle shall be acknowledged this court must reject constructions which render it totally inoperative—

thus very considerably weakening his opinion in the Nereide case. On the other hand, Judge Johnson, who had refused to concur with Judge Marshall and his associates in the Nercide case, took up the discussion of the right of a neutral and finally came to the following conclusion:

Upon the whole I am fully satisfied that the decision in the case of the Nereide was founded in the most correct principles, and recognized the rule that lading on board an armed belligerent is not per se as a cause of forfeiture.

The only other cases in the books at all touching the subject are the Katherine Elizabeth, which is distinguished by both Sir William Scott in the Fanny and Chief Justice Marshall in the Nereide; and the Amelia (1 Cranch, 1), in which the goods of a neutral recaptured by an American war vessel were held liable for salvage, but, though this would seem to be a decision in the line of my reasoning, the case so clearly stands on its own peculiar conditions that I do not quote it as such. Therefore, as a basis for this alleged right, we have one case in which less than a majority of the court held it to be the law; the English case which holds against the right and the second American case in which the reasoning of the earliest American case is, on one hand, weakened by Chief Justice Marshall's contention, and on the other to some extent strengthened by the adherence there to the principle by the judge who refused to adhere to it in the first case. But, of course, the opinion is merely obiter, as the case was sent back for further proof on another point.

A. Pearce Higgins, in his article on armed merchant vessels (vol. 8, American Journal of International Law), cites the cases, and says:

It does not appear that there is a definite decision on the question s to the fate of neutral goods laden on a defensively armed and un-commissioned enemy merchant ship either in Great Britain or the United States.

Twiss Law of Nations in War (2d ed.), page 188, cites the

So that the decisions of the highest tribunal of the United States are on this point in direct conflict with the judgment of the English high court of admiralty.

It is very evident to me that Secretary Lansing is one of the apparently few men in the United States who has taken trouble to familiarize himself with the exact condition of the law, and it is no surprise to me that on January 18, 1916, he sent to some, at least, of the foreign Governments the following memorandum:

It is a matter of the deepest interest to my Government to bring to an end, if possible, the dangers of life which attend the use of submarines as at present employed in destroying enemy commerce on the high seas, since on any merchant vessel of belligerent nationality there may be citizens of the United States who have taken passage or members of the crew in the exercise of their recognized rights as neutrals. I assume your Government is equally solicitous to protect their nationals from the exceptional bazards which are presented by their passage on merchant vessels through those portions of the high seas in which undersea craft of the enemy are operating.

While I am fully slight to the expections of the among your

While I am fully alive to the appalling loss of life among non-combatants, regardless of age or sex, which has resulted from the present method of destroying merchant vessels without removing the persons on board to places of safety, and while I view that practice as contrary to those humane principles which should control belligerents in the conduct of their naval operations, I do not feel that a belligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

In order to bring submarine warfare within the general rules of international law and the principles of humanity without destroying their efficiency in their destruction of commerce, I believe that a formula may be found which, though it may require slight modification of the precedent generally followed by nations prior to the mployment of the submarines, will appeal to the sense of justice and fairness of all the beligerents in the present war.

Your Government will understand that in seeking the formula or rule of this nature I approach it of necessity from the point of view of a neutral, but I believe that it will be equally efficacious in preserving the lives of noncombatants on merchant vessels of belilgerent nationalities.

BASIS OF PROPOSALS.

comments on this subject are predicated on the following

My comments on this subject are predicated on the following pronositions:

First. A noncombatant has the right to travel the high seas in a merchant vessel entitled to fly a belligerent flag, to rely upon the observance of the rules of international law and principles of humanity, and if the vessel is approached by a naval vessel of another belligerent, the merchant vessel of enemy nationality should not be attacked without being ordered to stop.

Second. An enemy merchant vessel when ordered to do so by a belligerent submarine should immediately stop.

Third. Such vessel should not be attacked after being ordered to stop unless it attempts to flee or to resist. In case it ceases to flee or resist the attack should be discontinued.

Fourth. In the event that it is impossible to place a prize crew on board of an enemy merchant vessel or to convoy it into port, the vessel may be sunk, provided the crew and passengers have been removed to a place of safety.

OBSTACLES FOR SUBMARINES.

OBSTACLES FOR SUBMARINES.

In complying with the foregoing principles, which, in my opinion, embody the principal rule, the strict observance of which will insure the life of a noncombatant on a merchant vessel which is intercepted bu a submarine, I am not unmindful of the obstacles which would be met by undersea craft as commerce destroyers.

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war and the limitation of armament to have been dependent on the fact that it could not be used effectively in offense against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

POWERLESS IN DEFENSE.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is atmost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament.

armament.

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel. armament.

INNOCENT LIVES AT STAKE.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stepping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declarations by the beligerent Government I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

STAND ON QUESTION SOUGHT.

which may be defiled on account of new conditions.

STAND ON QUESTION SOUGHT.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon their enemies making a similar declaration.

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly.

In my opinion, this memorandum states the law, and, if it does, no American citizen has a clear right on an armed vessel of a belligerent.

But it is said that the central powers in giving notice that they will sink armed merchant vessels of the allies without warning are changing the rules of international law during the conflict. It does not so appeal to me. I will assume, for the purpose of the argument that the allies' orders are that the armament is to be used only for defensive purposes. There is armament is to be used only for defensive purposes. There is only one way that an armed merchant vessel can defend itself against a submarine, and that is by keeping the submarine so far away that it can not discharge its torpedo or use its guns. In other words, the best defensive way to use the armament is

to commence firing at the submarine as soon as the latter gets within range of the merchantman's guns. It seems clear to me that a merchant vessel which revives the practice of carrying armament, after that practice has been permitted to become obsolete, and then revives it openly as against one form of war vessels and with an armament superior in range to the armament of that war vessel, very clearly can not be heard to say that the war vessel must come within a range which would be certain destruction and give a warning. Or in line with Sir William Scott's decision, if a ship chooses to rely upon force, it must take the inconveniences as well as the conveniences of force.

So far the discussion has proceeded on the question of the right of an American citizen, and it has been rather clearly demonstrated that there is no such clear right as has been mentioned. If it is borne in mind that Secretary Lansing's memorandum of September 19, 1914, referred solely to the right of armed merchant vessels of belligerents to enter our ports, while his memorandum of January 18, 1916, is the only one referring to the rights of our neutrals on board such armed vessels, an absolutely distinct proposition, then the two memorandums already mentioned, the memorandum of November 7, 1914, heretofore set out, and the protest to the British Government in relation to the Marron are all consistent, not only with each other, but with the decided cases and with the textbooks cited.

It is also apparent that in view of these cases, Secretary Lausing has handled the question from an American standpoint most admirably. His positions uphold every real American right, make the best possible effort to keep us out of the European war, and in addition, by attempting to limit the destruction of life and property threatened to be caused by the armed merchant vessel of the allies, on the one hand, and the submarine of the central powers, on the other, has attempted to do a service for humanity not only splendid in itself but of incalculable benefit as a precedent in future wars.

It seems scarcely necessary, having demonstrated that there is no clear American right, such as is insisted on, to go further and prove the propriety and wisdom of advising American citizens not to travel on armed merchant vessels of belligerents, but inasmuch as many people insist that such a right exists, it seems pertinent to call their attention to the fact that American citizens during this war have been advised many times to refrain from the exercise of undoubted rights so as to reduce the chance of our Government being in some way involved in the European war or its consequences.

On August 20, 1914, President Wilson asked all of us to refrain from discussing the European war—that is, to refrain from exercising the sacred right of free speech.

On October 4, 1915, Secretary Lansing asked American citizens to avoid visiting unnecessarily countries which are at war, and to particularly avoid, if possible, passing through or from a belligerent country to a country which is at war therewith; and naturalized citizens to refrain from visiting either the countries of their origin or countries which are at war therewith. In other words, to restrict their right to travel where they had a legal right to travel. He also announced that the Government would restrict the rights of American citizens to passports and would not issue any to persons who were merely touriets.

On October 25, 1915, he notified newspaper correspondents that issuance of passports to them would be restricted, thus restricting not only the right to travel, but a property right—i, e., the right to earn money.

The right of expatriation is a right for which our Government has always contended. Nevertheless, on November 1, 1915, the Department of State advised American citizens that enlistment in foreign armies might expatriate them, and asked them not to enlist in foreign armies.

On December 17, 1915, and theretofore we notified our citizens that we would restrict their rights to passports to persons going abroad on business or other imperative reasons satisfactorily shown to the Department of State.

The record, therefore, is that we have asked both Great Britain and Germany to refrain from the exercise of their right to send armed merchant vessels into our ports, and in the ways that I have mentioned, and possibly others, have either asked our own citizens to refrain from the exercise of rights or have curtailed those rights by executive departmental action. I do not criticize this advice and these restrictions. On the contrary, I think the action admirable. It tends to keep our country out of war, and an administration which has done these things ought, it seems to me, to be very willing itself to advise American citizens to keep off the armed vessels of belligerents, or, having asked Congress for its online, ought

to welcome an expression of opinion that such ought to be the course of American citizens.

There is, in addition, a moral side. Ought an American citizen, for a light cause, to jeopardize the peace of his country? The Apostle Paul, who was not a pacifist and who always stood up for his rights when he thought it essential, understood the necessity of sometimes waiving a right.

Wherefore, if meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend.

I wish that there could be put into the hands of every reckless American, whose conduct tends to jeopardize our peace, the article in the February Atlantic entitled "The radical's progress," a description of a portion of the experiences of a British transport captain at Gallipoli. I quote one paragraph.

How would any one of your American jingoes like to be 27 years old, with both eves shot out and both wrists shattered by shrapnel? The man I mean was a young Scot. I helped him up the gangway. He stood six feet three—a beautiful specimen of physical manbood. After a day aboard he suffered terrible torture from the heat of the weather and of the ship, and also from the swarms of files attracted by the smell of blood. He could not lie on a cot, so we had to fence off a corner in the 'tween decks, carpet it with pillows and mattresses, and let him grope around in his agony. On the spots where the blood had soaked through his eye and wrist bandages the files clustered in black clots. He moaned night and day and was scarcely conscious. He was totally blind, and even the sense of touch was denied him, because his wrists were so shattered that they would have to be amputated.

Personally, while I am perfectly willing in the exercise of the constitutional duties of Congress to vote to declare war because of a clear invasion of American rights, I am not willing to vote to duplicate all over our land experiences such as this, because of the assertion on our part of a doubtful right; and not being ready to vote to declare war because of the invasion of a right which I do not believe to exist, I have no moral right to deceive the President of the United States by voting to encourage him to continue to insist on a nonexistent right when such insistence might lead to war.

The Military Establishment.

EXTENSION OF REMARKS

HON. THOMAS F. KONOP,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 18, 1916.

Mr. KONOP: Mr. Speaker, we are to-day considering a bill to increase the efficiency of the Military Establishment of our country. I believe that this should be done as speedily as possible. I do not know of a question over which there has been more discussion among the people of the country than the question of providing an adequate Military and Naval Establishment in order to insure our country a permanent and lasting peace. I believe in the slogan, "In time of peace prepare against war." The war now raging in Europe has opened our eyes to the fact that war in modern times is carried on under such a large scale that the little Military Establishment we now have is inadequate to defend our Republic.

Mr. Speaker, I love peace. I am for peace, and I hope that we may never have another war. I hope that when this war abroad comes to an end the civilized world will come to some understanding whereby peace can be guaranteed to the world. I believe in arbitration of international disputes rather than their settlement by war. The settlement of international disputes by having innocent citizens of one country kill innocent citizens of another is so uncivilized and so unchristian that no one can subscribe to it. But barbarous, uncivilized, unchristian, and horrible as it may seem, we are face to face with the fact that war is upon us, that war is resorted to for the settlement of international disputes among the most civilized countries of the world. We are face to face with the fact that, civilized though he may be, man has not reached that ideal of Christian brotherhood when international disputes can be settled by arbitration.

Why, Mr. Speaker, when agitation for international arbitration was at its highest, when the opinion of the civilized world was unanimous for universal and lasting peace among nations, when rulers, statesmen, generals, publicists, and people everywhere had reached so happy a thought that war was impossible in modern civilization, like a thunderbolt from a clear sky a war broke out so stupendous, so cruel, so uncivilized, and so unchristian that will overshadow the wars of all past ages. am in favor of arbitration; I am in favor of some tribunal for the settlement of international disputes; but we must take the world as it is. We must take facts as they are in present civilization and act accordingly. We must make peace secure by

preparing ourselves against war.

Mr. Speaker, my opinion is that it will be impossible to settle international disputes by a court of arbitration until nations create a court of arbitration that will be capable of enforcing its judgments, orders, and decrees. A court without ability, means, and machinery to enforce its commands would indeed be weak and impotent to settle anything. Let us see how we settle disputes between individuals and between governmental authority and citizens. We settle these disputes by courts, of But back of these courts is a means and power ready and able at any time to enforce their judgments, decrees, and orders, even by violence if necessary. The ability and power to enforce judgments of courts is what makes them an institution capable of preserving peace among individuals. For examples: A man sues another for a debt. What commands obedience and respect for the court's judgment in the case is the executive power to enforce the judgment, even by violence if necessary, by the officer forcibly making a levy. A man assaults another or commits some crime. The judgment and sentence of a court against the defendant would be useless if back of the power to render judgment and sentence there was no executive power to forcibly put into prison the violator of the law. So in every case of our courts, back of their power to render judgments is the power to enforce them, even by violence if necessary

So, Mr. Speaker, if we expect to have international disputes settled as disputes are settled between individuals; if we are to have a court of arbitration that will be able to succeed as a tribunal to settle international disputes, it will be necessary to back up such a court with some executive power to enforce its judgments and decrees by violence. It will be necessary for all nations to disarm and to place at the disposal of such an international tribunal sufficient armament to enable it to enforce its judgments. I for one, Mr. Speaker, in view of what is going on in Europe, am unable to indulge in the happy thought and hope that such a tribunal will soon be established and that there will

be no wars in the future.

Mr. Speaker, now as to the bill presented: The bill provides for a Regular Army of 140,000, which in case of war or imminent danger can be increased to 207,000 men by the President. It provides for an increase of 786 officers to be detailed to our colleges and universities and to the National Guard to train our citizen soldiery. It provides for the federalization of the National Guard in order that it may become a dependable reserve. It provides for pay for these patriotic young men who up to now have received nothing for their time in training themselves to fight for their country in time of war. vides for the mobilization and utilization of our industries in time of war. I believe that this bill provides a most comprehensive Military Establishment to meet the needs of the country, and the Committee on Military Affairs and its distinguished chairman should be congratulated and receive the plaudits of I believe that the committee has presented to us the country. a reasonable bill. I hope that this bill will be approved by Congress as well as by the country generally. This bill. I be lieve, settles in the most sensible way the question of national preparedness in so far as the Army is concerned. I think this bill ought to satisfy the extremists on this question.

There are many in this country that would have no increase in the Army at all, and there are others that want an Army of half a million men. To those that do not want an increase in the Regular Army I would say that I believe that, considering the size of our country, its wealth and its great resources, and its many interests outside, and comparing ours with other countries, 140,000 men is indeed a modest regular Military Estab-

lishment.

To those that would have a Regular Army of half a million men I would say that, with a provision in this bill for the federalization of our militia, which will create a reserve ample to meet any exigency, ought to be satisfied with the regular estab-lishment provided for in this bill.

The chairman of the committee stated that the testimony presented by officers to the Committee on Military Affairs shows that it would be impossible to recruit a Regular Army of more than 140,000 under our voluntary system of enlistment. To recruit an Army of more than that number the compulsory system would have to be inaugurated or the pay of the private would have to be doubled.

Mr. Speaker, I do not believe that there is any man in this

country that would want to place this country under a compulsory military system as they have in the monarchies of go upon the assumption that all that defense of our country

Europe. I for one am opposed to compulsory military service in time of peace. I fear militarism, and never would stoop to vote for it in this Republic. Militarism results from compulsory military service, and compulsory military service should never be resorted to in our country in time of peace. I believe that in this country experience has shown that when the country is threatened with danger patriotic citizens rally around the flag in defense of the Republic.

Mr. Speaker, to maintain a Regular Army of 250,000 men under our voluntary system would cost us about \$500,000,000 a year. I do not think that the American people would consent to be burdened by an expense of half a billion dollars a year in

support of such an Army.

Mr. Speaker, what is our military situation to-day and what is expected under this bill? I can not state it better than it is stated on pages 14 and 15 of the report on this bill:

stated on pages 14 and 15 of the report on this bill:

It appears from the evidence given before the committee by The Adjutant General of the Army that under the reserve law now in operation there will be maintained a reserve of 60,000 men; that 27,020 men of the Regular Army are discharged each year on account of expiration of service, and that for the same reason 39,559 men are discharged from the National Guard.

It thus appears that, in addition to the Army reserve, there are now in the country 270,200 men who have passed through the Army in the last 10 years and 395,590 men who have passed through the National Guard during the same length of time; in addition to this, there are 33,000 young men who were last year passed through the military schools and colleges of the country, and that there are 330,000 of these young men who in the last 10 years have had military training. It is true that some of these have died, but in a general way it may be said that there are now in the country 995,790 men of military age who have had military training.

It is further proposed in this bill to create a reserve corps for the National Guard, and it is safe to say that there will be maintained for that force a reserve of 100,000 men.

This bill provides for—

This bill provides for—	
In time of peace	140,000
Reserve of Regular Army	60,000
National Guard	129, 000
Men trained and in the country	995, 790

Total

Men who will be at once available upon the passage of this bill.

The committee will also call attention to the amount of reserve material which is available for immediate use should any trouble arise. The following figures are taken from the hearings of the bureau chiefs in the War Department, under whose immediate control these supplies are:

Gen. Crozier, Chief of Ordnance, states that we have on hand nearly enough equipment to equip an army of between 400,000 and 500,000 men. He also stated that there were on hand 700,000 service rifles of the new model and between 300,000 and 400,000 Krags; also 200,000,000 rounds of small-arms ammunition, or 300 rounds per man. There are also built and under construction 1,077 machine guns and 900 Field Artillery guns. We had on hand 750,000 rounds of Field Artillery ammunition.

Gen. Aleshire, the Quartermaster General of the Army, states that there is on hand now equipment enough to supply the Regular Army, the National Guard, and 250,000 men in addition, and that in 90 days there could easily be provided equipment for from 600,000 to 700,000 men, with sufficient deliveries to maintain those who are now or may be equipped.

Gen. Kingman, Chief of the Engineer Corps of the Army, states that

men, with sufficient deliveries to maintain those who are now or may be equipped.

Gen. Kingman, Chief of the Engineer Corps of the Army, states that we have on hand heavy intrenching tools for 9 Infantry divisions, and that these tools can be supplied in 15 days. He also states that we have in reserve pontoon equipage for 500,000 men.

Gen. Gorgas, the Surgeon General of the Army, states that we have in store supplies for about 250,000 or 300,000 men in addition to what we have for the Regular Army. We have those supplies already packed and ready for use.

The present Military Establishment is costing us in the neighborhood of \$100,000,000 a year. We pay our privates \$15 per month. In the foreign countries where they have compulsory military service the pay is a few cents a day. In Russia it is 13 cents a day, Austria and Japan 23 cents per day, in France 63 cents per day, in Germany 123 cents per day, Italy 233 cents per day, and Great Britain 30 cents per day. Under this bill, considering the proposed increase of the Regular Army to 140,000 men and considering the pay of the militia, the cost of our Military Establishment will be about \$140,000,000 per year.

Mr. Speaker, as I said before, this bill provides for the federalization of the National Guard. It also provides for paying the members of the National Guard one-quarter of the amount paid to soldiers of the Regular Army. This little pay allowed to the militia will, in my judgment, stimulate the organization of military companies all over the country, and in that way a reserve will be created to augment the Regular Army in time of The provision for mobilization and utilization of our industries in time of war is one of the most important provisions in this bill. If there is anything that has enabled Germany to make such wonderful progress in this war, it has been the utilization of the industries of that country for war. We want to be prepared to do likewise if war should come.

Mr. Speaker, there is another matter that I wish to refer to, and that is this. What do we mean when we say that we want an Army only for defense? The pacifists argue that we have a means is the patrolling of the borders of our country and thus preventing the landing of a hostile force. These pacifists forget that in time of war with a foreign power this country can not simply stand its forces along its borders and await the enemy's attack. We can not in that way defend ourselves by shutting ourselves from the rest of the civilized world.

Mr. Speaker, is it contended by those who want only a Military and Naval Establishment for defensive purposes that, in case of war with Great Britain, we would not order the advance of our Army into Canada and thus take the offensive, if by offensive strategy we can gain from a military standpoint? Would the same pacifists claim that in a war with Mexico we should simply patrol the border with our Army and wait for the onslaught of our enemy? To my mind an army and navy for defensive purposes should in time of war be able to strike our foe wherever it is weak and make that foe seek peace. In time of war we can not wait to be attacked by the enemy. If necessary from a military standpoint our Army and Navy should be able to take the offensive and thus defend our country. Did we wait to be attacked when the Spanish-American War broke out? No. We struck the enemy offensively and thus kept it from our shore. So, in order to have an army sufficient for defense, we must have an army large enough to take the offensive in time of war.

Mr. Speaker, we have other interests to protect besides Territorial United States. We have interests in the Orient. We have the Philippine Islands. We have the Hawaiian Islands; we have Porto Rico. We are exercising a protectorate over Cuba, and under the Monroe doctrine we are responsible for the integrity of the Republics of South America. We are in a way responsible for order in Mexico. We can not protect these in-

terests if we can not act offensively.

Mr. Speaker, we are more and more becoming a great commercial world power. We are a country of wonderful resources. We are not only one of the greatest producers of raw materials, but we are taking the lend in manufacturing. We are growing so fast in industry that we are becoming the greatest exporter in the world. As we go out on the high seas with the products of our factories and our farms to the harbors of the world we excite the jealousy of our competitors.

In this struggle for commercial supremacy is it not our duty as patriotic citizens to provide for the protection and defense of our rights in the commercial world? I believe that our Military and Naval Establishments should be such as will up-

hold our rights everywhere.

In conclusion, let me suggest another thing that I think this The provisions in this bill will result in more bill will do. military training for our boys in colleges and schools and in more military training of our citizen soldiery. This will instill more patriotism into the hearts of our citizens. What is better What is better for an American boy than some military training? However little military training the American boy may get, it will teach him discipline and obedience to authority. If there is anything that the American boy needs to-day it is discipline and respect for the law of the land. Military training will make our boys stronger physically, instead of the mollycoddles we now turn out in our schools. It will make our boys more patriotic. What boy does not feel the heart throb for his country as he marches with his school company headed by the American flag? Go into a city where they have the National Guard. How interested not only the boys but even grown up citizens get. How enthusiastically their hearts beat for their flag displayed by the local company. The presence of a company of militia recalls to the mind and heart of everyone the history of the brave American soldier from the men who fought at Concord and Bunker Hill to the marines who fought at Vera Cruz.

Shellfish.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS,

In the House of Representatives,

Friday, March 17, 1916.

Mr. HICKS. Mr. Speaker, my reason for bringing to the attention of the House the needs of the shellfish industry is because this important food supply is in danger of serious diminution, if not extermination, unless the Federal Government adopts prompt and effective measures to correct the evils which are undermining its prosperity.

Many of the citizens I have the honor to represent obtain their livelihood—at best a precarious one—from the products of the sea. While it is true that the shellfish industry is confined to a comparatively small area, it is equally true that the prosperity of this valuable fishery is essential to the Nation at large, for a large percentage of our food supply is derived from the oysters, clams, and scallops caught in the waters along our shores.

If we compare the natural shellfish areas of to-day with those of former years we find a marked change. Formerly the clam, oyster, and scallop were found in great abundance in the numerous bays and estuaries of our coasts. Now, many acres once productive lie barren, and we have but a part of the natural yield we once enjoyed. As a boy on the farm I have frequently heard my father tell of sending a wagon down to Hempstead Harbor to gather a load of scallops, which were afterwards fed to the chickens. To-day not a scallop exists in that or neighbor-Through the careless indifference of former generaing bays. tions our heritage of the shell fisheries has been abused and dissipated. The story of the wasteful exploitation of the natural resources of our country is a sad chapter in our history. Much of it was undoubtedly made necessary by our rapid development; a great part of it was due to the generosity of nature which inculcated in the minds of the pioneers the belief-a wofully mistaken one-that the supply was inexhaustible. In the mad desire for immediate gain the present only was considered; the future was left to take care of itself. As Prof. James L. Kellogg, in his notes on the shellfish of Louisiana, has said:

As one looks over the record of the settling of this country and notes how a continent was reclaimed from a state of nature he can hardly fail to be impressed with the reckless wastefulness of his ancestors in their use of the treasures which nature, through eons of time had been collecting. In thousands of cases natural resources, which carefully conserved would have provided comfort and even luxury for generations of men, have been dissipated and destroyed with no substantial benefit to anyone. We have learned some wisdom from the past, because our attention has recently been drawn to the fact of the annihilation of several former sources of subsistence. Rapidly in America in recent years the struggle to obtain support for a family has become more severe to the wage earner. Often, no doubt, the extinction of useful animals and plants that we have witnessed has been due to the ignorant assumption that, under any circumstances, the supply would last forever. This idea seems especially to prevail concerning marine food animals. The fact that the sea is vast might naturally give the impression that its inhabitants are numberless. But when a natural food supply nears complete annihilation, men begin to think of the necessity of a method of artificial culture.

What has been done can not be undone. Regrets will not bring back our wasted resources. Our duty is to conserve that which remains and by scientific investigations endeavor to devise methods of increasing the output from the sources yet at our disposal. In many States laws have been passed to check the wasteful use of shellfish grounds, but a systematic study of the conditions essential for the propagation and development of this fishery has never been undertaken, although detailed statistical reports of the production, wages paid, and capital invested in the industry have been published. Save investigations carried on concerning the organisms destructive to the fishery, the Bureau of Fisheries, through lack of means, has been unable to make exhaustive experiments or go thoroughly into the breeding and general life history of the shellfish.

In a large measure the handicap imposed by the paucity of natural production has been overcome by the culture system, but now, in order to supply the ever-increasing demand and to make certain the "set," other methods must be devised.

To those who may not be familiar with the industry, let me say that it is the most valuable fishery in the world, yielding to the fishermen annually an amount greater than the combined fisheries of Norway, which constitutes one of that country's most valuable assets. The oyster, by far the most important of the shellfishes, contributes nearly 30 per cent of the total value of all the aquatic products of the United States. With clams and scallops, the oysters furnish a food supply of great magnitude to the people of this country.

In some quarters, owing to the agitation about infection and the erroneous attribution of many cases of illness to the eating of shellfish, it has been popular to malign the oyster. The Brooklyn Eagle recently, in commenting upon the report of Dr. Bolduan, of the New York health department, in reference

to oysters says:

Dr. Bolduan's statement is the more detailed and the more reassuring for that reason. He says that for a year there has not been a case of typhoid in the city traceable to eating oysters, and that very few such cases are on record at any time.

For several years both the set and the fattening of oysters have been uncertain in some parts of the oyster grounds. Those directly interested do not know the reasons for the failure; they have neither the means nor the facilities to make a scientific study of the causes which have produced these results, and they appeal to the Government for assist-

ance. To other industries the Government has lent its aid liberally and promptly, with results that have justified the expenditures. Investigations have been undertaken to ascertain the reasons for certain diseases in our animal and plant life and securing their prevention; expeditions have been organized for the purpose of discovering fresh material among our resources; commissions have been appointed to devise new methods of developing our latent forces; research work has been carried on to promote agriculture, increase the productivity of the soil, and improve the products raised thereon; scientific study has been given to our animal industry to increase the value and usefulness of our live stock; reports and scientific treatises upon a vast number of subjects have been spread broadcast over the land with the noble purpose of ameliorating the conditions under which men toil, and rendering the reward for their labor larger and more certain. Hardly a field of our diversified activities but has felt the support, assistance, and cooperation of the National Government, and the results have been beneficial in the extreme.

I commend the foresight which prompted all these meritorious undertakings, approve the policy, and rejoice over the success attained. Now I feel it is time to heed the call that comes from the neglected industry of our coasts. Upon the other fisheries the Government annually expends upward of \$500,000 for purposes of fish culture, yet the aid given to the shellfish, which represents one-third the value of the whole, is less than the amount expended in propagating such fishes as the black bass, whose chief value is to afford sport and recreation rather than food. The customary methods of fish culture are not applicable to the oyster on account of its peculiar characteristics and the

conditions under which it lives.

The Bureau of Fisheries, which has carried forward successfully so many worthy projects, is anxious to undertake the investigation. They have the facilities but not the means, and the purpose of the bill I have introduced is to provide the necessary funds for scientific investigators who will make a careful study of the entire shellfish industry—oysters, clams, and scallops. Hon. H. M. Smith, in a recent report to the Secretary of Commerce, states the case clearly and emphatically:

merce, states the case clearly and emphatically:

Oyster culture is of necessity a private enterprise, but it presents many difficulties and dangers which the growers are not in a position to combat, for lack of proper knowledge, and this knowledge can not be obtained excepting through investigations and experiments which the Government alone is in a position to conduct.

The bureau is without the means, and particularly the personnel, to carry on this much-needed work, although the deficiency and the necessity which it creates have been repeatedly pointed out in these reports and in the estimates for appropriations. Those interested in the oyster fishery in particular have repeatedly pointed out, with justice, the difference between the lack of consideration which is accorded their industry and the assistance which is received by other interests who find help available, but the oysterman, laboring under much greater disadvantage, finds it withheld, for the reason that the bureau has not been provided with the means for extending it. In all justice, and for the very practical consideration should be corrected without further delay.

The district whose commission I have the honor to hold pro-

The district whose commission I have the honor to hold produces the finest oysters in the world. Throughout the length and breadth of that noble body of water-Long Island Soundand in all the harbors and estuaries which indent the northern shore of the most beautiful of islands, known to the Indians as Seawanhaka, are found the oyster and the clam. In Gardiners Bay and the two Peconics, in Shinnecock Bay, and Napeague Bay, on the east, the oyster and scallop industries are potent factors in the life of the people. To the westward lies Jamaica Bay, connected with the waters to the east by the Great South Bay and Moriches Bay, all teeming with shellfish. These bays and harbors, Mr. Speaker, are the most beautiful bodies of water in America. They are the farms of "folk who live by the sea"—people of virile Americanism, imbued with

liberty and independence-fearless and courageous.

That great chain of bays and channels along our southern shore is unique in its position and formation. The western portion lies within the limits of the premier city of the world, touching the markets of the great metropolis. The central and eastern sections are bordered by thriving towns, and farms producing the choicest potatoes, cauliflower, and other products of agriculture. The sea fisheries which have made the name Montauk famous the country over are in close proximity. rated from the Atlantic by a narrow bar that protects it from the ravages of the sea, it offers an opportunity for development in the interests of commerce that is of prime importance. Should those bays be connected by navigable channels, an artery of water transportation of untold value would be added to our industrial life. Here lie dormant, potentialities of wealth and trade, of possibilities for the increase of commerce and industry that should command the attention and support of all who are desirous of developing the latent forces of our re-

sources. At some future time, Mr. Speaker, I will ask the indulgence of this House in presenting the importance and the value to the Nation of the Great South Bay waterway project.

For the present I plead for the men of the sea, for the oysterman, the clammer, the scalloper, and for an industry which is subject to many perils and susceptible to much improvement in its methods. The persons engaged in this hazardous enterprise are industrious and enterprising. Hard work and small profits are their portion, under the most favorable conditions. do not ask this help as a charity; far from it. In their inde-pendence they would scorn such assistance. All they ask for is fair treatment and the right to receive their share of considera-tion at the hands of the Government. The importance of their industry warrants it, the justice of their claim demands it.

NOTES ON THE OYSTER.

The oyster is a native American, found along the coasts of all the Gulf States and on the Atlantic seaboard from Cape Cod to Key West, as well as on the southern and western shores of the Gulf of St. Lawrence. At the time of the settlement of the Colonies it grew in abundance in Massachusetts Bay and on the coast of New Hampshire and Maine, a fact evidenced by the vast shell heaps still in existence, as well as by the records of the Pilgrim Fathers. To the Indians of the coast, long before the advent of the white man, the oyster was an important element of diet, and when dried or smoked was a valuable medium of barter with their inland neighbors. At many places great mounds of shells deposited in prehistoric times tell of the free use which the red man made of oysters, and on the Damariscotta River, in Maine, where none are now found, there is a mound containing about 7,000,000 bushels of shells. The species of oyster found in eastern and southern waters is the Ostrea virginica, while the small-sized oyster of the Pacific is known as Ostrea lurida. In Washington, Oregon, and California the industry is confined almost exclusively to the raising of eastern oysters grown from seed brought from the Atlantic coast and planted on the local beds. Formerly the supply for the eastern markets was obtained from the natural beds, but with the increase of population of the coastal towns and the wasteful methods employed these beds were gradually exhausted, and it became obvious, that lest the supply fail, new methods must be adopted. This led to the introduction of the culture system, by which oysters were planted and cultivated, as well as a change of control of the grounds from public to private, either by lease or ownership.

It may be asked what use is oyster culture where nature furnishes a lavish supply without other care or labor than that involved in gathering her bounty. If nature furnished enough to supply the demand, and if her product were as good as could be produced by systematic and intelligent oyster culture, the question would be pertinent, but the fact is that she fulfills neither of the premises. The demand for oysters, good and indifferent, is greater than the natural beds can supply, and in all parts of our coast where an active fishery exists they are yearly becoming more and more depleted despite all regulations

to protect them from extinction.

Every oyster bed wherever located owes its beginning to the lodging of some foreign body on the bottom. It may be a piece of drift carried by a freshet, a clamshell rolled up by the waves or some object accidentally or intentionally thrown into the It matters little what this object may be so water by man. that it be clean during the spawning season and that it does not become buried in the mud.

The oyster, while it eventually attaches itself to some fixed object on the bottom, in its infancy swims freely though feebly, and before it settles down may wander far from the parental

locality.

The oyster is a most prolific breeder, and as an average-size one will produce 16,000,000 spats, and a large one 60,000,000, the

mortality of the seedlings is enormous.

The embryo oyster, which forms after the egg is discharged into the water by the mother, is so small as to be just visible to the unaided human eye. This embryo soon becomes covered with microscopic fleshy bristles, which, beating in unison, give it some power of locomotion, though they are serviceable chiefly in suspending it in the water and bringing it within reach of the tidal currents which waft it afar.

After a brief career of travel a tiny shell begins to form, and as the burden of this increases a change of habit comes. little oyster must attach itself to a support and settle down to the sedentary life of the adult, and this necessity brings one of the gravest crises of its life. It is hardly visible without a lens and the thinnest film of sediment will cover and stifle it, and most of the bottom over which it has been swimming is muddy. On oyster beds, only gravel and shells, piling, and similar bodies in the water present a surface sufficiently firm and clean to serve the little oyster's purpose. The more fortunate ones cement their shells to such objects, grow, and henceforth remain where they fell unless displaced by some external force; but for each one which becomes so attached there are unknown myriads which fall on unsuitable surfaces and perish. This is one reason why it is necessary for the female oyster to produce millions of eggs that her kind shall not disappear from the

The men who first undertook oyster culture in America did not know these things, nor many other interesting facts of the oyster's life; but they had observed that almost any hard-surfaced objects falling into the water, if they did not become engulfed in the mud, became coated with a growth of oysters, and they reasoned that such materials purposely placed on barren bottoms would establish artificial oyster beds and that to the man who made the deposit belonged the oysters.

Thus began, through the initiative of the oystermen themselves, the practice of oyster culture in the United States, which has developed until at the present time about one-half of the oysters produced in the country, and nearly two-thirds of the total value of this product, are derived from artificial beds,

privately owned or leased from the States.

Beginning in shoal waters alongshore, the oyster growers have extended their operations into the deep open waters of Long Island Sound and Chesapeake Bay and to every coastwise State from Massachusetts to Texas and from Washington to California, and the few small boats first employed, propelled by sails or oars, have given place to fleets of motor boats and steamers. In 1911 planters spread 17,000,000 bushels of young oysters, shells, and gravel over their 500,000 acres of oyster farms, and they harvested a crop of over 15,000,000 bushels of oysters, worth to them approximately \$10,000,000.

Between the planting and the harvest, an interval from two to five years, the oyster culturist assumes many hazards. On the New England coast, after all his material is down, the fickle may not appear, possibly because at the critical time some weather disturbance may have killed the baby oysters while they were yet swimming near the surface. In the Gulf of Mexico the "set" may be so heavy that there is scant room for the oysters to grow, and many die, while those that are left are half starved and mischeron from growding.

are half starved and misshapen from crowding.

At all stages of its career the oyster is preyed upon by more or less dangerous foes. It might be supposed that an animal inclosed in a ponderous armor, which in times of danger is a complete encasement, would be free from the attacks of enemies, but no organism has ever evolved a protective device which some other organism has not found partially vulnerable, and it must be remembered that the oyster is not always as well protected as we find it in the adult and marketable condition. In the young state, before attachment, the minute and delicate fry is fed upon extensively by the adult oyster and by other mollusca, lingulas, worms, sponges, and hydroids. Upward of 200 young have been found in the stomach of an oyster, and there is but little doubt large numbers are so consumed on every

Even after the vicissitudes of larval life are passed, and the little oysters have attached themselves, the infantile spat may be buried in an accumulation of organic or inorganic sediment or devoured by enemies against which it can present no ade-

quate defense.

Schools of drumfish may grind them into fragments between teeth arranged like a cobblestone pavement, and so the oyster grower's crop may melt away, almost in a night. Starfish often appear in great hosts, and by the muscular force of their arms, furnished with rows of suckers, rend open the shells, and turning their own stomachs inside out absorb the oyster while it still lies within the armor designed to protect it. The drill, a little marine snail, uses its rough tongue like a rasp, and boring a smooth round hole through the helpless oys ter's shell inserts its snout and licks up the delicious meat

While it is the prey of aggressive enemies, it wages a passive fight against starvation and suffocation with mussels, barnacles, jingles, aquatic vegetation, and other prolific or luxuriant organisms growing on the beds.

Freshets from the land and storms rolling in from the sea take their toll—the one by rendering the water too fresh or too muddy and the other by the force of the waves tearing up both oysters and the bottom. Even with their own species these mollusks have to contend, and numbers uncountable die in the warfare. They struggle with their kind as man struggles with man for room to grow and enough to eat; and though the struggle is passive it is relentless, and the loser, unable to run away, is starved or stifled through lack of room in which

to open its shell for food and oxygen. The oyster feeds on small particles suspended in the water, and so scattered is its food that to get its daily meal the oyster filters between 25 and 35 quarts of water through its delicate sievelike gills.

The direction in which assistance can be rendered to nature in augmenting the oyster supply is governed by local conditions, but in general it may be stated that all methods of oyster culture depend for success upon the modification of the natural conditions in such a manner as to bring about one or several of the following results:

1. An increase in the number of eggs successfully fertilized. 2. An increase in the surfaces available for fixation, and consequently an increase in the number of spat which become fixed and pass through the early stages of spat existence.

The utilization and salvage of spat, which would otherwise fall victims to the several vicissitudes of their careers—storms, frosts, crowding, and so forth.

4. A decrease in the liability to attacks from enemies.5. The utilization of otherwise neglected bottoms and food

supplies.

Upon our coasts the objects set forth above, or some of them, have been best realized by the process of "planting." This consists in placing firm bodies in the water for the purpose of catching the spat or in spreading young oysters upon the bottom in places suitable for their growth. Vast as are our oyster fields, but a small portion of the bottom available for the growth of this mollusk has been utilized by nature. This has arisen from the fact that in many cases where the other conditions are favorable the bottom is of such a character as to prevent the attachment of the young, though perfectly adapted to the rapid growth of the adults. If, then, the spat be caught on planted cultch, or partially grown oysters be placed upon such bottoms, the difficulty is overcome and nature has been assisted to the degree necessary and all or some of the conditions mentioned above are more or less completely fulfilled; the first by increasing the number of adult oysters in any region and by their closer aggregation; the second, by the process of preparing the ground and sowing the shells; the third, by the use of seed from regions less favorable to its maturing; the fourth, from the greater care with which a bed under private ownership will be watched and guarded; and the fifth, by the very act of planting upon virgin or depleted bottom.

At the present time about 46 per cent of the quantity and

65 per cent of the value of our oyster supply comes from planted grounds, the output in many of the States depending largelyin some of them entirely—upon oyster culture. In the New England States 93 per cent, in New York 86 per cent, in the Pacific States 73 per cent, and in New Jersey 35 per cent of the oyster product is derived from private beds. In most of the

southern districts natural beds are still utilized.

To show what results can be accomplished by oyster culture and how important it is to the industry, let me cite what has been accomplished in the New England States in 30 years:

Massachusetts in 1880 produced 36,000 bushels, valued at 235,000 Rhode Island in 1810 produced 163,000 bushels, valued at 1,369,000 Connecticut in 1880 produced 336,000 bushels, valued at 1,369,000 Connecticut in 1890 produced 336,000 bushels, valued at 1,369,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,893,000 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 produced 3,384,000 bushels, valued at 1,890 Connecticut in 1910 Connecticut in 191

In the New England States there is held under lease or ownership by private parties 124,737 acres of bottom for purposes of oyster culture. Of this area only a third is under actual culti-The proportion of ground cultivated to the area held is less than 9 per cent in Massachusetts, while it is 33 per cent in Connecticut and 93 per cent in Rhode Island. The reason for the low percentage in Massachusetts is due to the fact that a large part of the ground is of little value. By reason of the continued popularity of the Blue Points, Rockaways, Peconics, Shinnecocks, Smithtown, Oyster Bay, Hempstead Harbor, Manhasset and Little Neck Bay, and other Long Island oysters with their superior quality and the proximity of the New York market, the oystermen of my district are able to obtain higher prices for their products than the growers in other States.

The feature of Delaware's oyster business is the taking of seed oysters from public grounds and planting them on private beds where they grow and fatten. In Maryland only 136,000 bushels of oysters are sold in the shell while 4,000,000 gallons of opened and 10,000,000 cans of canned oysters are shipped to market. The area of largest production in the United States is in Chesapeake Bay, but the value per bushel is less than in

the Northern States.

STATISTICS OF THE OYSTER BUSINESS.

[Wherever values are given in these tables they are based on the value of the catch to the fishermen.]

Total value of the fisheries of the United States (excluding Alaska), \$54,000,000; total value of the oyster production, \$15,000,000.

From this it will be observed that nearly 30 per cent of our sea food is supplied by the oyster, a statement which I dare say will be a surprise to many.

The industry produces annually about 33,000,000 bushels of oysters, valued at \$15,000,000, employs 67,257 persons and pays

wages of \$10.876,000.

Ninety per cent of the world's supply of oysters is grown in the United States, France being the only other country which produces them in any quantity, although a few are found in Great Britain and the regions bordering on the Baltic and 'Mediterranean.

Comparative statistics of the oyster production of the United States for various years.

(Where no report was made on year mentioned, nearest year is given; production in boshels I

1 No report.

While no figures are available, the value of the scallop yield and the hard and soft shell clam output is a very considerable item, and every effort should be made to assist the men who are employed in this kindred industry.

It is five years since this report was published, during which time serious inroads have been made upon the yield, and the industry to-day is far from prosperous. In some fields the oysters have failed to fatten, and the growers unable to market their crop have not dredged the beds, hoping that the cause for the failure would disappear. Causes which have produced these results are unknown to the oystermen, and they ask the Government to send investigators into the field to study the subject.

The above data has been taken from the reports of the Bureau of Fisheries, from whose pamphlets I have freely quoted in describing the oyster.

A Sign and a Portent.

EXTENSION OF REMARKS

HON. CHARLES E. FULLER. OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 20, 1916.

Mr. FULLER. Mr. Speaker, under leave given to extend remarks in the Record, I quote from the following editorial from the Chicago Tribune of March 19, 1916:

A SIGN AND A PORTENT.

A SIGN AND A PORTENT.

If the exposure of the fraudulent measure known as the Hay bill does not bring the American people up standing, there is something rotten in this Republic.

The correspondence given out yesterday strips the Hay bill naked. Congress and the Nation now know it for a vicious sham, a brazen and outrageous fraud.

The Hay bill is dead and done for. But that is not enough. The American people will ask how in the face of their apparent will and in the midst of what is, as we all know, a crisis in our international affairs an arrant quack dare thrust his wares into the face of Congress. We demand medicine for our urgent need and we are given a bottle of muddy water.

How can that be after months of earnest discussion, after months of anxiety, and the perpetual imminence of war?

How can that be after months of earnest discussion, after months of anxiety, and the perpetual imminence of war?

The Hay bill tells the people that they are to rest secure behind a million and a quarter of trained men.

That is a criminal lie.

The Hay bill leaves the land defense of the country virtually where it is. Even its miserable increment of Regulars will not be complete for four years. It leaves untouched the chief defects of the present organization, its undermanned and underofficered companies, its system which makes waste and inefficiency inevitable. It fills pages with provisions for soldiers who are not soldiers. It provides elaborately for officers who are not officers. It ignores the lessons of the war as to men, guns, munitions, and material.

It is a monstrous pretense, and if it had been accepted by Congress and the country its unreality would have cost the Nation in its hour of trial thousands of innocent lives, defeat, and humiliation.

Desertion in the face of the enemy is a venial offense, a petty misdemeanor, compared to such a piece of legislation at such a time as this.

Desertion in the face of the chemy is a valuation at such a time as this.

The Hay bill is the crowning achievement of years of stubborn ignorance, of quack devices, of selfish shirking politics. It belongs to the shameful past which has always found us unready in time of need, unrepentant and untaught when the need was over. The folly and shallowness and incompetence which the Hay bill repeats have been written down in our annals again and again in blood and tears. In every war we have had not only to fight the foe; we have had to fight ourselves, our own criminal procrastination, our own ignorance and indifference, our own swift forgetfulness of the sanguinary lessons of our repeated experience.

Worse than any external danger is this enemy within ourselves. Our own wars have taught us nothing. The spectacle of a world in flames—is that to teach us nothing?

What of the Nation's urgent need in the midst of this clamor of folly and self-interest?

The Hay bill is worse than an insolent fraud, gentlemen of the Government and citizens of this Republic. It is a sign and a portent.

No nation can endure, no nation deserves to endure, which will condone perpetual sloth and subterfuge in the highest places of government. The United States stands to-day at the parting of the ways. It can go forward or downward. It can accept its responsibilities and its opportunities. It can turn its back upon them both. But it can not both shirk and possess. It can not lie down and yet move forward. It must require of its representatives honesty, industry, efficiency in government. It can not submit to the intolerable irresponsibility which its government is showing now in a great crisis of its history and call itself a nation fit to stand among the powers of the world.

The Nation asks for a sword and a shield to sustain the Nation's honor, to defend the Nation's life. Our armorers offer us a painted lath.

The Submarine Controversy.

EXTENSION OF REMARKS

HON.S.D. FESS,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 18, 1916.

Mr. FESS. Mr. Speaker, the recent discussion of the submarine controversy developed a state of uncertainty due most largely to a want of facts upon which to base a judgment. It brought forth charges and countercharges of the belligerents. It disclosed the attempt of our Government to induce the entente powers to agree to total disarmament of their merchant vessels. Our note to this effect was of date January 18. This note was placed in the Record by Senator Lodge February 18, and is found on page 2762. I need not therefore include it here.

On February 10 Germany announced the intention of attacking armed merchantmen without warning, and gave as reasons that the British Admiralty had given instructions to their mer-

chantmen to operate as offensively armed vessels.

On February 18 Mr. McLemore gave his reasons for pressing his resolution of warning in an extension of remarks, in which he included the Lansing note of a month before.

On February 24 Senator Stone wrote the President as fol-

THE LETTER FROM SENATOR STONE TO WHICH THE PRESIDENT'S IS A REPLY,

UNITED STATES SENATE, Washington, February 24.

THE LETTER FROM SENATOR STOKE TO WHICH THE PRESIDENT'S IS A REPLY.

UNITED STATES SENATS, Washington, February 24.

Dear Mr. President's Since Senator Kern, Mr. Floop, and I talked with you on Monday evening I am more troubled than I have been for miny day. I have not felt authorized to repeat our conversation, but I have attempted, in response to numerous inquiries from my colleagues, to state to them, within the confidence that they should observe, my general understanding of your attitude. I have stated my understanding of your attitude to be substantially as follows:

That while you would deeply regret the rejection by Great Britain of Mr. Lansing's proposal for the disarmament of merchant vessels of the allies, with the understanding that Germany and her allies would not fire upon a merchant ship if she hauled to when summoned, not attempting to escape, and that the German warships would only exercise the admitted right of visitation and capture, and would not destroy the captured ship except in circumstances that reasonably assured the safety of passengers and crew, you were of the opinion that if Great Britain and her allies rejected the proposal and insisted upon arming her merchant ships, she would be within her right under international law.

Also that you would feel disposed to allow armed vessels to be cleared from our ports. Also that you are not favorably disposed to the idea of the control of the shaded of the control of t

W. J. STONE.

On the same day the President addressed the Senator as fol-

THE PRESIDENT'S LETTER TO SENATOR STONE MADE PUBLIC FEBRUARY 24. THE WHITE HOUSE, Washington, February 24, 1916.

Washington, February 24, 1916.

My Dear Senator: I very warmly appreciate your kind and frank letter of to-day and feel that it calls for an equally frank reply.

You are right in assuming that I shall do everything in my power to keep the United States out of war. I think the country will feel no uncasiness about my course in that respect. Through many anxious months I have striven for that object, amidst difficulties more manifold than can have been apparent upon the surface, and so far I have succeeded. I do not doubt that I shall continue to succeed. The course which the central European powers have announced their intention of following in the future with regard to undersea warfare seems for the moment to threaten insuperable obstacles, but its apparent meaning is so manifestly inconsistent with explicit assurances recently given us by those powers with regard to their treatment of merchant vessels on the high seas that I must believe that explanations will presently ensue which will put a different aspect upon it. We have had no reason to question their good faith or their fidelity to their promises in the past, and I for one feel confident that we shall have none in the future.

But in any event our duty is clear. No nation, no group of pations has the stable with the course of their stable with the course of the confident was the stable with the course of the course of the course of the course of their stable with the course of the course o

But in any event our duty is clear. No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action we should, it seems to me, have in honor no choice as to what our own course should be.

For my own part I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation are involved. We covet peace, and shall preserve it at any cost but the loss of honor. To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation indeed. It would be an implicit, all but an explicit, acquiescence in the violation of the rights of mankind everywhere and of whatever nation or allegiance. It would be a deliberate abdication of our hitherto proud position as spokesmen, even amidst the turmoll of war, for the law and the right. It would make everything this Government has attempted and everything that it has achieved during this terrible struggle of nations meaningless and futile.

It is important to reflect that if in this instance we allowed expediency to take the place of principle the door would inevitably be opened to still further concessions. Once accept a single abatement of right, and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands, piece by piece. What we are contending for in this matter is of the very essence of the things that have made America a sovereign Nation. She can not yield them without conceding her own impotency as a Nation and making virtual surrender of her independent position among the nations of the world.

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office and as your sincere and devoted friend. If we should unhappily differ, we shall differ as friends; but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation.

Faithfully, yours,

WOODROW WILSON.

On the 29th the President wrote Acting Chairman Pou, of the Rules Committee:

THE WHITE HOUSE, Washington, February 29, 1916.

Washington, February 29, 1916.

My Dear Mr. Pou: Inasmuch as I learn that Mr. Henry, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen, which have recently been so much talked about, in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very earnestly commend it to their immediate attention.

Cordially and sincerely, yours,

WOODROW WILSON.

On the 2d of March the British Admiralty made public its instructions:

FULL TEXT OF BRITISH INSTRUCTIONS TO ARMED LINERS—APPROACH OF SUBMARINE TO BE DEEMED HOSTILE ACT.

LONDON, March 2.

London, March 2.

The British Admiralty to-night officially made public the admiralty orders to armed merchantmen given October 2, 1915.

The orders say that the armament of such vessels must be used solely for resisting an attack by an armed vessel and for no other purpose. As British submarines and aircraft are ordered not to approach merchantmen, the orders say the approach to a British merchantman of a submarine is to be regarded as done with a hostile intention.

The official statement reads as follows:

"In view of the recent issue by the German Government of a memorandum on the treatment of armed merchant ships, the admiralty has decided to make public the instructions actually governing the actions of British merchant vessels armed for self-defense:

"Instruction, dated 20th of October, 1915, in re the status of armed merchant ships:

"Instruction, dated 20th of October, 1915, in re the status of armed merchant ships:

"(1) The right of the crew of a merchant vessel to forcibly resist visit and search and fight in self-defense is well recognized in international law and expressly admitted by the German prize regulations in an addendum issued June, 1914, at a time when it was known that numerous merchant vessels were being armed for self-defense.

"(2) Armament is supplied solely for the purpose of resisting attack by an armed enemy vessel and must not be used for any other purpose whetsever.

whatsoever.

"(3) An armed merchant vessel, therefore, must not in any circumstances interfere with or obstruct the free passage of other merchant vessels or fishing craft, whether these are friendly, neutral, or

cumstances interfere with or obstruct the free passage of other merchant vessels or fishing craft, whether these are friendly, neutral, or hostile.

"(4) The status of a British armed merchant vessel can not be changed upon the high seas.

"Rules to be observed in the exercise of the right of self-defense:

"(1) The master or officer in command is responsible for opening and ceasing fire.

"(2) Participation in armed resistance must be confined to persons acting under the orders of the master or the officer in command.

"(3) Before opening fire the British colors must be hoisted.

"(4) Fire must not be opened or continued from a vessel which has stopped, hauled down her flag, or otherwise indicated her intention to surrender.

"(5) The expression 'armament' includes not only cannon but also rifles and machine guns in cases, where these have been supplied.

"(6) The ammunition used in rifles and machine guns must conform to article 23, Hague Convention, 1907; that is, bullet must be cased in nickel or other hard substance and must not be split or cut in such a way as to cause them to expand or set up on striking a man. The use of explosive bullets is forbidden.

"Circumstances under which armament should be employed:

"Circumstances under which armament should be employed:

"Circumstances under which armament should be employed:

"Circumstances and armament is supplied for the purpose of defense only. The object of the master should be to avoid action whenever possible.

"(2) Experience has shown that hostile submarines and aircraft have frequently attacked merchant vessels without warning. It is im-

portant, therefore, that craft of this description should not be allowed to approach to short range, at which a torpedo or bomb launched without notice would almost certainly be effective. British and allied submarines and aircraft have orders not to approach merchant vessels; consequently it may be presumed that any submarine or aircraft which deliberately approaches or pursues a merchant vessel does so with hostile intention. In such cases fire may be opened in self-defense in order to prevent the hostile craft from closing to a range at which resistance to a sudden attack with bomb or torpedo would be impossible.

"(3) An armed merchant vessel proceeding to render assistance to the crew of a vessel in distress must not seek action with any hostile craft, though if she hersed is attacked while doing so fire may be opened in self-defense.

"(4) It should be remembered that the flag is no guide to nationality. German submarines and armed merchant vessels have frequently employed the British, ailied, or neutral colors to approach undetected. Though, however, the use of disguise and false colors to escape capture is a legitimate ruse de guerre, its adoption by defensively armed merchant ships may easily lead to misconception. Such vessels, therefore, are forbidden to adopt any form of disguise which might cause them to be mistaken for neutral ships."

Admiralty comment:

"These instructions, which are those at present in force, are the latest issued. Successive Issues have been made, not by reason of a change in policy—the policy throughout has remained unaltered—but by improvement in wording and greater clearness of expression, to emphasize the purely defensive character of the armament of merchant vessels.

"It is because of the distorted interpretation given these instruc-

to emphasize the purely defease character of the mandel of the chart vessels.

"It is because of the distorted interpretation given these instructions as a whole and the very forced character of the interpretation given by the German Government to portions which they quote from an earlier issue of the instructions that the Admiralty felt it desirable, with a view to aliaying neutral anxiety, to publish these in extenso.

On the 7th of March the House tabled the warning resolution. On the 8th of March Secretary Lansing gave out the following statement and requested its publication:

I wish to deny that there is the slightest foundation for a story sent out of Washington last night by a news service and appearing in the newspapers this morning to the effect that American citizens will "receive indirect but effective warning" not to take passage on armed merchantmen. The story is false from beginning to end. Nothing I have said could be construed as having such a meaning.

About the same time the German ambassador handed Secretary Lansing the following memorandum:

The Imperial German Government, on account of the friendly relations which have aiways existed between the two great nations, and earnestly desiring to continue them, wishes to explain the U-boat question once more to the American Government.

At the outbreak of the war the German Government, acting upon the suggestion of the United States, immediately expressed its readiness to ratify the declaration of London. At that time a German prize code had already been issued, which was entirely—and without modification—based upon rules of the declaration of London. Germany thereby proved her willingness to recognize full and existing rules of international law, which insure the freedom of the sea for the legitimate trade of neutral nations not only among themselves but also with belligerent countries.

GERMANY UTILIZES NEW WEAPON.

Great Britain, on the other hand, declined to ratify the declaration of London, and after the outbreak of the war began to restrict the legitimate trade of the neutrals in order to hit Germany. The contraband provisions were systematically extended on August 5 and 20, September 21, and October 29, 1914. On November 3, 1914, the order of the British Admiralty followed, declaring the whole North Sea a war zone, in which commercial shipping would be exposed to most serious danger from mines and men-of-war. Protests from neutrals were of no avail and from that time on the freedom of neutral commerce with Germany was practically destroyed.

Under these circumstances Germany was compelled to resort, in February, 1915, to reprisals in order to fight her opponent's measures, which were absolutely contrary to international law. She chose for this purpose a new weapon, the use of which had not yet been regulated by international law, and in doing so could and did not violate any existing rules, but only took into account the peculiarity of this new weapon—the submarine boat.

NEW DANGER TO NEUTRALS.

NEW DANGER TO NEUTRALS.

The use of the submarine naturally necessitated a restriction of the free movement of neutrals and constituted a danger for them, which Germany intended to ward off by a special warning analogous to the warning England had given regarding the North Sea.

As both belligerents—Germany in her note of February 17 and Great Britain in those of February 18 and 20, 1915—claimed that their proceeding was only enacted in retailation for the violation of international law by their opponents, the American Government approached both parties for the purpose of trying to reestablish international law as it had been in force before the war. Germany was asked to adapt the use of her new weapon to the rules which had been existing for the former naval weapons, and England not to interfere with the food supplies intended for the noncombatant German population, and to admit their distribution under American supervision.

GERMANY OFFERS TO COMPLY.

Germany, on March 1, 1915, declared her willingness to comply with the proposal of the American Government, while England, on the other hand, declaned to do so. By the order in council of March 11, 1915, Great Britain abolished even what had remained of the freedom of neutral trade with Germany and her neutral neighbors. England's object was to starve Germany into submission by these illegal means. Germany, after neutral citizens had lost their lives against the wish and intention, nevertheless, in the further course of the war, complied with the wishes of the American Government regarding the use of her submarines. The rights of neutrals regarding legal trading were, in fact, nowhere limited by Germany.

Then England made it impossible for submarines to conform with the old rules of international law by arming nearly all merchantmen and by ordering the use of guns on merchant vessels for attack. Photographic reproduction of those instructions have been transmitted to neutral Governments with the memorandum of the German Government of February 8, 1916. These orders are obviously in contradiction with

the note delivered by the British ambassador in Washington to the American Government on August 25, 1914.

On account of the proposals made by the United States on January 23, 1916, regarding disarmament, the Imperial Government hoped that these facts would enable the neutral Governments to obtain the disarmament of the merchant ships of her opponents. The latter, however, continued with great energy to arm their merchantmen with guns.

SHIELDED BY AMERICANS

The principle of the United States Government not to keep their citizens off belligerent merchant ships has been used by Great Britain and her allies to arm merchant ships for offensive purposes. Under these circumstances merchantmen can easily destroy submarines, and if their attack fails still consider themselves in safety by the presence of American citizens aboard.

The order to use arms on British merchantmen was supplemented by instructions to the masters of such ships to hoist false flags and to ram U-boats. Reports on payments of premiums and bestowals of decorations to successful masters of merchantmen show the effects of these orders. England's ailies have adopted this position.

SITUATION CONFRONTING GERMANY.

Now Germany is facing the following facts:

(a) A blockade contrary to international law (compare American note to England of Nov. 5, 1915) has for one year been keeping neutral trade from German ports and is making German exports im-

neutral trade from German potes are possible.

(b) For 18 months, through the extending of contraband provisions in violation of international law (compare American note to England of Nov. 5, 1915) the overseas trade of neighboring neutral countries, so far as Germany is concerned, has been hampered.

(c) The interception of mails in violation of international law (compare American memorandum to England of Jan. 10, 1916) is meant to stop any intercourse of Germany with foreign countries.

ATTEMPT TO STARVE NATION.

(d) England, by systematically and increasingly oppressing neutral countries, following the principle of "might before right," has prevented neutral trade on land with Germany so as to complete the blockade of the central powers, intended to starve their civil popula-

tion.

(e) Germans met by our enemics on the high seas are deprived of their liberty, no matter whether they are combatants or noncombatants.

(f) Our enemies have armed their merchant vessels for offensive purposes, theoretically making it impossible to use our U-boats according to the principles set forth in the London declaration (compare American memorandum of Feb. 8, 1916).

TRADE CUT OFF BY BRITAIN.

The English White Book of January 5, 1916, on the restriction of German trade, boasts that by British measures Germany's export trade has been stopped almost entirely, whilst her imports are subject to England's will.

The Imperial Government feels confident that the people of the United States, remembering the friendly relations that for the last hundred years have existed between the two nations, will, in spite of the difficulties put into the way by our enemies, appreciate the German viewpoint as laid down above.

On the following day the British Embassy gave out a reply to the memorandum presented to the State Department by Count von Bernstorff, the German ambassador. According to the British view, the German submarine warfare was not in retaliation for anything done by the British Navy, because German submarines had torpedoed British merchantmen without warning so far back as October 26, 1914. The British Embassy also gave another version of the failure to adopt the principles of the declaration of London.

ciples of the declaration of London.

The British Embassy's statement follows:

According to the German statement, German submarine warfare was enforced on February 18, 1915, as an act of reprisal against illegal acts of Great Britain.

The Amiral Ganteaume, with 2,000 unarmed refugees on board, mostly women and children, was torpedoed and sunk by a German submarine on October 26, 1914. Two British merchant vessels were torpedoed without notice on January 30, and the British hospital ship Asturias fired at with a torpedo on February 1.

The illegal acts complained of are apparently the nonacceptance of the London convention of 1909, the enlargement of the list of contraband, the warning to merchantmen as to mines in the North Sea, and the capture of the Wilhelmina with foodstuffs on February 9.

The declaration of London of 1909 was never ratified by the British Government and was never binding on them. One of the reasons of the nonratification of the convention was the claim of the German Government as to the right to treat foodstuffs as contraband. The enlargement of the list of contraband is an acknowledged belligerent right; the warning to merchant vessels in November was due to the fact that the Germans had sown mines in the high seas, resulting in the destruction of many innocent merchant vessels, foreign as well as British. The Wilhelmina, with a cargo of foodstuffs for Hamburg, was only stopped after the German cruisers had destroyed the Dutch vessel Maria (September, 1914) and the Frye (January, 1915), which were conveying grain from California to Ireland.

The press on the day the above was published carried the following dispatch:

ASKS FOR BRITISH ORDER.

ASKS FOR BRITISH ORDER.

The United States has asked Great Britain for a copy of the confidential instructions to commanders of merchant vessels, which Germany contends prove that merchantmen, armed ostensibly for defensive purposes, have orders to act offensively against German and Austrian submarines. The request is understood to have been made to-day through Sir Cecil Spring-Rice, the British ambassador. This is the first step the United States has taken since administration officials began studying the complete memorandum, in which the German Government announced its intention to treat as warships armed merchantmen of the entente allies.

There were strong intimations to-night that an opportunity would be afforded to Great Britain to answer all the German charges and to comment upon the 20 incidents where Germany asserts that defensively

armed ships have acted offensively toward submarines of the central European powers. The inquiry to Great Britain was determined upon as a means of gaining an accurate understanding of the British position. The State Department wants to know definitely under just what instructions British sea captains are operating, so that it will be in a position to carry on future diplomatic negotiations.

The British Government already has given out for publication a copy of instructions said to have been issued to the commanders of merchantmen. The German version of the contents, as submitted to the State Department, is materially different. The State Department has no official knowledge of the British version, although officials have read with interest the press dispatches containing the instructions, as given out in London for publication.

Pending receipt of the copy of the instructions asked for, the State Department, it is said, will not consider the question of whether the British Government has violated the assurances given during the early days of the war in regard to the peaceful character which would be assumed by British merchantmen.

It is considered unlikely, too, that there will be any further negotiations on the subject with Germany until after a reply has been received from Great Britain.

To-day's press carried the following, which I submit from the New York Times:

BERLIN ATTITUDE TO U-BOAT WAR—TEXT OF GERMAN WARNING TO NEU-TRALS AND EVIDENCE BACKING IT IS GIVEN OUT—ATTACKS ON SUB-MARINES—GERMAN DETAILS OF CLASHES WITH ARMED MERCHANT SHIPS OF AILIES—INSTRUCTIONS THEY FOUND—DOCUMENTS TAKEN FROM THE ADMIRALTY TRANSPORT "WOODFIELD" MADE PUBLIC IN WASHINGTON.

WASHINGTON, March 17.

Washington.

Washington, March 17.

Frank L. Polk, Acting Secretary of State, to-day made public the official text of the memorandum issued by the German Government on February 10, which announced to the neutral powers the purpose of Germany to treat all armed enemy merchantment as beliigerents liable to attack without warning after February 29

At the same time the State Department made public for the first time the official copies of all the so-called "appendices" to the memorandum in the form of a dozen exhibits, embracing what are declared by the German Government to be secret instructions issued by the British Admiralty to British merchant ships armed for defense, advising them to use their guns against enemy submarines pursuing or approaching them. One appendix is a recital of instances in which merchant ships are alleged to have fired on German and Austrian submarines.

The alleged secret instructions covered by these exhibits are declared to have been found on the British steamer Woodfield, which was sunk by a submarine in the western Mediterranean on November 3 last and on the British is version of the Admiralty orders to armed merchantment, the full text of which was made public by the British Admiralty on March 2, and which were printed in the New York Times of March 3.

The British Admiralty's version stated that the instructions were issued on October 20, 1915; that they are those now in force, and being the latest issued take the place of previous instructions.

OFFENSIVE AND DEFENSIVE FIRE.

OFFENSIVE AND DEFENSIVE FIRE.

The German Government appears to be laying stress on paragraph 3 of the confidential instructions of February 25, 1915, and of April, 1915, which provide: "If a submarine is obviously pursuing a ship by day and it is evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo."

The instructions of April, 1915, suggest, in view of the difficulty of distinguishing between friendly and hostile submarines, that instead of British merchant vessels opening fire at long range they "retain fire until the submarine has closed to a range of, say, 800 yards, at which fire is likely to be effective."

But these earlier instructions, upon which the German Government is laying emphasis, have not been officially admitted by the British Government to be authentic, and, even if they were so recognized by Great Britain, that Government, according to the understanding here, is now governing its armed merchantmen by the instructions of October 20, 1915, the essential portion of which provides:

"It is important, therefore, that craft of this description (hostile submarines) should not be allowed to approach to short range, at which a torpedo or bomb launched without notice would almost certainly be effective. Consequently it may be presumed that any submarine or air craft which deliberately approaches or pursues a merchant vessel does so with hostile intention. In such cases fire may be opened in self-defens in order to prevent the hostile craft from closing to a range at which resistance to a sudden attack with bomb or torpedo would not be possible."

REGARD ONLY LATEST ORDER,

REGARD ONLY LATEST ORDER,

It has already been announced semiofficially by the State Department that the matter of the instructions governing British armed merchantmen will be viewed by this Government in the light of the instructions now in force, and which have superseded those issued prior to October 20. Copies of the German memorandum and of the exhibits as made public to-day have been submitted by the State Department to the British Government, and it is expected that the British foreign office soon will indicate whether these orders, alleged to have been taken from the steamer Woedfield, were issued by Great Britain.

One of the most important disclosures made by the official publication of the appendices is that the German Government indicates it is speaking not only for itself but for the Austro-Hungarian Government. This is apparent from the title at the head of Exhibit 4, which reads: "Digest of cases in which enemy merchant ships fired on German or Austro-Hungarian submarines." Until to-day it was understood outside official circles that this enumeration covered only German submarines alleged to have been attacked. But the publication of the German note and its exhibits shows that Germany enumerates Austrian as well as German submarines, and the inference is that this list was prepared after exchanges between the German and Austrian Governments.

Here is the full text of the official translation of Germany's notification to the powers on the treatment of armed enemy merchantmen:

FOREIGN OFFICE, Berlin, February 10 1916

NOTE VERBALE.

The foreign office has the benor to transmit herewith to the embassy of the United States of America three copies of a memorandum of the

Imperial German Government on the treatment of armed merchantmen, with inclosures, and to request that the embassy be good enough to bring the essential contents of the memorandum to the members of its Government by telegraph, stating at the time that the order to the German naval forces mentioned in Section IV, No. 1, of the memorandum will not be carried into effect until the 29th instant, in the interest of neutrals already on board armed merchant vessels.

Memorandum of the Imperial German Government upon the treatment of armed merchantmen.

trais already on board armed merchant vessels.

Memorandum of the Imperial German Government upon the treatment of armed merchantmen:

I. Even before the outbreak of the present war the British Government had given English shipping companies the opportunity to arm their merchant vessels with guns. On March 26, 1913, Winston Churchill, then First Lord of the Admiralty, made the declaration in the British Parliament (Exhibit 1) that the Admiralty had called upon the shipowners to arm a number of first-class liners for protection against danger menaced in certain cases by fast auxiliary cruisers of other powers; the liners were not, however, to assume the character of auxiliary cruisers themselves. The Government desired to place at the disposal of the shipowners the necessary guns, sufficient ammunition, and suitable personnel for the training of the gun crews.

II. The English shipowners have readily responded to the call of the Admiralty. Thus Sir Owen Philipps, president of the Royal Mall Steam Packet Co., was able to inform the stockholders of his company in May, 1913, that the larger steamers of the company were equipped with guns; furthermore, the British Admiralty published in January, 1914, a list, according to which 29 steamers of various English lines carried guns aft. For example, the crew are not to wear uniforms in neutral ports and thus plainly belong to the British Navy. Above all, it is shown by the instructions that these armed vessels are not to await any action of maritime war on the part of the German submarines, but are to attack them forthwith. In this respect the following regulations are particularly instructive:

(a) The instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships, Exhibits 5 and 6, provide in the section headed "Action," in paragraph 4: "It is not advisable to open fire at a range greater than 800 yards unless the enemy has already opened fire." From this it is the duty of the merchantmen.

(b) The instructions regarding sub

the submarine.

(b) The instructions regarding submarines applicable to vessels carrying a defensive armament, Exhibits 9 and 10, prescribed under No. 3: "If a submarine is obviously pursuing a ship by day and it is evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense, nothwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo." From this also the mere appearance of a submarine in the wake of a merchantman affords sufficient occasion for an armed attack.

In all these orders, which do not apply merely to the zone of maritime war around England, but are unrestricted as regards their validity, see Exhibit 12 for the Mediterranean, the greatest emphasis is laid on secrecy, plainly in order that the action of merchantmen, in absolute contradiction of international law and the British assurances, Exhibit 2, might remain concealed from the enemy as well as the neutrals.

neutrals.

III. It is thus made plain that the armed English merchantmen bave official instructions to attack the German submarines treacherously wherever they come near them; that is to say, orders to conduct relentless warfare against them. Since England's rules of maritime war are adopted by her allies without question, the proof must be taken as demonstrated in request of the armed merchantmen of the other enemy countries also.

IV. In the circumstance set forth above enemy merchantmen armed with guns no longer have any right to be considered as peaceable vessels of commerce. Therefore the German naval forces will receive orders within a short period, paying consideration to the interests of the neutrals, to treat such vessels as belligerents.

The German Government brings this status of affairs to the knowledge of the neutral powers in order that they may warn their nationals against continuing to intrust their persons or property to armed merchantmen of the powers at war with the German Empire.

APPENDICES TO THE NOTE,

The so-called appendices to the note verbale, above quoted, embrace 12 exhibits, the most interesting of which are what purport to be the secret and confidential orders issued by the British Admiralty to British merchantmen. Germany's note points out that on March 26, 1913, Winston Churchill, then First Lord of the British Admiralty, called on British shipowners to arm a number of first-class liners for detense. Churchill's statement is the first exhibit submitted by the German Government, as follows:

EXHIBIT 1.

Declaration of the First Lord of the Admiralty, Winston Churchill, at the session of the British lower house of March 26, 1913. Parliamentary debates, official report, third session of the Thirtieth Parliament, House of Commons, 1913 (Bd., 1 S., 1775 Bis., 1776):

"I turn to one aspect of trade protection which requires special reference. It was made clear at the second Hague conference and the London conference that certain of the great powers have reserved to themselves the right to convert merchant steamers into cruisers, not merely in national harbors but, if necessary, on the high seas. There is now good reason to believe that a considerable number of foreign merchant steamers may be rapidly converted into armed ships by the mounting of guns. The sea-borne trade of the world follows well-marked routes, upon nearly all of which the tonnage of the British mercantile marine largely predominates. Our food-carrying liners and vessels carrying raw material, following these trade routes, would, in certain contingencies, meet foreign vessels armed and equipped in the manner desirable. If the British ships had no armament, they would be at the mercy of any foreign liner carrying one effective gun and a few rounds of ammunition. It would be obviously absurd to meet the contingency of considerable numbers of foreign armed merchant cruisers on the high seas by building an equal number of cruisers. That would expose this country to an expenditure of money to meet a particular danger altogether disproportionate to the expense caused to any foreign power in creating that danger. Hostile cruisers, wherever they are found, will be covered and met by British ships of war, but the proper reply to an armed merchantman is another merchantman armed in her own defense.

"This is the position to which the Admiralty have felt it necessary an armed merchantman is another merchantman armed in her own defense.

"This is the position to which the Admiralty have felt it necessary to draw the attention of leading shipowners. We have felt justified in

pointing out to them the danger to life and property which would be incurred if their vessels were totally incapable of offering any defense to an attack. The shipowners have responded to the admiralty invitation with cordiality, and substantial progress has been made in the direction of meeting it by preparing a defensive measure to equip a number of first-class British liners to repel the attack of armed foreign merchant

first-class British liners to repel the attack of armed foreign merchant cruisers.

"Although these vessels have, of course, a wholly different status from that of the regularly commissioned merchant cruisers, such as those we obtain under the Cunard agreement, the admiralty have felt that the greater part of the cost of necessary equipment should not fall upon the owners, and we have decided, therefore, to lend the necessary guns, to supply ammunition, and to provide for the training of members of the ship's company to form the gun crews. The owners on their part are paying the cost of the necessary structural conversion, which is not great. The British mercantile marine will, of course, have the protection of the Royal Navy under all possible circumstances, but it is obviously impossible to guarantee individual vessels from attack when they are scattered on their voyages all over the world. No one can pretend to view these measures without regret or without hoping that the period of retrogression all over the world, which has rendered them necessary, may be succeeded by days of broader international confidence and agreement than those through which we are now passing."

Exhibit No. 2 is the text of the note delivered August 25, 1914, by Sir Cecil Spring Rice, British ambassador at Washington, to the State Department, in which he gave fullest assurances that British merchant vessels "will never be used for purposes of attack; that they are merely peaceful traders armed only for defense; that they will never fire unless first fired upon; and that they will never under any circumstances attack any vessel."

Exhibit No. 3 is the text of a memorandum delivered by the German Government to Ambassador Gerard on October 15, 1914, concerning the treatment of armed merchant vessels in neutral ports.

SHIPS ATTACKED

Exhibit No. 4 of the German appendices is a list of cases in which armed enemy merchant ships are alleged to have fired on German or Austrian submarines. It follows:

"Digest of cases in which enemy merchant ships have fired on German or Austro-Hungarian submarines.

"April 11, 1915.—Unknown steamer, South North Sea, near the Nordhinder Lightship; steamer without a flag. Steamer saw periscope, opened gunfire at about 3,000 meters and turned on U (boat). Report of shells could be heard near the boat—about 15 or 20 shots.

"April 28, 1915.—Unknown steamer of medium size, North Sea, about 60 nautical miles northeast of the mouth of the Tyne. Steamer was sighted running onward; suddenly opened fire at abou 3,000 meters without hoisting flag. On account of her head-on position it could not be seen whether she bore neutral marks. From the impact of the shots the guns were from 5 to 7 centimeters. U escaped the well-directed fire by speedily submerging.

"May 29, 1915.—English steamship Demerara, west entrance to the English Channel, near Ouessant (Ushant Island). U chased the steamer and tried when 4,500 meters off to bring her to a halt by firing warning guns. Steamer turned off and returned the fire.

"June 3, 1915.—Unknown steamer, west entrance to the English Channel, 50 nautical miles south of the Scilly Isles. U tried to bring the steamer returned the fire with a poop gun.

"June 14, 1915.—Two unknown steamers, west of the Hebrides (about 30 nautical miles off Lewis). The two steamers were running close together, at about 4,000 meters; both opened fire on U with small-caliber poop guns. Shots hit sideways very bad. Speedy submerging, running deep; so submarine attack hopeless.

"August 14, 1915.—Large English steamer of the Royal Mail Line, Irish Sea. U was fired on suddenly by the steamer were running close together, at about 4,000 meters. Shots fell short. No attack was attempted on the steamer.

"August 18, 1915.—Unknown steamer, Bristol Channel. Tried to bring steamer to halt by gunfire, after warning. When

promenade deck.

"September 10, 1915.—Unknown steamer, western Mediterranean. Steamer was challenged to show her flag. She turned away without hoisting the flag and opened fire with a 10-centimeter poop gun on the U boat, which escaped the firing by speedily submerging.

"October 7, 1915.—French steamship Amiral Hametin, middle Mediterranean. U signaled the steamer to stop. She turned away and ran on a zigzag course. The U boat tried to bring the steamer to a halt by artillery fire. When about 3,000 meters distant she returned the fire. It was some time before the steamer stopped. She was sunk later.

the fire. It was some time before the steamer stopped. She was sunk later.

"November 3.—English transport steamer Woodfield, western Mediterranean. The steamer did not stop at the warning gun. At a distance of 6,000 meters she returned the fire with a small gun. She was forced to stop by artillery fire, and her crew list showed that the steamer carried gunners and enlisted men of the navy as members of her crew.

"November 5.—Unknown steamer, western Mediterranean. A large steamer was chased by U boat after being challenged in vain. The steamer returned the fire with a large gun. The chase had to be given up.

steamer returned the fire with a large gun. The chase had to be given up.

"November 6.—Eastern Mediterranean, English tank steamer Lumina. The steamer was challenged to stop by a warning gun. She turned about, ran away, and returned the fire with a poop gun. She was compelled to stop by artillery fire, and later was sunk.

"November 11.—English steamship City of Marseilles, western Mediterranean. U boat after warning tried to stop a large freight steamer by artillery fire. The steamer turned away and returned the fire with two guns of about 10 centimeters. The U boat had to give up the chase; the steamer got away. A press telegram of January 1, 1916, from Bombay told the incident in detail. The steamer claimed she had sunk the U boat.

"November 30.—Unknown steamer, middle Mediterranean. U boat after a warning gun tried to stop a large steamer by artillery fire. The steamer turned away and returned the fire with a small gun.

"December 8.—Unknown steamer, eastern Mediterranean. The steamer was approached under water. She fired with a poop gun on the periscope as soon as it emerged.

"December 13.—Unknown English steamer, middle Mediterranean. U boat tried to stop by artillery fire a large steamer, with poop guns,

that showed no flag. The steamer hoisted the English flag and returned the fire with two guns.

"December 14.—Unknown steamer, middle Mediterranean. U boat approached the steamer, which stopped at sight of the boat, and ordered her to show her flag. The steamer speeded away, keeping up a brisk fire from a poop gun.

"January 17. 1916.—Unknown steamer, middle Mediterranean. U boat ordered steamer, apparently in ballast, that was sighted on a westerly course to stop. The steamer turned about, ran away, and fired with a poop gun.

"January 17.—English steamer Melanic, middle Mediterranean. U boat signaled a flush-decked freight steamer, with raised forecastle and cabin, of about 3,000 tons, sailing under the Dutch flag, to send a boat and have the ship's papers examined. This was done after awhile. As U boat, which for safety's sake had gone under, came to the surface about 1,000 meters away from the steamer near the ship's boat, the steamer opened fire with two guns of medium caliber and machine guns so briskly that the U boat barely saved herself by speedly submerging. Throughout the action the steamer displayed the Dutch flag. She bore the name of Melanie, which is found not in the Dutch but the English marine list."

BRITISH ORDER TO MERCHANTMEN

Exhibit No. 5 is what purports to be the text of confidential instructions to British defensively armed merchantmen regarding the use of their armament. These instructions are declared to have been found on the British steamer Woodfield and are given as follows:

"CONFIDENTIAL.

"Instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships,

" GENERAL.

"1. Ratings embarked as gun's crew will sign the ship's articles at the rate of pay communicated.

"2. They are to obey the orders of the master and officers of the ship. If they think it necessary to make a complaint against any order, they are to obey the order and make their complaint in writing, asking that it may be forwarded to the proper authorities.

"3. The ratings are not required for duties unconnected with the armament, except in case of emergency, but they are to assist at all times in the welfare of the ship and look after the cleanliness of their berths.

"4. They are to keep watch and watch at sea and also when the ship is anchored in any place liable to attack by submarines.

"5. They will receive their pay through the master of the ship. They will not mess with the crew, but in one of the officers' messes, as the master may decide.

"6. Uniform is not to be worn in neutral ports.

"7. A brief report is to be rendered by the senior rating on the first of each month, countersigned by the master, and sent to the Director of Trade Division, Admiralty, Whitehall, S. W.

"DRILL AND MAINTENANCE OF GUN.

"DRILL AND MAINTENANCE OF GUN.

"BRILL AND MAINTENANCE OF GUN.

"8. The ratings embarked are entirely responsible for the efficiency in all respects of the gun and ammunition, which should be ready day and night.

"9. The senior rating is to arrange with the master to detail the necessary additional men to complete the gun's crew up to the numbers required by the drill book.

"10. One of the ratings is to act as gun layer and the other as breech worker. The remaining numbers should be told off to act as sight setter, projectile loader, and cartridge loader, etc.

"11. Arrangements are to be made with the master to detail a sufficient number of hands, over and above the gun's crew, to supply ammunition to the gun on going into action.

"12. A ready supply of 10 complete rounds, with percussion tubes in the cartridges, is to be kept at the gun day and night. Care should be taken that a supply of one percussion tubes to each cartridge is kept aside for action, and this supply of tubes is never to be encroached on for practice firing.

"13. The senior rating should arrange with the master for the instruction of the ratings told off as gun's crew and ammunition supply party.

"14. A drill book is supplied for information, but it is not necessary.

"13. The senior rating should arrange with a supply party.

"14. A drill book is supplied for information, but it is not necessary that the gun's crew should be burdened with details, provided that they understand what is required when the gun is to be fought.

"15. Percussion firing should always be used, as it is the most certain means of discharging the gun; and, therefore—

"(a) Cartridges in ready supply only should be kept ready tubed with percussion tubes. Tubes not required for ready supply of cartridges should be retained in their sealed boxes to preserve them from damp.

"(b) Alming practice with a percussion lanyard should be carried out daily. It is not necessary to fire a tube in this practice, but the breech worker should be exercised at the same time in cocking the striker while the breech is open and in hooking on the firing lanyard and passing it to the gun layer.

"NOTE.

"The present allowance of percussion tubes is one per cartridge. Electric firing mechanism and batteries are therefore to be kept efficient in every respect, in case the supply of percussion tubes becomes insufficient from damp or other causes.

"16. Great attention is to be paid to the ready supply of ammunition, to keep it clean and dry. If tubes and cartridges are not kept dry there is considerable danger of hanging fire. The projectiles are to be lightly olled. In case the cartridges are suspected to have become wet, they should be laid aside until return to harbor.

"17. For the maintenance of the gun and mounting, it is to be borne in mind that 'lubrication is the secret of efficiency in gun machinery.' All oll channels should be seen clear of vascline and filled with oll. It is to be remembered that vascline is a preservative only; oll is a lubricant.

"Each morning and evening the bore is to be seen clear, recoil cylinders filled, striker protrusion gauged, and the gun trained and elevated to both extremes.

"The gun is to be cleaned twice a day, gear being supplied by the master."

master. "Brick dust is not to be used on machined surfaces.

"ACTION.

"The master is responsible for handling the ship and for opening and asing fire. He has been furnished with instructions which will enable

him to do this to the best advantage. The duty of the gun's crew is to fire the gun under the general direction of the master, who will communicate to them so much of the instructions as he may consider necessary to enable them to fire the gun to the best advantage.

"In action the following instructions should be carried out:

"I. When in submarine waters everything should be in a state of readiness, but the gun should not be kept actually loaded.

"2. When the enemy is engaged:

"(a) The point of aim should be the center of the water line.

"(b) It is to be remembered that 'over' shots are useless. A short shot by causing a splash confuses the enemy. It may ricochet into the enemy. If the shell bursts on striking the water—as it usually does—some fragments are likely to hit the enemy. To get the best results at least half of the shots fired should fall short.

"3. The master will probably keep the submarine astern, so that little defection will be necessary.

"4. It is not advisable to open fire at a range greater than 800 yards, unless the enemy has already opened fire, for the following reasons:

"(a) The ammunition supply is limited.

"(b) Accurate shooting under probable existing conditions can not be expected at greater range.

"5. When in action and a missire occurs with a percussion tube the following procedure is to be adopted.

"(a) The 18 M. leyer is to be tapped to insure it is closed.

"(b) The striker is to be recocked.

"11 the gun does not then fire the striker is to be taken out to insure that the point is not broken. If unbroken, the breech is to be opened and the cartridge is to be thrown overboard, it having been ascertained that the percussion tube has been inserted.

"The gun is then to be reloaded.

"The gun is then to be reloaded.

"INSTRUCTIONS FOR CARRYING OUT FIRING PRACTICE.

"1. In order to insure that the gun is maintained in an efficient condition one round is to be fired every two months.

"2. In order to prevent false alarms it is essential that the firing referred to in paragraph 1 shall take place in clear weather and out of sight of tand and or other ships.

"3. If convenient a cask or other suitable object should be dropped as a target, and the gun should be fired when the range is about 600 paragraphs."

"4. The gun's crew and ammunition-supply party should be exercised on the day previous to the practice, and also immediately before

firing.

5. Before practice firing the following procedure is to be carried

(a) Recoil cytinders and tanks are to be seen filled.

"(b) Bore is to be seen clear.
"(c) Movable objects in the way of blast from the gun are to be

"(c) Movable objects in the way of blast from the gun are to be removed.

"(d) The striker is to be reexamined to see (1) that sheet net is screwed up and keep pin in place and intact; (2) that needle set and check nuts are screwed up; (3) that striker does not protrude with B. M. lever in open position: (4) that striker does not move forward till marks on breechbleck and gun are in line; (5) that safety step is correct and keep screw is in place.

"ADMIRALTY.

"ADMIRALTY.

" MAY 7, 1915."

INSTRUCTIONS TO SHIP MASTERS.

Exhibit No. 6 gives the text of a separate set of confidential British instructions for guidance in the use of armament on defensively armed merchantmen, said to have been found on the steamer Woodfield, and is similar to the secret instructions given in Exhibit No. 5, except that the instructions described as Exhibit No. 6 appears to be a reprint of the instructions described as Exhibit No. 5, with several slight technical rules concerning the guns.

Exhibit No. 7 embraces brief supplementary instructions of a confidential nature, also said to have been found on the steamer Woodfield, as follows:

dential nature, also said to have been found on the steamer Woodfield, as follows:

"Confidential addends to instructions for guidance in the use, care, and maintenance of armament in defensively armed merchant ships:

"I. The master should arrange, wherever possible, that the space in the immediate vicinity of the gun 's railed off, and passengers and other unauthorized persons should not be allowed near the gun.

"2. A notice to this effect should be posted up near the gun.

"3. When the ship is in harbor one of the two ratings is always to be on board to keep guard on the gun and ammunition, and the master is to use his discretion as to keeping both ratings on board should he consider such a course to be desirable.

"4. The gun is to be kept covered at all times when not in use.

"5. Whenever the ships anchor in the vicinity of a man-of-war a request should be made to the commanding officer of the man-of-war for an armorer to inspect the gun and mounting.

"Admiralty.

" MAY 27, 1915."

LEAF FROM DRILL BOOK.

Exhibit No. 8 is a facsimile of the title page of the "Drill book for 12-pounder quick-fire guns, issued to defensively armed merchant ships, issued by the gunnery branch of the British Admiraity in May, 1915." This book is alleged to nave been found on the steamer Woodfeld.

Exhibit No. 9 is a copy of secret instructions No. 45 regarding submarines, applicable to vessels carrying a defensive armament, issued by the British Admiratty on February 25, 1915, and also found on the steamer Woodfeld. It follows:

" CONFIDENTIAL-NO. 45.

"In no circumstances is this paper to be allowed to fail into the hands of the enemy.

"This paper is for the master's personal information. It is not to be copied, and when not actually in use is to be kept in safety in a place where it can be destroyed at a moment's notice.

"Such portions as call for immediate action may be communicated probably to the effective present."

verbally to the officers concerned.

" FEBRUARY 25, 1915.

"Instructions regarding submarines applicable to vessels carrying a defensive armament:

"1. Defensively armed vessels should follow generally the instructions for ordinary merchant ships.

"2. In submarine waters guns should be kept in instant readiness.

"3. If a submarine is obviously pursuing a ship by day and it is

evident to the master that she has hostile intentions, the ship pursued should open fire in self-defense, notwithstanding the submarine may not have committed a definite hostile act, such as firing a gun or torpedo.

"4. In view of the great difficulty in distinguishing a friend from an enemy at night, fire should not be opened after dark unless it is absolutely certain that the vessel fired at is hostile.

"5. Before opening fire the British colors should be holsted.

"It is essential that fire should not be opened under neutral colors."

FURTHER RULES FOR ATTACKS.

Exhibit 10 is a copy of British secret instructions No. 291, and is similar to and repeats instructions No. 45, printed above, with the addition of the following instructions:

" CONFIDENTIAL-NO. 291.

In no circumstances is this paper to be allowed to fall into the hands

"This paper is for the master's personal information. It is not to be copied, and when not actually in use is to be kept in safety in a place where it can be destroyed at a moment's notice. Such portions as call for immediate action may be communicated verbally to the officers

"APRIL. 1915.

"April, 1915.

"Instructions regarding submarines applicable to vessels carrying a defensive armament.

"6. If a defensively armed vessel is pursued by a submarine, the master has two alternatives:

"a. To open fire at long range immediately it is certain that the submarine is really in pursuit.

"b. To retain fire until the submarine has closed to a range, say 800 yards, at which fire is likely to be effective.

"In view of the very great difficulty of distinguishing between friendly and hostile submarines at long range (one British submarine has already been fired at by a merchant vessel which erroneously supposed herself to be pursued by the submarine) it is strongly recommended that course b should be adopted by all defensively armed ships.

"7. A submarine's hag is no guide to her nationality, as German submarines frequently fly British colors.

"8. Vessels carrying a defensive armament and proceeding to neutral ports must not be painted in neutral colors or wear a neutral flag.

"9. It is recommended that in neutral ports, particularly those of Spain, the armament should be concealed as far as possible. A canvas cover is recommended for this purpose."

ORDERS TO TROOP TRANSPORTS.

Exhibit No. 11 purports to be the text of secret instructions to masters of transports carrying troops, issued by the British Admiralty, May 31, 1915, and found on the steamer Woodfield. The document

" SECRET.

"SECRET.

"Memorandum for issue to masters of transports carrying troops.

"Use of ride and machine-gun fire by troops on board transports against enemy submarines or torpedo crafts.

"I. In daylight a submarine will probably attack while submerged, with only her periscope showing.

"At night, in moonlight, a submarine may attack while on the surface, or with only her conning tower above water, owing to the difficulty of seeing through the periscope at night.

"2. In either case heavy ride or machine-gun fire will make it more difficult for a submarine to make a successful shot with a torpedo. If submerged, no injury will be done to her, but a good volume of fire falling just short of the periscope will make spiashes which will render it difficult for the observer to see clearly through the periscope.

"3. When a destroyer escort is accompanying a transport troops should not open fire on a submarine, as it may prevent a destroyer from ramming her, nor should their weapons be loaded, in order to avoid the possibility of an escorting vessel being fired on by mistake, especially at night.

possibility of an escorting vessel being fired on by mistake, especially at night.

"4. When no escort is provided machine guns should be in readiness to open fire, and a strong party of riflemen should also be on duty.

"5. Military officers should be in command both of the machine guns and riflemen to control the fire.

"6. A military officer of the watch should be in command of the troops on deck. He should not order fire to be opened on a hostile submarine or torpedo vessel without the previous assent of the master or his representative—the ship's officer of the watch.

"7. The object of those controlling the fire should be to keep the center of the pattern just short of the hostile vessel.

"8. Machine-gun tripods can be lashed to the rails or other deck fittings. If there is motion on the ship and machine guns are fitted with elevating or training gear, it is advisable to disconnect it and point (he gun by hand.

elevating or training gear, it is advisable to disconnect it and point the gun by hand.

"9. Feid guns with recoil mountings might possibly be secured on deck in such a manner as to permit of their being fired, but their arc of training would be very restricted, and it is unlikely that gun layers, without previous training affoat, could make satisfactory practice from a ship with motion on. Their use is not, therefore, recommended.

"10. In men-of-war it has been the practice for many years to station sentries with ball cartridge on deck opposite the boats in the event of collision or other serious emergency lakely to the boats being required. Their duties are to prevent anyone getting into the boats or attempting to lower the boats without orders from the captain or his representatives. This practice should be followed in transports.

"Admiral.TY.

"31st May, 1915."

The last of the appendices, Exhibit No. 12, purports to be instructions to British merchant vessels in the Mediterranean, alleged to have been found on the English steamer Linkmoor. It follows:

"ADMIRALTY SUPERINTENDENT'S OFFICE, "Malta, June, 1915.

"Instructions to British merchant vessels passing through the Medi-

terranean Sea.

"It is now certain that there are enemies' submarines at sea in the

Mediterranean.

"In order to avoid attack you are to keep out of the track of shipping,
"You are to darken ship at night and are not to show navigation
lights except at discretion to avoid collision, and all lights are to be
extinguished when necessity is passed
"You are to carry out the procedure recommended by the Admiraity
in their printed instructions if a hostile submarine is sighted."

Democratic Exploits.

EXTENSION OF REMARKS

HON. WILLIAM S. GREENE,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 20, 1916.

Mr. GREENE of Massachusetts. Mr. Speaker, under the leave granted me to extend my remarks in the Record, I include a speech delivered by Senator Henry Cabor Lodge, of Massachusetts, before the Republican Club of Lynn, Mass., March 16, 1916.

The speech is as follows:

SPEECH OF HENRY CABOT LODGE, OF MASSACHUSETTS, BEFORE THE REPUB-LICAN CLUB OF LYNN, MASS., MARCH 16, 1916.

In every campaign it is usual to dwell upon the importance of the issues involved, and it is true that all elections which determine the policy of the United States are important in a high degree; but, weighing my words, I say with deliberation that since 1864 there has been no election comparable in its meaning and its results to that now before us. This is due to two facts—the unparalleled condition of the civilized world owing to the war in Europe and the conduct of the Democratic administration which came into power on the 4th of March, 1913. In my opinion, since the foundation of the Government, with the exception of the administration of Buchanan, there has been no administration in power which has been so injurious to the United States, both at home and abroad, as that now in control at Washington.

They began with the destruction of the protective tariff. shall not argue the question of protection or free trade; it is enough to point to results. They left our producers open to a destructive competition, and the consequences of this action were seen before the 1st of August, 1914, in languishing industries, diminished employment, lowered revenues, and increased taxation. The European war had two effects: One was that it acted like a prohibitory tariff, by largely stopping imports from Europe; the other was that the demand of Europe stimulated abnormally certain great industries and brought to the country large sums of money for their products. Despite the protection which the war afforded, other industries upon which the war caused no demand still remained dull and languishing, and they have made no preparation to meet the destructive and abnormally low-priced competition which will come with the end of But the Democratic Party did more than simply overthrow the protective policy; they altered our entire system of

By the Constitution of the United States the great source of revenue to be found in duties on imports was reserved to the General Government alone, and it was the policy of the framers of the Constitution and the founders of the Government to use duties on imports as the normal source for the national reve-The fields of direct taxation, except for the excise on liquors and tobacco, was left to the States, and it was tacitly understood that this field was not to be invaded by the General Government except in times of stress. In a period of profound peace the Democratic Party threw away a large part of the revenues to be derived from duties on imports, thus abandoning the field reserved exclusively to the United States, and deliberately substituted direct taxes, in this way crippling the resources of the States and increasing the burdens upon the people. They announced that their purpose was to have the taxes paid by the rich; but all taxes in the end are distributed among all the people, and you will find, if you will inquire into it, that the true object was to take money from the North and spend it in the South, the sure outcome of a party under sec-Yet, with all their new taxes and all the fresh burdens which they have placed upon us, they present us with a deficit in the Treasury and with Government expenditures larger than any ever known under a Republican administration. This has nothing to do with additional appropriations for national defense, because those appropriations have not yet It is due to reckless extravagance in directions intended to produce sectional benefits and supply a living for needy and deserving Democrats. What promises of theirs in this department of public affairs have they kept? They prom-ised to lower the cost of living by tariff changes. It was a false pended at any time under Republican rule. They have thrown away the best sources of national revenue and have increased the burdens of the States by entering the fields of taxation which ought to be reserved to the States alone. It is a melancholy picture of broken promises and disastrous results.

It would be impossible for me to trace even in outline what they have done in other fields of domestic legislation, but it has all proceeded on the one general principle of punishing any man who is successful in business. They have framed their policies in such a way as to impose a penalty upon everyone who wins an honest business success and they have treated business success as if it was a crime. It is one thing to prosecute those who do wrong in the management of great business enterprises, but it is a very different thing and a very pernicious thing to prosecute all success in business, no matter how honest and how well deserved.

I shall not attempt to follow any further Democratic exploits in the field of domestic legislation, accomplished or proposed. If I should attempt even in the barest outline to review their trust legislation, their ship-purchase bill, their raids upon the civil service, their administrative shortcomings, I should occupy hours where I have only minutes which I wish to devote to a subject far graver than anything involved in what the Democrats are pleased to call their domestic policies. We must pass beyond our own borders if we would understand the evils which have been wrought by the present administration and the humiliations to which they have subjected and the dangers to which they have exposed this country. It is not altogether easy to follow them in all the turns and twists and gyrations which have characterized this administration in our foreign relations. The President, it is true, has said that he has a single-track mind, but it is a track interspersed with so many turntables that it is not always easy to find out the direction in which the mind is running. For example, the Democratic Party, as a party, set itself firmly against continuing the policy which had worked so well with San Domingo, and one of the first acts of the administration was to recall the Nicaraguan treaty pending in the Senate when they came into power. took to deal with the Nicaraguan situation, and back came the treaty with Nicaragua made under the Taft administration, in not quite so good a form. It has just been ratified with the whole force of the administration behind it.

A little more than a year ago the President declared that there was no need of any increase in the national defenses and sneered at those who urged it as nervous and excited, but as the months passed it became apparent that there was a large body of voters interested in the question of the national defense. Now, this administration does not seek information and is indifferent to argument and reason, but it is extremely sensitive to votes. Its taxes are laid solely on the basis of votes, which are not a recognized economic principle. The votes began to look ominous on the question of national defense; the turntable suddenly operated; national defense became a leading policy and was made the principal subject of the President's message to It is true that the plans which be suggested proved on analysis to be partly shams and wholly inadequate, but there could be no doubt of the presidential zeal for the appearance, at least, of an earnest desire to increase the national defenses. enthusiastic did he become that, reversing the action of young Lochinvar, he went out into the West, like the three fishers in Kingsley's poem, and poured forth a torrent of generalities as to our national dangers and the need of arming, and declared, although he had sneered at the whole proposition a year before, that we must have "incomparably the best Navy in the world," larger even than England's. One whole precious year had been wasted and now, despite this outpouring of language in favor of increasing the national defense, nothing so far has been accomplished, and it is to be feared that in the end little will be done. These are but examples of the reversals of policy which have now grown so frequent that they dazzle the eyes like the rapid

twirlings of a dancing Dervish.

Let us now come to the most important question—our foreign relations. On this subject I feel that I have the right to speak and frankly to criticize, for I have never allowed politics or party feeling to influence my action in regard to our intenational relations. Mr. Cleveland had my earnest support in his action in the Venezuelan question, and on more than one occasion I found myself obliged, with great reluctance, to oppose treaties negotiated by Presidents of my own party.

needy and deserving Democrats. What promises of theirs in this department of public affairs have they kept? They promised to lower the cost of living by tariff changes. It was a false promise when it was made, and the cost of living is higher than ever. They promised to put an end to Republican extravation against the embargo, where there will be, I trust, no wavering. Very recently I came most heartily to his supported and helped to pass his treaties with Nicaragua and Haiti. I have supported him in his absolutely right position against the embargo, where there will be, I trust, no wavering. Very recently I came most heartily to his support when he took the position, which I have always held and advo-

cated, that American rights must not be abridged by foreign nations; that peace must not be bought by dishonor; and that he would not accept the public proclamation of national cowardice by warning Americans not to exercise their undoubted right because we would not protect them it they did. How long he will adhere to the proposition laid down in the letter to Senator Stone I do not know, but if he changes I shall not. These principles I have held all my life. They are nearest to my heart, and I will stand with and sustain any American of any party who asserts and defends them. Therefore in what I am about to say I speak as an American, and I have the right to criticize and attack what is wrong, as I have defended and supported what I believed to be right, without regard to party.

There, to begin with, is Mexico. What a tragic spectacle! And the responsibility for the conditions in Mexico rests largely on the Government of the United States. The present administration found Mexico and Mexican relations in a bad condition. They have made these bad conditions infinitely worse. They found a de facto government, under Gen. Huerta, in control of the capital and supported by the great bulk of the Mexican population, although not in control of certain large areas of the Re-The President, for some reason, took a personal dislike to Gen. Huerta, on good grounds, possibly; but personal dislikes have no place in diplomacy or international relations. There were good international grounds on which he could have withheld recognition from the Huerta government, but there is a very great difference between refusing recognition and active intervention. Huerta would not depose himself, as the President requested him to do, and so the President determined to intervene and put him out. It is wholly proper to refuse to recognize a government in another country, but it is direct intervention to say that you will not recognize a government because a particular man is at the

The expedition was sent to Vera Cruz nominally to secure a salute to the flag, which has never been given, and haste was urged in order to prevent the landing of a cargo of arms from a German vessel for the Huerta government, which were in due time delivered to that government. Nineteen American sailors and marines were killed and a hundred wounded in taking Vera Cruz, and several hundred Mexicans were killed or wounded. It was war against Gen. Huerta, a successful war, for at the same time we raised the embargo and allowed the opponents of Gen. Huerta to import arms from the United Gen. Huerta was driven from power, and the President's war against Gen. Huerta culminated in complete victory by the imprisonment of Huerta in a Texas jail and his death in consequence. The result in Mexico was the destruction of the only government that offered any prospect of order or peace or responsibility. The murderers and bandits favored by the administration in preference to Gen. Huerta, who was also a murderer, have been desolating the country and fighting among themselves ever since. Property has been almost entirely destroyed; industry is at a standstill; the people in many parts of Mexico are starving, and there is no end to it yet, But out of this miserable tragedy of Mexico one thing arises and commands our attention above all others. Americans have been murdered in Mexico; soldiers wearing the American uniform have been shot on the soil of the United States. The administration admits that there have been 112 such murders since they came into power. There were a good many before that time, and there are a good many not included in their Is is, I believe, speaking within bounds to say that some 400 Americans have been killed in Mexico. If you add those who fell at Vera Cruz you will find that more American lives have been lost in Mexico than were lost in the Spanish War, under the operations of the President whose great glory is proclaimed to be that he has kept the peace.

Turn now to the awful struggle in Europe which has continued for nearly two years. What has been the course of the administration there? Out of their own mouths let us judge them. On the 21st of October, 1915, the Secretary of State, in a note to the British Government, speaking, of course, in the name of the President, said:

name of the President, said:

* * * It is of the highest importance to neutrals not only of the present day but of the future that the principles of international right be maintained unimpaired.

This task of championing the integrity of neutral rights, which have received the sanction of the civilized world against the lawless conduct of belligerents arising out of the bitterness of the great conflict which is now wasting the countries of Europe, the United States unhesitatingly assumes, and to the accomplishment of that task it will devote its energies, exercising always that impartiality which from the outbreak of the war it has sought to exercise in its relations with the warring nations.

Brave words! You will find no lack of bold language in dispatches to the British Government, where there is nothing

at issue but trade and dollars, where the administration thinks that votes may be gained and none lost, and where they feel assured there is little danger of war. But in the sentences I have quoted I would have you mark that they say that "the principles of international right be maintained unimpaired." They do not confine the language to trade. They then go on, as you will have noticed, to say that "this task of championing the integrity of neutral rights the United States unhesitatingly assumes." Let us, I say, take their own words and see how they have been fulfilled. The neutral rights of Belgium, guaranteed by a convention of The Hague, to which we had put our name, were shamefully disregarded. Where was the "championship of neutral rights which we unhesitatingly assumed" then? or heatrar rights which we unnestratingly assumed their We were the great neutral power but we made no attempt to unite under our leadership all the neutral powers of Europe and America in defense of neutral rights. Such a league would have had a powerful influence and prevented some of the horrors of the war and saved us from some of the difficult and dangerous controversies which now menace us.

At the very outset of the war the open ocean, the pathway of all the nations, was in the North Sea and elsewhere strewn with contact mines, a flagrant infraction of the freedom of the seas of which some people have been prating, a flagrant infraction of neutral rights, because the contact mine does not distinguish between the neutral and the belligerent, between the innocent and the guilty. Where was the "championship of neutral rights which we unhesitatingly assumed" in October, 1915; where, oh, where? Echo answers "where," and silence follows. American citizens have the right, established by centuries, to take passage and to ship their goods on belligerent merchantmen in time of war and under the rules which humanity has dictated, and to which all nations have assented for centuries if captured by an enemy ship they are to be guarded and set free at the first opportunity. More than a hundred American men, women, and children, rightfully on board the Lusitania, an unarmed merchantman, were sent to their death without warning, without notice, without visitation or search, and nothing has yet been done except to pour out words and carry on inconclusive negotiations for eight months. Not until February 25, when the President's note to Senator Stone appeared, was any real step taken to protect Americans in their rights, and that step which the President then took in words boldly and clearly, but in words alone, came only because his own party in the House were clamoring for the public surrender of American rights in order to conciliate one belligerent and its voters. The Democratic Party showed itself to be worse than its own administration. There is, it would seem, a point of humiliation at which the President stops, definitely, I trust, firmly I hope. There is no such point apparently to be found in the action of the party to which he belongs. The Lusitania, alas, is not the only case. The Arabic and the Ancona are still fresh in our minds, and there are many others which might be mentioned and as to which no action has been taken.

It is well to remember, when we talk of neutrality, that there are neutral duties, like the refusal to commit a grossly unneutral act, such as the adoption of an embargo would be, as well as neutral rights. The duties should be fulfilled; the rights should be insisted upon and enforced. It is only of the rights that I am speaking here to-night. What I charge is that the rights of American citizens have been absolutely neglected and protection denied to them. The Americans robbed and slain in Mexico were entitled to our protection both for their property and their lives. They have had none. Only a few weeks ago 17 men who had gone back to peaceful occupations in Mexico on the invitation of an officer of the so-called government which Mr. Wilson has recognized were taken from a train and brutally murdered. Has anything been done about that? Nothing except to pass it by and hope that in the rush of events it will be forgotten. Within a week Mexicans have invaded the United States, attacked an American town, and killed American citizens and American soldiers. This is the inevitable result of our failure to protect Americans in their rights everywhere by land and sen. I say to you, my fellow citizens, that those dead lie at our doors. As for the dead of the Lusitania and the Arabic and the Ancona and the rest, we have not had even the poor reparation of an apology, for I will not speak of money in connection with our dead. Nothing like it has ever happened before in the history of the United States, and when we change the Government, as we shall change it on the 4th of next March, nothing like it, I believe, will ever happen again.

We are told that the great cry of the Democratic Party is to be that their President has kept the peace, and that they welcome the issue which we have made. The virtue of keeping the

peace depends altogether on how it is kept. The man who runs away and leaves his wife or daughter or sister to be assaulted and outraged keeps the peace, and is not worthy to cumber the earth. You can always keep the peace if you will submit to any wrong, to any outrage, to any oppression. The peace of this country would have been far better kept, we should be in far less danger of war to-day or of war when peace comes among the warring nations of Europe, if we had kept it without humiliation, kept it in honor and without fear. Humiliation and neglect of the rights of the American citizen are not necessary for keeping the peace. We all want peace, we all are against war if it can possibly be avoided; but we shall insist, we Republicans at least, that American rights shall be protected at home and abroad, in Mexico, and on the seas. The citizen owes allegiance, owes every sacrifice, even the sacrifice of life, to his country; and the country owes to him, while he obeys her laws, protection in every right that he possesses. The President has protection in every right that he possesses. The President has kept the peace, we are told, but until the letter of February 25 at what a sacrifice and humiliation! The peace could have been kept in such a way that it would have been

Proud to meet a people proud With eyes that tell of triumph tasted,

But the question that the generations yet to come will ask of us is not whether we have kept the peace, because that can be done very meanly and very humiliatingly. What they will ask of us, and what we have a right to ask to-day, is not merely whether we have kept the peace but whether we have kept the faith. Our children will demand, Have you kept the faith of the men who began at Concord Bridge and ended at Yorktown; of the men who stood behind the stone wall at Gettysburg; or have you sacrificed the principles in which they believed in order that you might have "safety first" and a peace which might have been maintained with honor, but which has been clouded and darkened by humiliation and surrender? Let us forever dismiss from our minds the idea that the Nation's life depends on the preservation of our individual lives. The life of a nation lies in its ideals. If it abandons its ideals of humanity and justice, if it casts aside its principles, if it becomes tributary and subject, then the nation is dead even if its citizens live on in a country whence honor, hope, and aspiration have fied. Let it not be said of us by our children that our motto was:

Down with honor, Down with right, Down with the flag; Toe proud to fight.

See to it that our children and our children's children shall be able to say of us, even as we say of the men of the Revolution and of the Civil War:

They fought the good fight, They kept the faith.

National Legislation and Its Bearing on the Future Growth and Development of this Country.

EXTENSION OF REMARKS

HON. CHARLES C. KEARNS,

IN THE HOUSE OF REPRESENTATIVES, Monday, March 20, 1916.

Mr. KEARNS. Mr. Speaker, under the leave granted to me to extend my remarks in the Record I include a speech made by my colleague Mr. McCulloch on the 12th of February last. The speech is as follows:

NATIONAL LEGISLATION AND ITS BEARING ON THE FUTURE GROWTH AND DEVELOPMENT OF THIS COUNTRY.

DEVELOPMENT OF THIS COUNTRY.

SPEECH OF CONGRESSMAN ROSCOE C. M'CULLOCH AT LINCOLN DAY BANQUET, NEW PHILADELPHIA, OHIO, FEBRUARY 12, 1916.

Mr. Tonstmaster and ladies and gentlemen, since I have had the honor of a seat in the National Congress—"the greatest lawmaking body in the world"—realizing the sacred responsibility devolving upon me as the representative of approximately 250,000 people, the question has recurred to me time and time again what are the purposes of government and how will the actions of Congress affect the individual welfare, peace, and prosperity of the people of this great country of ours?

The founders of the Republic in framing the Declaration of Independence—the greatest public document ever penned by human hands—declared that Governments are instituted among man for the purpose of securing to the people certain inalienable

rights, among which are life, liberty, and the pursuit of happiness.

It is declared in the preamble of our Federal Constitution that governments are formed for the purpose of promoting the general welfare, providing for the common defense, and establishing justice and domestic tranquillity in order that the blessings of liberty may be secured to the people of the United States of America and their posterity.

The cardinal purposes of government, therefore, would seem to be to promote the general welfare, peace, happiness, and prosperity of all the people, and there can be little happiness with-

out peace and prosperity.

PEACE.

With half the civilized world now at war, with the President of the United States recommending the expenditure of millions of dollars for defense, the question of how, by national legislation, to insure peace is one of the momentous problems now confronting the American Congress. I shall not dwell at any length upon the question of "preparedness" or on ways and means of insuring peace, but shall confine myself to a few general observations.

I believe that I am expressing the sentiment of the vast majority of the people of this country when I say that they are opposed to war except for the purpose of defending this country against invasion or protecting the rights of its people against the assaults of other powers. I can not conceive of a situation that would justify this country in entering upon a war of conquest. Ours is a peace-loving people engaged in the avocations of peace. We have millions of men and millions of money for defense, but not one life to give and not one cent to spend in a war of conquest.

But while we are preparing for defense we should keep in mind that the founders of this Republic, striving for liberty and for free self-government, feared most military power. History records the uncontrovertible fact that large standing armies foster militarism, bring on a lust for conquest and military aggrandizement.

That the founders of the Republic realized this is proven conclusively by the fact that in our Federal Constitution they made provisions imposing safeguards and restrictions against the dangers of militarism. There will be found in the constitution of the State of Ohio a section providing—

the people have the right to bear arms for their defense and security; but standing armies in time of peace are dangerous to liberty and shall not be kepi up, and the military shall be in strict subordination to the civil power.

The governor of our State has only power to call forth the militia "to execute the laws of the State, to suppress insurrection, and repel invasion." Militarism has always been a menace to free government, and if militarism is fostered by large standing armies, which history proves to be true, it would seem to me that Congress would do well, confronted, as it is, by a serious and, to the minds of some, a dangerous situation, to hearken to the voice of the fathers, whose wisdom, whose statesmenship, whose bravery, not only with the sword but with the pen, created the only free Government that has withstood the test of time and endured through the years.

I do not believe that our people would favor compulsory military service, and while it is true that an army without discipline is little less than a mob, yet I believe that there are ways and means of training and disciplining which will result in the raising of a sufficient and efficient army for defense without maintaining a great standing army.

The Revolutionary fathers, breathing the spirit of liberty, beat back the trained soldiers of England and then returned to the avocations of peace. This country would be strong in defense, even though it might be regarded as weak in a war of aggression. It takes trained soldiers to invade a country, but soldiers of less experience and less training are effective for the purpose of defense.

It would seem to me—and I will say that I am open to conviction on the subject and shall not act without a careful study of the testimony which will be followed by the committees of Congress now dealing with this important matter—that we should strengthen our coast defenses, provide a strong and efficient Navy, one effective in action and not only good on dress parade; provide in some way for the training and disciplining of a citizen soldiery—and at this time it would seem that the best way of training and disciplining a citizen soldiery would be through the National Guard, and after we have done all these things, then let Congress and the people of this country turn their attention to preparing for peace.

TROSPERITY.

To a greater extent than the average person realizes, the future prosperity of this country depends upon the wisdom of

the legislation enacted by our National Congress. Without the enactment of comprehensive national legislation, which will protect and encourage our people, this country will be unable to take advantage of the great opportunities which will come when peace is again restored. Should Congress and the administration fall short of its duty in this regard, the responsibility will lie with them alone. This is the time when party differences should be subordinated to the welfare of our country and all of its people. The situation should be viewed from the patriotic standpoint of national necessity and we should seek to enact legislation which will result in the greatest good to the greatest number.

PROBLEMS FEW.

I have always believed and contended—and I am stronger in that conviction to-day than ever before—that the great economic policies of Government which directly affect the prosperity of the country and therefore the individual welfare of all its people are very few in number. My limited experience on the floor of the National House of Representatives has served to strengthen that belief.

There is no great difference of opinion among the vast majority of the Members of Congress on either side of the House upon most of the questions which come before that body. Such questions are called nonpartisan, and while Members may differ as to the methods to be pursued in the accomplishment of reforms, in the expenditure of the public moneys, in the prevention of frauds by the regulation of commerce, or upon any other nonpartisan question, yet on the broad proposition of whether or not there shall be reform or remedial legislation I believe they are for the most part in accord. But on certain vital questions involving party policy, or in regard to which the two great parties differ, it is remarkable to see how close the lines are I never really realized to what extent our country is governed by parties and party policies upon these really vital issues until within the last few weeks. The Hall of the National Congress is divided into what they call two sides. one side is called the Republican side and the other side is called the Democratic side. When a question of party policy is up for consideration party leaders are active in seeing to it that all their votes are marshaled and that each party votes its full strength upon the proposition. If there is any doubt about the attitude of Members the party caucus is resorted to, and Members are bound by a majority vote to abide by the decision of the caucus.

When the war-tax resolution was up for consideration, involving as it did one of the most important, if not the most important question of governmental policy, about which the two great parties differ, the Democratic Members stood almost as a unit for direct internal taxation and against protective-tariff rates of duty, and the Republicans stood equally solid for indirect taxation and protective-tariff rates of duty.

TARIFF AN UNSETTLED QUESTION.

As I listened to that debate, filled as it was with much of partisan bitterness, the Democratic leaders standing for and defending their tariff-for-revenue-only policy approaching free trade, as carried out in the Underwood law, and the Republican leaders contending for protective-tariff rates of duty and for a return to the policy of protection; as I listened to that debate and contemplated to what extent the views of the two great parties diverge upon this great vital question, it seemed to me almost inconceivable, and after over 100 years of governmental experience, such a vital and important question as the tariff policy to be followed by this country should be still a mooted question. It would seem to me that wisdom gained by bitter experience would dictate the importance of a settled tariff policy in this country.

I have felt strongly that, aside from any party advantage which might be gained or result to the party of which I am a member by this question remaining unsettled (for the Republican Party is right on the tariff question) yet, in justice to all the people and for the purpose of safeguarding the future of the country, it should be settled for all time. But if the attitude of Congress is to be regarded as indicative of the true situation, we are no nearer the solution of this great question to-day than we were 100 years ago.

WHY CAN NOT THE TARIFF QUESTION BE SETTLED?

Why is this true? Why can not the tariff question be settled? Why is it that periodically or every few years, when the administration changes, this country must be subjected to tariff changes and business ruined and suffering and distress brought upon the people?

After a careful investigation of the whole situation I have concluded that the only answer is the "Solid South." So long as periodically the Congress of the United States is controlled by the Senators and Representatives from the South, unless

there are radical industrial changes there, the tariff question, in my judgment, will not be settled.

Representatives and Senators from the South have been actively opposed to the principle of protection for almost a hundred years.

Senator Hayne, of South Carolina, speaking for the planters during the congressional debate of 1831 on the tariff, stated the whole case of the planters of the South, the importers, and shippers, and covered all the grounds of sectional objection which they made against the American system of protection in the following words:

The value of the raw material is about one-fourth part of the manufactured article. Now, if the cotton yarns manufactured at Great Falls were imported from England instead of being made in New Hampshire, we should find the market for 12,000 bales of our cotton instead of 3,000 so that instead of gaining a market for 3,000 bales we should have lost a market for 9,000 bales. If trade were free, the goods manufactured in this country would be imported from England and paid for in our cotton, but in cutting off the imports, you of course to the same extent diminish our exports.

That the people of the South remained steadfast in their conviction and to the policy of free trade or tariff for revenue only in organizing their Confederacy is shown by the fact that they adopted a free-trade constitution which declared:

The congress shall have power: To lay and collect taxes, duties, imposts, and excise, for revenue necessary to pay the debts, provide for the common defense, and carry on the Government of the Confederate States; but no bounties shall be granted from the treasury, nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry.

It has been recorded that this is the first instance in the history of the world in which a nation attempted by organic law to prohibit the encouragement and promotion of the industrial arts.

In direct contradistinction to the policy outlined in the plank just referred to of the constitution of the Confederacy the Republican Party in nominating Abraham Lincoln made protection to native industries one of its cardinal principles, inserting the following plank in its platform:

That while providing revenue for the support of the General Government by duties from imports, sound policy requires such an adjustment of these imports as to encourage the development of the industrial interests of the country; and we commend the policy of national exchange which secures to the workingmen liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the Nation commercial prosperity and independence.

Mr. Underwood, when chairman of the Democratic Committee on Ways and Means, said on April 25, 1911, on the floor of the House:

We do not believe in levying taxes at the customhouse for the benefit of any man or the benefit of any industry. Our position is that taxes levied at the customhouse are for the sole purpose of producing revenue to support the Government of the United States, and that we are not justified in levying taxes for any other purpose.

The attitude of Chairman Underwood in the year 1911 is the same as the attitude of Chairman Wilson in the year 1893, who helped to frame the Gorman-Wilson law, who at a banquet given in his honor in England by British manufacturers shortly after the passage of the Gorman-Wilson law said:

Our protectionists have been building up defenses to keep you and other nations from competing with us in our home market. The tariff reformers are breaking down those defenses.

The only real difference between the bill which Chairman UNDERWOOD was defending in 1911 and the bill which Chairman Wilson defended in 1893 is that the Underwood bill was more of a free-trade measure than the Wilson bill.

That the present Chairman of the Ways and Means Committee, Mr. CLAUDE KITCHIN, adheres to the same views and the same policies as his predecessors, Chairman Wilson and Chairman Underwood, is indicated by his statements made when the war-tax resolution was up for consideration on the floor of the House December 16, 1915.

House December 16, 1915.

The attitude of Chairman Kitchin, the attitude of Chairman Wilson, and the attitude of Chairman Underwood are in accord with the attitude of Senator Hayne and the leaders from the South, not only during the Confederacy, but in Congress during all these years.

SOUTH NOW IN CONTROL.

The South is to-day in complete control of the Congress of the United States. Every important committee except only the Committee on Appropriations of the National House of Representatives, has for its chairman a Representative from the Southern States. The Democratic Representatives from the North are forced to and do support their Democratic colleagues from the South. This was shown on the vote on the Underwood tariff bill. Some Democratic Representatives from the North reflecting t[†], sentiment of the industrial centers which require protection in order to survive, expressed themselves as opposed to some of the provisions of the Underwood tariff bill.

But they were powerless for the reason that they were bound, hand and foot, by a Democratic caucus controlled absolutely by the Democrats of the South.

There is only one way to insure to the American people the benefits that result from the principle of protection and that is to elect a Republican Congress and a Republican President. THE DUTY OF PROTECTIONISTS.

It is well known, especially in my congressional district, that I have for almost 10 years constantly advocated a tariff board composed of experts with full powers for investigation, which powers, to my mind, should be broad enough to enable the President, upon recommendation of this commission, to refuse to permit to come into this market products of foreign countries which refuse to furnish the information required by the tariff board to determine the difference in the cost of production of articles in this country and abroad. The investigations of this commission should be reported to Congress, and rates of duty should be fixed so as to equalize the difference in the cost of production at home and abroad.

I know that there are protectionists who are opposed to a tariff board. I have recently received a great deal of literature from persons who are opposed to attempting to fix rates of duty scientifically. They advance many arguments in opposition to the plan. I shall not refer to them except to say that I regard their arguments for the most part as unsound. I believe in a

tariff board for two reasons:

First, I am opposed to the system of wirepulling, dealing, and trading that has characterized the enactment of every tariff law that has been placed upon our statute books. I first became impressed with the injustice of fixing tariff rates of duty on pull in 1908, when I appeared before the Ways and Means Committee, then holding hearings on the Payne-Aldrich bill. The American manufacturer would appear before the Ways and Means Committee presenting figures and data in regard to wages and relative cost of production. The American manufacturer would be encouraged by the Republican members of the Ways and Means Committee, and he would be cross-examined and assailed by the Democratic members of the Ways and Means Committee. Following the American manufacturer would appear the importer or the agent of the foreign manufacturer, who would be questioned and encouraged by the Democratic members of the Ways and Means Committee and cross-examined and assailed by the Republican members of the Ways and Means Committee. And then, after the hearings were over, the testimony submitted being entirely partisan and biased—being the testimony given by the parties in interest themselves—the committees of Congress would guess out a rate.

The result of this system was that the man who did not have a pull was likely not to secure a rate that would be sufficient to properly protect him against unequal conditions of competition abroad, while a manufacturer with a pull very often got rates that would guarantee to him profits to the extent that his

conscience would stand.

I am for a tariff board, therefore, because I believe in justice, because I believe in treating everybody alike, and because I regard this as a question of so vital importance to all the people that it should be handled as a business proposition and dealt with in a manner that the manufacturer, the laboring man, the business man, and the people at large will have confidence in the justice and equity of the rates fixed, which, in my judgment, can only be done through the intervention, either directly or

indirectly, of a tariff board.

Second. I believe in a tariff board for another reason, and that is that I am sure that such a board would ultimately result in taking the tariff out of politics. For it would create confidence in the minds of electors that the protective tariff system is not a graft system, but a legitimate policy of Government which safeguards the prosperity and well-being of all, and insures to all a chance in this free country of ours to earn a living at a reasonable wage. The unpopularity of the Payne-Aldrich bill resulted entirely, to my mind, from a feeling on the part of the people that the tariff was inequitable and unjust, and the majority of those who voted against the Republican Party as a protest against the Payne-Aldrich bill did so not because they were opposed to the protective tariff principle but because they felt that the special interests, through pull and political influence, were securing from the Government protection which guaranteed to them exorbitant profits to the detriment of the great consuming public.

The protective tariff principle will be the issue in the next campaign whether the war stops or whether it continues, and it is by that sign that the Republican Party will conquer.

PRESIDENT MADE ISSUE IN MESSAGE,

The President of the United States, in his message recently delivered to the joint session of Congress, made the issue when statement. Admitting that every tariff rate of duty carries

he said that the revenue should be raised to take care of his preparedness program and to meet any deficit in the National Treasury by direct internal taxation. It is true that the President recommended the retention of the duty on sugar for the purpose of raising revenue only, and it was clear to my mind that when the necessity for raising revenue had passed the duty on sugar would be removed should the Democrats remain in

The fact that the President recommended the retention of the duty on sugar means nothing from a protective standpoint, for the reason that just as soon as the necessity for raising revenue has ceased the duty under his tariff for revenue only theory will be promptly removed. The beet-sugar industry of this country could not rely upon any such protection, and I venture to say that the retaining of the duty on sugar under the circumstances under which it is being retained will not increase by a single dollar the investment of capital in this industry, but it proves one thing conclusively by the admission of the President himself, and that is that the levying of protective tariff rates of duty will raise revenue which will be paid by the foreigner for the privilege of selling his wares in our market.

Why not, therefore, follow the theory of protection which will raise revenue without the necessity of resorting to the direct taxation?

IMPORTS HAVE NOT MATERIALLY DECREASED DURING WAR.

It developed during the debate on the war-tax resolution. as shown by the following report, that the importations during the war have not been materially reduced, and that, had the duties provided in the Payne-Aldrich bill been maintained, there would have been no necessity, in order to take care of the needs of the Government, to resort to internal direct taxation, such as was provided in the war-tax measure recently extended.

Contrary to the impression conveyed by the majority report, imports at this time are not below normal. Imports for the eight months ended November 1, 1915, amount to \$1,203,452,698, an increase of \$56,000,000 over the corresponding eight months of 1913, when adequate customs receipts were being collected by the Government. In the table presented by the majority imports for the recent months are ignored completely. During this eight-month period showing an increase of imports of \$56,000,000 the customs-revenue receipts have declined to the extent of \$77,000,000. The average ad valorem rate of duty collected on imports during the 1913 period was 18.4 per cent, and during the 1915 period it was 11.1 per cent. This is due to the change in revenue laws and not the war in Europe. It is interesting and instructive to compare importations and customs receipts for the month of August, 1913 (the month on which the President based his calculations showing the necessity of additional revenue), with the month of August, 1915:

Imports, August, 1913Imports, August, 1915	\$137, 651, 553 141, 804, 202
Total	4, 152, 649
Customs receipts	30, 934, 952 15, 780, 540
Total	15 151 110

Food animais	\$12, 189, 000
Corn	2, 731, 000
Bituminous coal	3, 731, 000
Flax Fish	2, 192, 000
Beef and veal	6, 661, 000 7, 892, 000
Milk and cream	2, 650, 000
Lumber, lath, and shingles	17, 245, 000
Wool	68, 016, 000

INCIDENTAL PROTECTION.

There have been those who have said and contended that every rate of duty, however small, is a protective tariff rate, because every tariff rate of duty carries with it incidental protection. I can not understand what merit anyone can claim for any such an incidental protection, it should be clear that unless the protection is sufficient to enable the American producer and employer of labor to compete with the foreign producer, it is of no real value from a protective standpoint, because foreigners will be able to undersell the Americans,

The theory of protection is to fix rates of duty that will equalize the cost of production at home and abroad, taking into consideration all the various elements of advantage which the foreigner has over the American, the most important of which is

the difference in wages.

The revenue-producing powers of protective-tariff measures are always regarded as incidental to the main purpose of affording protection to the American people against unfair and unequal competition from abroad, but history proves that protective-tariff laws have always supplied more than sufficient revenue, while on the other hand, in fixing tariff rates of duty for the purpose of revenue only, the question of revenue becomes paramount and the question of protection is not only regarded as incidental but those who believe in this theory would eliminate it entirely if it were possible; and peculiar as it may seem, the history of all tariff-for-revenue-only laws has been that they failed as revenue producers as has the Underwood law.

Incidental protection means nothing; adequate protection means everything. I can best illustrate my views in regard to it in this way: Any obstruction across a stream will carry with it a degree of resistance which will create incidental power. But a dam across a stream which will produce sufficient power to run a mill must be high enough to afford sufficient resistance which will create the power required to move the wheels of the machinery of the mill. If the dam is not sufficiently high to create the necessary resistance, it will be inadequate for the purpose for which it is intended. This is true of tariff rates of duty. Incidental protection is nothing. Sufficient protection is all important; and in order that the American people may have security, they must know that rates of duty are fixed upon the theory of protection.

LET US PREPARE FOR PEACE.

Let us engage in preparing for peace and to take advantage of the great opportunity that will come to this country after the war is over. Let us not by a short-sighted economic policy lose our advantage. If by proper national legislation our interests are conserved; if we adopt a policy of America for Americans, protecting our country against the importations of cheap, foreign-made goods and against the immigration of cheap, foreign labor, we will experience one of the greatest eras of prosperity the world has ever known, with the resultant happiness and contentment which always comes to a people when times are prosperous.

GROWTH AND DEVELOPMENT OF THE UNITED STATES.

The United States before the war was the third financial power in all the world. Our area is vast and its productivity great. Our natural resources are still nearly unlimited and so great in variety as to be unrivaled by any country in the world.

The growth and development of our country up to this time is the marvel of the age. Before the discovery of America the people of the eastern continent were looking westward for an undiscovered world of wonders. Fables were told of a marvel-ous land to the west beyond a sea filled with monsters so terrible as to preclude the safe passage of the ships of explorers.

The story of the famous island of Atlantis had been told by

Plato, who described in eloquent detail-

The salubrity of the climate, the beauty of the natural scenery, the lofty mountains, the abundant rivers, the useful animals, the rich mineral resources, and the happiness and prosperity of the sturdy and wealthy people who had the good fortune to be its inhabitants.

Men believed that gold could be found everywhere and on every hand in that wonderful land; that the climate was perfection, the air always balmy, the skies serene, and that there was to be found the fountain of perpetual youth-indeed a paradise on earth.

Columbus died in neglect and poverty, a poor, broken man, because of the disappointment of the people, who regarded the land he had discovered (which had been called America) as a howling wilderness, inhabited by barbarians and savages, offering no promise and no hope, instead of the land of miracles, which their imaginations had pictured.

It is seldom that we stop to consider how different the America of to-day is from the America discovered by Columbus, and how wonderful our progress has really been. The same mountains towered to the skies then as now. The outlines of the land and the ocean shores were practically the same then as now. The same mighty rivers flowed to the seas. The same here. It was a land especially prepared by the forces of nature for the birth and development of the greatest nation and the greatest people on the face of the earth.

The Atlantic on the east, the Pacific on the west, connected from the north to the south by navigable rivers, furnishing great natural means of transportation and of power; great forests of sturdy timber; soil of marvelous fertility, made so by the decay of the vegetation of hundreds of years; vast treasures of mineral wealth—gold, silver, copper, iron, and coal; natural resources indeed unsurpassed, but inhabited by savages; a wilderness undeveloped from the frozen lands of the North to the tropical southern seas, with no man possessing the intellect or the genius to bridle the rivers and utilize their power, to mine or make use of the ores or till the soil for more than a mere subsistence.

The barbarians who roamed through the forests and hunted game in the wilderness and on the great prairies lived in dugouts, holes in the cliffs, or under a covering of bark or skins; their only accomplishments were their expertness as hunters and their bravery as warriors. They were only savages, lack-ing the ability and the intellect to develop and make the most the wonderful opportunities all about them, and it was only when the white men came as permanent settlers and with sturdy patriotic purpose, struggled first for independence and then for a place among the nations of the earth, that the wonders of the new world, which the explorers had overlooked, began to be realized.

The history of the development of our great country reads like a romance. It has become indeed a western world of wonders; from a wilderness to an industrial and commercial miracle land, so vast, so varied, and so wonderful that the mind of man can scarce conceive what the forces of liberty and civ-

ilization have wrought.

A contemplation of the wonders of our land-its progress, its development, its hope for the future-should inspire patriotism in the heart of every true American. If I were to be asked the question, "Wherein lies the strength of the Nation?" I would answer that it can all be summed up in one word, "Patriotism." Patriotism is the most important element of national character. We need have no fear of successful invasion by foreign powers so long as we keep burning in the hearts of our countrymen the spirit of patriotism.

I believe in inspiring patriotism in the youth of the country. I try to teach my children patriotism. I want them to love their country and all that it stands for. I want them to respect the soldiers of the Republic, living and dead, who fought for freedom, for union, and for humanity-not for conquest, but for

conscience; not for themselves, but for others.

Every young man should be impressed with the solemn fact that ours is the one Government on the face of the earth that offers equal opportunities for all; that all the avenues of distinction, honor, and success are open to him; that the preservation of this Nation and the principles of liberty upon which it is founded and has been maintained are all important to his future well-being, happiness, and prosperity; and I would have him bear in mind always the last public words of one of the greatest and best loved of our President—William McKinley who said at Buffalo, an hour before his assassination, "Let us ever remember that our interests are in concord, not conflict, and that our chief eminence rests in the victories of peace, not those of war."

The McLemore Resolution.

EXTENSION OF REMARKS

HON. ROSCOE C. McCULLOCH, OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 11, 1916.

Mr. McCULLOCH. Mr. Speaker, in voting against tabling the McLemore resolution I felt that I voiced the sentiments of the sixteenth congressional district. I can not see where any other course could be justified.

President Wilson, in his letter to Representative Pou, acting chairman of the House Committee on Rules, asked for a vote by the House of Representatives on the issue of warning American citizens to stay off armed merchantmen flying the flags great natural resources, undeveloped by the genius of man, were of countries which are at war. Everyone will admit that the

request occasioned great surprise, both in and out of Congress, for the opinion is almost general that the conducting of international affairs is the function of the Executive and not the legislative branch of the Government.

The fact remains that President Wilson saw fit to ask the House to vote on the issue. His request was entitled to full The President asked Congress to take up the consideration. question, and it should have been taken up fairly and honestly with a vote reflecting accurately the true sentiment of the Members

The House never got an opportunity to vote on the clean-cut issue of warning. Through a parliamentary trick, engineered by some members of the Committee on Rules and certain of their colleagues, a vote was obtained on a resolution which in no way could bring a test of the real sentiment of the House.

I voted against tabling the McLemore resolution because I wanted—and the vote shows that I was by no means alone in the desire—a resolution which would bring about an honest expression of the attitude of Congress and prevent any dodging of the real issue.

I can best explain this matter as I see it by calling attention to the situation in which I personally was placed. Commissioned by approximately 250,000 people as their representative in Congress, feeling the responsibility of the situation keenly, being neither pro-German nor pro-English, but desiring to do only that which would be for the best interests of the American people I concluded, after careful consideration, that it was the part of wisdom and common sense to warn Americans of the dangers of traveling on armed merchant ships of belligerents. I was, therefore, favorable to a resolution, properly drawn, which would express the views of Congress upon the subject, since the President had asked for such an expression, and at the same time not em-barrass the President of the United States in the exercise of the duties imposed upon him by our Constitution in the handling of the diplomatic relations between this country and other nations. These were my honest convictions, and, having arrived at that conclusion, I felt it was my duty to so express myself by

The much-talked-about McLemore resolution was not a resolution of simple warning, but a resolution far-reaching in its effect, which on a straight vote would have received the support of very few, if any, Members on the floor of the House. The only hope, therefore, of those who were in favor of a warning, but opposed to the passage of any resolution that would embarrass the President or this Government in its present or future negotiations with foreign powers, was to amend the McLemore resolution, eliminating its objectionable features, and passing, if possible, a simple resolution of warning, such as I have referred to. Had the motion to table been voted down, this could have been done. Therefore I voted "no."

The situation is just this: The President asked for an expression of opinion from Congress upon this subject. Having asked for it, it is fair to assume that he wanted an honest expression, and he should have had it; but those in control of the parliamentary machinery of the House reported a rule that made it impossible to get an honest expression, and many Members made declarations on the floor of the House that while they were for warning, yet they were for preventing the consideration of the subject. If they were afraid of a fair consideration and a fair vote, why did they allow the matter to come up

The only reason why the majority prevented by this rule a square vote on this proposition was, in my judgment, because they knew that a square vote would result in a resolution of warning; so that in order to avoid an appearance of defeat they prevented a fair consideration of the proposition.

My vote should not be taken as indicating that I favored the McLemore resolution, for I did not. I desired that the resolution should be considered by the House and not tabled in order that it might be amended so as to provide for a simple warning of Americans to stay off belligerent ships without foregoing any material American rights.

My attitude in this whole matter is entirely American. I am vigorously opposed to the surrender of any material American rights; everything I have done and everything I expect to do will be guided by my opinion as to what is for the best interests of our country.

My vote should not be regarded as partisan. There was no politics in it. If I should permit partisan politics to influence my vote on a matter of this kind, I should regard myself as unfit to represent a district in Congress. I believe that it is the patriotic duty of all to stand by the President in any crisis in our national affairs, but when he asks for my opinion he is entitled to have me express it honestly and not dodge the issue.

Military Roads.

EXTENSION OF REMARKS

HON. WILLIAM C. ADAMSON,

OF GEORGIA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 20, 1916.

Mr. ADAMSON. Mr. Speaker, under leave already granted to extend my remarks in the Record, I submit the following two articles from a recent issue of the Columbus Ledger on the subject of military roads. I will state that for many years, assisted by the gentleman from Kansas [Mr. Anthony], I have tried to secure legislation to construct some military roads connecting various military reservations. The articles from the Ledger hereinafter submitted are in line with our efforts and very opportune at this time.

The articles are as follows:

HIGHWAYS AND FEDERAL PRISONERS.

A great highway from Atlanta and points north direct to Pensacola via Columbus (and the Dillingham Street Bridge) to be constructed by the Federal Government, with Federal prisoners now confined in the pen at Atlanta, is suggested by Road Engineer Julian Lane as a part of Uncle Sam's preparedness program, and it seems to the Ledger that it is a timely suggestion, too. Mr. Lane advocates further highways in sections where they are needed—and they are needed everywhere—which, he claims, can be constructed with little real expense to the Government with the use of Federal prisoners.

That such a highway is needed to connect Atlanta and sections to the north, including Chattancoga, Knoxville, Spartanburg, Cincinnati, and other big centers, with deep water at the Florida coast, not only in times of threatened war, but for any emergency that might come to the Government, seems to be quite clear, and that the proposed route via Columbus is the most plausible and direct to the port city, must be admitted by those who are posted on existing conditions.

The suggestion regarding the use of Federal convicts to carry on this construction work seems to the Ledger to be most timely. We can see no good reason why the Government should "board" the thousands of Federal prisoners and just allow them to sit down and practically idle away their lives in such a manner as they are now doing. A great majority of these people are used to active lives and they would be much better off with some kind of employment out in the open. Muscogee County prisoners, for instance, are rarely ever sick, and this is due largely to the fact that they are kept out in the open and employed.

Let the "preparedness program" be extended to the construction of

due largely to the fact that they are kept out in the open and employed.

Let the "preparedness program" be extended to the construction of a number of national highways, and let the Federal prisoners be put to work. It will be to their interest and it will certainly mean the saving of much money to the Government. Let Congressmen Adamson. Steagall, and others take up this matter, which seems to be of great importance at this time, and let us have the highways. The country needs these substantial roadways at all times and the Federal prisoners need exercise.

LANE WOULD CONSTRUCT ROADS WITH FEDERAL PRISONERS—CONNECTING ATLANTA AND PENSACOLA—SUFFICIENT TO CARRY WAR MACHINERY, BIG GUNS—CROSS CHATTAHOOCHEE ON DILLINGHAM BRIDGE—MUSCOGEE CONCRETE BRIDGES ALREADY STRONG ENOUGH—ENGINEER CALLS ATTENTION OF CONGRESSMEN TO PLAN.

Along with the general plan of preparedness, seeing the need of good roads as well as railroads and other things, Road Engineer Julian Lane has a suggestion for the forming of a plan to construct a military road from Atlanta to Pensacola, Fla., which bears merit.

It is pointed out that Pensacola is a naval basis of the Government and that Atlanta is a concentration station, and yet there is no road connecting them which would stand up under the moving of the heavy machinery and guns which would be necessary to move, with the exception of the roads in Muscogee County.

FEDERAL PRISONERS.

FEDERAL PRISONERS.

Mr. Lane suggests that the prisoners in the Federal prison at Atlanta and those elsewhere be placed on the road by the Government constructing roads and concrete bridges which would be heavy enough to stand the hard traffic. In support of this plan he states that it would put possibly 2,000 prisoners in Atlanta to doing something, making it more healthful for them, and also making them better satisfied.

He points out that Muscogee County has near 200 convicts and that not one of them is sick, while hearsay has it that the hospitals at the Federal prisons are often filled with sick prisoners. He believes that "out in the open" plan would be the best for their health and at the same time would construct a highway or several highways which would be of great use in time of war for this country, and he believes that it should be a part of the plan of preparedness as well as any other thing.

OVER DILLINGHAM BRIDGE.

The Chattahoochec River would have to be crossed at some point be-tween Atlanta and Pensacola, and in Columbus the place to cross it is already constructed. Mr. Lane says that the Dillingham Street Bridge is strong enough to hold up any machinery or gun which might be trans-

MUSCOGEE READY.

MUSCOGER READY,

Mr. Lane says that in the construction of the roads of Muscogee
County that every concrete bridge which has been placed here has been
constructed of such strength that it could stand any machine or gun
which would have to be moved over it, and that he believes that this
county is the only one in Georgia that this can be said about.

In the construction of a concrete bridge strong enough for any use,
Mr. Lane says that the difference in cost is less than 20 per cent, so it
can be seen that to do such work right it could be done with little extra
cost.

EUROPEAN ROADS.

The roads of Europe which have been constructed in the years past have saved the day for many a movement of troops. This is especially true of Germany, and has been a part of the preparedness as much as any other part, and Mr. Lane believes that the United States should prepare in the same way.

CONGRESSIONAL ATTENTION.

CONGRESSIONAL ATTENTION.

If no need in the history of the country should ever come up, the roads would be constructed and would serve as great highways for the States. There is one Government road in Georgia now, built from Chattanooga to La Fayette, Ga., past Fort Oglethorpe, and this could be continued into Atlanta, giving a straight highway to the Gulf and to the greatest Gulf port of the Army and Navy.

The plan is an interesting one, and with the labor to make it a success at hand, the attention of the Congressmen is called to it, with a view of them taking it up and making the highway a reality. The way over the only difficult place—the Chattahoochee River—is already constructed and some of the road already built, it is pointed out.

The History of Liberty.

EXTENSION OF REMARKS

HON. WILLIAM GORDON.

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 17, 1916.

Mr. GORDON. Mr. Speaker, under the general leave to print I insert an address by Edward Everett, delivered at Charlestown, Mass., on July 4, 1828, on "The history of liberty."

Edward Everett, a Representative and a Senator from Massachusetts; born in Dorchester, Mass., April 11, 1794; was graduated from Harvard College in 1811; tutor in Harvard 1812-1814; studied theology and was ordained pastor of the Brattle Street Unitarian Church, Boston, February 9, 1814; elected professor of Greek literature in Harvard in 1814, and served as such 1819-1826; elected as a Whig to the Nineteenth, Twentieth, Twenty-first, Twenty-second, and Twenty-third Congresses (Mar. 4, 1825-Mar. 3, 1835); declined a reelection; governor of Massachusetts 1836-1840; declined a commission to China in 1843; minister to Great Britain September 3, 1841, to August 8, 1845: elected president of Harvard College and served from 1846 to 1849; appointed Secretary of State under President Fillmore to fill the vacancy caused by the death of Daniel Webster, and served from November 6, 1852, to March 1853; elected to the United States Senate and served from March 4, 1853, to May 17, 1854, when he resigned; defeated as the American compromise candidate for Vice President in 1860 on the ticket headed by John Bell; presidential elector in 1864 on the Lincoln and Johnson ticket; died in Boston January 15,

Edward Everett was a worthy colleague in Congress of Clay, Webster, Benton, and Calhoun, one of the great men of his time, and "there were giants in those days."

The address is as follows:

THE HISTORY OF LIBERTY.

(Oration delivered at Charlestown on the 4th of July, 1828.)

Fellow citizens, the event which we commemorate is all important not merely in our own annals but in those of the world. The sententious English poet has declared that "the proper study of mankind is man," and of all inquiries of a temporal nature the history of our fellow beings is unquestionably among the most interesting. But not all the chapters of human history are alike important. The annals of our race have been filled up with incidents which concern not, or at least ought not to concern, the great company of mankind. History, as it has often been written, is the genealogy of princes—the field book of conquerors, and the fortunes of our fellow men have been treated only so far as they have been affected by the influence of the great masters and destroyers of our race. Such history is I will not say a worthless study, for it is necessary for us to know the dark side as well as the bright side of our condition. But it is a melancholy study, which fills the bosom of the philanthropist and the friend of liberty with

But the history of liberty-the history of men struggling to be free-the history of men who have acquired and are exercising their freedom-the history of those great movements in the world by which liberty has been established and perpetuated forms a subject which we can not contemplate too closely. This is the real history of man-of the human family-of rational, immortal beings,

This theme is one; the free of all climes and nations are themselves a people. Their annals are the history of freedom. Those who fell victims to their principles in the civil convutsions of the short-lived Republics of Greece, or who sunk beneath the power of her invading foes; those who shed their blood for liberty amidst the ruins of the Roman Republic; the victims of Austrian tyranny in Switzerland and of Spanish tyranny in the Netherlands; the solitary champions or the united bands of high-minded and patriotic men who have in any region or age struggled and suffered in this great cause belong to that people of the free, whose fortunes and progress are the most noble theme which man can contemplate.

The theme belongs to us. We inhabit a country which has been signalized in the great history of freedom. We live under forms of government more favorable to its diffusion than any which the world has elsewhere known. A succession of inci-dents of rare curiosity and almost mysterious connection has marked out America as a great theater of political reform. Many circumstances stand recorded in our annals connected with the assertion of human rights which, were we not familiar

with them, would fill even our own minds with amazement.

The theme belongs to the day. We celebrate the return of the day on which our separate national existence was declared; the day when the momentous experiment was commenced by which the world and posterity and we ourselves were to be taught how far a nation of men can be trusted with self-government—how far life and liberty and property are safe and the progress of social improvement is secure under the influence of laws made by those who are to obey them; the day when for the first time in the world a numerous people was ushered into the family of nations organized on the principle of the political equality of all the citizens,

Let us, then, fellow citizens, devote the time which has been set apart for this portion of the duties of the day to a hasty review of the history of liberty, especially to a contemplation of some of those astonishing incidents which preceded, accompanied, or have followed the settlement of America and the establishment of our constitutions, and which plainly indicate a general tendency and cooperation of things toward the erection in this country of the great monitorial school of political

We hear much at school of the liberty of Greece and Romea great and complicated subject, which this is not the occasion to attempt to disentangle. True it is that we find in the annals of both these nations bright examples of public virtuethe record of faithful friends of their country, of strenuous foes of oppression at home or abroad—and admirable precedents of popular strength. But we nowhere find in them the account of a populous and extensive region, blessed with institutions securing the enjoyment and transmission of regulated liberty. In freedom, as in most other things, the ancient nations, while *hey made surprisingly near approaches to the truth, yet, for want of some one great and essential principle or instrument, came utterly short of it in practice. profound and elegant scholars, but for want of the art of printing they could not send information out among the people, where alone it is of great use in reference to human happiness. Some of them ventured boldly to sea, and possessed an aptitude for foreign commerce, yet for want of the mariner's compass they could not navigate distant oceans, but crept for ages along the shores of the Mediterranean. In respect to freedom, they established popular governments in single cities, but for want of the representative principle they could not extend these institutions over a large and populous country. But as a large and populous country, generally speaking, can alone possess strength enough for self-defense, this want was fatal. The freest of their cities accordingly fell a prey, sooner or later, either to a foreign invader or to domestic traitors.

In this way liberty made no firm progress in the ancient States. It was a speculation of the philosopher and an experi-ment of the patriot, but not an established state of society. The patriots of Greece and Rome had, indeed, succeeded in enlightening the public mind on one of the cardinal points of freedom—the necessity of an elected executive. The name and the office of a king were long esteemed not only something to be rejected but something rude and uncivilized, belonging to savage nations ignorant of the rights of man as understood in cultivated States. The word "tyrant," which originally meant no more than "monarch," soon became with the Greeks synonymous with "oppressor" and "despot." as it has continued ever since. When the first Cæsar made his encroachments on the liberties of Rome the patriots even of that age boasted that they had—

Heard their fathers say, There was a Brutus once that would have brooked The eternal devil to keep his state in Rome As easily as a king.

So deeply rooted was this horror of the very name of king in the bosom of the Romans that under their worst tyrants and in the darkest days the forms of the Republic were preserved. There was no name, under Nero and Caligula, for the office of monarch. The individual who filled the office was called Cæsar and Augustus, after the first and second of the line. The word "emperor" (imperator) implied no more than "general." The offices of consul and tribune were kept up, although if the choice did not fall, as it frequently did, on the er:peror it was conferred on his favorite general, and sometimes on his favorite horse. The senate continued to meet and affected to deliberate, and, in short, the Empire began and continued a pure military despotism, ingrafted by a sort of permanent usurpation on the forms and names of the ancient Republic. The spirit, indeed, of liberty had long since ceased to animate these ancient forms, and when the barbarous tribes of Central Asia and Northern Europe burst into the Roman Empire they swept away the poor remnant of these forms and established upon their ruins the system of feudal monarchy, from which all the modern kingdoms are descended. were made in the Middle Ages by the petty Republics of Italy to regain the political rights which a long proscription had wrested from them. But the remedy of bloody civil wars between neighboring cities was plainly more disastrous than the disease of subjection. The struggles of freedom in these little States resulted much as they had done in Greece, exhibiting brilliant examples of individual character and short intervals of public prosperity, but no permanent progress in the organization of liberal governments.

At length, a new era seemed to begin. The art of printing was invented. The capture of Constantinople by the Turks drove the learned Greeks of that city into Italy, and letters A general agitation of public sentiment in various parts of Europe ended in the religious reformation. A spirit of adventure had been awakened in the maritime nations, and projects of remote discovery were started, and the signs of the times seemed to augur a great political regeneration. But as if to blast this hope in its bud, as if to counterbalance at once the operation of these springs of improvement, as if to secure the permanence of the arbitrary institutions which existed in every part of the Continent at the moment when it was most threatened, the last blow, at the same time, was given to the remaining power of the great barons-the sole check on the despotism of the monarch which the feudal system provided-and a new institution was firmly established in Europe, prompt, efficient, and terrible in its operation, beyond anything which the modern world had seen-I mean the system of standing armies; in other words, a military force organized and paid to support the king on his throne and retain the people in their subjection.

From this moment the fate of freedom in Europe was sealed. Something might be hoped from the am'elioration of manners, in softening down the more barbarous parts of political despotism; but nothing was to be expected in the form of liberal institutions founded on principle.

The ancient and the modern forms of political servitude were thus combined. The Roman emperors, as I have hinted, maintained themselves simply by military force, in nominal accordance with the forms of the Republic. Their power—to speak in modern terms—was no part of the constitution. The feudal sovereigns possessed a constitutional precedence in the State which, after the diffusion of Christianity, they claimed by the grace of God; but their power, in point of fact, was circumscribed by that of their brother barons. With the firm establishment of standing armies was consummated a system of avowed despotism, paralyzing all expression of the popular will, existing by divine right, and unbalanced by any effectual check in the State. It needs but a glance at the state of Europe in the beginning of the sixteenth century to see that, notwithstanding the revival and diffusion of letters, the progress of the reformation, and the improvement of manners, the tone of the people in the most enlightened countries was more abject than it had been since the days of the Cæsars. The state of England certainly compared favorably with that of

any other part of Europe; but who can patiently listen to the language with which Henry VIII chides and Elizabeth scolds the lords and commons of the Parliament of Great Britain?

All hope of liberty then seemed lost; in Europe all hope was lost. A disastrous turn had been given to the general movement of things, and in the disclosure of the fatal secret of standing armies the future political servitude of man was apparently decided.

But a change is destined to come over the face of things, as romantic in its origin as it is wonderful in its progress. All is not lost; on the contrary, all is saved at the moment when all seemed involved in ruin. Let me just allude to the incidents connected with this change, as they have lately been described by an accomplished countryman, now beyond the sea. (Irving's Life of Columbus.)

About half a league from the little seaport of Palos, in the Province of Andalusia, in Spain, stands a convent dedicated to St. Mary. Some time in the year 1486 a poor wayfaring stranger, accompanied by a small boy, makes his appearance on foot at the gate of this convent and begs of the porter a little bread and water for his child. This friendless stranger is Columbus. Brought up in the hardy pursuit of a mariner—occasionally serving in the fleets of his native country—with the burden of 50 years upon his frame, the unprotected foreigner makes his suit to the sovereigns of Portugal and Spain. He tells them that the broad, flat earth on which we tread is round, and he proposes, with what seems a sacrilegious hand, to lift the veil which had hung, from the creation of the world, over the bounds of the ocean. He promises by a western course to reach the eastern shores of Asia—the region of gold and diamonds and spices; to extend the sovereignty of Christian kings over realms and nations hitherto unapproached and unknown, and ultimately to perform a new crusade to the Holy

found gold of the East.

Who shall believe the chimerical pretension. The learned men examine it and pronounce it futile. The royal pilots have ascertained by their own experience that it is groundless. The priesthood have considered it, and have pronounced that sentence, so terrific where the Inquisition reigns, that it is a wicked heresy. The common sense and popular feeling of men have been kindled into disdain and indignation toward a project which, by a strange new chimera, represented one half of mankind walking with their feet toward the other half.

Land and ransom the sepulcher of our Savior with the new-

Such is the reception which his proposal meets. For a long time the great cause of humanity, depending on the discovery of this fair continent, is involved in the fortitude, perseverance, and spirit of the solitary stranger, already past the time of life when the pulse of adventure beats full and high. If, sinking beneath the indifference of the great, the sneers of the wise, the enmity of the mass, and the persecution of a host of adversaries, high and low, he give up the thankless pursuit of his noble vision, what a hope for mankind is blasted! But he does not sink. He shakes off his enemies, as the lion shakes the dewdrops from his mane. That consciousness of motive and of strength which always supports the man who is worthy to be supported sustains him in his hour of trial, and at length, after years of expectation, importunity, and hope deferred, he launches forth upon the unknown deep to discover a new world, under the patronage of Ferdinand and Isabella.

The patronage of Ferdinand and Isabella! Let us dwell for a moment on the auspices under which our country was discovered. The patronage of Ferdinand and Isabella! Yes; doubtless they have fitted out a convoy worthy the noble temper of the man and the grandeur of his project. Convinced at length that it is no day dream of a heated visionary, the fortunate sovereigns of Castile and Aragon, returning from their triumph over the last of the Moors, and putting a victorious close to a war of seven centuries' duration, have no doubt prepared an expedition of well-appointed magnificence to go out upon this splendid search for other worlds. They have made ready, no doubt, their proudest galleon to waft the heroic adventurer upon his path of glory, with a whole armada of kindred spirits to accompany him.

Alas! from his ancient resort of Palos—which he first visited as a mendicant—in three frail barks, of which two were without decks, the great discoverer of America sails forth on the first voyage across the unexplored ocean! Such is the patronage of kings. A few years pass by; he discovers a new hemisphere; the wildest of his visions fade into insignificance before the reality of their fulfilment; he finds a new world for Castile and Leon, and comes back to Spain loaded with chains. Republics, it is said, are ungrateful; such are the rewards of mon-

archies!

With this humble instrumentality did it please Providence to prepare the theater for those events by which a new dispensation of liberty was to be communicated to man. But much is yet to transpire before even the commencement can be made in the establishment of those institutions by which this great advance in human affairs was to be effected. The discovery of America had taken place under the auspices of the Government most disposed for maritime adventure, and best enabled to extend a helping arm, such as it was, to the enterprise of the great discoverer. But it was not from the same quarter that the elements of liberty could be introduced into the new world. Causes, upon which I need not dwell, made it impossible that the great political reform should go forth from Spain. For this object a new train of incidents was preparing in another quarter.

The only real advances which modern Europe had made in freedom had been made in England. The cause of constitutional liberty in that country was persecuted, was subdued, but not annihilated nor trampled out of being. From the choicest of its suffering champions were collected the brave band of emigrants who first went out on the second, the more precious, voyage of discovery—the discovery of a land where liberty and its consequent blessings might be established.

A late English writer (in London Quarterly Review for January, 1828) has permitted himself to say that the original establishment of the United States, and that of the colony of Botany Bay, were pretty nearly modeled on the same plan. The meaning of this slanderous insinuation is that the United States were settled by deported convicts, in like manner as New South Wales has been settled by transported felons. It is doubtless true that at one period the English Government was in the habit of condemning to hard labor as servants in the colonies a portion of those who had received the sentence of the law. If this practice makes it proper to compare America with Botany Bay, the same comparison might be made of England herself before the practice of transportation began, and even now, inasmuch as a considerable number of convicts are at all times retained at home. In one sense, indeed, we might doubt whether the allegation were more of a reproach or a compliment. During the time that the colonization of America was going on the most rapidly some of the best citizens of England, if it be any part of good citizenship to resist oppression, were immured in her prisons of state or lying at the mercy of the law. (See Mr. Walsh's United States and Great Britain, sec. 2.)

Such were some of the convicts by whom America was set-.tled-men convicted of fearing God more than they feared man; of sacrificing property, ease, and all the comforts of life to a sense of duty and the dictates of conscience; men convicted of pure lives, brave hearts, and simple manners. The enterprise was led by Raleigh, the chivalrous convict, who unfortunately believed that his royal master had the heart of a man and would not let a sentence of death which had slumbered for 16 years revive and take effect after so long an interval of employment and favor. But nullum tempus occurrit regi. The felons who followed next were the heroic and long-suffering church of Robinson, at Leyden-Carver, Brewster, Bradford, Winslow, and their plous associates, convicted of worshiping God according to the dictates of their consciences, and of giving up all—country, property, and the tombs of their fathers—that they might do it unmolested. Not content with having driven the Puritans from her soil, England next enacted or put in force the oppressive laws which colonized Maryland with Catholics and Pennsylvania with Quakers. Nor was it long before the American plantations were recruited by the Germans convicted of inhabiting the Palatinate, when the merciless armies of Louis XIV were turned into that devoted region, and by the Huguenots, convicted of holding what they deemed the simple truth of Christianity, when it pleased the mistress of Louis XIV to be very zealous for the Catholic faith. These were followed in the next century by the Highlanders, convicted of the enormous crime, under a monarchical govern-ment, of loyalty to their hereditary prince on the plains of Culloden; and the Irish, convicted of supporting the rights of their country against what they deemed an oppressive external power. Such are the convicts by whom America was settled.

In this way a fair representation of whatsoever was most valuable in European character—the resolute industry of one nation, the inventive skill and curious arts of another, the courage, conscience, principle, self-denial of all—was winnowed out by the policy of the prevailing Governments as a precious seed wherewith to plant the American soil. By this singular coincidence of events our country was constituted the great asylum of suffering virtue and oppressed humanity. It could

now no longer be said-as it was of the Roman Empire-that mankind was shut up as if in a vast prison house, from whence there was no escape. The political and ecclesiastical oppressors of the world allowed their persecution to find a limit at the shores of the Atlantic. They scarce ever attempted to pursue their victims beyond its protecting waters. It is plain that in this way alone the design of Providence could be accomplished, which provided for one catholic school of freedom in the Western Hemisphere. For it must not be a freedom of too sectional and peculiar a cast. On the stock of the English civilization as the general basis were to be ingrafted the languages, the arts, and the tastes of the other civilized nations. A tie of consanguinity must connect the members of every family of Europe with some portion of our happy land, so that in all their trials and disasters they may look safely beyond the ocean for a refuge. The victims of power, of intolerance, of war, of disaster, in every other part of the world, must feel that they may find a kindred home within our limits. Kings, whom the perilous convulsions of the day have shaken from their thrones, must find a safe retreat, and the needy emigrant must at least not fail of his bread and water, were it only for the sake of the great discoverer, who was himself obliged to beg them. On this corner stone the temple of our freedom was laid from the first:

For here the exile met from every clime, And spoke in friendship every distant tongue; Men, from the blood of warring Europe sprung. Were here divided by the running brook.

This peculiarity of our population, which some have thought a misfortune, is in reality one of the happiest circumstances attending the settlement of the country. It assures the exile from every part of Europe a kind reception from men of his Had we been the unmixed descendants own tongue and race. of any one nation of Europe, we should have retained a moral and intellectual dependence on that nation, even after the dissolution of our political connection had taken place. It was sufficient for the great purposes in view that the earliest settlements were made by men who had fought the battles of liberty in England, and who brought with them the rudiments of constitutional freedom to a region where no deep-rooted proscriptions would prevent their development. Instead of marring the symmetry of our social system, it is one of its most attractive and beautiful peculiarities, that with the prominent qualities of the Anglo-Saxon character inherited from our English fathers we have an admixture of almost everything that is valuable in the character of most of the other States of Europe.

Such was the first preparation for the great political reform, of which America was to be the theater. The colonies of England, of a country where the supremacy of laws and the constitution is best recognized—the North American Colonies were protected from the first against the introduction of the unmitigated despotism which prevailed in the Spanish settlements, the continuance of which, down to the moment of their late revolt, prevented the education of those Provinces in the exercise of political rights, and in that way has thrown them into the revolution inexperienced and unprepared-victims, some of them, to a domestic anarchy scarcely less grievous than the foreign yoke they have thrown off. While, however, the settlers of America brought with them the principles and feelings, the political habits and temper, which defied the encroachments of arbitrary power, and made it necessary when they were to be oppressed that they should be oppressed under the forms of law, it was an unavoidable consequence of the state of things-a result, perhaps, of the very nature of a colonial government—that they should be thrown into a position of controversy with the mother country and thus become familiar with the whole energetic doctrine and discipline of resistance. This formed and hardened the temper of the colonists, and trained them up to a spirit meet for the struggles of

On the other hand, by what I had almost called an accidental circumstance, but one which ought rather to be considered as a leading incident in the great train of events connected with the establishment of constitutional freedom in this country, it came to pass that nearly all the colonies (founded as they were on the charters granted to corporate institutions in England, which had for their object the pursuit of the branches of industry and trade pertinent to a new plantation) adopted a regular representative system, by which, as in ordinary civil corporations, the affairs of the community are decided by the will and voices of its members or those authorized by them. It was no device of the parent government which gave us our colonial assemblies. It was no refinement of philosophical statesmen to which we are indebted for our republican institu-

tions of government. They grew up, as it were, by accident, on the simple foundation I have named. "A house of burgesses," says Hutchinson, "broke out in Virginia in 1620," and, "although there was no color for it in the charter of Massachusetts, a house of deputies appeared suddenly in 1634." "Lord observes the same historian, "tempted the principal men of Massachusetts to make themselves and their heirs nobles and absolute governors of a new colony, but under this plan they could find no people to follow them."

At this early period and in this simple, unpretending manner was introduced to the world that greatest discovery in political science, or political practice, a representative republican system. "The discovery of the system of the representative republic," says M. de Chateaubriand, "is one of the greatest political events that ever occurred." But it is not one of the greatest, it is the very greatest, and combined with another principle, to which I shall presently advert, and which is also the invention of the United States, it marks an era in human affairs, a discovery in the great science of social life, compared with which everything else that terminates in the tem-

poral interests of man sinks into insignificance.

Thus, then, was the foundation laid, and thus was the preparation commenced, of the grand political regeneration. For about a century and a half this preparation was carried on. Without any of the temptations which drew the Spanish adventurers to Mexico and Peru, the Colonies throve almost beyond example, and in the face of neglect, contempt, and persecution. Their numbers in the substantial middle classes of life increased with singular rapidity; no materials out of which an aristocracy could be formed, no great eleemosynary establishments to cause an influx of paupers. There was nothing but the rewards of labor and the hope of freedom.

But at length this hope, never adequately satisfied, began to turn into doubt and despair. The Colonies had become too important to be overlooked; their government was a prerogative too important to be left in their own hands, and the legislation of the mother country decidedly assumed a form which an-nounced to the patriots that the hour at length had come when the chains of the great discoverer were to be avenged, the sufferings of the first settlers to be compensated, and the long-

deferred hopes of humanity to be fulfilled.

You need not, friends and fellow citizens, that I should dwell upon the incidents of the last great act in the colonial This very place was the scene of some of the earliest and the most memorable of them; their recollection is a part of your inheritance of honor. In the early councils and first struggles of the great Revolutionary enterprise the citizens of this place were among the most prominent. The measures of resistance which were projected by the patriots of Charlestown were opposed but by one individual. An active cooperation existed between the political leaders in Boston and this place. The beacon light which was kindled in the towers of Christ Church, in Boston, on the night of the 18th of April, 1775. was answered from the steeple of the church in which we are now assembled. The intrepid messenger who was sent forward to convey to Hancock and Adams the Intelligence of the approach of the British troops was furnished with a horse for his eventful errand by a respected citizen of this place. At the close of the following momentous day the British forces-the remnant of its disasters-found refuge, under the shades of night, upon the heights of Charlestown, and there, on the ever-memorable 17th of June, that great and costly sacrifice in the cause of freedom was consummated with fire and blood, Your hilltops were strewed with the illustrious dead; your homes were wrapped in flames; the fair fruits of a century and a half of civilized culture were reduced to a heap of bloody ashes, and 2,000 men, women, and children turned houseless upon the world. With the exception of the ravages of the 19th of April, the chalice of woe and desolation was in this manner first presented to the lips of the citizens of Charlestown, Thus devoted, as it were, to the cause, it is no wonder that the spirit of the Revolution should have taken possession of their bosoms and been transmitted to their children. The American who, in any part of the Union, could forget the scenes and the principles of the Revolution would thereby prove himself unworthy of the blessings which he enjoys; but the citizen of Charlestown who could be cold on this momentous theme must hear a voice of reproach from the walls which were reared on the ashes of the 17th of June-a piercing cry from the very

on bloody fields-to establish in the place of the Government whose yoke had been thrown off a Government at home, which should fulfill the great design of the Revolution and satisfy the demands of the friends of liberty at large. What manifold perils awaited the step! The danger was great that too little or too much would be done. Smarting under the oppressions of a distant Government, whose spirit was alien to their feelings, there was great danger that the Colonies, in the act of declaring themselves sovereign and independent States, would push to an extreme the prerogative of their separate independence and refuse to admit any authority beyond the limits of each particular Commonwealth. On the other hand, achieving their independence beneath the banners of the Continental Army, ascribing, and justly, a large portion of their success to the personal qualities of the beloved Father of his Country, there was danger, not less imminent, that those who perceived the evils of the opposite extreme would be disposed to confer too much strength on one general government, and would, perhaps, even fancy the necessity of investing the hero of the Revolution in form with that sovereign power which his personal ascendency gave him in the hearts of his countrymen. Such and so critical was the alternative which the organization of the new government presented, and on the successful issue of which the entire benefit of this great movement in human affairs was to depend.

The first effort to solve the great problem was made in the course of the Revolution, and was without success. ticles of Confederation verged to the extreme of a Union too weak for its great purposes, and the moment the pressure of the war was withdrawn the inadequacy of this first project of a government was felt. The United States found themselves overwhelmed with debt, without the means of paying it. Rich in the materials of an extensive commerce, they found their ports crowded with foreign ships and themselves without the power to raise a revenue. Abounding in all the elements of national wealth, they wanted resources to defray the ordinary expenses of government.

For a moment, and to the hasty observer, this last effort for the establishment of freedom had failed. No fruit had sprung from this lavish expenditure of treasure and blood. We had changed the powerful protection of the mother country into a cold and jealous amity, if not into a slumbering hostility. The oppressive principles against which our fathers had struggled were succeeded by more oppressive realities. The burden of the British navigation act was, as operating on the Colonies, removed, but it was followed by the impossibility of protecting our shipping by a navigation law of our own. A state of material prosperity, existing before the Revolution, was succeeded by universal exhaustion, and a high and indignant tone of militant patriotism by universal despondency.

It remained, then, to give its last great effect to all that had been done since the discovery of America for the establishment of the cause of liberty in the Western Hemisphere, and by another more deliberate effort to organize a Government by which not only the present evils under which the country was suffering should be remedied but the final design of Providence should be fulfilled. Such was the task which devolved on the statesmen who convened at Philadelphia on the 2d day of Mny, 1787, of which Gen. Washington was elected president, and over whose debates your townsman, Mr. Gorham, presided for two or three months as chairman of the committee of the whole during the discussion of the plan of the Federal Constitution.

The very first step to be taken was one of pain and regret. he old Confederation was to be given up. What misgivings The old Confederation was to be given up. and grief must not this preliminary sacrifice have occasioned to the patriotic members of the convention! They were attached, and with reason, to its simple majesty. It was weak then, but it had been strong enough to carry the Colonies through the storms of the Revolution. Some of the great men who led up the forlorn hope of their country in the hour of her dearest peril had died in its defense. Could not a little inefficiency be pardoned to a Union with which France had made an alliance and England had made peace? Could the proposed new Government do more or better things than this had Who could give assurance, when the flag of the old Thirteen was struck, that the hearts of the people could be rallied to another banner?

sods of yonder hill.

The Revolution was at length accomplished. The political separation of the country from Great Britain was effected, and it now remained to organize the liberty which had been reaped.

Such were the misgivings of some of the great men of that day—the Henrys, the Gerrys, and other eminent anti-Federalists, to whose scruples it is time that justice should be done. They were the sagacious misgivings of wise men, the just fore-

bodings of brave men, who were determined not to defraud posterity of the blessings for which they had all suffered and for

which some of them had fought.

The members of that convention, in going about the great work before them, deliberately laid aside the means by which all preceding legislators had aimed to accomplish a like work. In founding a strong and efficient Government, adequate to the raising up of a powerful and prosperous people, their first step was to reject the institutions to which other Governments traced their strength and prosperity, or had, at least, regarded as the necessary conditions of stability and order. The world had settled down into the belief that an hereditary monarch was necessary to give strength to the executive power. The framers of our Constitution provided for an elective Chief Magistrate, chosen every four years. Every other country had been betrayed into the admission of a distinction of ranks in society, under the absurd impression that privileged orders are necessary to the permanence of the social system. framers of our Constitution established everything on the pure natural basis of a uniform equality of the elective franchise, to be exercised by all the citizens at fixed and short intervals. In other countries it had been thought necessary to constitute some one political center toward which all political power should tend, and at which in the last resort it should be exer-The framers of the Constitution devised a scheme of confederate and representative sovereign republics, united in a happy distribution of powers, which, reserving to the separate States all the political functions essential to local administration and private justice, bestowed upon the General Government those, and those only, required for the service of the whole

Thus was completed the great Revolutionary movement; thus was perfected that mature organization of a free system, destined, as we trust, to stand forever as the exemplar of popular government. Thus was discharged the duty of our fathers to themselves, to the country, and to the world.

The power of the example thus set up in the eyes of the nations was instantly and widely felt. It was immediately made visible to sagacious observers that a constitutional age had begun. It was in the nature of things that where the former evil existed in its most inveterate form the reaction should also be the most violent. Hence the dreadful excesses that marked the progress of the French Revolution and for a while almost made the name of liberty odious. not less in the nature of things that when the most indisputable and enviable political blessings stand illustrated before the world-not merely in speculation and in theory, but in living practice and bright example—the nations of the earth, in proportion as they have eyes to see, and ears to hear, and hands to grasp, should insist on imitating the example. France clung to the hope of constitutional liberty through 30 years of appalling tribulation, and now enjoys the freest constitution in Europe. Spain, Portugal, the two Italian Kingdoms, and several of the German States have entered on the same path. Their progress has been and must be various, modified by circumstances, by the interests and passions of Governments and men, and in some cases seemingly arrested. But their march is as sure as fate. If we believe at all in the political revival of Europe, there can be no really retrograde movement in this cause, and that which seems so in the revolutions of govern-ment is, like that of the heavenly bodies, a part of their eternal

There can be no retreat, for the great exemplar must stand, to convince the hesitating nations, under every reverse, that the reform they strive at is real, is practicable, is within their reach. Efforts at reform by the power of action and reaction may fluctuate, but there is an element of popular strength abroad in the world stronger than forms and institutions, and daily growing in power. A public opinion of a new kind has arisen among men—the opinion of the civilized world. Springing into existence on the shores of our own continent, it has grown with our growth and strengthened with our strength, till now this moral giant, like that of the ancient poet, marches along the earth and across the ocean, but his front is among the stars. The course of the day does not weary nor the darkness of night arrest him. He grasps the pillars of the temple where Oppression sits enthroned, not groping and benighted, like the strong man of old, to be crushed himself beneath the fall, but trampling in his strength on the massy ruins.

Under the influence, I might almost say the unaided influence, of public opinion, formed and nourished by our example, three wonderful revolutions have broken out in a generation. That of France, not yet consummated, has left that country

(which it found in a condition scarcely better than Turkey) in the possession of the blessings of a representative constitu-tional government. Another revolution has emancipated the American possessions of Spain, by an almost unassisted action of moral causes. Nothing but the strong sense of the age that a Government like that of Ferdinand ought not to subsist over regions like those which stretch to the south of us on the continent could have sufficed to bring about their emancipation against all the obstacles which the state of society among them opposes at present, to regulated liberty and safe independence. When an eminent British statesman (Mr. Canning) said of the emancipation of these States, that "he had called into existence a new world in the West," he spoke as wisely as the artist who, having tipped the forks of a conductor with silver, should boast that he had created the lightning which it calls down from the clouds. But the greatest triumph of public opinion is the revolution of Greece. The spontaneous sense of the friends of liberty at home and abroad-without armies, without navies, without concert, and acting only through the simple channels of ordinary communication, principally the -has rallied the Governments of Europe to this ancient and favored soil of freedom. Pledged to remain at peace, they have been driven by the force of public sentiment into the war. Leagued against the cause of revolution as such, they have been compelled to send their armies and navies to fight the battles of revolt. Dignifying the barbarous oppressor of Christian Greece with the title of "ancient and faithful ally," they have been constrained by the outraged feeling of the civilized world to burn up in time of peace the navy of their ally, with all his antiquity and all his fidelity, and to cast the broad shield of the holy alliance over a young and turbulent Republic.

This bright prospect may be clouded in; the powers of Europe, which have reluctantly taken, may speedily abandon the field. Some inglorious composition may yet save the Ottoman Empire from dissolution at the sacrifice and liberty of Greece and the power of Europe. But such are not the indications of things. The prospect is fair that the political regeneration which commenced in the West is now going backward to resuscitate the once happy and long-deserted regions of the older world. The hope is not now chimerical that those lovely islands, the flower of the Levant-the shores of that renowned sea around which all the associations of antiquity are concentrated-are again to be brought back to the sway of civilization and Christianity. Happily, the interest of the great powers of Europe seems to beckon them onward in the path of human-The half-deserted coasts of Syria and Egypt, the fertile but almost desolated Archipelago, the empty shores of Africa. the granary of ancient Rome, seem to offer themselves as a ready refuge for the crowded, starving, discontented millions of Western Europe. No natural nor political obstacle opposes itself to their occupation. France has long cast a wishful eve on Egypt. Napoleon derived the idea of his expedition, which was set down to the unchastened ambition of a revolutionary soldier, from a memoir found in the cabinet of Louis XVI. England has already laid her hand—an arbitrary, but a civilized and Christian hand-on Malta, and the Ionian Isles, and Cyprus, Rhodes, and Candia must soon follow. It is not beyond the reach of hope that a representative republic may be established in central Greece and the adjacent islands. In this way, and with the example of what has here been done, it is not too much to anticipate that many generations will not pass before the same benignant influence will revisit the awakened East and thus fulfill, in the happiest sense, the vision of Columbus by restoring a civilized population to the primitive seats of our holy faith.

Fellow citizens, the eventful pages in the volume of human fortune are opening upon us with sublime rapidity of succession. It is 200 years this summer since a few of that party who in 1628 commenced in Salem the first settlement of Massachusetts were sent by Gov. Endicott to explore the spot where we stand. They found that one pioneer, of the name of Walford, had gone before them, and had planted himself among the numerous and warlike savages in this quarter. From them, the native lords of the soil, these first hardy adventurers derived their title to the lands on which they settled, and in some degree prepared the way by the arts of civilization and peace for the main body of the colonists of Massachusetts, under Gov. Winthrop, who two years afterwards, by a coincidence which you will think worth naming, arrived in Mystic River and pitched his patriarchal tent on Ten Hills upon the 17th day of June, 1630. Massachusetts at that moment consisted of six buts at Salem and one at this place. It seems but a

span of time as the mind ranges over it. A venerable in-dividual is living at the seat of the first settlement whose life covers one-half of the entire period, the venerable Dr. Holyoke, of Salem; but what a destiny has been unfolded before our country! What events have crowded your annals! What scenes of thrilling interest and eternal glory have signalized

the very spot where we stand!

In that unceasing march of things, which calls forward the successive generations of men to perform their part on the stage of life, we at length are summoned to appear. have passed their hour of visitation; how worthily, let the growth and prosperity of our happy land and the security of our firesides attest. Or, if this appeal be too weak to move us, let the eloquent silence of vonder famous heights-let the column which is there rising in simple majesty-recall their venerable forms as they toiled in the hasty trenches through the dreary watches of that night of expectation, heaving up the sods, where many of them lay in peace and in honor before the following sun had set. The turn has come to us. The trial of adversity was theirs; the trial of prosperity is ours. Let us meet it as men who know their duty and prize their bless-Our position is the most enviable, the most responsible, which men can fill. If this generation does its duty, the cause of constitutional freedom is safe. If we fail-if we fail, not only do we defraud our children of the inheritance which we received from our fathers, but we blast the hopes of the friends of liberty throughout our continent, throughout Europe, throughout the world, to the end of time.

History is not without her examples of hard-fought fields, where the banner of liberty has floated triumphantly on the wildest storm of battle. She is without her examples of a people by whom the dear-bought treasure has been wisely employed and safely handed down. The eyes of the world are turned for that example to us. It is related by an ancient historian (Dio Cassius, Lib. XLVII in fin.) of that Brutus who slew Cæsar, that he threw himself on his sword after the disastrous Battle of Philippi, with the bitter exclamation that he had followed virtue as a substance, but found it a name. It is not too much to say that there are at this moment noble spirits in the elder world who are anxiously watching the practical operation of our institutions, to learn whether liberty, as they have been told, is a mockery, a pretense, and a curse or a blessing, for which it becomes them to brave the scaffold

and the scimitar.

Let us, then, as we assemble on the birthday of the Nation, as we gather upon the green turf, once wet with precious blood, let us devote ourselves to the sacred cause of constitutional liberty. Let us abjure the interests and passions which divide the great family of American freemen. Let the rage of party spirit sleep to-day. Let us resolve that our children shall have cause to bless the memory of their fathers, as we have cause to bless the memory of ours,

The Army Bill.

EXTENSION OF REMARKS OF

HON. JOHN R. CONNELLY, OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES.

Monday, March 20, 1916.

Mr. CONNELLY. Mr. Speaker, each Member of Congress as well as the whole people of the country have for some months thought much about the condition of our national defenses, and I believe most Members have tried to ascertain what were the needs and demands on this question and to sanely provide for those needs and bring forth such a measure as would meet the approval of the great body of American people who constitute the real strength of the Nation. It is not a matter of surprise that a question, old as the Government yet comparatively new in its demands, because of changed conditions in the affairs of the world, should have found the people of the country far from a unit as to just what should be done. There have, in the main, been two ideas that have engaged the minds of the people since the matter was brought pointedly before them a few months ago. One idea has been to go to the extreme of military preparedness and cumber the country with an Army and Navy exceedingly expensive and unreasonably large. The other has been that, while it is apparent that our present Army and Navy are hardly what they should be, there were no good and sufficient reasons why the country should become hysterical and provide such an Army and Navy as would be unreasonably large.

Mr. Speaker, I am glad to note that the great Military Affairs Committee of this House has chosen rather to approve of the reasonable view and have unanimously reported that appeals to me to be one worthy of support. The bill will. as I view it, be a disappointment to those who want a standing army of half a million soldiers. It perhaps will not quite meet with the approval of those who believe that no increases should be made. It will, however, provide what appears to be a very reasonable increase in the Regular Army and at the same time provide for the organization of a potential force of trained men

that will meet any reasonable expectation should trouble come. It is a matter of much satisfaction to those of us who have hoped for a sane and sensible bill to be brought out, that we are permitted to support such a bill as I believe this to be. report on this bill shows that the country is not now as destitute of defense as many have insisted that it is. In reading the report of the committee I note that we now have perhaps more than a million men in this country of military age who have had military training. Most of these would be available in time of trouble and would form a very formidable basis around which an army could be mobilized. The report says we have 750,000 modern rifles and 400,000 Krag rifles, which are effective modern arms. We have more than 1,000 machine guns and nearly 1,000 field guns of the most modern pattern. The report cites the further fact that there are stored away in the arsenals of the country 200,000,000 rounds of ammunition for the small guns and nearly a million rounds for the larger ones. It might

plies should the emergency require.

Lieut, Gen. Nelson A. Miles, United States Army, retired, in the hearing before the Military Affairs Committee, among other

be stated in addition to this that the Government has arms and

ammunition factories fully equipped for bringing out more sup-

things, said as follows:

Our gun and ammunition factories are manufacturing at least 5,000,000 rifle cartridges daily and will be soon capable of manufacturing daily 50,000 artillery shells or even more. As a matter of fact, there is now being manufactured in our country daily more war materials than any two armies now warring against each other are using in the same time.

Continuing, he said:

Having had much to do with the construction and placing of our fortifications and inspecting every one along the Atlantic, Pacific, and Guif coasts, as well as having had an opportunity of seeing all the great armies of the world and many of their strongest fortifications, including the Dardanelles 1 am prepared to say that our coasts are as well defended as the coasts of any country, and with the same class of high-power guns and heavy projectiles. At the time of the Spanish War we had but a few modern guns mounted. To-day there have been manufactured and mounted, or placed ready to be mounted, approximately 1,000 high-power guns—to be accurate, 994 high-power guns and nearly 500 12-inch mortars. These are better in some respects than the guns that are mounted at the Dardanelles, which have resisted the most powerful ships of the war of the British and French Navies and practically resulted in that expedition being a total failure with the loss of 125,000 lives and \$1,600,000,000 in money.

In view of these facts it appears to me that while the committee has not provided a bill that will meet with the approval of the ultramilitary advocates, it is such a bill as should command the respect of the great body of the people and we believe that it will. This bill, if I understand it, provides for an increase of 40,000 in the Regular Army and nationalizes the State militia in times of war or times when war appears imminent.

I like the idea of making the State militia a part of the plan for our military defense. In the first place the militia is composed of men and boys from among the great body of people who in times of peace go about getting the spirit and sentiment that makes for peace, while the man who does nothing but continually talk war, drill, and prepare for war may lose this very essential touch that the member of the State guard has. Then again, the pay that is allowed the militia, when compared with the pay it would require to keep that same number of men in the Regular Army, is but nothing. It appears to me that it is but paying the actual expense that the State guard goes to in getting to and from his place of drill, and is not a pay for his patriotic service that he renders when he prepares himself to be a unit in the de-fense force of the Nation. We do not keep him as a burden on producing and consuming people of the country, but rather give him such pay as will assist him in his drill and preparation. While on the other hand, the Regular soldier, useful and essential to a certain number, necessarily lives in a sphere that prevents his coming in close contact with the great body of people, and thus ne may come to cultivate the military rather than the civic ideals, which military ideals, I believe, in a republic, should not be encouraged to the extent of creating and maintaining a great Regular Army in time of peace.

Mr. Speaker, there may be those who would like to see this country at war with some other country. I hope there are none who would. I have here and there read opinions in certain newspapers that would seem to justify such a course, and the reasons given did not appeal to me, nor will they appeal to the great body of American people who desire only to be allowed to exert their energies along the avenues of peace with all man-kind. All over this fair land to-day the men and women who are engaged in making homes, educating children, and teaching the principles of justice, humanity, and Christianity are praying that we may go on in peace and devoutly hoping that the blighting touch of war may be spared our land forever. I am one of those who have not been impressed with the claims of those who believe that great preparation for war insures us against war. I can not persuade myself that our danger of a conflict with any of the first-class nations of the world is probable at any time in the near future. I am rather of the opinion that when the war god has taken his frightful toll from the broken and bleeding nations of Europe reason will again be enthroned and a long period of peace ensue. It appears to me that to believe otherwise is to forsake much of the faith that has gone far to make us a great people; but, believing this as I sincerely do, I would not neglect so important a matter as to make a reasonable and rational provision to repel any hostile people who would dare to do us harm or interfere with our purpose to be a free people, fully determined to enjoy the blessings of free government even, if need be, at the expense of fighting for that liberty as did our fathers. My position exactly stated is that I want to be ready to meet trouble if it comes, but I do not want to be so ready as to invite it. Mr. Speaker, I do not represent a people who are for peace at any price. They have neither preached nor practiced that code. They believe that past wars of this Republic have been waged for the high purpose of establishing or extending liberty. the time ever comes when the institutions of this Republic that have come to us as a heritage from martyrs are threatened, millions of men will rush to their defense with guns in their hands. But who is there now to threaten us? The great nations of Europe are practically all engaged in a death grapple, out of which they must come bruised and chastened. have dissipated their men, their resources, their energies. will be busied for long years binding up the wounds they have made and building up the devastation they have wrought. Is it reasonable that they should seek trouble with a people who look upon their present misfortune in pity rather than in anger? I for one shall not expect that to happen. I know the great masses of people of this country, when this war over there shall cease, would rather see our merchant ships start for their ports with food and raiment and money to help them than to see our battleships called into action to engage any of them in war, I can not escape the conviction that much of the hysteria in this country over our state of unpreparedness is not warranted. either by the present state of our armaments or the conditions that confront us from abroad. I do not want to say that all of the noise is made by the shipbuilders, the munition makers, and the thousands of other concerns that fatten from preparedness contracts, which have found the time opportune to frighten our people. I am, however, of the opinion that if the voices of these profit seekers could be silenced for a little while that the tumult would subside to that extent; that the voice of reason could be heard and we could go along making those rational preparations for such an adequate defense as sanity demands.

Sugar.

EXTENSION OF REMARKS

OF

HON. CYRUS A. SULLOWAY,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 15, 1916.

Mr. SULLOWAY. Mr. Speaker, we are to witness to-day one of the greatest acrobatic feats ever displayed by a political party in this country. As an example of lightning changes and high and lofty tumbling it stands without a precedent in the administration of party affairs since the birth of this Nation. We here see the spectacle of the Democratic Party about to abandon and repudiate its great paramount principle of a competitive tariff, of virtual free trade, and compelled by its own acts to recognize the great Republican principle of protection.

Woodrow Wilson, theorist and dreamer, whose tariff views are said to be largely expressed in the Underwood bill, has been compelled to recognize the utter fallacy of the position of himself and his party on this great fiscal issue. The action taken here to-day shows the complete failure and collapse of the tariff program of the Democratic Party and the practical reenactment of a Republican tariff schedule on sugar shows the utter helplessness and hopelessness that party is now confronted with.

The visionary views of the President on the tariff question, his oft-expressed prophecy that a sweeping reduction of the tariff would surely result in a sweeping reduction of the high cost of living, have come to naught. Failure is being stamped on the fiscal policy of the present administration here to-day by its own acts and its own admissions. Where three years ago in this very same body, over on the Democratic side of this Chamber, present Members of this House were hollering their heads off for free sugar, shouting that it was a "tax on the poor man's breakfast table," we find them now meekly and solemnly lined up to preserve the duty on sugar and in a complete right-about face upon their whole tariff policy and about to give a national certificate of recommendation to the greatness and goodness of the protective system. The Democratic Party by its action here to-day is saying to the country that the Republican Party has been right and that it has been wrong. It is an admission of its weakness and a record vote of its inefficiency. It serves notice on the country that it has been legislating for the ethereal and not for the real.

It admits its position has been wrong on the sugar schedule, which leaves no construction except that it has been wrong on all. It points out that while the party has started out to save one industry it has neglected all others which have been similarly affected. I am in favor of the passage of this bill, notwithstanding the fact that it will receive the support of our Democratic friends. It is an orphan Republican schedule, which was cast off and which has come back to us in bad company. It is a Republican prodigal, which has come back to rise up and smite the party that tried to destroy it. I wish it had more I was in hopes the Democratic Party, the President company. of the United States, and the leaders of the House on that side of the Chamber would be wise enough, patriotic enough, and public-spirited enough to bring back to the House a tariff bill that would wipe out the unfortunate, un-American, and unbusinesslike provisions of the Underwood bill from its opening paragraph to its closing words. I was in hopes that this industrydestroying nonrevenue-producing failure would be brought here and be embalmed and forever laid away. But I am doomed to disappointment. I find that only one schedule, that touching sugar, something that will leave a pleasant taste, at least, in the mouths of our political opponents, has alone been brought forward. But it is something. It shows while Democracy on its fiscal policy can not be reformed in its entirely it is at least beginning to see the light and that it has begun to administer to itself Republican doctrine, on the installment plan, for its political ills and its financial sufferings,

The putting of sugar on the free list May 1, 1916, which was the plan and policy of the Underwood bill and the Democratic Party, not only was a blow at the great beet-sugar industry of this country, which was practically in the hands of the farmers of the United States and which represented an investment of \$100,000,000, but it actually placed this great ndustry, this important and necessary commodity of the American people, directly in the hands of the Sugar Trust and gave them an absolute monopoly of the business. Republican protection had fostered and developed the beet-sugar industry and thus created competition, which prevented the Sugar Trust from fixing prices and squeezing the public. In 17 States of the Union it was the means of constructing 77 great beet-sugar refineries, which represented an outlay of \$100,000,000. These industries were built by American capital, operated by American workingmen, and were owned by American citizens.

Since the Underwood tariff bill was enacted into law October 22, 1913, there has not been constructed a single new sugar refinery in the United States, but down in Cuba the Sugar Trust, with the prospect of free sugar next May, where labor is cheap and the profits greater, have built 20 new refineries, 11 of which were constructed in 1915. They were erected because the Sugar Trust knew that the free-sugar provision of the Underwood bill meant the death of the beet-sugar industry in the United States. With free sugar the trust would absolutely dominate the American market. The labor cost in refining imported raw sugar, with the low wages paid, is about one-third of a cent a pound for converting raw into refined sugar, while in the beet-sugar industry it is 3½ cents per pound. So that there was but one con-

clusion, sugar produced by cheap labor, free of duty, must, of necessity, destroy the great beet-sugar industry of this country.

But Providence and a depleted Treasury have forced the Democratic Party to intervene. The policy of the Republican Party has been seized upon to help rescue our political foes from their financial dilemma. A great industry has been saved and preserved, which in a few years, under wise legislation by the Republican Party, would have made us the greatest sugar-producing country on the face of the earth, and which would have made us in times of peace or war absolutely independent of foreigngrown sugar. Tests made by former Secretary of Agriculture Wilson show that 274,000,000 acres of lands in this country were available for producing the sugar beet. Protecting our industries spells preparedness in both peace and war.

During the past 14 years beet sugar increased in production from 40,000 to 760,000 tons, while the price of granulated sugar has been reduced to the consumers of the country 85 cents per hundred pounds. This means a saving of \$68,000,000 a year to the people of this country. This is one of the fruits of protection in one industry alone. It explodes the fallacy of Democracy, that the "tariff is a tax," or that it has ever enhanced the value of a single article to the consumer. It explodes the Wilson theory that the tariff was responsible for the high cost of living, and to-day, the action being taken by the Democrats of this House, places the stamp of approval upon the past fiscal history of the Republican Party and the votes of the Members of this House on the other side of this Chamber, indorses the policy of protection and uphold the righteousness and neces-

must be levied on the people.

President Wilson has learned from experience that "whet-President Wilson has learned from experience that wher-ting wits" and seeing who has the "best brains" under free trade does not create business or provide revenue to run the Government, but, on the contrary, that such a policy is ruinous to our business, throws labor out of employment, cripples and curtails our industries, and bankrupts our Treasury. Such a policy has compelled the Democratic Party in a time of profound peace to levy "war taxes" and to place other additional tax burdens-directly on the backs of the American people, something unheard of in the history of the Republican Party. Yet, in spite of all these added taxes, the administration finds itself running behind millions in the matter of meeting the running expenses of the Government, and still other additional burdens

I am glad that even in the closing hours of this Democratic administration, just previous to the time when it is to be removed from power by the votes of the American people, that it has at least had a "death-bed repentance" on its tariff policy. That again it has repudiated its policy of the past and shifted its views upon another great issue. With three years in power, not only its Chief Executive but the party in Congress itself has wobbled or side-stepped practically every potent issue it stood for on the Baltimore platform. It has not taken a long period to show up the Democratic Party in all its hypocrisy or to demonstrate its fallures and its fallacies. Stripped of its last great issue, it is to-day making a spectacle of itself and displaying such an element of governmental weakness that it is signing its own death warrant politically, and serving notice on itself that it must vacate March 4, 1917.

To-day the Democratic Party has given the policy of protection an indorsement of which the voters of this country will take heed. It means that once more the people of this land will turn to a reunited Republican Party; the party that stands for something; that believes in the upbuilding of American industry and American labor; the party that stands for progress, protection, prosperity, the hum of industry, and the full dinner pail; the party that will bring to this country peace, contentment, efficiency, economy, and Nation-wide happiness.

The Military Establishment.

EXTENSION OF REMARKS

HON. JAMES J. BRITT,

OF NORTH CAROLINA.

IN THE HOUSE OF REPRESENTATIVES.

Tuesday, March 21, 1916.

Mr. BRITT. Mr. Speaker, in this House we sometimes do our work cheerily, sometimes indifferently, and sometimes even unwillingly, but I believe every Member here will vote for this bill with a joyous pride and with a swelling of patriotic fervor.

For my own part, no other measure since I have been a Member of this House has so completely enlisted all my sympathies, so strongly challenged my unqualified support. Some of our work here may be but little above the trivial, much of it is fleeting in its nature, but somehow I believe there clusters around this measure a great and powerful national destiny. With its passage we launch upon a new career among the nations of the earth, we begin a new epoch in American history. It is indeed a measure of tremendous importance. And it is infinitely greater in promise than in provision, for I believe it is the beginning of a sound military policy, one that will be adequate to the protection of our lives, our liberties, and our institutions. This bill is admirably drawn. It shows the hands of master draftsmen. It is not only great in subject matter, it is fine in phrase and singularly direct in purpose. I wish personally to thank each member of the Committee on Military Affairs for the time, the pains, and the care which they have given to the preparation of this bill.

And yet, with all my heart, I wish they had gone further. I would gladly vote for a larger Infantry, for a stronger Cavalry, for a more powerful Field Artillery, for better coast defenses, and especially for better provision for the National Guard. My only objection is that the defensive forces raised by the bill are not large enough, but, having caught the step, I feel assured that we shall from year to year make the necessary additions to every arm of our national forces.

And, Mr. Speaker, we have commenced none to early. Indeed, we may yet rue the lateness of the hour. We all love peace, we all seek peace, and our unending prayer is that it may abide with us, but we are living in a strangely confused world. We are amid the play of forces—political, racial, economic, moral, and religious-which we can not ourselves control. We are a part of the newly adjusting world. We may any day be called upon to justify our right to a place under the sun. Man is still a fighting animal. His primal instinct for prey is yet a part of him. Civilization, that thin veneer that hides our savage nature, has not yet been able to lift us above imbruing our hands in human blood. The teachings of the Christ, with all their sweet influences, with all their healing efficacy, have not, in 20 long centuries, brought to the world the universal brotherhood of man. True, man's nature changes, and changes for the better, but it is only by slow and imperceptible advances, such as the Psalmist had in mind when he said, "A thousand years in the sight of the Lord are but as yesterday when it is past and as a watch in the night." Personally we are no larger, no taller, no more comely than when Phidias first chiseled the human form in stone, 2,300 years ago. Intellectually, while more efficient, more variously cultivated, we are nevertheless no keener, no more profound than when Aristotle taught the Greeks, 2,400 years ago. And, even more, we can not tell how much better we are morally than were the men of Israel when David sang and Solomon wrote, 3,000 years ago.

In preparing for the national defense, we ought to take into account what we have to defend, our national policies, and the strength of our probable enemies.

Let us, for a moment, inquire whether we have anything

worth defending, worth living for, or worth dying for.
First, we have the continental United States, with its 3,000,-000 square miles of rich and smiling lands, teeming with the best that God has permitted the earth to produce, a precious heritage from our fathers, sealed with their blood on a thousand battle fields; its 100,000,000 of people, with their lives and liberties in our keeping; its sweet memories and glorious traditions, reaching far beyond the Revolution; its vast heap of \$150,000,000,000 of resplendent wealth; its monuments of beauty and galleries of art; its churches and religious institutions; its schools and colleges; its literature that has enriched the world; and its inventions that have given wings to thought and arms to industry.

Far to the south of us, under tropical suns, we have the Isthmian Canal, that mighty enterprise of \$400,000,000, the crowning workmanship of the world, by which we have wedded the two oceans, separated from the beginning of time, and cut the globe's distance in twain, constructed for the welfare of mankind, and for the neutrality of which we have given pledges to the world.

Away to the northwest w have Alaska, that boundless tract of 600,000 square miles of undeveloped treasure land, rich in gold, silver, fuel, and forest, those prime necessaries of mankind, our hope for the coming years when our homeland is cut over and burrowed into and wasted away by the scrambling masses of our crowded population.

We have, too, our great historic foreign policies, the Monroe doctrine, by which, for a hundred years, we have guaranteed republican government to the 20 Central and South American

Republics; the maintenance and defense of the Panama Canal, and the guaranty of its neutrality; the exclusive of undesirable Asiatic citizens; and, lastly, the preservation of the open door in China.

These are the peoples, the institutions, the traditions, the policies, and the possessions of which God has made us his keeper, and it is a task worthy of the noblest efforts and the bravest defense of men who, though they love peace, are yet men of blood and iron in defense of home and native land.

One hundred and thirty-six years ago Washington laid down the maxim that no nation can be trusted further than it is bound by its own interests, and all history confirms this truism. Treaties are but "pieces of paper," ententes are useless, and understandings count for naught when they clash with the greed and ambition of nations. Our position in the world is suddenly changed. We are no longer protected by a remote isolation. Steam and electricity have destroyed all distance. The nations of the earth have moved together and live in speaking range. The oceans now make war vastly more easy instead of more difficult. A quarter million soldiers can be brought across the Atlantic in 10 days, and across the Pacific in 30 days. The diplomatic, commercial, and social relations of the nations are bewilderingly complex, and the points of collision are constantly increasing. We are in the whirl of the vortex, and from it there is no escape. But we can yet play the part of noble men of a great Nation.

Are we likely to be attacked by any great nation of the world? No one can tell. But we know that Washington's maxim is true. We hear the crash of falling timbers among the nations of Europe. We behold the world bristling with martial airs. The race stands aghast at its own madness. We can not foresee the events of a day. We know that all Europe fell to pieces overnight. To-morrow we may be in the whirlwind of war.

We are not loved by Germany, whatever we may hear to the contrary. She hates our Monroe doctrine because, as she says, it makes us virtual overlords over all Central and South America, one-half of the unexploited globe, while she is without a field for the display of her genius or an outlet for her surplus population. Nor does she like our commercial rivalry, or our foreign trade in the munitions of war, the benefit of which she, because of her military misfortunes, can not share equally with her enemies.

Japan, although we first introduced her to the family of nations, cherishes two festering grievances against us, our taking the Philippine Islands at her very gateway, and clearly within her sphere of influence, and our refusal to admit Japanese immigrants to our shores on equal terms with immigrants from the other favored nations of the world.

Nor is the future secure as to England. Although at peace with us for the last hundred years, yet when the time comes, as it surely will come, when we shall dispute her right to the supremacy of the seas, she will then appeal to the inexorable law of self-interest, and the world will see that blood is not thicker than water.

Our position, then, should be that of the just man armed for battle. We should seek no quarrel with any nation and should suffer no wrong from any quarter. We should demand our every right and should comply with our every obligation.

This is not a party measure. It transcends all party considerations. It is not the measure of the President of the United States, or of the Secretary of War, or of the majority, or of the minority. It is the concrete and harmonious voice of the American people, demanding through their chosen Representatives that this Congress shall make ample preparation for the defense of their lives, their liberties, their property, and the sacred institutions bequeathed to them by their forefathers.

The McLemore Resolution.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. SCHALL. Mr. Speaker, in casting my vote against tabling the McLemore resolution I am voting against a subterfuge, a trick, an unwarranted attempt on the part of the Democratic majority to dodge responsibility. The question that they have arbitrarily thrust before us is not a discussion of the

merits or demerits of a resolution warning Americans off armed belligerent merchantmen.

A vote to table is not voting for or against warning, it is not voting for or against the President; it is simply and only voting not to vote—an expedient to avoid putting yourself on record.

You gentlemen, with your flaunt of patriotism, who have paraded the catch phrases, "Stand by the President," "Don't waive our international rights," "Don't palsy the President's arm," "Hold up the President's hands," know that you are befuddling the issue to the American people.

I hear the hiss of the party lash and the scuttling of feet before it; and if this parliamentary trick can be congratulated on anything, it is that it will prevent an opposition vote of its

own supporters from coming into the open.

As I sat here listening to the voices of Congressmen who before now, upon subjects even where I differed from them, have moved me by the truth and force that was in them, those same voices, speaking in defense of tabling this resolution, have come to me shorn of conviction, with no message, faltering, broken, stumbling, no inspiration, lacking the ring of sincerity and truth, because they know that every man upon this floor understands the ruse and reads their hearts straight and not through the lens ground for the particular purpose of distorting the vision of the people.

I could join with the so-called patriotic slogan "Stand by the President," and ride as a glorified patriot on the easy wave of applause, but in doing so I should be false to myself and false to my better judgment. I should stultify my conscience and leave bare my soul to the just rebuke of the still small

voice

I am not infallible in my judgment, and I may be wrong; but as God gives me the light to understand between right and wrong, I believe that in casting my vote against the tabling of this resolution, I am casting it against deceit, fraud, gag rule, and all the petty intrigues that have gone to weaken the people's confidence in their Congress.

I realize it is like reasoning with a big locomotive coming down the track to attempt to explain, in the face of public misconception of the point at issue, a vote against the tabling of the McLemore resolution. I am no seer, but I have faith to believe that "truth crushed to earth will rise again" to confront us all and judge between us. I would rather go down to defeat with truth in my heart than up to victory as a part of deceit and fraud practiced upon the American people.

It was the Democrats and not the Republicans nor the Progressives who raised the question. They indulged in a cloak-room revolt and the President asked for a show-down. He asks that Congress advise him, that it give the matter a full and free discussion. The Democratic majority do not propose to give this matter a full and free discussion. Neither do they propose to go on record for or against a warning resolution. Their leaders have said that a warning resolution would carry 3 to 1 in the House; therefore the problem is to engineer a parliamentary trick which will enable them to think one way and vote another. How all of a sudden the shelving of the whole subject can be satisfactory to the President is beyond my comprehension.

In picking from the several similar resolutions the McLemore, they chose the one most incapable of passage, because it bore the most seeds of dissension. And now they intend to jam this program down the throat of Congress without a full discussion, as the President especially requested. If the advice of Congress is worth anything on a subject that may involve the peace and welfare of the United States, surely four hours is not a full and free discussion, especially when the time is spent on the proposition of tabling and not on the meat of the thing itself. The plan to table the resolution does not give the House a chance to express its views on the subject. It is plainly a ruse.

Had the Democratic House Members wished a square vote, it would have been easy to put the issue squarely before the House by adopting a parliamentary handling which would permit of amendment germane to the subject, and would also permit a direct vote so that each man could show where he stands. If the special rule had been defeated, this amendment would have been introduced:

Resolved, That citizens, under existing conditions and irrespective of their legal rights, ought to refrain from taking passage on armed merchantmen of belligerent nations, except in cases of imperative necessity.

The above would have put the real question before Congress, where it could have had full and free discussion, as the President said he wished.

But this is not the Democratic plan, as was shown conclusively in the Senate, where the plan adopted, it is charged, came through subterranean passages from the power "higher up."

In so much haste was the Democratic majority to table the Gore resolution that they paid no attention to the amendment offered by the Senator from Oklahoma, and when they had completed their record performance they had voted to table a resolution which declared that the sinking of an armed merchantman with a loss of American lives would be a cause for war. This amended resolution contained the gist of the President's position, yet in their haste to get under cover, in their avid eagerness to avoid a record vote which would have been frank, clear, and open, they put themselves in the ridiculous position of voting, presumably upon the orders of the President, in a manner directly opposite to the position which the President wished them to take.

The purpose of the parliamentary jockeying which places the McLemore resolution before the House, so that it may be tabled,

is equally insincere.

If a triumph for the administration consists of forcing a recalcitrant majority to side-step a question of such tremendous importance, it is easy to see the adminstration needs little with which to grace such an occasion. How many ruinous victories like this will it take to open the people's eyes!

A vote against tabling the resolution is a protest against deceit, subterfuge, parliamentary trickery, and an utter failure on the part of the majority to rise to the great responsibility which the President's request has placed upon them. But-and here is the crux of the whole fiasco-the Member who votes to table the McLemore resolution will be in a position to go before his constituents and say that a vote to table was not a vote against, oh my. no! or in favor of warning, oh, no! as the political exigencies of his constituency may dictate. The unstable character of the vote is possibly in keeping with the mobile character of an administration position which possesses an incomparable agility.

In asking for a vote of confidence the President asked Congress to vote blindly, since he did not furnish, and never has furnished, that body with information. Admit that the President should handle the diplomatic relations of our country, but when he asks the Representatives of the people to commit themselves on a matter so important, surely he should not expect them to vote without knowledge and without information.

The firmness which the administration so valiantly parades at this time, is but a part of the belated program which it has displayed and which has subjected our entire foreign relations

to the charge of always being too late.

It was "too late" when a firm stand might have halted the war at its outset. It advertised a policy of nonresistance at a time when to do so invited the very troubles which now beset us. Had it shown the firmness which it now assumes at the outset of the European war, had it locked the barn door before the horse was stolen and not afterwards, our course would have been clear. Europe wants no trouble with us and has wanted none. A firm course would have obviated the difficulty at the outset. Every step made by this administration in its handling of our foreign policy has been an effort to remedy the error which sins of omission or commission had previously invited. On one day the administration devotes itself to scrambling the situation, and the next day is devoted to the pleasant task of unscrambling it.

The present issue of the armed belligerent merchantmen which the President caused to be raised in Congress would probably never have come up had it not been for the communication made by the President through his Secretary of State, Lansing, in which he opened the entire question and apparently assumed the position of the German contention, wherein he said, on January 18, 1916:

The use of submarines, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge, is almost defenseless in point of construction. Even a merchant ship carrying a small-caliber gun would be able to use it effectively for offense against the submarine.

It would therefore appear to be a reasonable and reciprocally just arrangement if it would be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatever.

In proposing this formula as a basis of conditional declarations by the belligerent Government I do so in full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistance upon doubtful legal rights which may be denied on account of new conditions.

I would be pleased to be informed whether your Government would be willing to make such a declaration, conditioned upon their enemies making a similar declaration.

Almost the next day the administration was "on again, off again," and endeavoring to get out of a ticklish situation by placing the responsibility upon the Members of Congress of its

own party, who, forsooth, were merely expressing opinions in loyalty to his opinions, as set forth by his Secretary of State.

With such a record of ineptness, of instability, of wabbling uncertainty, it is not strange that the administration should hesitate to insist upon the "full and free" discussion which it asked for, for purposes of publicity only, and to put over in the confusion the idea that it was Congress, instead of his own Secretary of State, that was tying his hands, and should prefer that the dehate be confined to the four-hour discussion of the that the debate be confined to the four-hour discussion of the parliamentary method of handling the situation rather than to a discussion of the situation itself,

Standing by the President is a splendid attitude to take; it is the usual and unquestionable attitude for any patriot; but the tabling of the McLemore resolution has nothing to do with

standing by the President.

The country would benefit by the discussion of this resolu-tion upon its merits. Its significance would be complete were the Members privileged to vote on the resolution directly, and I therefore believe it my patriotic duty to cast my influence toward securing them that privilege and vote against tabling the resolution.

The Military Establishment.

EXTENSION OF REMARKS

HON. JOHN M. MORIN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 20, 1916.

Mr. MORIN. Mr. Speaker, I am heartily in favor of the amendment offered by Mr. Kahn, of California, to increase the Regular Military Establishment to 220,000. I regret that the amendment does not provide for 250,000 men, which I would gladly support. I agree with Maj. Gen. Wood that we should have an adequate regular force of at least 220,000 men just as soon as possible to record enveraged that the provide in the provide soon as possible to meet emergencies that may arise in the near future, which force might be reduced somewhat in strength, so far as troops within the continental United States is concerned, for the sake of economy. When we have an adequate and well-trained reserve this reduction need not exceed 15 per cent of the full war strength of the regular military organization.

The Military Establishment.

EXTENSION OF REMARKS

HON. HENRY I. EMERSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 21, 1916.

Mr. EMERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following amendments, which will be introduced to the Hay bill.

The executive committee of the National Guard Association of the United States recommends the following amendments to section 23 of House bill 12766, together with the reasons therefor: Amend, on line 22, page 48, by substituting for the period a comma, and adding the following words:

and shall have the status of Federal soldiers, within the meaning of section 8 of Article I of the Constitution of the United States whenever ordered into the service of the United States by the President: Practided, That commissioned officers shall take and subscribe to the following oath of office:

-, county of -STATE OF -

STATE OF _______, county of _______, ss:

I, _________, do hereby solemnly swear that I will support and defend the Constitution of the United States and the constitution of the State of _______ against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office of ______ in the National Guard of the United States and of the State of ______ upon which I am about to enter, so help me God.

And provided further, That enlisted men shall take and subscribe to the following oath of enlistment:

I do hereby acknowledge to have voluntarily enlisted this — day of —, 19—, as a soldier in the National Guard of the United States and of the State of —, for the period of three years in active service and three years in the reserve under the conditions prescribed by law unless sooner discharged by proper authority. And I do solemnly swear that I will bear true faith and allegiance to the United States of America and to the State of —, and that I will serve them honestly

and faithfully against all their enemies whomsoever, and that I will obey the orders of the President of the United States and of the governor of the State of —, and of the officers appointed over me, according to law and the rules and Articles of War.

Amend, by substituting for the period, on line 16, a colon, and adding the following words:

Provided, That when ordered into the active service of the United States the National Guard shall be taken as organized, by regiments, brigades, divisions, or independent and separate organizations as the guota of each State, Territory, or the District of Columbia, or major fraction thereof, may require, including all regimental, brigade, and division staff officers authorized by law and regulations for corresponding units of the Regular Army.

ARGUMENT.

The proviso recommended above as an amendment to this section is necessary to protect the interests of those men who may qualify under the provisions of this act for the command of authorized units, be they divisions, brigades, regiments. or companies. The justice of this principle has been recognized in all measures concerning the use of the National Guard for Federal purposes that have been submitted for the consideration of Congress in recent years and has been conceded as just and fair by the War Department authorities.

Amend, by substituting a colon for the period at the end of

paragraph 30, and adding the following:

paragraph 30, and adding the following:

Provided, That there shall be appointed in each State an adjutant general, who shall be an officer of the National Guard with rank of brigadier general. The office of the adjutant general shall be the office of record and administration for the militia of each State, except when such militia has been called into the service of the United States. In addition to his duties as prescribed by the laws of such State, such adjutant general shall make such returns and reports to the Secretary of War, at such times and in such form as the latter shall from time to time prescribe. The adjutant general shall be appointed from among officers on the active list of the National Guard of their respective States who shall have had not less than five years' prior service as commissioned officers of the National Guard or in the Regular Army, or both combined: Provided further, That the adjutants general of the Territories and of the District of Columbia shall be appointed by the President with such rank and qualifications as he may deem proper.

ARGUMENT.

ARGUMENT.

In the tentative militia code submitted to the Military Committees of Congress by this committee, the above suggested amendment appeared as section 14.

It has been suggested that the said section 14 was not made a part of the House bill because it was felt that by prescribing qualifications for the adjutants general Congress would in a measure be restricting the field of selection of the governors from which this office may be filled, and that in some States the office of adjutant general has come to be considered as a political rather than a military office. On the other hand, it may be that the House committee was influenced in this matter by a belief that the force authorized to be organized under this act could be more effectively federalized and centrally controlled under a system of administration which would enable the War Department to deal directly with commanding officers of troops rather than through the adjutants general of the several States.

It is the opinion of this committee, however, that neither of these presumptions are sound. Dealing with the first, it will be recalled that the Chief of the Division of Militia Affairs in his testimony before the House committee stated that the successful administration of militia affairs had been seriously interfered with and hampered by lack of uniformity in rank, tenure of office, and the prescribed duties of the adjutants general in the several States and Territories. It has also been established beyond question that efficient military administration has been interfered with by the fact than in many instances political considerations enter into the filling of this office. The fact must not be lost sight of that under existing State constitutions and laws the office of adjutant general is provided for and recognized, and that this officer has important functions to perform, in connection with the administration of military affairs within a State, including the disbursement of funds appropriated by the State legislatures for the support of the National Guard, and that the existing Federal law provides and requires that there shall be an adjutant general in each State. If it is thus established that there must be an adjutant general in each State, obviously great military advantage would result from the exercise of the power of Congress to regulate. as a matter of organization, the rank, tenure of office, and qualifications of those who may be appointed as adjutants general, and this is what is recommended. Thus there may be established such conditions, uniform throughout the whole United States, as will insure the filling of the office of adjutant general within each State by the appointment of a competent person who has had reasonable military training and experience.

The control of the National Guard within a State in time of peace devolves upon the governor, and the mass of detail work involved must necessarily be performed by a subordinate of the governor. Established military procedure and the plan of organization now prescribed for the militia by the United States recognizes the office of adjutant general as the proper State agency for performing this service. In the relations of the War Department with the National Guard there must be a fixed medium of communication not subject to constant change, nor influenced by those changes which occur in individual line officers, their station or rank, and which are incidental to the service. It is plain that the volume of administrative duties devolving upon an adjutant general is such as could not be assumed by a line officer not permanently on duty as a salaried officer of a State.

There should be no misapprehension as to the meaning of the term "administration" as used in the amendment which this committee suggests as being the normal function of the adjutant general. This term will not be confused in military minds with the term "control" or "command," which functions are exercised only by line officers in whom the right to command troops is vested.

Rural Post Roads.

Good roads benefit the capitalist and the laborer, the rich and the poor, the adult and the child.

SPEECH

OF

HON. ROYAL C. JOHNSON,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 25, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 7617) to provide that the Secretary of Agriculture, on behalf of the United States, shall, in certain cases, ald the States in the construction and maintenance of rural post roads.

Mr. JOHNSON of South Dakota. Mr. Chairman, I had not expected to speak upon this measure appropriating \$25,000,000 for the construction of rural post roads in the United States until I listened to the inspiring and patriotic address of the gentleman from New York, Mr. Hulbert. In his speech he called attention to the fact that some of the opponents of the measure apparently based their opposition on the fact that they represented city districts, which did not receive benefit from the law, and called attention to the fact that no part of this country could receive any help without a corresponding benefit to every other part. He said, "Any man who has lived in the city of New York, who has grown up with its commercial progress and advancement, must look to the East, to the West, to the North, and to the South," and I agree with him that no Member of this body can afford to oppose this measure because it does not directly appear that his district will receive direct benefit, because there is no East, no West, no North, and no South, and any measure which will benefit one section of the country indirectly, benefits every citizen.

I desire, however, to call the gentleman's attention to the fact that, in addition to the indirect benefit to his constituents, which the measure will have, it will have direct effect upon their pocketbooks. Any measure which will tend to lower taxation or to lessen the cost of living financially benefits every citizen, and the lowering of indirect taxes is as much a benefit as the lessening of direct taxes. This measure will tend to lower an indirect commercial tax assessed against his consti-This measure will tend to tuents in the city of New York-the tax of transportation.

It has been estimated that of the total income of the average citizen, from 10 to 25 per cent of it goes to pay for the transportation of food, clothing, and the necessities of life. The first transportation tax is added by the producer. Each middleman adds a proportionate share; and the total is paid by the con-Lower this tax and you help the consumer. Nothing will tend to lower it as will the building of good roads. The gentleman from Illinois [Mr. WM. ELZA WILLIAMS] stated Saturday that-

Statistics show that it costs 25 cents per ton per mile to transport farm products in the United States; while in continental Europe, where they have good roads, it costs but 8 cents per ton per mile, a loss on account of bad roads of 17 cents per ton per mile.

And the statistics bear out his statement.

The gentleman from North Carolina [Mr. Britt] stated, in effect, that farm products must be transported over our public roads an average distance of about 9.4 miles before being served up as food for our city population, or to provide raw material for running our factories-and his statement is borne out by the statistics. If the consumer is paying an excess of 17 cents per ton per mile for 9.4 miles for each ton of food products, he is paying 8 cents per hundred pound; more than he would pay if we had a comprehensive system of good roads.

Concretely, then, he is paying about 8 cents per hundred pounds more for wheat flour from the great Northwest than he would pay if the farmer who hauled that wheat could secure good roads over which to haul it, and this 8 cents is paid by the consumer as a part of the cost of production, exactly the same as if it were rail transportation. In other words, the consumer should pay just as much attention to the cost of wagon transportation as he does to railroad rates, because one affects his pocketbook just as much as the other, and the cost of transportation will never be as low as it should be in this country until we have a comprehensive system of good roads.

Mr. DALLINGER. Will the gentleman yield?

Mr. JOHNSON of South Dakota. I will yield to the gentleman.

Mr. DALLINGER. I would like to ask the gentleman if he thinks that this bill now being discussed by the House will give the country a comprehensive system of good roads?

Mr. JOHNSON of South Dakota. I do not know; but in my opinion it would be a start toward giving the country a

comprehensive system of good roads.

A slight study of this bill demonstrates the fact that the Committee on Roads have given much of their time to an attempt to devise a fair and equitable scheme of division of the funds appropriated among the different States and Territories, taking into consideration in each State the population, the per cent of population to the total population of the United States, the number of rural free-delivery routes, the aggregate length of such routes in every State, the number of star routes, the aggregate length of star routes, and the per cent of total miles of rural free-delivery and star routes in each State to the total of such routes in the United States.

Under an estimate of the committee, the State of South

Dakota would receive from the Federal Government under this bill the sum of \$337,406 and, although the minority report of the committee objects to the allotment to the States of South Dakota, North Dakota, Colorado, and certain other Western States because of the small population in such States, I am of the opinion that the allotment is fair, taking into consideration the mileage of rural free-delivery routes in such States. It is true that it may be necessary to amend the constitution in some of the States to secure the benefits in this act, but I shall not enter into a discussion of the legal questions involved, as those questions are for the people of each State to determine

and have no part in the deliberations of this body.

I would call attention to the fact, however, that no particular kind of a State highway commission is required and there seems to be nothing in the law to prevent State highway commissions from operating through the county authorities, or through the authorities of any legal subdivision of a State. It is manifest that it would be unwise for the United States to attempt to deal with any unit smaller than a State in the matter of road construction or maintenance. Otherwise the cost of supervision and overhead expense would use up a large proportion of the appropriation. I agree with the committee that, "Roads are local concerns, and primarily, it is the duty of the States to provide them for the people," but the taxes collected by this Government come from all of the people and their expenditure in the aid of good roads assist all of the people.

The Federal Government has reserved to itself the right to conduct the Postal Service, and if rural free deliver routes are to be extended and mail service given to all of the citizens of this country, its cost will be prohibitive, unless the carriers can travel over roads that are at least passible. Good roads are just as necessary as an adequate office force and competent carriers. The United States has been very liberal in its appropriation for harbor improvements and it is more necessary that we have land transportation than water transportation.

Much has been and much will be said concerning the so-called preparedness of this country for war, and it is manifest from temper of the House and Senate that vast appropriations will be made for an increase in the Navy, an increase in the Regular Army, and an increase of the reserve or National Guard.

The present war in Europe has demonstrated the fact that the transportation of soldiers, arms, and munitions of war is one of the big problems to be solved and battles are won or lost, depending on facilities of transportation. Both France and Germany have for many years expended vast sums of money in building military roads and as a consequence have been able

of the sum needed for national defense in building roads that will be of military value and the sum so expended will not only be of benefit in time of war, but of equal value in time of peace. This is more than can be said of any other funds for the support of the Army or Navy.

Vast sums of money are being expended in the United States for the education of our children. It is impossible to build a schoolhouse in every section of the land and pupils can not attend educational institutions unless some arrangement is made for their transportation, and good roads are just as necessary

as good schools.

The only valid objection that I can see to this legislation is the present depleted condition of the National Treasury and the fact that the money that is now being raised to run this Government is being procured through odious stamp taxes. I should not vote for the measure, if I did not feel sure that the people of this country will retire the administration that depends for its revenue upon stamp taxes instead of a fair tariff measure, but this condition will soon be in the hands of the people themselves and they can again decide in what manner they wish to raise revenue, whether it shall be the Republican policy of protection or the Democratic policy of stamp taxes.

In conclusion I will say that this measure ought to receive the vote of every Member of this House and it will receive the votes of a vast majority of the Members. It is fair, just, and equitable, benefits alike the rich and the poor, the capitalist and the laboring man. It will help the farmer move his grain to market and assist the child in his attempt to get an educa-

tion. [Applause.]

To Repeal Free-Sugar Provisions.

EXTENSION OF REMARKS

OF

HON. MAHLON M. GARLAND, OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES, Friday, March 17, 1916.

Mr. GARLAND. Mr. Speaker, the bill now before the House to amend the Underwood tariff bill in order that the reduction arranged in said tariff bill making sugar free may be stayed and not take effect in order that the depleted Treasury, caused by a Democratic administration in the enforcement of their theories and fallacies, may be helped a little against the wreck and ruin of a lowered tariff. While this measure is introduced by the leader of the majority party in this House, Mr. KITCHIN, yet it is a Republican measure, being for a protective tariff on

Mr. FORDNEY, of Michigan, gave to this House to-day a most splendid and thorough history of the growth of the sugar industry and the revenues that have accrued therefrom to the United States under a protective tariff that it has ever been my fortune to either hear or read, and in addition thereto he has charged, proven, and defied contradiction to the effect that the so-called Sugar Trust, represented by one Frank E, Lowery, had written into the Democratic campaign textbook of 1912 the chapter on "The Farmers' Sugar Bowl," and yet, Mr. Speaker, only a few evenings ago, when the Democrats in this House met in caucus in this room, Mr. Keating, of Colorado, is reported to have held aloft that same textbook and with all the reverence of a believing Democrat demanded to know from his assembled partyites whether this bill would not be sacrilege to the gospel There were but 14 other party conscious present who joined with him in protest, the reason thereof being that they needed cash. To-day the floor leader of the majority in this House did not presume to answer the truths established on the sugar industry in this country by Mr. FORDNEY and other Republicans under a protective tariff, but has proceeded to try to establish by newspaper clippings, boom-town boosting publications, that the Underwood tariff had been beneficial to the The reading of these articles being received with country. applause on that side of the House, we are constrained to the belief that they accept these clippings as sufficient evidence, notwithstanding the known fact that depression and distress brought on in any community by mistakes of a fleeting administration is minimized by the newspapers in order that when the cloud has passed the real facts as they existed may not be a future detriment to their part of the country. But, Mr. Speaker, that does not alter the truth that the fact that the majority party presents this tariff bill by necessity to-day which the Republicans will unanimously support is evidence to the counto move their troops with great rapidity. The United States would do well to follow their example; to expend a large part and distrust in Democratic rule.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. CARTER GLASS, OF VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1916.

Mr. GLASS. Mr. Speaker, there has been, as I think, so much confusion of thought and expression as to what is precisely the issue which the House must determine to-day that I feel a little disposed to avail of the general leave to print in order that I may exactly state my own conception of the question and indicate unmistakably to my colleagues and to my constituents the meaning of the vote which I presently shall give. It is a pity that on a great matter like this, fraught with consequences, it may be of the gravest nature, no more time has been appointed for discussion than would enable some score of Members to rise in their places and hurriedly adjure us to "stand by the President," or, if of contrary mind, needlessly to depict the folly of risking war with a foreign country merely to assert the abstract right of "some fool Americans to joy ride on the seas." To such a plane of disputation have we this day reduced our consideration of an issue that holds for us, as for other nations of the earth, the very profoundest import!

WHY THE QUESTION IS HERE.

It repeatedly has been said that this question should not have been brought to the House, and in this view I readily concur. But most of those who thus affirm at the same time bitterly impute to the President of the United States responsibility for the presence here of this vexatious matter. From this opinion I flatly dissent. It is not true in point of fact, no matter how ingenious a guise the assertion may assume in its distinctly technical aspect. What, briefly, is the history of this agitation? The executive department of the Federal Government was

patiently pursuing diplomatic negotiations with a European nation concerning an intolerable disregard by the latter of the rights of American citizens on the high seas. The demand of this Government, involving in a very practical sense the charge of maritime murder, was for disavowal of the crime, reparation for the lives taken and assurances against a repetition of the With a caution that provoked the taunts of the truculent; with a courage that excited the apprehensions of the timid; with an undeviating frankness and firmness that commanded the respect of foreign nations, as they confirmed the faith of millions of his own countrymen, the President had for 18 months applied himself to the task of preserving the peace without impairing the honor of the Republic.

A PROPOSED USURPATION.

The negotiations were proceeding in a way that gave promise of speedy adjustment, when suddenly resolutions were presented here and elsewhere proposing, as I construe them, an astounding usurpation by Congress of the diplomatic functions of the President of the United States! I do not omit to note that, by some gentlemen, this interpretation of the resolutions is contested; but nobody can fairly contradict the assertion that the well-nigh universal opinion of the country, as expressed by the press of every shade, was that these resolutions betrayed a lack of confidence in the residue to the re of confidence in the pacific purpose of the President and comprised a plain intent to vitiate, as far as such a legislative explosion could, the consistent effort of this Government to maintain the incontestable rights of its citizens.

That is not all. That, indeed, is the least of it. These reso-

lutions might not have been seriously regarded as anything more than the mental exhaust of a few Members of the House had not the newspapers of the country been filled immediately with a circumstantial, and apparently authentic, story to the effect that the resolutions were warmly approved by the titular leaders here and reflected the overwhelming sentiment of the Moreover, it was represented that the leaders and Members were in open outbreak against the diplomatic methods of the President; impatient with his "obstinate insistence upon the doubtful, and, at least, technical rights of American citiens," and proposed to block forthwith his fixed purpose to plunge this country into war." Only a quick and sharp legislative rebuke, it was averred, could save the situation!

That was the printed story, wired from ocean to ocean, from Lakes to Gulf, and cabled abroad. And, Mr. Speaker, it was not a wicked invention. The publication was neither malevo-

Capitol. Is there any occasion, then, for astonishment that the President should have been concerned, as well as amazed, at this extraordinary disclosure? Was it to be assumed that he would, in the circumstances, regard with indifference this threatened legislative interposition—this impertinent and agitated seizure of the diplomatic reins of government by those certainly ignorant of the facts and, as now appears, utterly disdainful of constitutional sanctions and usages

THE PRESIDENT AGAINST CONGRESSIONAL ACTION.

The President did not fail to take notice. In a perfectly gnified, though pungent, way he protested. But he did not dignified, though pungent, way he protested. But he did not get excited. He did not even get defiant, albeit it is not difficult to imagine how a man of spirit might have gotten indignant. Nevertheless, he seems to have courteously, if not precipitately, assented to an interview with gentlemen who deemed it important that the President should be straightway apprised of the serious nature and formidable extent of the insurrection here against his conduct of foreign affairs. We are told that at that parley the President was duly advised as to the gravity of the situation; how ardent the House was to register its disapproval and how hard it would be to restrain and hold the protestants The President, we likewise are told, resolutely remonstrated against this prodigious blunder of attempting, at a critical moment, to fetter the Executive in his effort to vindicate the indubitable rights of American citizens by the usual processes of diplomatic representations. The President desired no interference by Congress. He urged the suppression of the resolution and of the outbreak to which it gave expression; and to this end was promised the cooperation of the leaders.

And now, Mr. Speaker, we have to-day the sequel to this extraordinary eruption. Members with a greater bent for satire than for the truth have twitted the President with vacillation and derided him for inconsistency. The whole excuse for the imputation is that "one day he protested action by Congress and the very next day demanded action by Congress." Very conveniently gentlemen put out of view the thing that intervened. They mutilate the episode to justify their raillery. suppress a pregnant part of the incident for the sake of a bitter quip. All the world knows what happened between the one day and the other; hence all the world knows why the President protested action by Congress one day and demanded action the next day. There is not a semblance of inconsistency in his attitude-not the shadow of anything whimsical about it.

PRESIDENT THREATENED WITH HUMILIATION.

After the conference at the White House it was, with apparent warrant, sent broadcast that the President had been told by Members of Congress high in authority that the House was eager to vote on this question; that, given a chance, it would vote two to one—perhaps three to one—for these intrusive resolutions to warn American citizens off the seas and to abandon them as fair prey to the barbarities of submarine warfare! The state of mind in this body toward the President and his diplomatic policy was portrayed as that of impatient condescension—a sort of momentary toleration, in imminent danger of changing to openly expressed hostility. We know that these outgivings were instantly dispatched to foreign chancelleries as accurately reflecting American public opinion. We know that they created abroad the triumphant belief that a breach at last had been made in the political situation in this country which might be turned to good account by the party of merciless and indiscriminate destruction over there. We know, in short, that this whole wretched incident practically blocked negotia-tions and threatened with humiliating failure the President's supreme effort to maintain the honor of the Nation by asserting the rights of its citizens. Through resolutions of its Members and by proclamation of its leaders Congress had practically challenged the position of the President and brought negotiations to an ominous pause.

That is why this matter is before the House. It is here because the President accepted your challenge to the bar of public opinion. You know—the American people know-Woodrow Wilson stands; now the President wants the American people to know where the Congress stands.

DEFENDING AN IMMUTABLE PRINCIPLE.

The issue has been utterly misstated here by the critics of the President and by some who are not his critics. It is not a mere question of "standing by the President." It is something of infinitely greater dignity, of vastly more consequence than that. It is a question of vindicating human rights which, for the moment, with half of mankind at war, are peculiarly American rights. It is not a question of protecting "a few fool Americans" who recklessly jeopardize the peace of their coun-try to experience a thrill on the ocean. It is a question of delent nor without excuse, for that was exactly the talk in the try to experience a thrill on the ocean. It is a question of decloakrooms, in the lobbies, and along the corridors of the fending an immutable principle which, within the last year

alone, held the fate of 400,000 human souls, transported across the seas. We are distinctly not asked simply to justify the President. He stands serenely on his constitutional rights and unliesitatingly avows his position to all the nations of the earth. Nor is the President a suppliant before this body for an empty vote of confidence. He has declined to be a party to any such petty travesty. He has impatiently put aside the suggestion whenever or by whomsoever made. Nothing of a nature so obsequious as that is presented here nor will anything of that kind meet the issue which really is presented here. The fact is, Members of Congress challenged the purposes and authority of the President and we now are counterchallenged to maintain the supremacy of law over the practices of piracy; to assert the cherished rights of civilization against the incursions of oceanic barbarism; to execute, if we dare, the threatened capitulation of Congress to the atrocious idea that international honor is a fantasy and moral obligation a dream.

NULLIPICATION BY LEGISLATIVE FUROR.

And gentlemen can not confuse the question here as was done in another place. They can neither make a mockery of representative accountability nor a farce of so critical a problem. They can not by parliamentary expedient shift the issue. At the very outset of discussion to-day it was made plain to those who had professed an anxiety to checkmate the President by warning American citizens off the seas that adoption by the House of the "previous question" and the rule would preclude nmendment. It repeatedly was pointed out to them by the gentleman from Kansas [Mr. Campbell] and others that a vote 'previous question," or the rule itself, was a vote to confine the issue to the identical resolution which had been taken to reflect the opposition in the House to the President's undeviating purpose to maintain the very rights which Congress was represented as eager to surrender. Thus no Member has been recorded under a misconception of the practical effect of his action. With a clear understanding the House voted-256 to 160-to order the previous question on the rule. Likewise the House, by a vote of 270 to 137, has adopted the rule itself; and we are, by a parliamentary process, of which no Member may profess ignorance, brought face to face with the question as to whether or not it is true, as represented to the President and cabled abroad, that the Congress of the United States stands ready to withdraw the protection of this Government to citizens of the United States who may choose to exercise the rights which international law and usage, for the whole period of our existence, have assured them; whether Congress is so restless to make this cowardly and humiliating surrender that it will resort to the amazing experiment of trying by legislative furor to nullify the diplomatic achievements of the President of the United States in maintaining the conceded rights of neutral nations against the unscrupulous aggressions of belligerent powers.

ISSUE CAN NOT BE DODGED.

That is the plain issue. It can not be dodged; it can not be evaded; it can not be obscured. Neither adulation nor defama-tion of the President will avail. I know perfectly well what my two recorded votes to-day have meant and precisely what my next vote will signify. I know, as every other Member of the House must know, that the plain parliamentary intent of laying a proposition on the table is to kill it-kill it without hesitation or mental reservation; to bury it without ceremony or tears. That is why I shall vote to table the McLemore resolution. I want the people of Virginia to know that I oppose any surrender, actually or implicitly, of any vital American right merely to propitiate a war-mad foreign nation, which already has strewn the seas with the dead bodies of helpless American victims. I want them to know that I have no absolution for such a crime; that I stand for full reparation and ample security, and am utterly opposed to the suggested interference of Congress with the diplomatic functions of the President. want them to know that I should despise myself for a vote cast here to warn American citizens that they must travel the free waters of the globe in merchant ships at their own peril, without their country's protection. I want them to know that I would tear to tatters my commission as a Member of the House of Representatives could I imagine that the people of the sixth Virginia district would have me do a thing so repugnant to my sense of national honor and so at variance with my conception of national self-respect.

EXPOSITION OF THE LAW.

The suggestion that the neutral rights which the President has sought to maintain and which Congress is asked to yield are of a doubtful nature needs little serious attention. The gentleman from Pennsylvania [Mr. Temple] has dealt lucidly and convincingly with that phase of the dispute. His accurate recital of the facts, reinforced by a temperate but incontestable

exposition of the law, puts the case beyond the realm of conjecture. Rhetoric nor verbal froth can obscure the truth so well defined. Vociferation on so grave a problem seems like profanation contrasted with the frigid logic which the gentleman from Pennsylvania applied to the question. The rights of neutral persons and their noncontraband property are inviolate except by breach of international law or by exercise of savage propensities interdicted and abhorred by civilization.

LANSING MADE NO "CONCESSION."

Ah, but gentlemen say, Lansing "conceded" that the right of merchant vessels to defensive armament is of "exceedingly doubtful legality" and confessed the "reasonableness of Germany's contention" that altered circumstances necessitate a modification of maritime usage. Do not let us lose our direction in any such oral fog. The plea is strictly specious. The quickest and surest answer to it is, that Lansing's opinion does not constitute international law nor can his ethical beliefs change the law. No doctrine ever has been more positively asserted by the textbook writers nor more certainly accepted by civilized nations than that international law is not a moral philosophy, but a code of historical facts generally incorporated into the usages of States. International law is not ideal, it is real. It may be morally good or morally bad; in either case it is the law, and nothing that the Secretary of State for the United States might think or say, however cogent or exalted, could change the law one jot or tittle without the general assent of other nations.

Another answer to the proposition is that Mr. Lansing has made no "concession" whatsoever to any contending power on the point at issue. He simply underfook to state to the allied powers the extreme contention of the central powers with respect to merchant ships carrying armament and to indicate the potential concurrence of his Government in the Teutonic view. He did this in compliance with a previously expressed willingness to bring about, if possible, a modus vivendi in submarine warfare between the belligerent nations. Right or wrong, this was done with a view to constraining the allied powers to acquiesce in the proposition totally to disarm merchantmen.

THE CASE PROVES ITSELF.

The memorandum was not addressed to the central powers nor intended to be seen by them. It was a private memorandum. But the vital fact that a memorandum of the tenor indicated was written at all furnishes conclusive proof that there existed at the time it was written a universally recognized maritime usage, constituting international law, which the Teutons insisted on changing and to which suggested alteration Lansing was asking the assent of the allied powers. Indeed, the very text of the Lansing memorandum itself reveals a definite knowledge of the fact that, regardless of his own opinion upon the ethics of the case, there could be no change of the fixed rules of international law respecting the stopping and searching of merchant vessels or regarding the right of such craft to carry defensive armament except "it could be agreed by the opposing belliger-Mr. Lansing may have presented the matter skillfully or unhappily, as one may please to view it; but the inexorable fact remains that international law sanctions the use of defensive armament for merchant ships, and the Secretary of State for the United States, whether speaking for himself or for the President or for the Republic, had no more right, as I think he had no more desire, to yield this point to Germany, except by common consent, than he had to change the law of seizure and blockade to suit the convenience of Great Britain. He is bound to have known that capitulation in either or any other event would bring about chaos and expose neutral nations to a state of outlawry on the seas. It not only is plainly evident that Lansing knew this when he wrote the memorandum in question, but equally manifest that the President had no other view when he sanctioned the dispatch. This is confirmed by Senator STONE'S letter of February 24 reciting his own understanding of the President's attitude as consistently stated to him:

the President's attitude as consistently stated to him:

That while you would deeply regret the rejection by Great Britain of Mr. Lansing's proposal for the disarmament of merchant vessels of the allies, with the understanding that Germany and her allies would not fire upon a merchant ship if she hauled to when summoned, not attempting to escape, and that the German warships would only exercise the admitted right of visitation and capture, and would not destroy the captured ship except in chromatances that reasonably assured the safety of passengers and crew, you were of the opinion that if Great Britain and her allies rejected the proposal and insisted upon arming her merchant ships, she would be within her right under international law.

law.

Also that you would feel disposed to allow armed vessels to be cleared from our ports. Also that you are not favorably disposed to the idea of this Government taking any definite steps toward preventing American citizens from embarking upon armed merchant vessels. Furthermore, that you would consider it your duty if a German warship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers to hold Germany to strict account.

The reply to Senator Stone accentuates the fact that the President has never wavered for an instant in his fixed determination not to yield the rights of American citizens on the seas or withdraw the protection of this Government. He said:

seas or withdraw the protection of this Government. He said:

No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war, and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action we should, it seems to me, have in honor no choice as to what our own course should be.

For my own part I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation are involved. We covet peace, and shall preserve it at any cost but the loss of honor. To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation, indeed. It would be an implicit, all but an explicit, acquiescence in the violation of the rights of mankind everywhere and of whatever nation or allegiance. It would be a deliberate abdication of our hitherto proud position as spokesmen, even amidst the turmoil of war. for the law and the right. It would make everything this Government has attempted and everything it has achieved during this terrible struggle of nations meaningless and futile.

RIGHTS OF MERCHANT SHIPS.

RIGHTS OF MERCHANT SHIPS.

Aside from all this, Mr. Speaker, a glance at the diplomatic record reveals clearly the uncompromising attitude of this Government on the question in point. Specifically and incidentally, over and over again, deftly and bluntly, the Secretary of State now in charge, as well as his predecessor, asserted and maintained the rights of defensively armed merchantmen. Within six weeks after the war in Europe began on September 19, 1914, Mr. Bryan not only reasserted the right of merchant ships to defensive armament but actually published rules defining the exact nature and extent of armament which a vessel might carry and still be treated in our ports as a merchantman. These rules, already quoted in part by the gentleman from Pennsylvania, prescribed that—

Pennsylvania, prescribed that—

1 A merchant vessel of belligerent nationality may carry an armament and ammunition for the sole purpose of defense without acquiring the character of a ship of war.

2. Evidence necessary to establish the fact that the armament is solely for defense and will not be used offensively * * must be presented in each case independently at an official investigation.

3. The caliber of the guns carried does not exceed 6 inches.

4 No guns are mounted on the forward part of the vessel.

5. The vessel is manned by its usual crew and the officers are the same as those on board before war was declared.

When the German Government protested this action on October 15 following, Mr. Lansing, Acting Secretary of State, suavely retorted on November 7, 1914, by saying:

The practice of a majority of nations and the consensus of opinion by the leading authorities on international law, including many German writers, support the proposition that merchant vessels may arm for defense without losing their private character, and that they may employ such armament against hostile attack without contravening the principles of international law.

This was but a repetition of the doctrine proclaimed by Chief Justice Marshall in the Nereide case of 1815, reaffirmed by the Supreme Court decision of 1818 in the case of the British ship Atalanta, and strictly adhered to in all judicial determinations from that time to the present; and, in pursuance of this accepted doctrine, the United States Government repeatedly thereafter gave clearance and is to-day giving clearances to defensively armed merchant vessels of belligerent nations. Few things have been more steadfastly established in international jurisprudence than the status of merchant vessels defensively armed. It has been fixed both by the court decisions and the naval codes of this and other countries; and, as I have said. not only was the principle specifically reasserted by this Government after the outbreak of war, but every incidental allusion made to the subject in our diplomatic correspondence confirms the view that I have presented. In Germany's note touching the Lusitania it was contended that the vessel was an auxiliary cruiser, and, upon perjured testimony, it was held that the Lusitania "had guns on board, which were mounted under decks and masked." Brushing aside this and other unsubstantiated allegations, Mr. Lansing, Secretary of State ad interim, reminded the Imperial German Government that among the recognized duties of a neutral power, which this Government had strictly performed, was "its duty to see to it that the Lusitania was not armed for offensive action." Mark you, "not armed for offensive action"-a plain implication that the Lusitania was or might have been lawfully armed for defensive action. And almost instantly Mr. Lansing further asserted that, thus defensively armed, only the vessel's "actual resistance to capture or refusal to stop when ordered to do so for the purpose of visit could have afforded the commander of the submarine any justification for so much as putting the lives of those on board the ship in jeopardy." In this identical note Lansing also "understands the Imperial German Government to accept as established beyond question the principle that the lives of noncombatants can not lawfully or rightfully be put in jeopardy by the capture or destruction of an unresisting merchantman." Indeed, he points to the pregnant fact that the Imperial German Government itself so thoroughly understood and completely accepted this requirement of its own naval code that on August 3, 1914, the Imperial German Admiralty specifically instructed its commanders at sea accordingly.

SOME AMERICAN WARNINGS

On these points this Government has never yielded an inch to any belligerent nation. It has stood from the first, as it should stand to the last, for the humane doctrine of "warning and search." I do not mean the doctrine proposed by our I do not mean the doctrine proposed by our pacifists of warning American citizens off the seas. That is even unique with Mr. Bryan. When that gentleman presided over the State Department of this Government he not only issued no warning himself but sharply rebuked the Imperial German Government for "the surprising irregularity" of its Washington embassy in presuming to warn citizens of the United States against their "right of free travel upon the seas." Mr. Bryan reminded Von Jagow that—

American citizens act within their indisputable rights in taking their ships and in traveling wherever their legitimate business calls them upon the high seas, and exercise these rights in what should be the well-justified confidence that their lives will not be endangered by acts done in clear violation of universally acknowledged international obligations, and certainly in the confidence that their own Government will sustain them in the exercise of their rights.

And yet, Mr. Speaker, it is not only proposed that the Congress of the United States shall imitate the malapert example of the Imperial German embassy in warning citizens of the United States off the seas; but it is proposed that we shall gracelessly renounce the duty of their "own Government to sustain them in the exercise of their rights." Mr. Bryan, when Secretary of State, pointed out to the Imperial German Government "that no warning that an unlawful and inhumane act will be committed can possibly be accepted as an excuse or palliation for that act or as an abatement of the responsibility for its commission." But this House is now asked not only to excuse and palliate crimes against humanity but practically to incite a foreign nation to the perpetration of such crimes, Mr. Bryan warned the Imperial German Government not to "expect the Government of the United States to omit any word or act necessary to the performance of its sacred duty of maintaining the rights of the United States and its citizens and of safeguarding their free exercise and enjoyment." Likewise Mr. Lansing warned the Imperial German Government that the Government of the United States would vindicate the rights of its citizens "from whatever quarter violated, without compromise and at any cost." He supplemented this warning by the significant statement that "repetition by the commanders of German naval vessels of acts in contravention of those rights must be regarded by the Government of the United States, when they affect American citizens, as deliberately unfriendly." Yet, with phrases like these ringing in our ears, resonant with fine sentiment and high resolve, we are asked abjectly to disavow the admonition which they convey and, lost to shame, decry the memory of our Lusitania dead! Shall this House to-day proclaim to the world what Dumba is said to have been told in a corner, that the Government of the United States did not exactly mean what it said?

REVERSAL OF NATIONAL POLICY.

How unique, how incredibly singular, is the suggested reversal of national policy! I wonder that all gentlemen do not realize what it means. I marvel that some here appear not to perceive to what a state of debasing impotence it would reduce The proposition is to alter the tenor and to change the direction of American warnings. Instead of aiming them at submarine depredations, such a tender regard has manifested itself for this sinister method of killing innocent people that we are placidly invited to abandon the humanities of naval combat in order to embrace the miscreancy of the newer dispensation. We are literally admonished that we will adhere to the tenets of honorable warfare only at the risk of being ourselves unable consistently to practice hereafter the villainy which the President ventures now to condemn. No longer must we hold the culprit responsible for transgressing the elementary principles of international law; the criminal must go acquit, and the helpless victims of his ferocity, denounced here to-day as fools and traitors for confiding in the purpose and power of their Government to protect them-these must bear the blame and, unavenged, suffer the consequences of their trust!

In this humiliating way and to this amazing extent, Mr. Speaker, despite the thrilling words of the President and in contravention of every note dispatched by the Secretary of State, it is proposed that Congress shall "forbid our people to exercise their rights for fear we might be called upon to vindicate them." And with what fascinating complaisance is the reason for this shameful change of nautical usage presented. "When the occasion for a thing ceases the thing itself should no longer exist" is the axiom employed; and the determination

of the first point of this convenient doctrine having by God been committed to the Grand Admiral of the German Navy, the enforcement of the ensuing point by the same high functionary proceeds inevitably as a vicarious exercise of divine right. And thus the path is cleared for the benignant activities of the undersea Sneak. Simple enough, to be sure. But strangely in conflict with the very precise utterances and uncompromising attitude of the Government of the United States, as well as of all other civilized Governments, except those of the central European powers. Not once, but at various times, this Govern-ment has explicitly declined to subordinate the immemorial rights of peaceful merchant vessels to the sinister provess of newly invented warcraft. This was notably done in the dis-patch to Germany on the Lusitania tragedy, in which Lansing

The Government of the United States is not unmindful of the extraordinary conditions created by this war or of the radical alterations of circumstance and method of attack produced by the use of instrumentalities of naval warfare which the nations of the world can not have had in view when the existing rules of international law were formulated, and it is ready to make every reasonable allowance for these novel and unexpected aspects of war at sea; but it can not consent to abate any essential or fundamental right of its people because of a mere aiteration of circumstance. The rights of neutrals in time of war are based upon principle, not upon expediency, and the principles are immutable. It is the duty and obligation of belligerents to find a way to adapt the new circumstance to them.

THE "SIMPLÉ WARNING."

That, of course, is the true position; that is the doctrine of the textbooks; that, until now, the unchallenged naval code of the world, based upon usage and confirmed by every juridical decision ever rendered on the subject of maritime warfare. It is the thing for which the President stands and for trying to vindicate which Congress is asked to override him. In my judgment, Congress will do nothing of the kind. In my belief there is not now nor has there ever been any foundation for the astounding assertion that this House is eager to warn citizens of the United States against the exercise of their "indisputable right to take their ships and to travel wherever their legitimate business calls them on the high seas." Some gentlemen favor a "simple warning," unaccompanied by any surrender of technical rights; but, Mr. Speaker, aside from the usclessness, the emptiness, of such a thing, we could not disengage the intimation from the factthey are, in the circumstances, inseparable; they are indistinguishable. Any sort of warning would convey the idea of concession, would be tantamount to yielding, would cover us with odium and excite against us the just indignation of the American people. God save us from the degradation and from the universal execration involved in it!

A FALSE ANALOGY.

I can not appreciate the attitude of gentlemen who appear to discover an analogy between the warning proposed here and the warning issued by the Department of State to citizens of the United States in the bandit-infested territory of Mexico. Here we have an issue between organized Governments; here we have in question the assumption of one responsible Government to justify its own unlawful practices against the citizens of another Government, even to the extent of murdering them on the open seas. In the other case it was merely a matter of warning citizens of the United States against the dangers of intermittent brigandage on alien territory, where there was no organized or responsible government to protect their lives or property. In the one case the offense was by and against a nation; in the other by and against individuals. which can not discern the difference is simply hopeless. He who can not perceive, and makes the argument, is shallow; he who knows better, and makes it, is-worse. In any event it is a sad tribute to the intellectual integrity or sanity of any man who either affects or fails to see no distinction in fact or in principle between the cases cited.

AN APPRECIATION OF PEACE.

Mr. Speaker, every one of us in authority here is for peace. The whole Congress is for peace. The President of the United States for many months, by night and by day, has kept a vigit for peace. Both on this continent and in the other hemisphere he has fervently pursued this end. With enduring patience, with amazing skill, oblivious to all things else, he has passionately sought, by every conceivable means, to keep this country out of the maelstrom of war. Neither taunt nor threat has out of the maelstrom of war. Neither taunt nor threat has shaken his purpose or diverted him from his course. But there are some things better than life, as there are other things worse than death. This human body, bereft of the soul which reveals the image of God, is but a whited sepulcher; and so a nation with its righteous spirit quenched is as a tossing derelict of the sea. We are asked to do a thing to-day that would waste, indeed would palsy, every worthy aspiration of our national existence and shame us through the remaining years. Warn Warn

American citizens from the seas! Of course, the President will 'Twere to abandon, as he so finely said, the "very essence of the things which have made America a sovereign nation"; yea, and to approvingly celebrate the never-to-be-forgotten day when a thousand innocent human beings, victims of maritime stealth and atrocity, were suddenly plunged into the cold embrace of the fathomless deep. Why, sir, their very spirits would ride upon the waves to mock our battle craft from the oceans. Their outraged memory in some fateful form would cling to our ships avengingly and cast derision in the faces of our sailors in every port of the civilized earth.

AN APPEAL TO HONOR.

And like unto the proposal to discredit the Nation is the pathetic, perfervid talk about desolating American homes and distressing American mothers by sacrificing their sons to the god of war. The nearest approach to war which this country has recently made, Mr. Speaker, was when Members of Congress sought to impede the President's plans for maintaining an honorable peace. The surest prelude to intolerable affront from one direction is the manifestation of a cowardly submission from the other; and unless it be conceived that no injury, however great, no insult, however grlevous, could provoke this Nation to resentment, the course proposed by meddling resolutions was most certain to invite aggression and ultimately to precipitate war. And there are some things worse than war. Virginia has homes which might be desolated and mothers who might be distressed and sons who might be sacrificed. But I pray God that the mothers and sons of Virginia who live appreciate their heritage from those who, "being dead, yet speaketh." Two of Virginia's boys are my own-stalwart, manly fellows, for either of whom I would die a thousand times-and I would have them hear me say, without a tremor, in the spirit which I hope animates their hearts, that I would rather be pursued through time and eternity by the pitiful apparition of their shattered forms than to see my country dishonored and its flag hauled down in disgrace.

I shall vote to lay this resolution on the table.

Free Sugar.

EXTENSION OF REMARKS

HON. BEN JOHNSON, OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 16, 1916.

Mr. JOHNSON of Kentucky. Mr. Speaker, recently the House had under consideration what has come to be known as the war-tax act. That act was to have expired on the 31st day of December last. The proposition which was before the House recently was to extend that act instead of letting it expire on the 31st day of December. All the Republicans, with possibly one or two exceptions, and many Democrats of the House voted against extending that act. At that time I made some remarks undertaking to show that the act should be extended. In those remarks I showed that under the war-tax act no necessity of life was taxed, and that, in consequence, it was a good tax.

I adhere to the position that the luxuries of life should be taxed and that the necessities of life should go untaxed. In those remarks I cited the luxuries that were taxed therein, such as champagne, wine, beer, tollet articles, perfumery, beauty lotions, wrinkle removers, and things like that, and at that time I challenged anybody to point out one item in that act which taxed any necessity of life. Nobody at that time nor since has been able to point to a single article necessary to the life of man

which is taxed by that act.

At this time the proposition is to continue the tax on sugar. Under the provisions of the Underwood Tariff Act the tax was to be taken off of sugar on the 1st day of next May. It is now claimed, and that claim is true, that the Government needs more money. But it is not true that it is best to have the tax remain on sugar after May 1, as I hope to demonstrate.

Some people insist that sugar is not one of the necessities of

life. I contend that it is.

At one time man was able to live without window glass. With the first appearance of window glass it was regarded as a luxury. Everybody now concedes that it is a necessity. At one time man lived without a hat. With the first appearance of hats they were treated as luxuries. Everybody now concedes that a hat is a necessary article of wearing apparel. At one time man lived without having any sweet at all. The aboriginal man in every land found a sweet. The aboriginal man in America—the Indian—dug up the root of the maple or sugar tree, broke it off and let the water from the root run into some sort of receptacle. He then reduced that sweet water either by the process of boiling or freezing until it was reduced to a thin sirup. Later along the American made good maple sugar and maple sirup. The very old persons in Kentucky recall that they once had what was called "long sweetnin" and "short sweetnin". The "long sweetnin'" was molasses and the "short sweetnin'" was sugar. By and by the sugarcane industry was so developed that sugar could be bought at every little store.

At this time sugar has become so extensively used in the United States that the average per capita consumption of it is about 80 pounds per annum. In other words, the yearly portion of sugar for each man, woman, and child in the United States is about 80 pounds. This fact testifies to its general use. By the use of sugar numerous articles are made so palatable and wholesome that they can be used for the support of human life, while without it these same articles would be useless and would go to waste.

For these and many other reasons that I could give I assert that sugar is a necessity, and because it is a necessity that it should not be taxed.

I fully agree with practically everybody in this House and in the land that on account of the great European war our revenues have constantly fallen off and that now we must raise money for the support of the Government from sources which at the time of the passage of the Underwood bill were considered unnecessary. While I admit that the Government needs and must have more money than it is now getting, I deny the soundness of the proposition that that money should be gathered from the sugar-eating people of the United States. When I deny that this money should be gathered from a tax on sugar I am asked how we are to get along without the money. My answer is that we can not get along without the amount of money which it is now proposed to raise by taxing sugar. But I insist that sugar should go untaxed, and that either some luxury of life which now goes untaxed should be added to the taxable list or that some luxury of life which is being taxed but which can bear a greater tax should have that greater tax imposed upon it and thus relieve sugar of taxation altogether. Then I am asked to name some article of luxury that can bear a greater tax, so as to make up the amount which it is now proposed to raise by taxing sugar.

Beer is one of the very first items of this class to which my mind turns. If the alcohol in beer were taxed at the same rate that the alcohol in straight whisky is taxed, that of itself would bring to the Federal Government much more money than it is now proposed to raise by taxing sugar.

For the purpose of taxing whisky the Government has created the standard of 100 proof. Whisky at 100 proof is only half alcohol, the other half being made up of water, fusel oil, and various ethers and acids in small quantities. To put it more practically, straight whisky at 100 proof is 50 per cent alcohol and 50 per cent water, the quantity of fusel oil, ethers, and so forth, being small in comparison to the alcohol and water.

Straight whisky at 100 proof is now taxed at the rate of \$1.10 per gallon. The per cent of alcohol in beer ranges from 2 per cent to 9 per cent. The 2 per cent beer is called "next-to-beer," and its sale is permitted in some prohibition sections. The beer that is sold over the counter of the usual saloon averages 5 or 6 per cent alcohol, while the alcohol of all kinds of beer—high proof and low proof—averages about 4 per cent. Therefore, I shall treat beer as being 4 per cent alcohol in order to be certain that my figures may not be too large.

The records of the office of the Commissioner of Internal Revenue show that last year the brewers of the United States turned out 59.746,701 barrels of beer, each barrel containing 31 gallons. If pure whisky, which is only 50 per cent alcohol, pays a tax of \$1.10 per gallon, then beer, which is 4 per cent alcohol, if taxed upon the same basis, would pay a tax of \$8.8 cents per gallon. The tax on 31 gallons in each barrel at 8.8 cents per gallon would amount to nearly \$2.73 a barrel. When the number of barrels which were turned out by the brewers last year is multiplied by the tax of \$2.728 per barrel the result is \$162.989,000.

Under the Republican tariff bill, better known as the Payne-Aldrich bill, the tax on beer was only \$1 per barrel instead of \$2.73. Under the war-fax act, which was recently extended, the tax on beer was increased to \$1.50 a barrel, so that last year the tax on the 50.746.701 barrels of beer which were made by the brewers amounted to \$89,620,051. Therefore under the war-

tax act the tax on beer amounts annually—the annual consumption being the same—to nearly \$30,000,000 more than it amounted to under the Payne-Aldrich Tariff Act.

If the alcohol in beer should now be made to pay the same rate of tax that the alcohol in straight whisky is made to pay, then we would gather \$73,368,949 more than is now being gathered from beer under the concessions which have been made to the brewers.

Insisting, as I do, that sugar is a necessity and that beer is a luxury, I also insist that it would be far more equitable to collect the needed revenue from beer rather than from sugar.

The advocates of the sugar tax claim that if the tax is left on sugar it will bring an annual income of \$44,154,187; whereas, if they would tax the alcohol in beer just as they tax the alcohol in straight whisky, they would get annually \$29,214,762 more than they will get by taxing sugar.

In my judgment it is indefensible to tax sugar in the light of this fact. The least that can be said about it is that it is a concession to the brewers; and, at the same time, a discrimination against a hundred million men, women, and children in the United States who eat sugar.

There is also a concession which for generations has been made in favor of another class of merchandise which, in my opinion, should never have been made and which should not now exist,

The additional concession of which I speak results in a discrimination in favor of the tax on adulterated whisky as against straight whisky or pure whisky. If adulterated whisky were taxed just as straight whisky is taxed, that would bring the Government an increased revenue of nearly \$15,000,000 every year.

As I have said before, straight whisky at 100 proof is 50 per cent alcohol and 50 per cent water. When the 50 per cent alcohol and 50 per cent water are considered together they make a gallon of whisky, on which the tax is \$1.10. It is therefore a positive, certain, clear fact that the water in straight whisky is taxed, while, upon the other hand, the water in adulterated whisky is not taxed.

I can not see either wisdom or justice in taxing the water in straight whisky and at the same time permitting the water in adulterated whisky to go untaxed. If any discrimination whatever is to be indulged in, certainly it seems to me that that discrimination should be in favor of the pure article rather than in favor of the adulterated one.

By straight or pure whisky I mean that product which goes upon the market just as it came from the tail of the worm at the distillery, plus the aging period—nothing added, nothing subtracted. By adulterated whisky I mean that which is made of commercial alcohol and water, with coloring matter and bead oil added to give it the appearance of whisky, with just enough whisky also added to make the compound smell like whisky.

As I have said, straight whisky at 100 proof or less bears

As I have said, straight whisky at 100 proof or less bears a tax of \$1.10 a gallon, whereas adulterated whisky at 85 proof—that being the average proof of adulterated whisky—bears a tax of about 93½ cents a gallon. Therefore the tax on a gallon of adulterated whisky at 85 proof is 16½ cents less than the tax on a gallon of straight or pure whisky at 100 proof or less.

Last year the adulteraters of whisky put 90,858,331 gallons of their product on the market. That many gallons, when multiplied by 16½ cents, the difference between the tax on adulterated whisky and the tax on straight whisky, show a loss of \$14,991,624 to the Government, and amounts to a concession of that much to the adulteraters.

Without enumerating others of the great number of luxuries which are either not taxed at all or are not taxed sufficiently, we find that beer and adulterated whisky, if taxed like straight whisky is taxed, would bring an additional annual revenue of \$88,360,573; whereas the advocates of the sugar tax admit that the tax on sugar will bring a revenue of only one-half that amount.

For the life of me I can not understand why these concessions are made to the brewers and the adulteraters of whisky, thus discriminating against the manufacturer of pure whisky and, at the same time, necessitating a tax on sugar to make up half of the amount so generously conceded to the brewer and the adulterater of whisky.

brewer and the adulterater of whisky.

Again, I wish to invite attention to the fact that before the adoption of the war-tax act the tax on beer was \$1 a barrel, and that the war-tax act increased it to \$1.50 a barrel, and that when the question came to extending that act, which contained the increased tax of 50 cents a barrel, every Republican Member of the House voted against it. In other words, every Republican Member of the House thereby voted in favor of having a

dollar tax on beer instead of a tax of a dollar and a half. Now, on the proposition to keep a tax on sugar, every Republican in the House is favoring the tax on sugar instead of taxing beer and adulterated whisky just as pure whisky is taxed.

For half a century the Republican Party has refused to tax beer and adulterated whisky to the same extent that straight or pure whisky is taxed. Instead, during all that time, they have preferred to tax the necessities of man from the cradle to the And only a few weeks ago the members of that party in this House to a man voted against the continuance of the If their votes had prevailed, the result would have been to still further lessen the tax on beer and at the same time to make champagne, perfumery, beauty lotions, and alleged wrinkle removers free of all taxation, and thus compel an additional amount of revenue to be raised by taxing the necessities

No matter how many may vote to retain the tax on sugar, I shall derive much gratification in after years from being able to say that I voted to leave sugar free of tax to the men, women, and children of this country, and preferred to raise the necessary

revenue by taxing the luxuries of life.

There is scarcely a man, woman, or child in the United States who does not, in one form or another, use sugar; while, upon the other hand, there are millions of our people who do not use either beer or whisky or beauty lotions or wrinkle removers. Why these millions should have their sugar taxed in order to suffer beer, adulterated whisky, and other luxuries to escape with less taxation is beyond my comprehension.

The manufacturer of pure whisky pays a tax of approximately \$3 more on each barrel of his product than the manufacturer of

adulterated whisky pays on each barrel of his product.

Neither can I understand why the manufacturer of pure whisky is discriminated against for the benefit of the adulterator of whisky.

As I have said, I could go further and continue to find articles which, in my judgment, could be more justly taxed than sugar. I believe, however, that the two items of beer and adulterated whisky suffice to make good my contention that they should be looked to for revenue before taxing sugar or any other necessity of life.

The Military Establishment.

EXTENSION OF REMARKS

HON. LUIS M. RIVERA,

OF PORTO RICO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 21, 1916,

On the bill (H. R. 12766, sec. 12) making provision for an increase in the organization of the Porto Rico regiment of Infantry.

Mr. RIVERA. Mr. Speaker, in this great question of preparedness, directly affecting my country, I wish to take the only position corresponding to a son of my country, a Porto Rican in the Congress of the United States of America.

You are for the interests of your Nation first, after that for the highest ideals of humanity, engaged in a lively discussion about the more efficient way to put yourselves in readiness for every future struggle, for every possible complication.

And you do not forget that the insular forces can be and

must be increased. At present we have there in the little island two battalions. They are our soldiers, so brilliant, so valiant, and resolute as to invite comparison with other brilliant, valiant, and resolute corps of the United States Army.

In support of the arguments made for the increase of the Porto Rico regiment to the same strength as other regiments of the Regular Army, the following facts must be considered:

First. Its strategic position making Porto Rico the advanced base for the protection of the Panama Canal, it is unsafe not

to provide for the necessary safe-keeping of the island.

Second. The development of the commerce and industries of an island like Porto Rico, with 1,200,000 inhabitants and worth \$180,000,000 a year, entitle it to more than the protection it receives from the scanty 559 men composing the Porto Rico

regiment of Infantry.

Third. Since 1912 the Chief of Staff of the Army has advocated making the Porto Rico regiment a three-battalion organization and its maintenance at "a minimum strength of at least 100 men per company.

Fourth. The Chief of Staff further says in the report quoted above:

I am of the opinion that a battalion of Mounted Artillery should be organized in Porto Rico.

Fifth. The Porto Rico regiment has never had any trouble in keeping its ranks full, and the island has plenty of men to organize at least a war strength of Infantry brigade-three regi-

If Congress should authorize, at the same time the third battalion is organized, to fill up the regiment to war strength, the Porto Rico regiment would have about 1,900 men, for the maintenance of which the United States would approximately expend \$1,500,000 a year, not including the cost of new buildings, furniture, arms, equipments, clothing, food, and animals; money for

which things would also be spent in the island.

All organizations serving in the Philippine Islands are recruited to war strength before leaving the United States. this way the Federal Government makes a great saving, because by sending the regiment recruited to war strength, 1,900 men, one cadre of officers-the 51 officers to each regiment-are used to command three times as many men as they would otherwise; when in order to have the same number of men they now keep in the islands the United States would have to send to them almost three times as many regiments as are now sent.

As an illustration of the convenience to the United States of giving Porto Rico more participation in preparedness, I beg to submit that just before the European war, and in order to meet the increase in the German Army, France extended the military service to all her possessions, and these have answered in the

way shown during the war.

It is current opinion in the island "that the regiment is the best thing done for Porto Rico." The physical development, dis-cipline, and hygienic principles inculcated in the men who enlisted in the regiment, says the Insular Chamber of Commerce, of San Juan-

is of so much benefit to them and they are so much better prepared to enter the industrial, agricultural, and commercial fields that former soldiers are given the preference above any other competitors for positions outside. It is a fact that, for instance, 80 per cent of the insular police is made up of former soldiers.

Mr. Anthony, the gentleman from Kansas, said on the floor of this House, after making a trip to Porto Rico and inspecting the regiment:

The Porto Rico regiment is one of the finest in our Army. Its officers, both American and Porto Rican, are a splendid lot of men, the equals of others of their rank in other branches of the service and as deserving of the same privileges and opportunities for promotion.

It is advisable to complete the regiment, and it is fair to give the officers the same standing which all other American officers enjoy. You can be assured, Mr. Speaker, that these Latin soldiers, if necessity arises, will emulate the tranquil valor, the bold intrepidity of the Anglo-Saxon soldiers of this hemisphere. Rest assured that they will defend, with no care for the sacrifice of their own lives, the rights and the flag of this Nation, for they well know your splendid history, for they realize that in maintaining the supremacy of your national character and influence they maintain the principles of modern freedom and modern civilization.

You have heard, and if not you hear it now from my lips, that we long for our beloved independence. But we have never sought to obtain such blessing through a rebellion against your sovereignty, but through a vote of this Congress, the singular and unique parliamentary body in the world, capable of attracting to its shelter insular peoples, as Cuba and the Philippines, not to exploit them, but to convert them into free and independent peoples in whose hearts love and gratitude toward

the United States will never die.

We are absolutely certain that some day the United States will do justice to the sentiments of Porto Rico. We do not entertain the least doubt that, in a not very remote time, the United Sates will become convinced that Porto Rico deserves to be a small and peaceful republic, a model republic among her sisters, the agitated and constantly convulsed South American Republics. But even after that day, the military forces of Porto Rico will be a body willingly cooperating to guarantee the Panama Canal and to protect the American frontier against foreign invaders

Without any hesitation, I vouch for the loyalty of the Porto-Rican troops. The privates are honest countrymen, educated under the old customs of the "Cavalleria rusticana"; the officers are magnificent boys, belonging to the more distinguished families, speaking your language easily and identified with your enterprising temperament. When in contests of skill, they have won many medals for marksmanship and general efficiency, and they are anxious to fight for an American cause, which can not be other than a cause of honor and liberty.

And not only for that reason are they anxious to fight, but the Porto Ricans are aware that somebody has questioned their military fitness, their valiancy, their eagerness to unsheath the sword. They, in the eighteenth century, repulsed many attacks from the buccaneers, from the British and the French Navies; from the buccaneers, from the British and the French Navies; they, in the nineteenth century, went to help the Cubans to gain, in the battle field, their nationality. They freely expended their blood for the sake of their brothers. But, on account of the smallness of the country, the Porto Ricans were never able to expend their blood as a sacred tribute to their own land. Now they want to demonstrate that there is in the forests of Porto Rico good timber out of which to make heroes. I know, and I proudly proclaim, that they will be heroes following and defending the Star-Spangled Banner.

The Military Establishment.

EXTENSION OF REMARKS

HON. JOHN N. TILLMAN, OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 21, 1916.

Mr. TILLMAN. Mr. Speaker, I shall vote for the amendment offered by the gentleman from Ohio [Mr. Gard], and in connection with this amendment I ask leave to print in the RECORD the following letter written by President Futrall, of the University of Arkansas:

MARCH 15, 1916.

Hon. Jno. N. Tillman,

House of Representatives, Washington, D. C.

Dear Sir: It is understood that when H. R. 12766 comes up for debate in the House of Representatives Mr. Gard, of Ohio, will introduce his bill, H. R. 10845, as a substitute for section 18 of the bill. Section 18 is the one making provision for 30 cadet companies. H. R. 10845 is the bill indorsed by agricultural colleges and State universities and is favored by the administrative council of the University of Arkenses.

versities and is favored by the administrative council of the University of Arkansas.

I may say further that this bill of Mr. Gard's embodies and, so far as I know, is very generally indorsed by them. Your support of Mr. Gard's effort to make his bill a part of H. R. 12766 will be much appreciated if you can consistently give it.

Yours, very truly,

J. C. FUTRALL.

The McLemore Resolution.

EXTENSION OF REMARKS

HON. GEORGE R. SMITH.

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 7, 1916.

Mr. SMITH of Minnesota. Mr. Speaker, it is not my purpose to enter upon a general discussion of the McLemore resolution warning or requesting American citizens to refrain at this time from traveling on armed belligerent vessels, but to set forth the facts and circumstances that influenced the House of Representatives to take the action it did on this resolution, so that the public can better judge as to whether the final disposition of this matter by Congress was wise or not.

In the note of January 18, 1916, addressed to all the foreign

powers, Secretary Lansing set forth the position of the United States on the question of submarines and armed merchant

vessels, as follows:

* * I do not feet that a beligerent should be deprived of the proper use of submarines in the invasion of commerce, since those instruments of war have proved their effectiveness in this practical branch of warfare on the high seas.

Prior to the year 1915 belligerent operations against enemy commerce on the high seas had been conducted with cruisers carrying heavy armaments. In these conditions international law appeared to permit a merchant vessel to carry armament for defensive purposes without lessening its character as a private merchant vessel. This right seems to have been predicated on the superior defensive strength of ships of war, and the limitation of armament to have been dependent on the fact that it could not be used effectively in offensive against enemy naval vessels, while it could defend the merchantmen against the generally inferior armament of piratical ships and privateers.

POWERLESS IN DEFENSE.

The use of the submarine, however, has changed these relations. Comparison of the defensive strength of a cruiser and a submarine shows that the latter, relying for protection on its power to submerge,

is almost defenseless in point of construction. Even a merchant ship carrying, a small-caliber gun would be able to use it effectively for offense against the submarine.

Moreover, pirates and sea rovers have been swept from the main trade channels of the sea and privateering has been abolished. Consequently the placing of guns on merchantmen at the present date of submarine warfare can be explained only on the ground of a purpose to render merchantmen superior in force to submarines and to prevent warning and visit and search by them. Any armament, therefore, on a merchant vessel would seem to have the character of an offensive armament

a merchant vessel would seem to have the character of an obtensive armament

If a submarine is required to stop and search a merchant vessel on the high seas, and in case it is found that she is of an enemy character and that conditions necessitate her destruction and the removal to a place of safety of persons on board, it would not seem just nor reasonable that the submarine should be compelled, while complying with these requirements, to expose itself to almost certain destruction by the guns on board the merchant vessel.

INNOCENT LIVES AT STAKE.

It would therefore appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

In proposing this formula as a basis of conditional declaration by the belligerent Government I do so in the full conviction that each Government will consider primarily the humane purposes of saving the lives of innocent people rather than the insistence upon doubtful legal rights which may be denied on account of new conditions.

STAND ON QUESTIONS SOUGHT.

I would be pleased to be informed whether your Government would be willing to make such a declaration conditioned upon their enemies making a similar declaration.

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be an auxiliary cruiser and so treated by a neutral as well as by a belligerent Government and is seriously considering instructing its officials accordingly.

This suggestion of Secretary Lansing is in harmony with the facts and common sense. The objection to it is that it proposes a change in international law during the progress of the war. The suggestions of the Government of the United States, as set

The suggestions of the Government of the United States, as set forth in Secretary Lansing's note were promptly agreed to by Germany and rejected by England.

On February 15, 1916, in Carnegie Hall, New York City, ex-Senator Root made a merciless assault on the Wilson administration. Mr. Root attempted to show by briefly relating the history of the Wilson policy toward Mexico how the President first failed to protect American life and property beyond the Rio Grande and then interfered without warrant in Mexican states the transposition of the semiptric before a state of the semiptric states and the semiptric states are semiptric to the semiptric states. by taking sides against Huerta, so that to-day no flag is so dis-honored and no citizenship worth the claiming in Mexico as

Mr. Root also pointed out what he claimed to be three fundamental errors in the administration's policy toward Europe:

First, the lack of foresight to make timely provision for backing up American diplomacy by actual or assured military and naval force. Secondly, the forfeiture of the world's respect for our assertion of rights by pursuing the policy of making threats and failing to make them good. Thirdly, a loss of the moral forces of the civilized world through failure to interpret truly to the world the spirit of the American democracy in its attitude toward the terrible events which accompanied the early stages of the war.

THE PRESIDENT'S HANDLING OF THE U-BOAT ISSUE IS SEVERELY CRITICIZED.

Our Government undertook one year ago to prevent the destruction of American life by submarine attack, and now that the attempt has failed and our citizens are long since dead and * * * there is small advantage in discussing whether we shall or shall not have an admission that it was unlawful to kill them. * * * Measured and restrained expression, backed to the full by serious purpose, is strong and respected. Extreme and belligerent expression, unsupported by resolution, is weak and without effect. No man should draw a pistol who dares not shoot. The Government that shakes its first and its finger afterwards falls into contempt. Our diplomacy has lost its authority and influence because we have been brave in words and irresolute in action. Men may say that the words of our diplomationotes were justified; men may say that our inaction was justified, but no man can say that both our words and our inaction were wise and creditable.

After thus resugrection the sinking of the Australiance of th

After thus resurrecting the sinking of the Lusitania and bringing to the minds of the American people all the horrors of that incident, as though it had happened yesterday, Mr. Root proceeded to open up the Belgian violation sore in this fashion:

The American people were entitled not merely to feel but to speak concerning the wrong done to Belgium.

The law protecting Belgium which was violated was our law and the law of every other civilized country.

We had a right to be neutral and we were neutral as to the quarrel between Germany and France, but when, as an incident to the prosecu-tion of that quarrel, Germany broke the law which we were entitled to have preserved, and which she had agreed with us to preserve, we were entitled to be heard in the assertion of our national right.

The pro-ally and partisan press, as well as the press owned or controlled by our militaristic friends and munition makers, pronounced the Root speech an utterance combining the vision of true statesmanship, the virility of stern patriotism, the convincing force of cold logic, pointing out the utter failure of the Wilson administration in the handling of foreign affairs.

The temptation to throw the public into a state of excitement and to arouse their prejudices and passions was too great for a heartless press to resist, so it resurrected scenes of the invasion of Belgium and the sinking of the Lusitania, much to the discomfort and disadvantage of the Wilson administration.

Associations calling themselves Citizens' League for "America and the Allies" had been formed in the East. Prof. Josiah Royce, of Harvard University, a member of one of these associations, in an address delivered in Fremont Temple, Boston, Sunday, January 30, 1916, said things that not only reflected the views of his association but, I' am sorry to say, of some other citizens in this country. Among other things of like character, Prof. Royce said:

Character, Frot. Royce said:

We owe to the allies whatever moral support and financial assistance it is in the power of this Nation to give; it is not merely the so-called American right that our munition makers should be free to sell to the enemies of Germany—it is our duty to encourage them to do so. Let us enthusiastically approve the supplying the enemies of Germany with financial aid and minitions of war and resist with all our moral strength those who would place an embargo on munitions.

Let us do what we can to bring about at least a rupture of diplomatic relations between our own Republic and those foes of mankind (Germany) and fearlessly await whatever dangers this may entail upon us, our land, and posterity.

This league is formed to use all lawful means to put this Nation in a position of definite sympathy with the allies.

The only construction that can be placed on Prof. Royce's words is that until we are ready to plunge into war in support of the allies we should continue our shipment of war supplies to them. What an exhibition of neutrality for a professor in our most ancient and most renowned university! And, again, there appeared the other day in the New York Journal of Commerce, one of Wall Street's publications, this article:

If the present submarine controversy should result in war with Germany, what would be the chief effects upon the United States outside of military and naval activities?

And it answers:

And it answers:

A second general readjustment of business affairs to a new situation, less violent than in 1914.

Some temporary deraugement in the security markets.

Extensive bond issues, which would tend to lessen foreign borrowings on this side.

A larger home demand for war munitions, which would probably interfere with foreign orders.

The German ships now interned in this country might be commandeered as transports or to relieve the freight situation.

Taking the situation at large, war with Germany could not be a very serious matter to the United States, "and if it hastened peace would be distinctly beneficial."

This last expression has been quite freely used of late by some

distinguished citizens.

With the press mercilessly assaulting him and the people blindly following its lead and that of Mr. Root, Prof. Royce, and his associates and sympathizers, the President deemed it the better part of valor to get out from between the trenches where he had thus thrust himself and his country when he caused Secretary Lansing to send to the belligerent nations the now famous note of January 18, but just how this could be done without loss of honor and credit to himself, and possibly the Presidency, was a most perplexing question. He feared and dreaded the criticism made upon his foreign policy by Mr. Root, the pro-British press, and the partisan press. Something had to be done to turn the tide. Root had sounded the keynote for the Republican national campaign against the President This note was rapidly finding a responsive chord in the minds of the American people. The situation was desperate and demanded prompt and heroic action. Meanwhile, the German Government not only notified the President of its acceptance of the suggestions of the Lansing note, but that on and after March 1, 1916, it would treat armed merchant vessels 'auxiliary cruisers.

This brought the U-boat controversy again to the front. Senators Kern and Stone and Representative Flood sought an interview with the President on February 21 to talk over the situation. As a consequence of this interview, Senator Stone,

on February 24, wrote the President as follows:

on February 24, wrote the President as follows:

Dear Me. President: Since Senator Kers, Mr. Flood, and I talked with you on Monday evening, I am more troubled than I have been for many a day. I have not felt authorized to repeat our conversation, but I have attempted, in response to numerous inquiries from my colleagues, to state to them, within the confidence that they should observe, my general understanding of your attitude. I have stated my understanding of your attitude to be substantially as follows:

That while you would deeply regret the rejection by Great Britain of Mr. Lansing's proposal for the disarmament of merchant vessels of the allies with the understanding that Germany and her allies would not fire upon a merchant ship if she hauled to when summoned, not attempting to escape, and that the German warships would only exercise the admitted right of visitation and capture, and would not destroy the captured ship except in ciscumstances that reasonably assured the safety of passengers and crew, you were of the opinion that if Great Britain and

her allies rejected the proposal and insisted upon arming her merchant ships she would be within her right under international law. Also that you would feel disposed to allow armed vessels to be cleared from our ports; also that you are not favorably disposed to the idea of this Government taking any definite steps toward preventing American citizens. from embarking upon armed merchant vessels.

Furthermore, that you would consider it your duty, if a German warship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers, to hold Germany to strict account.

Furthermore, that you would consider it your duty, if a German warship should fire upon an armed merchant vessel of the enemy upon which American citizens were passengers, to hold Germany to strict account.

Numerous Members of the Senate and the House have called to discuss this subject with me. I have felt that the Members of the two Houses who are to deal with this grave question were entitled to know the situation we are confronting as I understand it to be.

I think I should say to vou that the Members of both Houses feel deeply concerned and disturbed by what they read and hear. I have heard of some talk to the effect that some are saying that, after all, it may be possible that the program of preparedness, so called, has some relation to such a situation as we are now called upon to meet.

I have counseled all who have talked with me to keep cool; that this whole business is still the subject of diplomacy and that you are striving to the utmost to bring about some peaceable adjustment, and that in the meantime Congress should be careful not to "ball up" a diplomatic situation by any kind or hasty and ill-considered action. However, the situation by any kind or hasty and ill-considered action. However, the situation in Congress is such as to excite a sense of deep concern in the minds of careful and thoughtful men. I have felt that it is due to you to say this much.

I think you understand my personal attitude with respect to this subject. As much and as deeply as I would hate to radically disagree with you, I find it difficult from my sense of duty and responsibility to consent to plunge this Nation into the vortex of this world war because of the unreasonable obstinacy of any of the powers, upon the one hand, or, on the other hand, of foothardiness, amounting to a sort of moral treason against the R-public, of our people recklessly risking their lives on armed belligerent ships. I can not escape the conviction that such would be so monstrous as to be indefensible.

I want to be with you and to stand by

After the attitude of the President on the U-boat controversy became known to Great Britain through the publication of the Stone letter, there would be no advantage to Great Britain in accepting the proposals of the United States, moreover, on the contrary, it would be to her material advantage not to accept them. In his letter of reply to Senator STONE the President confirmed all that Senator STONE had said as to the administration's undersea warfare views. The President's letter in full is as fol-

FEBRUARY 24, 1916. MY DEAR SENATOR: I very warmly appreciate your kind and frank letter of to-day, and feel that it calls for an equally frank reply.

You are right in assuming that I shall do everything in my power to keep the United States out of war. I think the country will feel no uneasiness about my course in that respect.

Through many anxious months I have striven for that object, amidst difficulties more manifold than can have been apparent upon the surface, and so far I have succeeded. I do not doubt that I shall continue to succeed

to succeed

to succeed

The course which the central European powers have announced their intention of following in the future with regard to undersea warfare seems for the moment to threaten insuperable obstacles, but its apparent meaning is so manifestly inconsistent with explicit assurances recently given us by these powers, with regard to their treatment of merchant vessels on the high seas, that I must believe that explanations will presently ensue which will put a different aspect upon it.

We have had no reason to question their good faith or their fidelity to their promises in the past, and I, for one, feel confident that we shall have none in the future.

But in any event our duty is clear. No nation, no group of nations, has the right while war is in progress to alter or disregard the principles which all nations have agreed upon in mitigation of the horrors and sufferings of war; and if the clear rights of American citizens should ever unhappily be abridged or denied by any such action, we should, it seems to me, have in honor no choice as to what our own course should be

For my own part, I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation is involved. We covet peace and shall preserve it at any cost but the loss of honor.

To forbid our people to exercise their rights for fear we might be called upon to vindicate them would be a deep humiliation indeed. It would be an implicit, all but an explicit, acquiescence in the violation of the rights of mankind everywhere and of whatever nation or allegiance. It would be a deliberate abdication of our hitherto proud position as spokesman, even amid the turmoil of war, for the law and the right.

It would make everything this Government has attempted and everything that it has achieved during this terrible struggle of the content of the right.

If would make everything this Government has attempted and everything that it has achieved during this terrible struggle of nations meaningless and futile.

FEARS MORE CONCESSIONS.

FEARS MORE CONCESSIONS,

It is important to reflect that if in this instance we allowed expediency to take the place of principle the door would inevitably be opened to still further concessions.

Once accept a single abatement of right and many other humiliations would certainly follow, and the whole fine fabric of international law might crumble under our hands, piece by piece. What we are contending for in this matter is of the very essence of the things that have made America a sovereign Nation. She can not yield them without

conceding her own impotency as a Nation and making virtual surrender of her independent position among the nations of the world.

I am speaking, my dear Senator, in deep solemnity, without heat, with a clear consciousness of the high responsibilities of my office, and as your sincere and devoted friend. If we should unhappily differ, we shall differ as friends; but where issues so momentous as these are involved we must, just because we are friends, speak our minds without reservation.

reservation, Faithfully, yours, WOODROW WILSON.

The President's letter set forth very clearly principles of international law with which we all agree, and expresses in a most pleasing manner the hopes, ideals, and desires of every true American citizen. I fully agree with him that should the clear right of American citizens be abridged or denied by any of the belligerent nations we should have in honor no choice as to what our course should be. My life is at the service of my country to prevent any abridgment of the rights of American citizens in any respect. Neither as a Nation nor as an individual should we covet peace at the loss of "honor" "respect." However, there may come a time when our rig However, there may come a time when our rights as a Nation or as a citizen are not "clear" and easily ascertainable.

I am not so sure that I have under the law of nations a "clear" right to travel upon a merchantman of a belligerent country armed with powerful guns in the hands of trained naval officers bearing secret instructions to attack U boats on sight, supplemented by instructions to the masters of such ships to hoist false flags and ram U boats. Under circumstances where my right is not clear, but is doubtful, what is the prudent thing

for me to do?

Germany claims that British merchant vessels are armed and instructed to fight, and that masters of ships are instructed to hoist false flags and ram U boats, and has submitted to our Government evidence to that effect. Great Britain asserts that merchantmen are armed solely for defense, but she has not controverted the evidence furnished by Germany. The dispute is over facts, not over law. There being doubt as to the facts, it is obviously the duty of American citizens to forego traveling upon vessels of doubtful character or intentions. It is likewise the duty of the Government to inform its citizens of the danger, and to request them to refrain from doing anything that would complicate the situation until their "clear rights" can be ascer-Our Government would be placed in a dangerous and humiliating position if it should protest against the killing of American citizens on an armed British merchantman only to find that the vessel had been heavily armed with guns manned by a trained naval crew, and had made war upon the enemy. Until we know the true character of the British merchant vessels the United States and its citizens are in serious danger of being drawn into this horrible conflagration of death and destruction that is so ruthlessly decimating the flower of European manhood. Why should our Government deliberately insist on thrusting itself into a position where it may be called upon to defend a very "doubtful" legal right?

Prior to the Root speech and the subsequent unwarranted assault made upon the President by a mercenary and partisan press he was advocating that all guns be taken from merchantmen, and in this connection the note of his Secretary of State

said:

I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel carrying an armament of any sort, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be "an auxiliary cruiser" and so treated by a neutral as well as by a belligerent government, and is seriously considering instructing its officials accordingly.

Germany, looking eagerly for an opportunity to damage her enemies, seized upon the American proposal as an indorsement of her own contention and immediately announced that, beginning March 1, her submarines would sink without warning and regardless of passengers all armed enemy merchant vessels "as auxiliary cruisers." The position of the President was untenable, because his declaration would make it impossible to demand reparation for the killing of American citizens on armed merchantmen, whether armed for defensive or offensive purposes or whether or not their commanders had secret instructions to hoist false flags and ram U boats. There was only one course open to him, and that was to reverse himself. He did this most completely in his letter of February 24 to Senator Stone, in which he said:

I can not consent to any abridgment of the rights of American citizens in any respect. The honor and self-respect of the Nation is involved. We covet peace and shall preserve it at any cost but the loss of honor.

In these strong, patriotic words the President has voiced my sentiments and has clearly expressed the position every true American citizen should take in reference to this controversy. I am proud to be able to testify that my colleagues, with the exception of a very few who are in sympathy with Prof. Royce's school of thought, since the beginning of this deplorable European war,

have committed themselves absolutely to the policy of "neutrality even in thought." They have studiously refrained from even exercising their constitutional right to discuss the policy of our Government in reference to this subject lest they might embarrass in the slightest degree our President in his negotiations with belligerent powers.

Mr. Speaker, in my own case, on the day of the sinking of the Lusitania, when I thought my words would help still the agitation and excitement of our people and thus be of assistance to

my President, I gave to the press this statement:

I consider the present the greatest crisis that has arisen in the history of the United States, and in this crisis it is imperative that we bear ourselves with calmness, dignity, and loyalty to our Government. We must uphold our President in the policies he outlines and initiates, irrespective of personal opinions. To do otherwise would be an act of disloyalty. He alone can represent the policy, the honor, and the dignity of the United States in our foreign affairs. He is our representative, and the only one authorized to speak for us as a Nation. Therefore it is incumbent upon us to uphold him in whatever course he, in his judgment, sees fit to pursue. In a time like this, when there has been such a wholesale substitution of unrestrained will for international law, good citizenship demands that every individual dedicate himself without mental reservation to the support and protection of our Nation. I am confident that every American citizen will rally to the support of America and American ideals, as they have on all previous occasions.

From that day until this I have religiously lived up to the sentiments expressed in that statement and I propose to do so

in the future, whether in public or private life.

While the President's new position was highly patriotic, and as an abstract proposition was sound, it by no means clarified the situation as to "doubtful" rights of American citizens. Λ large majority of the Members of Congress-and I include myself among that number-believe that Americans should forego their right to travel on armed vessels until it has been determined whether or not such a vessel is "an auxiliary And such was the position taken by the President cruiser." himself prior to the Root speech, as evidenced by a logical de-

velopment of the policy outlined in the Lansing note. On February 17, 1916, Representative McLemore, of Texas, introduced a resolution having for its central idea the warning of American citizens not to take passage upon armed merchant vessels of belligerent nations. This resolution was generally approved by the American people. Considerable feeling existed among the Members of Congress of the President's own party on account of his sudden change of front. The section of the press that had been hurling bitter invectives at the President since the Root speech seized upon this opportunity to foment strife between the President and the Members of Congress. Headlines appeared, such as "War between Wilson and Congress," "Congress in revolt," and so forth.

This gave the President's advisers a cue. They insisted that his political salvation depended upon making Congress the cen-By so doing he would divert the enemies' fire ter of attack.

from himself.

By this time the press reported that he was in desperate straits and had about concluded to withdraw as a candidate for reelection.

The President opened his campaign against Congress on February 29 by writing Representative Pou, ranking member of the Committee on Rules, this letter:

WILSON TO FOU-THE LETTER THAT SUSPRISED ALL.

THE WHITE HOUSE, Washington, February 29, 1916.

Washington, February 29, 1916.

My Dear Ma, Pou: Inasmuch as I learn that Mr. Henry, the chairman of the Committee on Rules, is absent in Texas, I take the liberty of calling your attention, as ranking member of the committee, to a matter of grave concern to the country which can, I believe, be handled, under the rules of the House, only by that committee.

The report that there are divided counsels in Congress in regard to the foreign policy of the Government is being made industrious use of in foreign capitals. I believe that report to be false, but so long as it is anywhere credited it can not fail to do the greatest harm and expose the country to the most serious risks. I therefore feel justified in asking that your committee will permit me to urge an early vote upon the resolutions with regard to travel on armed merchantmen which have recently been so much talked about in order that there may be afforded an immediate opportunity for full public discussion and action upon them and that all doubts and conjectures may be swept away and our foreign relations once more cleared of damaging misunderstandings.

The matter is of so grave importance and lies so clearly within the field of Executive initiative that I venture to hope that your committee will not think that I am taking unwarranted liberty in making this suggestion as to the business of the House, and I very carnestly commend it to their immediate attention.

Cordially and sincerely, yours.

Woodbow Wilson.

After the contents of the Pou letter became known word was sent to the President by his supporters that an agreement had been reached to drop the warning resolution and to pass a general resolution of "confidence" in the President. He rejected this suggestion at once, and demanded that the Congressmen eat their words by calling up the McLemore resolution and tabling it. This was a complete reversal of his position prior to February 29, for he had previously informed the Foreign Affairs Committee not to report out the McLenore resolution.

In obedience to the President's subsequent request, the Foreign Affairs Committee reported out the McLemore resolution, accompanied by the following recommendation:

That House resolution 147, known as the McLemore resolution, be reported to the House with the recommendation that it do lie on the table. Under the practice and precedents in this country the conduct of diplomatic negotiations has been left to the President, and with this practice the committee does not feel it proper for the House of Representives to interfere. We have confidence that if the President reaches a point in any negotiations with foreign Governments at which he has exhausted his power in the premises, he will in the usual way report all facts and circumstances to Congress for its consideration.

By the action of the committee the McLemore resolution was laid on the table as effectively as though it had been done by a vote of the House. However, it was not laid on the table in the precise manner that the President had demanded, and had to be taken from the table and tabled again by the House for the satisfaction of the President and to the great benefit, satisfaction, and pleasure of that section of the press that had been heaping coals upon the head of our President. But like the sinner of old, who "went to church to scoff, but came away to pray," these self-same purveyors of news and molders of public opinion that had been so relentlessly criticizing the President before his war upon Congress were now, as had been predicted by his advisers, proclaiming him a martyr to the cause of free institutions; the brayest and most heroic President that ever occupied the White House; the embodiment of patriotism and self-denial.

So the ridiculous, absurd, and wholly unnecessary and selfinvited controversy between the Capitol of our Nation and the White House was not to end by the committee placing the offending resolution in the legislative tomb. Apparently the President's campaign had not been sufficiently advertised. Therefore it was further demanded that the House take from the table this resolution and immediately, without debate or discussion, return it to this selfsame table. The excuse offered for further continuing the agony was that the President desired a vote of the House upon the resolution in order that there might be full public discussion and action. On what? Why, of course, on the matter of citizens of the United States traveling on armed merchantmen. Was that done? Was an opportunity for full public discussion and action given? No. What was done? parliamentary situation was deliberately created to avoid discussing and voting on the very question the President said he wished fully discussed and acted upon. This was brought about by forcing the Committee on Rules to bring in a special rule to gag the House. At the command of the President, the House hog tied itself by adopting the following rule:

House resolution 158.

Resolved, That immediately upon the adoption of this resolution the House shall proceed to consideration of H. Res. 147; that there shall be four hours of general debate, one-half to be controlled by the gentleman from Virginia, Mr. Flood, and one-half by the gentleman from Wisconsin, Mr. Coopen; that at the conclusion of said general debate the said resolution shall be considered under the general rules of the House

To those unfamiliar with parliamentary procedure the words "shall be considered under the general rules of the House" are misleading, for a motion to lay on the table was in order as soon as the four-hour debate closed, and all opportunity for amendment or further discussion was foreclosed. Representative Campbell, the ranking minority member of the Rules Committee, pleaded with the House to vote down the previous question on the rule so that he might have an opportunity to offer the following as a substitute, which simply warned American citizens of the danger of taking passage on armed ships of nations at war:

Strike out all after the word "debate" where it last occurs and in-

Strike out all after the word "debate" where it last occurs and insert the following:

"The resolution and preamble shall both be open to amendment with the following amendment considered as pending, to wit:

"Strike out both the preamble and the resolution and insert in lieu thereof the following:

"Resolved. That in the opinion of the House of Representatives citizens of the United States under existing conditions and irrespective of their legal rights ought to refrain from taking passage on armed vessels of belligerent nations, and the consideration of the resolution and amendments thereto shall proceed under the five-minute rule to a final vote on its passage."

Under the Campbell substitute rule amendments could have been offered, and full discussion, "so explicitly demanded by the President" in his letter to Congressman Pou, prevented, however, by his managers through a parliamentary situation created for that express purpose, could likewise have been had. The attitude of Members of the House that disagree with the

supporters of the President as to the proper mode of procedure

was ably and succinctly expressed by the minority leader, Hon. JAMES R. MANN, as follows:

was ably and succincily expressed by the minority leader, Hon. James R. Mann, as follows:

If we are correctly informed by gentlemen on the floor, not having been informed directly by the President, either in a message or in person here, as to what he desires, the President desires our opinion on the subject of American citizens traveling on armed vessels of beiligerent nations. We do not express any opinion on that subject by laying the McLemore resolution on the table lapplause], unless such action shall be construed as an invitation to American citizens to travel on these armed vessels. I am not willing to extend an invitation to American citizens to travel on armed vessels when to do so may bring us into serious compilications, and I would not voluntarily offer to inject my owe opinion apon this subject while the President is carrying on his negotiations; but when the President seeks to know what the American people may think on the subject as expressed by their Representatives, I think it is our duty, if we are to act at all, to meet the question fairly and squarely and express the opinion such as we have; and if we believe that American citizens, under at least ordinary circumstances, ought not to render this country liable to war, we ought to say so, and leave the President in his discretion and power to take care of the future. [Applause,] We have not sought to bother or annoy the President; but the President, it is said, asks our beliefs on the subject. Let us tell him frankly and fairly that we do not desire compilications which will lead to war [applause]; and the only method by which we can now proceed under these circumstances, if we are willing to meet the question fairly, is to vote down, first, the previous question. I can not conceive how it will be considered that the President is informed through a parliamentary trick, such as is proposed by the Committee on Rules, to give the House no chance to vote on the real question at issue, but only to table a resolution which the House would not agree

Is anyone so credulous as to believe that foreign countries will be influenced in their negotiations with our Government by reason of this fiasco? If so, he credits them with little understanding.

I voted against laying the McLemore resolution on the table because I knew that under the rule, if that motion were defeated. full opportunity would be given to Members of the House to go upon record upon a resolution simply warning Americans against traveling on armed merchant vessels of belligerents until their character had been determined. No right would be denied by such a resolution, and our Government would be left free to assert any right to the extreme limit, and I am free to admit that in casting my vote as I did-and I want it so understoodit gave me much satisfaction to be able, at the same time, to register my protest against encroachments by the Executive department upon the legislative branch of our Government.

It will be recollected that a little over a month ago when Secretary Garrison resigned because the President had reversed himself on a fundamental principle of "preparedness," the President declared with much feeling "that under no circumstances" would he "feel at liberty to insist upon the adoption by Congress of any specific course of action." He was offended that Mr. Garrison should even suggest his using the power of his office to advance a policy, however worthy.

At that time I most heartily commended the President for his clear conception of the attitude that one branch of our Government should maintain toward a coordinate branch. His excellent sentiment and lofty purpose, as thus expressed, was comforting to Members of Congress who still had very vivid recollections of the performances of the President on the occasion of the repeal of the Panama Canal tolls act and the declaration of war against Huerta. But, alas, how vain were our hopes! Within a fortnight he is found riding roughshod over rules and precedents and arbitrarily dictating not only the action the legislative branch should take but the forms under which it shall proceed.

The President and Congress were created by the solemn mandate of the people, expressed in words so clear that their meaning can be readily ascertained. The founders of this Government caused these words to be transcribed on parchment and delivered into our hands as our guidebook in carrying further the Government which they created. When in doubt as to the Government's power to do a particular thing, or as to the respective powers of the different branches of the Government, recourse is had to this guidebook, or Constitution. In the present instance our Constitution provides that Congress has power

Define and punish piracies and felonies committed on the high seas and offenses against the law of nations.

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

The executive power shall be vested in a President of the United States of America. He shall have power, by and with the advice and consent of the Senate, to make treaties. He shall, from time to time, give to Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and

expedient. He shall receive ambassadors and other public ministers. He shall take care that the laws be faithfully executed.

I fail to understand how the President can find warrant of authority in this language of the Constitution for his peremptory demand that Congress make a complete denial at once of any intent or purpose to express an opinion or offer advice on the question of warning our citizens to keep off of auxiliary cruisers-a domestic question having nothing to do with our foreign affairs, unless we desire to make it so. However, upon an examination of his work on Constitutional Government in the United States, published in 1911, he clearly defines his view as to the unlimited and exclusive prerogative of the Executive in dealing with foreign affairs, and he has decided to treat this question as one relating to foreign affairs, which it is not.

this question as one relating to foreign affairs, which it is not.

One of the greatest of the President's powers I have not yet spoken of at all—his control, which is very absolute, of the foreign relations of a nation. The initiative in foreign affairs which the President possesses without any restriction whatever is virtually the power to control them absolutely. The President can not conclude a treaty with a foreign power without the consent of the Senate, but he may guide every step of dipiomacy; and to guide diplomacy is to determine what treaties must be made if the faith and prestige of the Government are to be maintained. He need disclose no step of negotiation until it is complete, and when in any critical matter it is completed the Government is virtually committed. Whatever its disinclination, the Senate may feel itself committed also.

If a President is need disclose no step of negotiations until it.

If a President "need disclose no step of negotiations until it is complete, and when in any critical matter it is completed the Government is virtually committed," he can go to the limit of making war, and Congress has no alternative but to accept. The Czar of Russia could do no more,

Mr. Speaker, by resorting, as on two other occasions since he became Chief Executive of this Nation, to an appeal to the patriotism of the American people on the pretext that the dignity and honor of their flag was being attacked, the President won in his recent war on Congress.

But when the people realize that this appeal was but a pre-text to conceal the real purpose of the attack I do not believe

text to conceal the real purpose of the attack I do not believe they will rejoice over the fact that the legislative branch of our Government was degraded and brought to the dust for "political," not "patriotic" purposes.

Can any unprejudiced person, knowing the facts, doubt that the alleged cause of this war was but a pretext, and that the real cause was a desire to advance the political fortunes of the

If this were the first time that resort was had to our flag to carry through Congress an Executive program, I would be loath to believe that such a thing was within the realm of possibility. However, when I recall, as I do most vividly, that the same methods were pursued by the same parties and by the same sections of the press when Congress was commanded to declare war on Huerta, and to repeal the Panama Canal tolls act, I am forced to believe it, much as I dislike to. On March 5, 1914, the President delivered a message in person to Congress in part as

Gentlemen of the Congress, I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. * * * I have come to ask you for the repeal of that provision of Panama Canal act which exempts vessels engaged in the coastwise trade of the United States from payment of toils, and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable. I ask this of you in support of the "foreign policy of the administration." I shall not know how to deal with other matters of even "greater delicacy and nearer consequence" if you do not grant it to me in ungrudging measure.

What foreign policy is investored to our transcent.

What foreign policy is involved in respect to our transcontinental railroads

Mr. Root, in his Carnegie Hall speech, said:

The taking of Vera Cruz destroyed confidence in the sincerity of the American Government in Mexico, because every intelligent man in Mexico believed that the avowed reason for the act was not the real reason.

The avowed purpose was to compel a salute to the American flag. Is there anyone who doubts that the alleged cause was but a pretext and that the real cause was the purpose to turn Huerta out of office?

Mr. Root made a serious charge, but produced facts to prove it. Mr. Speaker, for the consideration of the House and the great mass of the American people I have stated the incontrovertible facts and circumstances of the President's war on Congress and have drawn certain deductions therefrom which are fully warranted and sustained by these facts and circumstances.

No question of international law or foreign policy was involved.

except as Mr. Wilson sought to make it so.

What question of international law was involved in an expression by Congress as to the wisdom of Americans traveling upon belligerent ships of doubtful character?

Is our internationalism to supersede our nationalism?

Has it come to pass that we have more concern for the people

of other countries than for American citizens?

I can not consent to the doctrine that our Government should constitute itself the guardian of the peoples of the world.

should extend to them our deep sympathy in their hour of mis-fortune, but refrain from thrusting our Government into their family quarrels, unless we intend to abandon the Monroe doctrine and our acknowledged rights as American citizens.

The idea of internationalism at the present time is very intoxicating, because it brings with it a sense of large responsibility, experienced by such international characters as J. Pier-

pont Morgan.

However, the average American citizen is quite content to forego this international thrill. He still finds comfort in love, loyalty, and respect for his own country. He is neither pro-German nor pro-British, but only an American, in favor of the American Nation standing up and facing the world in defense of American institutions and American ideals,

True, there will always be with us the Tories of Revolu-tionary days and the copperheads of the Civil War, but thank God, at the present time their number is infinitesimal.

There will be no need of working the flag overtime to arouse either the patriotism of Congressmen or the loyalty of our patriotic and complex citizenry; for whenever a real situation confronts the country, not an imaginary one, and the administration in charge of affairs informs Congress that legislation or money, or both, are needed in order to put the country in proper shape for its own safety, it will meet with ready response from Congress and the great mass of patriotic American citizens, as was evidenced in this House the other day, when all proceedings under the rule providing for the call of committees were suspended—a thing that had never happened before—at the request of the President, and legislation materially increasing the Army and providing a large sum of money for the Navy was passed in less than five minutes by the unanimous vote of the membership then.

Pro-German, pro-British, and pro-everybody will be cemented into an indissoluble union for the defense of America, justice,

liberty, and equality under-

ality under—
Your flag and my flag
And how it waves to-day
O'er your land and my land
And half the world away!
Rose-red and blood-red
Its stripes forever gleam
Snow-white and soul-white
The good Forefather's dream;
Sky-blue and true-blue
Its stars that shine aright
A glorious guidon of the day
A shelter through the night.
Your flag and my flag. A shelter through the night.
Your flag and my flag,
And, oh, how much it holds
Of your heart and my heart
Secure within its folds,
Your heart and my heart
Beat quicker at its sight,
Sun-kissed and wind-tossed
The Red and Blue and White,
The One Flag, the Great Flag,
The flag for me and you
Glorified all else beside
The Red and White and Blue.

The inspiration that created, the love and sacrifices that have sustained my flag and your flag did it for a nobler purpose than that of forcing the public to pay unreasonable rates to transcontinental railroads; than that of interfering with the internal affairs of a sister Republic; than that of making an unconscionable war on a coordinate branch of the Government.

The Military Establishment.

EXTENSION OF REMARKS

HON. WILLIAM GORDON, OF OHIO,

IN THE HOUSE OF REPRESENTATIVES, Wednesday, March 22, 1916.

Mr. GORDON. Mr. Speaker, under the rule granting leave to print pertinent remarks on the consideration of H. R. 12766, to increase the efficiency of the Military Establishment of the United States, I insert a very able argument in opposition to the subordination of the civil to the military authority made by the late John H. James, of Urbana, Ohio, in an open letter to the Attorney General of the United States in 1869.

The principles herein contended for were subsequently vindicated, but this letter was written during a time of great po-litical excitement, while the passions of the people of the Northern States were quite generally aroused over the greatest We civil war in all history, and for the time being all the important safeguards of constitutional liberty were subverted

by the military arm of the Government.

This paper is an important contribution to the military history of the United States, and emphasizes the importance of subordinating the military to the civil authority, as this bill now under consideration seeks to do.

The letter is as follows:

MILITARY COMMISSIONS FOR THE TRIAL OF CITIZENS, A LETTER TO THE ATTORNEY GENERAL OF THE UNITED STATES.

To the Hon, E. R. HOAR,

Attorney General of the United States:

In the matter of the application of E. M. Yerger, a civilian now under military arrest, and recently tried before a military commission, for a writ of habeas corpus, the American people have been called upon to witness the spectacle of an Attorney General of the United States going into the Supreme Court and making an argument on behalf of the Government against the granting of the writ and in favor of the unchecked supremacy of military power. Whatever regret and humiliation the fact may cause, it can hardly excite surprise. On every occasion which has offered you have been the ready apologist of arbitrary power. When Yerger first made his application in July last, invoking the decision of the civil tribunals as to the legality of his detention by the military authorities and his trial by a military commission in time of peace, you appeared to resist the application, though it would be difficult to explain the interest of the Government in the case. And when a short time previous to this the case of James Weaver, a citizen of the United States, not in the military service, tried by a military commission and sentenced to suffer death, was referred to you for your official opinion as to whether the President might legally approve and his subordinates legally execute the sentence of the commission, you responded in favor of the legality of the commission in an opinion equally distinguished by its extraordinary views of the law and its apparent eagerness to sustain the action of the commission. The country and the world learned with surprise from that remarkable opinion that, though more than four years have elapsed since a hostile gun was fired, the war is not yet over, and that in this country, boasting of its freedom, and whose Constitution expressly secures trial by jury, habeas corpus, and all the safeguards of English and American liberty, citizens are liable to be taken out of the hands of the civil authorities or from their homes by the military, tried by military courts, and hung or shot by military order. The course of reasoning by which you sought to justify this arbitrary power it is hardly worth while to notice. The very statement of its result is its own most conclusive refutation. There are some things about which the unsophisticated understanding of the people refuses to be deceived, which it even refuses to discuss. The people will treat with contempt any argument which insults their common sense, as does your proposition that a state of war still exists in the face of their four years' knowledge and experience to the contrary, and unless they are much degenerated they will refuse to listen calmly to any proposition to lay down the liberties for which they and their forefathers have struggled. So far as the intrinsic weight of your opinion is concerned, it is hardly necessary to consider it. But your advocacy has the appearance at least—as it was doubtless intended to have—of giving in the eyes of the people the sanction of law, the color of legality, to that outrage on all law and all liberty, the employment of martial law in time of peace. You hold the office of Attorney General of the United States, an office which has an hereditary claim to popular respect, derived from the days when it was filled by Randolph, Pinckney, Wirt, and Rush men who had acquired national reputations at the bar before being called to the Cabinet. You are the legal adviser of the President and of the heads of departments, and you have given advice in the opinion just referred to, upon which it was intended that officers should act and upon which they will act, utterly ignorant, so far as they depend upon you, of the responsi-bilities they are incurring. Under these circumstances it is worth while to see what the law really is, to examine your opinion, to show that its positions are untenable, the authorities you cite inapplicable, and the whole result of your reasoning

directly subversive of public liberty.

You justify the trial of citizens of the United States in this year, 1869, by military commissions? What are military commissions? A distinguished United States Senator (now or recently representing the country at a foreign court) characterized them as tribunals "organized to convict." It was a very happy description. The triers of the prisoner's guilt or innocence— the court and jury—are selected by the same authority that orders the arrest and prosecution, and afterwards executes the sentence. When the prosecuting attorney selects the jury, it is

certainly his own fault if anyone escapes. The bitterest enemy of the accused may be appointed one of his judges; no law protects him against it; his only appeal is to the court itself. If his offense partakes of a political character, or involves party feeling, his judges may be, and almost inevitably will be, selected with gross partiality, and he has no remedy. It is the distinguishing characteristic of these tribunals that the accused before them has no rights secured to him by law. His life, liberty, and property are entirely at the mercy of his judges. Their will is law.

This will be clearly understood if we consider the origin and constitution of these tribunals. What is a military commission? It is simply a court-martial taken out of its legitimate sphere and applied to the trial of civilians. How perfect an engine of despotism it is can be seen from its very purpose and nature. The government of an army is, and must necessarily be, a pure despotism. Its object is not as in civil government, to secure the happiness, welfare, safety, liberty, and rights of its subjects and their property. Its first object is to promote the discipline and efficiency of the army; all other purposes are merely incidental and subordinate. Hence we find while the civil laws punish only two or three offenses with death-generally only two, treason and murder-that out of 46 offenses of all grades defined by the Articles of War as punishable by courts-martial, 14 are punishable with death at the discretion of the court. The same difference in the objects and purposes of the two systems is seen in the courts which enforce their laws. The enlightened men of every succeeding age have sought to render the administration of civil justice as impartial as possible. Courts are permanent and are made as independent as possible by a proper tenure of office and by laws guarding against interest or par-tiality; positive law regulates the selection of juries, the course of procedure, and the rules of evidence; and to guard against errors of law or fact appeals and proceedings in error are provided. All these have come down to us from our American and English ancestors, and they constitute the strongest muniments of our boasted liberties, the surest safeguards of our personal rights. But what have courts-martial to do with them? has a system born amid the shock of arms, and having for its very object the enforcement of that rigid despotism so essential to military success-what has such a system to do with the safeguards of personal liberty? A man expressly surrenders his liberties for the time being when he enters the Army. The court-martial is a court temporarily appointed for the trial of the particular case or cases to be tried, often in the very midst of military operations. Its very constitution is subordinate to the interests of the hour; it is to be composed of as many officers, from 5 to 13, as can be detailed "without manifest injury to the It is a court of military men for the trial of military And as such its decisions and its opinions upon the laws and usages of war are entitled to respect for the same reasons that give weight and character to the decisions of learned judges of the civil and common law, because they are the opinions of men on subjects which they understand and which their education and profession have made them master of. it is exclusively for the trial of military offenses committed by persons in the military or naval service that courts-martial are The Constitution of the United States, the supreme law of the land, says so-

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service in time of war or public danger.

In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district where the crime shall have been committed.

And the Articles of War, the military code, enacted by Congress, but framed by military men, say the same. You may look through them from first to last and you will find no punishment provided for murder or robbery or arson or any of the crimes punished by the civil laws, even when committed by soldiers. On the contrary, the thirty-third article of war distinctly provides as follows:

When any commissioned officer or soldier shall be accused of a capital crime, or having used violence or committed any offense against the person or property of any citizen of any of the United States such as is punishable by the known laws of the land, the commanding officer and officers of every regiment, troop, or company to which the person or persons so accused shall belong are hereby required, upon application duly made by or in behalf of the party or parties injured, to use their utmost endeavors to deliver over such accused person or persons to the civil magistrate, and likewise to be aiding and assisting to the officers of justice in apprehending and securing the person or persons so accused in order to bring him or them to trial. If any commanding officer or officers shall willfully neglect or shall refuse, upon the application aforesaid, to deliver over such accused person or persons to the civil magistrates or to be aiding or assisting to the officers of justice in apprehending such person or persons, the officer or officers so offending shall be cashiered.

Such is the law as framed by military men themselves. There is no lawful authority for trying by military court even a soldier for the crime of murder. If he is accused of it, he has the right of any other citizen of the United States to be tried before a court whose knowledge of the "known laws of the land" enables it to define the legal limitations of the crime, and to be convicted only by the "lawful judgment of his peers." What, then, must be the thought of the American citizen—above all the American lawyer—who seeks to thrust upon these military courts a jurisdiction which their framers distinctly refused and to prostitute them to the destruction of the liberties of his country? For there is no bulwark of our civil rights which these tribunals do not destroy.

The Constitution of the United States assures the humblest citizen that he shall not be put upon trial for any capital or infamous crime unless he has been indicted—unless a grand jury of his fellow citizens, after hearing the evidence against him, shall decide that he ought to be put upon trial. The system your opinion sanctions sends him to trial upon the order of a general or colonel—the same who afterwards picks out the court

to try him.

The Constitution guarantees to every citizen the right to a speedy and public trial by an impartial jury of the State ...nd district wherein the crime was committed; and to insure this impartiality, the laws throw certain safeguards around the selection of the jury; it is provided that it shall be selected by lot from a large number of suitable persons previously appointed, and the right is guaranteed by law to the defendant to object to any member of the jury for a number of specified causes affecting their impartiality or fitness, on establishing the existence of any one of which the court has no discretion but to set the juror aside. The accused has also the right to chal-lenge peremptorily any two members of the jury whom he may object to or regard as unfriendly to him, without giving any reason therefor; and in capital cases he may so challenge 24 successive jurors. Your military commission is composed of such persons as the commanding officer thinks proper to pick out for the particular case to be tried. No law controls him in his selection. If he is corrupt, or passionate, or tyrannical; or prejudiced, he has the power to constitute the court to suit his purposes exactly. He knows the material he has to select from—what officers are corrupt, what ones are weak and easily influenced, what ones are strongly prejudiced against the pris-oner, who are his political friends, and who are his political or his personal enemies. He can appoint whom he pleases, All these tremendous powers over the life, liberty, and property of the citizen on trial are placed, unchecked and uncontrolled, in the hands of the officer ordering the court. If he exercises them corruptly, or tyrannically, or with partiality and prejudice, there is no law to appeal to—no courts of appeal before which to bring his action. The only challenge-the only appeal-is to the court itself, to the officer himself, or to a superior officer as totally irresponsible as he is. The accused, instead of being tried, as the Constitution guarantees, by an impartial jury of the State and district where the crime was committed, is sent before a board of officers from distant parts of the country temporarily stationed in the State during the pleasure of their superior officers, without the least interest in the State or its property-aliens to all intents and purposes to its people. They are, moreover, all the salaried employees and agents of the Government which institutes the prosecution-dependent upon it for preferment and promotion, and liable to be made to feel its displeasure in a very substantial manner. In what condition are they to exercise impartial judgment? It has been the constant effort of wise governments, as it is the spirit of the divine command, "Lead us not into temptation," to promote in every way possible the independence, impartiality, and purity of judges and juries. The system you advocate reverses all this and throws round the arbiters of the citizen's life and liberty temptations to partiality and injustice.

It has been commonly supposed, too, that some knowledge of the law was necessary to its proper administration. Judges and other law officers have always hitherto been appointed on the theory, at least, of taking the men best qualified by their learning and knowledge of the law. The labors of such men—of learned judges, statesmen, and legislators; of Coke, Mansfield, Erskine, and Brougham; of Kent, Parsons, Story, and Marshall—have been building up, generation after generation, a system of common and statute law regulating all the interests of society. It is the result of the experience of ages. It secures our lives, our liberties, and our property against arbitrary power and popular clamor and excitement—against malice or prejudice or ignorance. In the domain of criminal law it defines the different grades of crime; what degree of premeditation will make homicide murder, and what circumstances will re-

duce it to manslaughter; how far provocation will palliate or excuse the offense, and within what "cooling time" it ceases to operate; in the peculiar and difficult field of insanity it defines what kinds and degrees of mental disease exempts a criminal from responsibility for his acts and what do not. In all such cases the law provides rules, derived from experience and from close observation and study of the human mind, and its principles of action in given circumstances. In the department of evidence the conclusions arrived at by courts and jurists, in the course of the administration of the law in different ages and countries, have gradually taken shape in certain principles and rules known as the law of evidence, having for their object to elicit the truth, to ascertain the weight and value of testimony, to exclude what is unreliable, and to remove temptation to perjury. Few persons who have studied them will fail to agree with Lord Erskine that they are founded "in the charities of religion, in the philosophy of nature, in the truths of history, and in the experience of common life." If they had been understood or regarded at the time of the so-called trial of the persons charged with the murder of President Lincoln, the country and the men who sat on the commission might have been spared the conviction, now deepening into certainty, that one of the victims of that court was a wholly innecent woman. But they can not be understood nor applied by persons wholly unacquainted with them. For the interpretation and application of this system of common law-handed down to us by our fathers, incorporated in and recognized by the Constitution of the United States, and every day relied on by the people—for the administration of this system, the highest talent and legal learning have not been deemed too great. But you would commit the administration of justice and the lives and liberties of American citizens to a board of officers-wholly ignorant of the law-whose very profession and education remove them from even the ordinary acquaintance with it gleaned by citizens who serve as jurors. A lieutenant just from the academy at West Point, a member of a court to decide complicated questions of law and evidence and medical jurisprudence in a case of life and death! And you, an American lawyer, a judge, and-save the mark—an Attorney General, approve this thing.

And on what ground do you justify the employment of these tribunals subversive of all liberty and all law? It appears from the statement of the facts in your opinion in the Weaver case, that James Weaver had been indicted for murder in the district court of Bastrop County, Tex., and was under arrest awaiting trial, when one J. J. Thornton, a district judge, represented to the military commander that the civil courts were badly situated and managed, and that if the prisoner were left to them, no trial could probably be had, and asked that he be tried before a military commission, which was accordingly ordered. As this opinion of Mr. Thornton's is the sole basis on which the military acted in taking Weaver out of the hands of the civil authorities, it provokes the inquiry in passing how far the alleged condition of the civil courts (supposing it to exist) is attributable to the prolonged denial of civil self-government to the people of Texas-the last phase of such denial being the recent postponement of elections till November, in the midst of the cotton season—a postponement procured (as recently stated in an influential journal in political sympathy with the dominant party) by persons interested in a certain land speculation to which the interests of the State were held subordinate, thus prolonging by military rule a disorganized condition of civil society, and then in turn making such condition an excuse for military rule. But this is a political rather than a legal question, and it is with the legal aspects of the case that we

are now dealing.

As a matter of fact, the loose assertion or opinion of Mr. Thornton that the civil courts were badly situated and no trial could probably be had is controverted by the positive statement of the defendant's plea "that the district court of Bastrop County was fully organized and prepared to pass upon all questions brought before it," and by the fact that a grand jury of that court had already found an indictment against him for murder, and that he was under arrest awaiting trial. But he was brought before a military commission, duly selected by the officer to whom Mr. Thornton had made his complaint, and thereupon he filed exceptions to the jurisdiction of the commission, objecting, first, that he was entitled to a trial by jury; second, that the Constitution of the United States provides that no person shall be twice put in jeopardy of life and limb for the same offense; that the offense with which he was charged belonged entirely to the civil courts of Texas; and that he would be unable to plead the finding of the commission in bar in the district court of Bastrop County, in which he was under in-dictment; that said district court was fully organized and pre-pared to pass on all cases brought before it, and that neither he nor the deceased were in the military service of the United States. Compelled, as you are, to admit the irrefragible force of these objections (for you say "it is obvious that under the Constitution of the United States Congress has no right to subject any citizen of a State to trial and punishment by military power in time of peace"), to what theory do you resort to sanc-tion the employment of these tribunals? To the miserable subterfuge (it deserves no better name) that war exists in the United States, and therefore these provisions of the Constitution omited States, and therefore these provisions of the Constitution just quoted may be overridden by virtue of some supposed war powers in the Constitution. Even if you could establish this preposterous proposition that the war still continues, it would avail you nothing. We have seen that the military code (the Articles of War) is intended for the punishment of military offenses only, and makes no provision for ordinary crimes, such as murder, arson, and others, but expressly leaves them to the civil authorities and the "known laws of the land." This is so even where the accused is himself in the military service, and it has been so held. At the trial of Brig. Gen. Hull before a court-martial at Albany, during the last war with Great Britain, for the surrender of Detroit, three charges were preferred by the judge advocate—for treason, cowardice, and neglect of duty and unofficerlike conduct—the last two being military offenses and the first, treason, a common-law and statutory crime, cognizable exclusively by the civil courts. Gen. Huil objected to the jurisdiction of the court to try the charge of treason on the very grounds above indicated, "because treason is a crime of which a court-martial has no cognizance. Their power is confined to such military crimes as are specified in the Articles of War, and their jurisdiction is so limited, not only by the Constitution, but by the very articles themselves." And the court in their finding say: "The accused having in his final defense protested against the jurisdiction of the court to try the charge of treason, and the opinion of the court being that the objection would have been tenable if the same had been pleaded by the accused on his arraignment, and believing also that the court can not acquire jurisdiction of the offense by the waiver or consent of the accused, they decline making any formal decision on that charge" (though the evidence having already been publicly given, they informally expressed the opinion that he was not guilty of the charge). (Hull's Trial, Appendix, pp. 21 and 118.) And this was in the midst of a foreign war, and the accused an officer in the Army.

The same rule prevails in England. Even in the midst of wars and civil commotions such a thing as the trial of civilians by military courts has not been heard of for 200 years. martial law was declared and the habeas corpus suspended in Ireland during the rebellion of '98, and recently during the Fenian troubles, such a thing was not thought of as denying to the persons accused of crimes, even of a political nature, a trial in the civil courts, and according to the rules of the common law. Shall our people be less free, less under the protection of law, than the people of England? To hold your position is to admit the absurd and dangerous doctrine that in time of war the constitution may be laid aside; that there are certain "war powers" lurking in it which are latent in time of peace; and that those provisions especially designed to secure the citizen against violence and the administration of justice against excited popular feeling may be disregarded at the very time when they are most needed. This doctrine was highly favored during the late war by persons seeking excuse for lawlessness, but it has no ground to stand upon, and never had. Our constitution is a written one; its language is the same in peace and in war; the powers it gives and the rights it secures are the same in war and in peace. It gives ample powers for war without twisting or straining. Congress has power to declare war, and when declared, of course, it carries with it all the recognized usages of war within the district which is its theater. The President-not Congress, as you very singularly assert—has power to suppress insurrection by virtue of his duty to "take care that the laws be faithfully executed," and if this insurrection or opposition to the execution of the laws becomes so formidable as to assume the proportions of a war-when it becomes, in fact, civil war-the law of nations attaches to it, in the very interests of humanity, the incidents and usages which obtain in wars between foreign countries. During the continuance of such a war, if necessary, the writ of habeas corpus may be suspended, and, as one of the incidents of a state of war, when the civil tribunals are entirely closed or overthrown in the district which is the immediate theater of war, martial law may be declared and administered as a mere matter of discipline and police. But this is a mere temporary expedient in the absence of all law. So great a master in the art of war as the Duke of Wellington declared in his place in Parliament that martial law was no law, that it was the absence of law. And even during the continuance of a war, when a

country has been brought subject to the hostile arms, the modern usages of nations do not authorize the administration of justice between citizens of the conquered country by military law. The conqueror is to administer the laws of the conquered country. During our occupation of Mexico in 1847–48 alcaldes were appointed from among our officers for towns and cities and charged with the duty of administering the Mexican laws. If Texas had been a conquered foreign State, her people, even during the war, would have been, under modern usages, governed according to the former laws. But the people of Texas are citizens of the United States. The war proceeded on this theory. When they were conquered they were still citizens. The most that could be claimed was that they were liable to trial and punishment, according to the laws of the land, for their participation in the rebellion. But this has not been attempted. No indictments have been preferred against them for that offense. But you propose to hold them indefinitely, during the pleasure of Congress, "within the grasp of war," and subject to a military government which knows no law, and is responsible to none.

But whatever force may be attached to the maxim inter arma silent leges, amid the shock of armies and the roar of artillery, the idea that it can have any application four years after the firing of a hostile shot, under a free constitution and with the civil courts in operation, as they have been for at least three years, trying civil and criminal cases, is so absurd that it is difficult to believe that it can be seriously advanced by any lawyer. You quote the reconstruction acts authorizing the employment of these military commissions, and you argue in support of them that, as Congress has the power to declare war it has the power to recognize the existence of a war begun by others, to provide for carrying it on, and to declare how long the war shall continue and when peace is restored; that the Government had a right to protect itself and its lawful authority; and that it was the duty of Congress to recognize the war and "apply itself by means belonging to war to the vindication of the national authority, the preservation of the national territory, and the restoration of a republican government, under the National Constitution, to each of the rebellious States" while the war lasted and the courts and governments were overthrown it was necessary to govern by martial law, and, finally, that the war is not yet over, and that Congress, having the power to say when the war is ended, have by the reconstruction acts declared that it is not yet over. Such, in substance, are the main points in the argument on which you base your opinion. But Congress has no such power over the termination of the war or declaring when peace is restored. A foreign war is terminated by a treaty which is made by the President and Senate. A civil war such as the late contest—caused by "resistance to the execution of the laws, too powerful to be subdued by the ordinary processes," as it was generally described in the legislation of Congress during the war-is terminated whenever the President, whose duty it is to see the laws executed, declares that there is no longer any resistance to their execution—a declaration which he has long since made.

If Congress has the power you claim for it, what is the result? The reconstruction laws provide that the States recently engaged in the rebellion shall remain subject to military government till they adopt constitutions approved by Congress, and until their Senators and Representatives are admitted to Congress. No fixed conditions are laid down on compliance with which they are to be entitled to be admitted; they are to depend entirely on the will and pleasure of Congress—in other words, under a free government and constitution, States and people are liable to be deprived of their civil and constitutional rights, and subjected to military government during the pleasure or caprice of a Congress in which they have no voice.

As to your claim of the right to govern during the war by martial law, the very language you use and the authorities you cite prove that by no possibility can such right now exist. You say:

Where all lawful governments have been extinguished by the rebellion on the theater of active military operations where war really prevailed, there is a necessity to furnish a substitute for the civil authority thus overthrown to preserve the safety of the Army and society, and as no power is left but the military, it is allowed to govern by martial rule until the laws can have their free course.

And in the case of Milligan (4 Wallace, 127), before the Supreme Court of the United States, you say that the test is suggested "that the right to govern by military power depends upon the fact that the courts are actually closed, and that it is impossible to administer criminal justice according to law." This "test" is perfectly conclusive against your opinion. Are the courts actually closed in Texas and other Southern States? Is it not notorious that they have been in constant operation for more than three years? Do not these very reconstruction acts

recognize the fact by authorizing the military commanders to employ them? Is all lawful government now extinguished in Texas and no power left but the military? The Supreme Court of the United States, in the recent case reported in American Law Review for July, 1869, of Texas v. White et al-which you cite but not for this purpose-has decided that Texas is a State in the Union, and has a State government authorized to order and conduct a suit in the Supreme Court against a citizen of another State.

To see the crudeness and absurdity of the jurisdiction attempted to be conveyed by these reconstruction acts, it is only necessary to examine for a moment its practical working. is provided (sec. 3, act of Mar. 2, 1867) that it shall be the duty of the commanding officer "to punish, or cause to be punished, all disturbers of the public peace and criminals, and to this end he may allow local civil tribunals to take jurisdiction of and try offenders; or, when in his judgment it may be necessary, he shall have power to organize military commissions or tribunals for that purpose." It is further provided (sec. 4) that "the laws and regulations for the government of the Army shall not be affected by this act, except in so far as they conflict with its provisions." Here, then, we find military commissions authorized for the trial of "criminals" of all kinds. No form of organization or oath is prescribed for these commissions or tribunals. It must either be intended that they should be organized and sworn (if sworn at all) at the sole discretion of the commanding officer-like a vigilance committee-or that they should be appointed and sworn according to the laws and regulations for the government of the Army, with which, on this subject, there is nothing in the act to conflict. The oath presubject, there is nothing in the act to conflict. scribed by the articles of war for a court-martial requires the members to "well and truly try and determine according to the evidence the matter before them, and administer justice according to the provisions of an act establishing rules and articles for the government of the Armies of the United States, without partiality, favor, or affection," and "if any doubt should arise not explained by said articles, according to your conscience, the best of your understanding, and the custom of war in like cases," Suppose the accused to be charged with murder, forgery, counterfeiting, conveying land without color of title, or any other crime, the definition and limitations of which are somewhat intricate; we have seen that the Articles of War throw no light upon the subject. They define and punish military offenses only. The "custom of war" is no better. The members of the court know nothing about the civil or common law, and they have not, like a jury, any judge to charge them what the law is, and they are left to the "best of their understanding" in a matter about which they understand nothing.

If your acquaintance with the reports had been equal to your

bias in favor of a party position you might have referred the military authorities—for whose information mainly your opinion was sought—to cases much more calculated to enlighten them was sought—to cases much more chromated to unight have as to the responsibilities they are incurring. You might have cited the case of Little v. Barreme, decided by the Supreme Court of the United States (2 Cranch's Reports, p. 157). This was a civil suit for damages, brought against Capt. Little, of the United States Navy, for capturing a ship in obedience to an order of the President of the United States, which the Presi-dent had no legal authority to give. During the hostilities be-tween the United States and France an act for the suspension of all commercial intercourse between the two countries was passed which authorized the President to instruct the commander of armed vessels to seize any American vessel sailing to any French port. This act received a construction from the Executive, under which orders were issued to seize vessels sailing to or from a French port. The Flying Fish having been seized under these orders of the President while sailing from a French port, her owners obtained some \$8,000 damages for her detention, before the circuit court at Boston, from which Capt. Little appealed to the Supreme Court of the United States. Chief Justice Marshall, himself an Army officer in his youth, in delivering the opinion of the court said:

These orders, given by the Executive under the construction of the act of Congress made by the department to which its execution was assigned, enjoin the seizure of American vessels sailing from a French port. Is the officer who obeys them liable for damages sustained by this misconstruction of the act, or will his orders excuse him? If his instructions afford him no protection, then the law must take its course, and he must pay such damages as are legally awarded against him.

And in deciding this question he says:

I confess the first bias of my mind was very strong in favor of the opinion that, though the instructions of the Executive could not give a right, they might yet excuse from damages. I was much inclined to think that a distinction ought to be taken between acts of civil and those of military officers, and between proceedings within the body of the country and those on the high seas. That implicit obedience which military men usually pay to the orders of their superiors, which, in-

deed, is indispensably necessary to every military system, appeared to me strongly to imply the principle that those orders, if not to perform a prohibited act, ought to justify the person whose general duty it is to obey them, and who is placed by the laws of his country in a situation which in general requires that he should obey them. I was strongly inclined to think that where, in consequence of orders from the legitimate authority, a vessel is seized with pure intention, the claim of the injured party for damages would be against that Government from which the order proceeded, and would be a proper subject for negotiation. But I have been convinced that I was mistaken, and I have receded from this first opinion. I acquiesce in that of my brethren, which is that the instructions can not change the nature of the transaction or legalize an act which without those instructions would have been a plain trespass.

Capt. Little, then, must be answerable in damages to the owner of this neutral vessel, and as the account taken by order of the circuit court is not objectionable on its face and has not been excepted to by counsel before the proper tribunal, this court can receive no objection to it.

There appears, then, to be no error in the judgment of the circuit court, and it must be affirmed with costs.

This is the law of the land, as declared by its highest tri-

This is the law of the land, as declared by its highest tribunal. A military officer can not by the plea that he is obeying orders exempt himself from being personally liable if he does any act not warranted by the law and which without those orders would have been a plain trespass." And it is immaterial whether the illegality of the act arises from the order which he obeys, being in contravention of the terms of a valid statute, or whether it arises from acting under the provisions of a void or unconstitutional statute. In either case the act is equally forbidden by that Constitution, which is declared, together with the "laws made in pursuance thereof," to be "the supreme law of the land." An unconstitutional law neither justifies nor excuses anyone acting under it. It is a simple nullity, the same as if it had never been. Neither the President nor any of his subordinates can, by ordering the execution of a void or unconstitutional law, give that law any validity if it had none in itself. If the statute violates the supreme law of the land, the order to enforce it equally does so and is, in fact, simply an order to violate such fundamental law.

If, then, these reconstruction laws are unconstitutional, which no lawyer, looking at them unbiased by political feeling, can doubt they will be held to be as soon as they come before the courts for adjudication, they will protect neither the President nor his subordinates in acting under them against liability for any act committed by them forbidden by the Constitution, "the

supreme law of the land."

But it is not only in civil actions for damages that such officers become liable. They become amenable to the criminal laws of the country by doing acts unsanctioned by law. This familiar principle has received recognition in a very recent judicial decision-which also bears on the subject of your opinionthe legality of military commissions. In the matter of the application of certain parties claiming the rewards offered for the capture of Booth, Payne, and others, charged with the murder of President Lincoln, the Supreme Court of the District of Columbia, a court which, considering the mode of its appointment and its antecedents, certainly will not be suspected of any political leanings adverse to your opinion, held the following language: After saying that "the guarantee of trial by jury contained in the Constitution was intended for a state of war as well as a state of peace, and is equally binding upon rulers and people at all times and under all circumstances," and reciting the fact that the parties for whose apprehension the reward was claimed were tried and convicted before a military commission appointed by the executive department of the Government, and that they were not in the military service of the United States nor of the Confederacy, Judge Olin said:

United States nor of the Confederacy, Judge Olin said:

The crime committed by those persons was committed in this district. Martial law was never proclaimed here. Courts of law had been established and were daily engaged in efforts to punish crimes and redress wrongs. I do not see upon the principles announced in exparte Milligan (4 Wal. Rep., p. 2) how an action in this case can be maintained. It will not, I think, be contended, if none of the parties arrested had been tried and convicted, or having been tried had been acquitted, that an action could be maintained to recover this reward. If that be so, the question necessarily arises whether there was a legal conviction of any of those parties before this military commission. If there was not, the commission was but little better than a mob and were themselves guilty of murder.

This is strong language, but it unquestionably defines the offense of those who either as mobs, vigilance committees, or by illegal and usurped authority take the law into their own hands. you ever hear of the case of Gov. Wall? Gov. Wall was the English military commandant at Goree. Some insubordination or discontent breaking out in the garrison, he seized those whom he considered the ringleaders and subjected them to corporal punishment, from which three of them died. He was indicted for murder on his return to England, but escaped to the Continent. Here he remained nearly 20 years—not hiding in exile, but countenanced by men of high rank among his countrymen at Naples, which was part of the time his residence.

Partly induced by the countenance received from such persons, partly by his pecuniary necessities and the belief that after so long a time the witnesses would be dead or scattered, the occurrence forgotten, and the danger of conviction small, he returned to England and gave himself up for trial. Witnesses appeared from the remotest part of the island whom he had supposed dead.

The question-

Says Southey, who gives a cotemporary account of the trial-

For that was admitted-

was to be considered as an execution or as a murder. The evidence of a woman who appeared in his behalf was that which weighed most heavily against him; his attempt to prove that a mutiny actually existed falled—

Just as your argument to prove that war now exists has

and the jury pronounced him guilty. For this he was utterly unprepared; and when he heard the verdict, clasped his hands in astonishment and agony. The bench had no doubt whatever of his guilt, but they certainly thought it doubtful how the jury might decide; and as the case was so singular, after passing sentence in the customary form they respited him that the circumstances might be more fully considered.

The governor was well connected and had powerful friends; and it is said that as the case turned on a question of discipline, persons high in the military service exerted themselves warmly in his favor. It was urged that his self-surrender evidently implied that he believed himself justifiable in what he had done. To quote again the language of Southey:

Form only was wanting to have rendered that a legal punishment which was now called murder, and he may have regarded himself as a disciplinarian not a criminal

The deliberations of the privy council continued for so many days that it was evident great efforts were made to save his life, and he was several times respited. But the feeling of the populace was very strong against him, especially in view of the rigorous justice recently meted out to some mutineers in the fleet of much humbler rank; and the Government was either indisposed or feared to commute his sentence, and he was executed for his act committed 20 years before.

These cases are very suggestive. They show what the law is with regard to unauthorized executions and unlawful procedures, It is a matter of very great interest to officers acting in pur-suance of your advice to know what the law is—a knowledge which they wholly fail to obtain from your opinion. The country will not always be dominated by a lawless power. The instincts, the traditions of the people are in all in favor of the supremacy of the civil laws. The law will everywhere resume its sway, or rather its powers, which have never ceased to exist, though at times betrayed by its chosen guardians and at other times overborne by arbitrary violence, will again be felt. question of the constitutionality of these reconstruction laws and the responsibility of officers for acts affecting the rights of persons or property done under them will come before the courts-with what results may be inferred from the tenor of the decisions quoted above. It were to be regretted if meritorious officers of subordinate rank thus incur liabilities b; obeying, from a sense of obligation, orders which they disapprove; but such is the law, and it is well they should know it.
